APPENDIX.

APPENDIX

TO THE

CONGRESSIONAL RECORD.

Our Revenues and their Treatment—Wages and their Causes—Income and Outgo.

It has been laid down by some of the most eminent writers on political economy that every active interference of the legislature with its subjects by prohibiting or restraining any particular branch of honest labor, or by encouraging any particular branch at the expense of the others, whether in agriculture or commerce, has uniformly retarded the advances of public opulence, and that the sound policy of a legislator is not to impose restrictions or regulations upon domestic industry, but rather to prevent them from being injured by the contrivance or folly of others.—*Ingraham's note, Vattel's Law of Nations*, page 42.

"Unhappy race! who never yet could tell,
How near their good and happiness they dwell:
Fetter'd in faults, they seek not to be free,
But stupid, to their own sad fate agree:
Like pond'rous rolling-stones, oppress'd with ill,
The weight that loads them, makes them roll on still."
[*Rowe's Golden Pythagorean Verses.*]

SPEECH

OF

HON. SAMUEL S. COX,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 20, 1884.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 5265) to extend the time for the payment of the tax on distilled spirits now in warehouse—

Mr. COX, of New York, said:

Mr. CHAIRMAN: I do not intend at this time to do more than speak a portion of the paragraphs which I have heedfully prepared. They are connected with our revenues. They are logically imbound, for the whisky question is more or less bound up with them.

Without going into any special reasons, I beg to make these remarks now on this bill. Moreover, I ask to print certain tables and deductions entirely impersonal, having the same relation to our revenue.

The CHAIRMAN. The Chair hears no objection.

Mr. EZRA B. TAYLOR. I rise to a question of order. The members who occupy their seats are unable to hear what is going on, because other members cluster around the speaker. If gentlemen would take their seats all would be able to hear.

Mr. MILLS. This Hall is so large that those who sit on the outside can not hear.

Mr. NICHOLLS. I wish to know, Mr. Chairman, whether the gentleman has a right to get permission to print his remarks, and then proceed to address them to the House?

The CHAIRMAN. That is not a question of privilege.

Mr. COX, of New York. I assure my honorable friend from Georgia I will only print those things I do not speak. [Laughter and applause.]

Mr. Chairman, the true glory of a nation is made up of the character of its people. They must be of simple habits, without ostentation. Such men are the blossom and fruit of national majesty and secular strength.

When I came to Congress, nearly thirty years ago, I found a power in the West and South which was represented by men. They were not here for greed. Such men were an antidote of the poison of our present luxury and ill-gotten gain. Since then the lines of empire have grown strong on the face of the great West and South. The cradled Hercules has become a demi-god.

The Father has strengthened us by chastening. We have gone through a great civic and bloody struggle. We have come out scathed. A sum that in 1857 covered the whole cost of our Government is now less than the sixty-six millions involved in this bill for extending the whisky tax. It is less than one-half of the surplus now in the Treasury that has grown out of our senseless fiscal policies. Far better to borrow than fill the Treasury to overflowing by pandering to excesses of local avarice. Far better to dispose of our surplus than to keep on accumulating by taxation.

THE INTERNAL REVENUE.

I will not now discuss the operation of the internal-revenue tax on its merits or demerits, except to say that in my judgment its mode of collection is susceptible of reform.

Mr. BELFORD. I rise to a point of order. Occupying a back seat in the Hall, I have at least the right to hear what is going on, and especially when one of the most brilliant statesmen of this Republic is speaking on a subject of great public interest. [Applause.] I demand that we shall have order, not only in the body of the House but outside of the railing. In my seat I have the right at least to hear what great men—and I say it advisedly to the country—are uttering on the floor of this House. [Applause.]

Mr. COX, of New York. After that dainty confectionery, I ask the gentleman from Colorado to take my seat. [Laughter and applause.]

[Mr. BELFORD here moved toward Mr. COX's seat, to the middle aisle.]

Mr. BELFORD. I prefer to stand by and see it done. [Laughter.]

Mr. COX, of New York. Mr. Chairman, I have urged here often since the war not only the impolicy but the indecency of the internal-revenue system. It is to the methods and not to the objects of taxation to which I demur. If money must be raised for the Government by direct ways, surely such taxation is fair. When we raise means by ways so questionable as the present mode, is it not best to do as I have often urged, namely, collect the tax on spirits and tobacco either by the existing custom-house or by stamps and other simple methods? This implies only a change in the mode of collection; yet the reduction of the whisky tax would give more revenue; and on the other luxury there might be the same result.

Besides, sir, in these days of temperance agitation I would avoid any discussion on the whisky question that is not called for.

The laws under which the first taxes were collected to support the Confederated Government in 1792 were intended, like all such laws, to be short-lived—a makeshift. They cost too much; whisky insurrections in early days cost a million and a half. The prosecutions are endless and innumerable to-day. Open revolt and secret espionage are not the proper results of law. Jefferson, in speaking of such taxation, intimated that the temptations of surplus treasure were dangerous. Now, why should we keep up a mode of collection costing five millions if there is a more economical mode? Why add to the corruptions a lot of useless stipendiaries? Why add unnecessary arrests and burdens, trials and expenses, in order to raise a surplus we do not need, and which if needed could be raised by better methods? Our best Democratic Presidents advocated the abrogation of the internal revenue as odious and repulsive.

TARIFF TINKERING.

It was thought by some gentlemen that the last business-tinkering of the tariff by commission and Congress would produce a result so as to reduce the surplus. A very small percentage is the measure of that reduction. The same reason which made the President and the Secretary of the Treasury urge upon the last Congress a reduction of the surplus obtains now, and with greater force, though the administrative emphasis and urgency are lacking.

I therefore, sir, ask your attention and that of the House to some imperative reasons for the remodeling of the tariff. If we can not cut it down to the full and just extent, we may, perhaps, have 20 per cent. of a loaf, which is better than no bread at all.

BUSINESS INTERESTS AND LABOR.

The agricultural portion of our population can take care of itself by manual labor. It is rich by nature. If the people of some sections of the country can not work with spindles and forges without the aid of other classes of industry; if they must have the bounties of the Government poured in vast largesses into their lap, let us at least know the amount that we pay to these splendid paupers.

Every year since 1857 I have spoken against these enormous and unequal exactions by tariff. Will it always be pretended by interested folk that to adjust things equitably would disturb "business interests"? Because I would have no revenue law which does not give labor an equal chance with capital, must I be reproached as one who cares not for the interests of either labor or capital? It is time to have a review of our fiscal relations.

In reply to the imputation of disturbing the business interests, may I quote with emphasis from the report of our late Tariff Commission to Congress? I find in it the following language:

Early in its deliberations the commission became convinced that a substantial reduction of tariff duties is demanded, not by a mere indiscriminate popular clamor, but by the best conservative opinion of the country, including that which has in former times been most strenuous for the preservation of our national industrial defenses. Such a reduction of the existing tariff the commission regards not only as a due recognition of public sentiment and a measure of justice to consumers, but one conducive to the general industrial prosperity, and which, though it may be temporarily inconvenient, will be ultimately beneficial to the special interests affected by such reduction.

THE SURPLUS.

Alluding to this report, and the bill that was passed in the last Congress, the Secretary of the Treasury says in his last financial report:

The chairman of the Senate Committee on Finance, in explanation of the bill before the Senate last year, which after various amendments became a law, estimated at $45,000,000 the reduction of the revenue which would follow the changes in the tariff proposed thereby.

These intentions and calculations have not been verified.

The estimated receipts for the current year from customs are $195,000,000, a reduction of less than $20,000,000. Considering that there has been some depression of business during the past year and current year, it is probable, should business revive, that the revenues from customs under the present laws will in succeeding years increase rather than diminish.

It was estimated by the Senate committee that the repeal of internal-revenue taxes proposed by their bill would effect a reduction of $34,790,334. The Commissioner of Internal Revenue estimates that the aggregate amount of reduction made by the act will not be less than $43,000,000 per annum, including the $6,000,000 of taxes on deposits of national banks; but he further estimates that the increase of receipts from distilled spirits will so augment the revenues from that source as to make the aggregate receipts from internal revenue for this year $129,000,000, or about $24,500,000 less than those for the preceding year. The reduction, therefore, from all sources of internal revenue for the current year appears to be about $10,000,000 less than the reduction expected by the Senate committee. We have, then, a reduction of $30,000,000 less than was sought for or expected.

THE PRESENT TARIFF BILL.

Mr. Chairman, the majority report accompanying the tariff bill now before the House indicates that the object of its framers is to follow in the footsteps of the Tariff Commission. In the language of the report, your Committee of Ways and Means submit this bill "with the recommendation that it be passed as a measure of partial relief to the people from unnecessary taxes, 'as a measure of justice to consumers,' and [as] 'conducive to the general industrial prosperity.'" I am amazed, sir, that this unambitious policy, this modest, *naïve*, deprecatory recommendation, should have failed to appease the gentlemen of the minority.

On what grounds, sir, can a measure of *partial relief* from *unnecessary taxes* be obnoxious to the legislative mind? On what ground can this proceeding, which is confessedly supplemental to that of the Tariff Commission created by a Republican Congress, be in the least objectionable to the adherents of the idea of protective tariff? The majority of the Ways and Means Committee aim not to destroy the work of the commission. They do not even go to the extent that the commission proposed. They only aim to reduce the tariff revenue by a nominal sliding scale of 20 per cent. This scale is expected to relieve from unnecessary taxation to the extent of only 15.74 per cent.

It was the opinion of the Tariff Commission that under their scheme there would be a reduction in rates of from 20 to 25 per cent. Your committee now report the result of this golden promise. Is it any relief? Is it justice to consumers? Behold the percentage of relief reached in the first six months after the act of March 3, 1883, went into effect! The magnificent relief of 1.74 per cent.! "The average cost of importing goods valued at $100 was only 1.74 per cent. less under the new than under the old law."

What guarantee have we that the present bill would produce the desired result of a sufficient revenue reduction?

I am proud of the attention of my friend from Colorado. He has ciphered much about the surplus revenue. Let him cudgel his brains by logarithm and integral calculus and demonstrate this proposition. [Laughter.] Or, perhaps it is simply a question of arithmetic as to what the percentage of reduction would be under the present bill. The question might be stated thus: If a scheme intended to produce a substantial reduction of 20 to 25 per cent. of the tariff duties resulted, under six months' operation, in reducing the cost of importation only 1.74 per cent., what would be the result of a scheme intended to produce the modest reduction of 15.74 per cent. in these duties? I confess I can see but small results, if the object be to cut down our surplus revenue.

MINORITY OBJECTIONS.

The minority report seems to ignore the evils of surplus revenue and unnecessary taxation. If a remedy is thought of, it lies in the suggestion for an increase of tariffs that would cut off importations. One ground of objection taken by the minority of the Ways and Means Committee in respect to the present bill is that the last tariff bill has not had a fair trial; that its effect upon either the revenues or the business of the country can not yet be ascertained or determined. The very slight effect on the revenue after six months' operation of the Tariff Commission bill is plain enough to be seen. The honorable Secretary of the Treasury suggests in his last finance report that we may expect an increase of customs revenue under the present law rather than a decrease.

"Business of the country!" What interests are referred to? The business interests of the manufacturers of protected products? I shall discuss the question of the ability of our manufacturers to sustain themselves and pay fair wages without any levy of tax on the masses of our consumers.

Great stress is laid by the minority in their report on the propriety of resting for a while under a law that was framed by a commission "composed of practical men, after the fullest study of the subject" committed to them—men who called "to their aid representatives of all interests and all views." The fact remains, however, that the recommendations made by the commission, which were in the main adopted by the framers of the act of March 3, 1883, did not accomplish what the "practical" gentlemen of the commission said would be accomplished—relief from unnecessary taxation and a sufficient reduction of the surplus revenue.

INTERESTS REPRESENTED.

Another objection made to the bill by the minority report is that "every interest, manufacturing, laboring, and agricultural, represented before the Committee of Ways and Means has protested most earnestly against the change recommended by a majority of the committee;" that "no interest has asked for it." No, sir; no interest that was actually represented.

It is beyond question that the act of 1883 has failed, and must continue totally inadequate to afford us relief from unnecessary taxation and surplus revenue. If, as the Tariff Commission reported, its members became convinced "early in their deliberations" that "a substantial reduction of tariff duties" was last year "demanded, not by mere indiscriminate popular clamor, but by the best conservative opinion of the country," I must assume, sir, that the best conservative opinion of the country was not regarded by the minority when they framed their report against the present bill.

I admit, Mr. Chairman, that the manufacturing interests were represented before the Committee of Ways and Means, and possibly also, to some extent, a few of our mining interests, and some sheep farmers. But, sir, I beg leave to question the accuracy of the minority in their statement that the farmer, the laborer, and the general consumer were represented before the committee. I know there is an American Iron and Steel Association; I know that there are many other associations of manufacturers; but I know of no organization authorized to speak for the American farmer, laborer, or consumer, or their interests, unless it be their representatives here in Congress.

PLEA OF MINORITY—REPLICATION.

Allusion is made in the minority report to the "enormous increase of the capital-wealth of the country during the last fifteen years under a protective tariff," to the subject of wages, and to the avowed policy of the minority to oppose any legislation that would tend to stimulate, or rather restore to us, our foreign carrying trade.

In a nutshell, Mr. Chairman, the minority report is a plea that our present prosperity—the prosperity of capital-wealth—and our wages rates are maintained by high tariffs; that high tariffs should continue in force; and that it is sound policy for a country to discourage any increase of imports. To this plea I enter the replication that our prosperity is the result of natural advantages; that the present concentration of capital-wealth is an evil due to high tariffs; that the tendency of the latter is to reduce the wages of labor and increase the cost of necessaries of life; that we can have no healthful system of manufactures without free and equal commerce with the civilized world; and that such commerce is most desirable for all interests.

RADICAL REDUCTION.

Mr. Chairman, our country is increasing in population at the rate of 3 per cent. per annum. Our industrial domain and income are increasing in like ratio. We must have a radical reduction of taxation to relieve our industries and remove the surplus which is overburdening our fiscal department. I repeat, sir, the conservative opinion of the country demands that the reduction shall be in the existing tariff.

It was from no cowardice, but from pure courage, that I asked the House to adjourn the other day before we debated one subject of the tariff, to wit, wool. I want no mere duello between two Ohio statesmen as to what should be paid on wool, either on the fabric or the raw material.

The House, without the admonition of any one, even when I tried to reconcile members, insisted that the adjournment should be made, in order that there might be a general debate and reduction, and not an isolated debate or partial relief.

HEAVY TAXATION AND SURPLUS REVENUE.

We have a financial and economical problem to solve. We have a heavy burden of taxation and a large surplus of revenue. How easy would be the task before us were it not for the concern that so many gentlemen have for American labor, upon whose shoulders this burden is borne. The gentlemen who come here from the mills and factories, in which children of tender years are not seldom employed from eight to ten hours a day, tell us that we must protect American skilled labor from competition with the pauper wages of Europe. The gentlemen

who exact from factory labor ten hours of steady work each day it is employed in producing the limited quantity of goods that home consumption demands—foreign markets we have none—bid us to beware how we reduce the tariffs. Do they not stand between America and Europe as a wall of defense against pauper wages?

I take up this problem with as great concern for American labor as any gentleman in or out of Congress. No gentleman on this floor will go further into valid legislation for the general welfare of American labor than I will go. I must assume that many gentlemen entertain a conscientious belief that high tariffs have tended to develop our manufacturing industries and maintain high wages, and that they apprehend that to abandon such tariffs would be fatal to some or perhaps most of our manufactures. These gentlemen will, I trust, credit me with equal conscientiousness when I refuse to profess such belief. My position in regard to the effect of high tariffs was not assumed without investigation. It has the concurrence of my best judgment. I have watched the operation of these tariffs for a quarter of a century. I maintain now, as I have always charged on this floor, that they reduce the purchasing power of wages in much greater degree than they tend to increase them in amount.

LABOR IS A COMMODITY.

Is there in any one of our manufacturing industries a demand for labor in excess of the supply? Is not labor a commodity in the industrial marts? Can we prescribe by act of Congress the price of this commodity or the cash value of the wages earned by a day's labor in any one of our industries? As easy would it be for you to decree the value of a dollar. What you can not do by direct legislation can not be accomplished by laws of more remote operation. I admit that you have the constitutional power to make a dollar a legal tender for the payment of a debt in that amount; but you have no power to say that it shall be the legal money equivalent for a bushel of wheat. Suppose we were now to pass a law prescribing that hereafter all adult employés in our shops, mills, and factories should be paid wages at the rate of $5 a day, and this rate were thereafter paid, would such inflation carry with it any appreciable increase of purchasing power in the wages received when the business of the country had accommodated itself to the change of rate? When wheat is scarce and in demand it commands a high price. Similarly, when labor is scarce and in demand it commands high wages. Can you create these conditions for labor by tariff laws? You say that those laws have created one of these conditions for skilled labor in manufacturing industry. This I deny. I believe that had no such laws ever appeared in our statute-book our manufacturing industry would long since have reached a larger and more healthful development than that to which it has attained. For the purpose of showing the fallacy of your position, I will admit that your tariffs tend to create the condition of manufacturing industry under which there is a large demand for skilled labor; but has the other condition on which the payment of high wages also depends, namely, scarcity of hands, resulted from high tariffs? So far as wages are concerned, your tariff theory is, to say the least, erroneous and impracticable.

AMERICAN STANDARD OF WAGES.

My protective-tariff friends, there is one method, and only one, to fix by legislation an American standard of wages. It is, to close our ports. Are you prepared to grant such protection? I can assure you that it would be much better for all our productive labor than the highest protective tariffs you could invent. Labor would then be on an equal footing with every other commodity in the market; the more labor produced the more it would have to consume. You might call the wages earned 10 cents a day or $10 a day, the purchasing power of either rate would be the same.

Adopt this Chinese system, graft on it the Malthusian compensating law of population, and what a protection you could give to American labor from pauper wages. In this magnificent domain of ours, teeming as it is with every resource of soil and climate that industry could desire, labor would soon achieve for itself all and more than the highest protectionist ever dreamed of. It would supply all our wants and fare bounteously every day. True, our wealthy classes could not under such a system enjoy the luxuries, elegancies, refinements, and splendors of the Old World; but might not the intelligence and skill we have developed by long years of protective tariffs enable American enterprise and genius to supply all luxuries as well as wants in unfailing abundance, if we were to shut out forever the rivalry of pauper wages? Have we not colleges and universities and schools of art and design? Have we not shops and mills and factories? The tea-gardens of South Carolina and Georgia and the widespread mulberry show how independent we could be of Italy and China. The sugar-beet of Illinois, in alliance with the cane of Louisiana, points out a path to emancipation from Cuba and Hawaii. The vine of Ohio and California will flourish when the vineyards of Champagne and the Rhine are devastated at the root by the *Phylloxera vastatrix*, and in the leaf by the *Pemphigus vitifolia—Dactylosphæra*. When by cultivation and selection our *Diospyros Virginiana* can be made to rival the persimmon of Japan, and the *Vanilla planifolia* of Mexico, Peru, and Brazil to produce its fragrant pods in the Everglades of Florida, the American Republic need not go without its morning coffee, under this Chinese mode of labor protection, even if to obtain the berry we should have to establish our southern boundary as near the north bank of Count de Lesseps's canal as the Monroe doctrine would permit.

HIGH TARIFFS DEPRECIATE WAGES.

Your high-protectionist manufacturer needs no argument to convince him of the impossibility of protecting by legislative enactment the purchasing power of a dollar. Now, the same logic that would prove this applies with equal force to the tariff fallacy. You can by no possibility add to the purchasing power of a dollar by tariff legislation, because it is exchanged for the products of labor whose value you inflate to the extent of the tariff rate. The higher your protective tariff the less the laborer gets for his wages. You can not have an immigration mill of free labor with unlimited issue, and at the same time protected wages, because such issue means an unlimited depreciation of labor wages and a high-tariff standard in the necessaries of life with which they are to be redeemed.

If you are sincere in your theory of protection, you must prescribe for labor the Chinese policy which you have so long maintained for the benefit of a quarter-million of employers. Let me tell you, gentlemen, that labor is beginning to see through the fallacy of one part of your beautiful theory—the free-labor part of it. We have scarce skimmed the surface of our wealth-producing resources, and yet, under your high tariffs, the marts of labor in all your protected manufactures are crowded to overflowing, and strikes and labor unions alone protect wages there. The skilled factory laborer who earned almost free-trade wages thirty years ago knows that the conditions of life are harder for him now than they were then. What answer will you give him when he contrasts your tariff schedules with your immigration returns, and asks, "Is this what you call protection from the pauper labor of Europe?"

OCCUPATIONS OF AMERICAN LABOR.

Where do we find American labor mostly employed now? Referring to the "occupations" tables of the last United States census reports, I find the total number of persons employed in what may be called the non-protected occupations given at 13,554,987, of which number about 16 per cent. (2,268,860) were persons of foreign birth.

In the "protected" occupations, namely, the manufacturing, mechanical, and mining industries, I find the total number of persons employed given at 3,837,112, and of these, 32 per cent. (1,225,787) were of foreign birth—double the percentage of persons of foreign birth employed in the non-protected occupations. Any person familiar with one of the conditions of labor in the "protected" industries during the last twenty-five years, namely, the impossibility of its migration to the great West, will, if he is candid, have to admit that if he were to classify this labor, at least 32 per cent. more of the persons employed therein would appear to be of foreign parentage. I make this reference not to disparage our citizens of foreign birth or foreign parentage, but only for the purpose of showing that protection does not protect labor, and that employers will employ the cheapest labor that the necessities of the laborers will enable them to employ.

Aside from the "protected" industries referred to, there are no other productive occupations in this country except the eleven classed under the head "Agriculture," on page 1368 of the Compendium of the last census (part 2). The total number of persons therein given as employed in agriculture is 7,670,493, of which number 3,323,876 were "laborers" and 4,225,945 "farmers and planters." The other 120,676 were engaged in dairying, horticulture, stock-raising, and kindred pursuits. On the page referred to, I find that less than 5 per cent. of these 3,323,876 laborers (161,402) were persons of foreign birth, while of the "farmers and planters" 14.5 per cent. (610,180) were persons of foreign birth. Do not these figures show that American labor is being driven out of manufacturing industry under a system of tariffs which the advocates of the latter would have us believe was designed mainly if not solely for the protection of our skilled labor? If wages in our mining and manufacturing industries were commensurate with the ideas and necessities of life, would we find, as I could easily show by the census reports, that 64 per cent. of the labor employed therein is of foreign birth or parentage, while over 95 per cent. of our hired farm service is being performed by laborers of American birth?

FARMS AND FACTORIES.

In the year 1880 we had 253,852 manufacturing establishments, against 4,008,907 farms varying in area from three acres to 1,000 and over. The capital then employed in the former is given in the census reports at $2,790,272,606; and the farming capital may, in the figures of the same reports, be stated as follows:

Value of farms	$10,197,096,766
Value of implements and machinery	406,520,055
Value of live-stock	1,500,464,609
Total farming capital	12,104,081,430

Now let us see what were the relative profits on manufacturing and farming capital in gross amount.

The value of manufactured products was—

For the year 1880		$5,369,579,191
Deduct from this value of materials used	$3,396,823,549	
Wages paid	947,953,795	
		4,344,777,344
And thus we have a gross profit of		1,024,801,847

WAGES OF SKILLED LABOR.

These figures set forth a gross return to the capital invested in manufacturing of between 36 and 37 per cent.; and with this return our protected manufacturers were only able to pay their 2,732,595 employés (including clerks, superintendents and foremen) at the rate of $1 16 per day! You can figure it for yourselves: Wages $947,953,795, divided among 2,732,595 employés, gives $347 per annum per capita; and allowing three hundred working days, this gives an average wages rate of $1.16 per day. What better off is the employé at the end of the year if he gets $2.32 per day for 150 days? He must "stick to his last." He can not "go West" on the savings from such munificent earnings and establish himself on a "homestead."

SURPLUS FACTORY LABOR.

We have "surplus labor" in our manufacturing centers, and the surplus is being daily increased by immigration. I use the phrase "surplus labor" not of my own authority alone. The chairman of the Senate Committee on Labor and Education, Senator BLAIR, used it last year, when propounding to a Mr. Jay Gould a financial conundrum as to how "a strong, healthy man, with brains enough for two average Congressmen," who sought in vain any sort of employment, was to get out West with his family when he had no money. We find thousands of such cases every day in the great manufacturing centers of the East. This is what "protection" has done for manufacturing labor—$1.16 a day for those who are lucky enough to find work. No wonder employment on our farms is sought by the American laborer. He finds the farmer more generous than the manufacturer in sharing the profits of his toil.

FARM LABOR WAGES.

The estimated value of all farm products for the year 1879 is given in the census report at $2,213,402,564. Deduct from this cost of fertilizers, $28,586,397, and we have a gross return of $2,184,816,167 on the $12,104,081,430 capital invested in agriculture, which is equal to 18 per cent. on the latter sum. But I have not deducted for seed or wages. These items are not reported. As to wages, I assume that 50 cents a day, with board and lodging, are at least equal on a farm to $1.16 a day in a manufacturing town where rents, fuel, and provisions are at climax rates. But I will, for the purpose of the comparison being drawn, admit that the wages of farm labor were, in the year 1879, at the rate of only 50 cents a day, with board and lodgings, or 75 cents a day without board or lodgings. These average rates I consider better relatively than those paid to labor employed in manufacturing industries. At the rate of 75 cents a day or its equivalent, the amount paid to agricultural labor by our farmers for the year 1879 was $747,872,100. Deducting this sum from the $2,184,816,167 gross profits which accrued on farming capital that year, we reduce the latter to $1,436,944,067, which gives a gross return to that capital of about 11 or 12 per cent., as compared with the return of 36 or 37 per cent. which accrued on the capital employed in manufacturing.

FARMER'S PROFITS.

I have shown that, without any deductions for wages to laborers, the gross return to agricultural capital was at only one-half the rate gained by manufacturing capital. If it be said that manufacturers borrow money to enable them to carry on their operations, that they pay interest thereon, and that, in addition to this, they have to pay for insurance and repairs, and get improved machinery, the same may also be said in respect to the farmers, and with much greater force; for the latter have certainly to pay higher rates of insurance and interest than the manufacturers, and their outlays for repairs of buildings, fences, implements, and machinery, and the purchase of new or improved implements and machines, are relatively greater than similar expenses incurred in manufacturing establishments. It will not do for the advocate of "protective" tariffs to suggest that a good share of the amount of farmers' returns on capital which I have apportioned to wages may have been earned by the labor employed in manufacturing, because we know too well that the great mass of the latter is congregated in and around our large manufacturing towns and cities, and that this labor does not seek the field where hired farm labor is any way extensively employed, and could not reach it even if wanted there.

So far as they go, the census statistics are the best we have in respect to labor and wages. These show very distinctly that labor of American birth is mainly employed in agricultural industry. They show that in the year 1879 our 3,615,765 farmers of American birth employed 3,162,474 persons of American birth as farm laborers, and that the 610,180 farmers of foreign birth, if they had had all the foreign-born labor then employed in farming (161,402) assigned to them, not more than one in four of these farmers could have had any employed labor on their premises. I admit, Mr. Chairman, that your high tariff has afforded some protection to American labor, inasmuch as it has driven the bulk of it into rural retreats, where the gaunt wolf, *Want* which prowls around the hives of manufacture and trade, is but seldom heard to howl.

HIGH TARIFFS FOSTER MONOPOLIES.

Year after year, with a few spasmodic exceptions, the condition of labor in the United States has been growing worse. It is harder for the maintenance of families since high-tariff legislation has been in force. The employers have been growing rich, the laborers poorer. There has never in our industrial progress as a nation been a time when the producing laborers in our mills, shops, and factories more required protection from tariff robbery, which fosters monopoly, than the present. I well remember when the villages and hamlets in our land had local manufactures and trades within their own limits, ample for the supply of the ordinary wants, and with fair compensation to labor; but this was before the march of modern improvements had inaugurated to any great extent on this continent the system of manufacturing that has harnessed steam-power and human muscle to costly machinery owned by large private and corporate capital. I admit, if enlargement of productive capacity is the true criterion of improvement, that since this modern system of manufacture has become generally established among us we have made wonderful progress in our ability to supply the ever-increasing wants of advancing civilization, not only in our own markets, but also in the marts of commerce if these were open to us. Confined as our shops and factories are to home markets, we are nevertheless yearly adding a wonderful increment to our wonderful wealth. But at what a cost to labor. Your large productive capacity and limited market render constant employment impossible.

Our millionaires are steadily increasing in number and adding to their millions, corporate capital is adding almost annually to its billions, the gorgeous mansions and palaces of our merchant princes and factory monarchs and railroad kings are becoming more numerous and resplendent year after year, and still the cry resounds throughout the land and is echoed with increasing vehemence in the Halls of Congress, that we must have "protection for American labor." After a quarter of a century of high-tariff "protection," factory labor stands to-day more in need of living wages than ever it did in any previous quarter-century of our existence.

THE WHOLESOME CONDITIONS OF THE PAST.

You may bring in your most expert statisticians with their tabular statements of comparative wages rates; I care not for their figures or their conclusions, for the fact remains patent to every American who has turned the meridian of life that our industrial classes, those who produce our wealth, labor skilled and unskilled, are not now enjoying the comforts of life, the ease and independence enjoyed by the industrial classes who worked under the wholesome conditions of the past generation. You ask, "Shall we return to the Arcadian simplicity of the past, to the village blacksmiths and tailors and weavers, and pull down our factories, and abolish capital and corporations?" Better, a thousand-fold better for our common humanity and national security that this were possible, if it were the only remedy. But is there no other panacea for the evils of the times? Your nostrum of a protective tariff has not only failed to lighten the burdens of labor, but it has so debilitated the laborer, so distorted his mind, that, like the slave of opium, he imagines he can not exist without the enervating stimulus of protection. He craves the poison that destroys his faculties. He regards the friend who would deprive him of it as his worst enemy. What has any public man, any political party to gain, under such conditions, that advocates the removal of even a modicum, much less the abolishment, of your tariff narcotics other than the approval of conscience? You have bound the bands of Orion [labor]; you have hooked the jaws of leviathan [commerce]; the former is enslaved, and the latter is stranded in the shallows [coast trade], and who would seek to enfranchise the one or restore the other to the briny deep is "a villain and bought with British gold!"

THE POLITICAL ASPECT.

I believe that if the political party to which I belong—the party which, with all its frailties and shortcomings and backslidings, is still the party of the poor man as distinguished from the party of wealth—were to go before the country in the next Presidential canvass on the issue of free trade *vs.* tariff protection, it would in all probability be defeated at the polls; for there is no class of voters whose minds are more tainted with the tariff heresies of protection than the laboring classes who are most injured by them. When this issue comes, give me defeat again and again rather than a victory gained against the toil, blood, sweat, and comfort of my fellow-men. I would rather be on the side of right than have such a victory.

A quarter-century of a specious system of protection to labor that has concentrated the wealth of the nation into the hands of the few, and made the millions of our wealth-producers dependent on daily earnings for daily bread—too often, as every member in this House well knows from the appeals to his supposed influence, the eager suppliants for employment at any wages—has resulted in blinding the eyes of our productive labor to the cardinal and most obvious law of industry and trade. That law is, that there can be no healthy condition of either without a free, active, and equal exchange of the products of labor. Had I the power to direct my party in this most vital matter, I would command it to go out into the highways and byways of the nation, into the lanes and alleys of our overcrowded centers of manufactures and preach the gospel of interchange. I would ask it to suffer the martyrdom of defeat again and again at the hands of the scribes and pharisees of "protection" until the golden sunshine of reason would enlighten our people, rather than sell into deeper slavery their fast-receding liberties for the mess of pottage of an immediate political victory. I would enter

upon this holy mission with the confidence of an Algernon Sydney, well knowing that truth is freedom and heresy enslavement.

TARIFFS INIMICAL TO ENTERPRISE AND LABOR.

The modern system of steam-aided manufacturing has been developed in Europe within the memory of men now living. Yet I am told that our country, after a century of independence, still hungers for protection from competition with the "pauper" labor of Europe. Poor, weak, unskilled America! With all her vast, unlimited, inexhaustible natural resources of soil and climate, mine and forest, plains of laughing harvests and herds upon ten thousand ranges, she begs for protection from pauper labor three thousand miles away. You have granted her prayer, and the commerce we once enjoyed under liberal conditions is borne across the ocean under a foreign flag. The ensign that in our boyhood days was glorious on every sea has disappeared from the face of the ocean and skulks along our coast. We no longer need a navy; our "protected" products remain within the protection of our army of consumers. The 2,732,595 American men, women, and children employed in our manufacturing and mechanical industries, who turned out of their hands in 1880 products to the value of $5,369,579,191, are protected from the "pauper" wages of Europe—by an immigration of labor therefrom, mostly adult, of 4,809,524 souls since July 1, 1870. This influx in the past three years has been at the rate of from six to seven hundred thousand per annum!

HOW WAGES MIGHT BE INCREASED.

And is this the kind of protection you, and you, and you, dear friends of American industry, would have us continue to secure to our producing labor? Free trade in labor and prohibition, strong, hard, and enduring, in the commodities of the monopolies out of which you reap your annual harvests of over a billion dollars of profit on a little more than two and three-quarters billions of capital!

Are the owners of the 253,852 manufacturing establishments in the United States aware that this vast capital represents not more than $1,000 per capita to the 2,732,595 "hands" employed by them? And are the latter aware that, with this moderate per capita sum capitalized in trades-union productive industry, they might add at least a billion dollars annually to their wages? Might they not increase their wages as much more as they pleased under a protective tariff until all our other productive industries lay prostrate at their feet?

The 1,500,000 sovereign voters employed in our factories and mills, if bound by one common tie of blind self-interest, would be a much more persuasive power in the lobbies of legislatures than the owners of a quarter-million factories and mills with all their money-bags. If this be communism, socialism, or nihilism, make the most of it. I merely hold up this side of the protective tariff to its most ardent advocates. I merely show these patriotic gentlemen how they could more certainly and more effectually, by a direct administration of their medicine to the patient rather than the nurse, protect his feeble, unskilled hands from the stalwart pauper bugaboo of king-ridden, down-trodden Europe.

"PAUPER LABOR OF EUROPE."

After more than twenty years of your so-called protection, our manufacturing labor does not seem to have the wherewithal to bless itself when it is a week out of employment; and this, sir, in a country where bread and meat are plenty; and a quarter-section of public land—on the other side of the Mississippi—is freely offered by a "generous Government" to every citizen, well knowing that those most needing homesteads are the least able to locate on them. The terrible pauper laborer of Europe not infrequently seems to be able to save enough money to transport himself and his family across ocean and land four or five or six thousand miles to homestead or pre-empt the soil that our protected skilled labor is unable to reach. Oh, my friends, there is a vast amount of humbug in your catch-penny cry of European "pauper" labor. The intelligent, skilled, well-developed European mechanic or artisan would not long remain on the other side of the Atlantic if, all things considered, he could better his condition in our shops and factories. The skilled labor that reaches our shores is, generally speaking, of that class that can not successfully compete with the more skilled labor that remains in Europe. The great bulk of our immigration is comprised in two classes, namely, those brought up to ordinary manual labor, and those who come to locate on our public lands. They are both good, honest, industrious, and desirable; both productive of wealth which, if allowed free exchange with the world, would, like the "gentle dew from heaven, twice bless."

I have some little knowledge of the disappointment that not seldom a few months of realization brings to the skilled artisan immigrant in respect to the vision of our large wages. It is seen through the mirage of emigrant agencies which the friends of American labor have established so extensively in Europe. How my heart has bled to hear the repinings over a change of habitation that wrought no improvement of conditions; the hard savings of years of frugal toil expended in passage-money over three thousand miles of ocean, and family ties severed never to be reunited.

WAGES CUT DOWN BY TARIFF LAWS.

Talk not to me of your dollars and cents difference in weekly wages while you recoup that difference and more by act of Congress, by tariffs on everything that labor needs and uses and consumes except bread and meat. No! I will not except bread and meat even; for have you not taxed the tools that built the road, its rails, its engines, its cars, and every mechanical implement and appliance that carries the bread and meat to our Eastern and Southern labor from the fields and ranges of the West? Are not the plows and the hoes, the harrows and the reaping-machines that the farmer uses taxed? Have you not taxed every bolt in the farmer's wagon, every buckle and strap and chain in his horse's harness? The very clothes on the farmer's back, from his shirt to his overcoat, from his hat to his shoes, even the bed that he lies on, the roof that covers him, the glass in his windows, the plates on his table, the cup he drinks from, the rope in his well—have you not taxed them specifically and advaloremly from 50 to 100 and more per cent. as it pleased your honors; and for what?

TARIFF OUTRAGES ON FARMERS.

Have you committed all these outrages on our farmers and industrial producers in order to secure 37 per cent. annual return on manufacturing capital? Is this the compensation that you award to American labor for depriving it of a foreign market for the bulk of its products? You tax the farmer, the day laborer, the mechanic, from the crown of his head to the soles of his feet, in sleeping and waking, in riding and walking, in every bodily function that involves the breaking of a thread or the shedding of a button. You tax his wife, and his son, and his daughter, and his man-servant, and his maid-servant, and the stranger within his gates—even the very pins in their garments have not escaped your specifics and ad valorems. You have made unto yourselves a "heaven of iron and an earth of brass." (Lev. XXVI, 19.) Your tariff taxes are as the curses of Deuteronomy, as the imprecations of King David (Psalms, CIX), as the anathemas of excommunication; they reach the labor on which they are heaped in every bodily attribute, function, occupation, and relation of life! This, too, in face of your fiscal report that you had in the Treasury on last 30th of June, when you settled your annual accounts, $346,087,437 cash, and a surplus of revenue the current year (estimated) of $59,874,695, after allowing $46,269,756 to the sinking fund. (Report of Secretary of Treasury, 1883, page 8, and table "D," page 7.) The Government is controlled by the rich. Why should not its coffers overflow?

DISTRIBUTION OF TARIFF SPOILS.

I might, if time and patience permitted, go through the whole list of our "protected" manufacturing industries, and show by the official figures that in almost every class of manufactures there is a gross disproportion under your tariff laws between the earnings retained by capital and the wages paid to labor, but I must not trespass.

THE IRON INFANT.

I will, however, take up the case of the most clamorous "infant" industry—iron and steel manufacture—as set forth in the last census reports, in proof of my assertion.

In 1880 there were in the United States 1,005 establishments, with a capital of $230,971,874, engaged in the production of iron and steel. These employed 133,203 males of the age of over 16 years, and, including 66 females, 7,775 persons below that age.

The total value of the iron and steel products is stated at		$296,557,685
Deducting the value of all materials used	$191,271,150	
And the wages paid	55,476,785	
		246,747,935
We find the gross profit to be		49,809,750

This sum represents a profit of 21.56 per cent. on the capital invested. The average wages paid to the employed was at the rate of $393.50 per annum per capita, say $1.31 per diem.

INFANT STEEL INDUSTRIES.

The more tender infant industry of steel manufacture will still better illustrate the operation of protective tariff. In that year, 1880, there were thirty-six establishments in the United States engaged in the production of Bessemer and open-hearth steel. Their capital is given at $20,975,999, and their employés numbered 10,825, including 621 males under the age of 16 years.

The total value of all products was		$55,805,210
Deduct from this value of materials used	$36,826,928	
And wages paid	4,930,349	
		41,757,277
And we find the gross profit to be		14,047,933

This represents a profit of 67 per cent. on the capital invested, and shows that the average wages paid per capita were at the rate of $455 per annum, or $1.50 a day. In 1880, according to the returns of the manufacturers, 741,475 tons of Bessemer steel rails were made, at a gross value of $37,408,625, or at the rate, as reported to the Government, of $50.45 a ton, but probably of greater value, as Bradstreet's reports show that such rails were quoted on January 1, 1881, at $60 a ton. Wages were then little, if any, higher than in 1880, when the census reports quoted Bessemer steel rails at $50.45 a ton. In the spring of last year, Bessemer steel rails fell to $38 a ton; and now it appears that the Lackawanna Steel Rail Mill Company can manufacture Besse-

mer steel rails with a profit at $35 a ton, they having last November contracted to place 30,000 tons at that rate. Well may that company still make large profits at this rate if our consul at Newcastle-on-Tyne, Evan D. Jones, is correct in his official report that "it is of course known that a steel rail can now be made cheaper than one of iron." (United States Consular Reports, No. 34, October, 1883, page 622.)

ANOTHER INFANT—SAWED LUMBER.

Lumber manufacture is another infant crying for protection from pauper labor. Let us glance at the profits and wages which this infant creator of floods and tornadoes yields.

The sawed-lumber trade of the United States is one of its most important industries—taking rank very nearly in value of products (if Bessemer and open-hearth steel are omitted) with the iron and steel production—the latter amounting in 1880 to $240,752,475, and the former to $233,268,729.

In 1880 there were 25,708 sawed-lumber establishments in the United States, which produced in that year 18,091,356,000 feet, board-measure, of sawed lumber, 1,761,788,000 of laths, 5,555,046,000 of shingles, 1,248,226,000 of staves, 146,523,000 sets of headings; and 34,076,000 feet were consumed in the manufacture of spools and bobbins. The total value of these items, including $2,628,668 worth of other products, amounted to $233,268,729. The capital invested in this business amounted to $181,186,122; the wages paid during the year amounted to $31,845,974; and the value of all material consumed in the manufacture was $146,155,385. Deducting the latter two items from the value of the products gives $55,267,370 as the gross profit for the year, which shows about 30.5 per cent. profit on the capital. The average wages of the 147,956 hands employed was at the rate of $215 per annum. An average of eight or nine months' earnings, say about $25 a month.

PACIFIC COAST ENTERPRISE.

Now, let me show some figures in respect to this industry in one of the most prosperous and rapidly growing parts of the United States—Washington Territory:

The lumber statistics for Washington Territory during the same year, 1880, were as follows: Establishments, 37, employing 499 hands; capital, $2,456,450—

Total value of product		$1,734,742
Wages paid	$200,539	
Cost of materials used	1,188,075	
		1,388,614
Total amount of profit		346,128

The average wages paid to employés during the year was $402—almost twice as much as the general average of the United States. The percentage of profit on capital was very much lower than the general average—only 14.09 per cent. The value of the logs used is given at $1,174,005, and that of other mill supplies at $14,070. The products were: Feet of lumber, board-measure, 160,176,000; laths, 6,550,000; shingles, 3,610,000; staves, 23,666,000. If only the average wages had been paid, the profits on capital would have been 18.05 per cent.; but as on such average the mills could have worked on 25 per cent. less capital, the profits in such case would have come very near the general average.

Here is a part of the country in which a tariff on lumber does not "protect;" for the lumber trade of this magnificent Territory is very largely one of export, with British Columbia alongside of it as a rival. The mills at New Tacoma, the terminus of the Northern Pacific Railroad, and many other mills on Puget Sound are largely engaged in exporting lumber to South America, Japan, China, Australia, and European ports; and still they pay better wages than the mills in our protected States. Some gentleman may here remark: "Oh, but the supply of timber at Puget Sound is inexhaustible and cheap." As to the latter, the answer is that timber land sells no cheaper at the United States land offices there than in Michigan, Wisconsin, Florida, or Mississippi; and as to the supply being inexhaustible, I think not. The time is fast approaching when the Eastern forests will be exhausted, and then the lumber interests of Puget Sound will assume gigantic proportions. Michigan is being stripped at the rate of $53,449,000 a year; Wisconsin at the rate of $18,000,000; Pennsylvania at the rate of $22,500,000; New York at the rate of $14,000,000; North Carolina at the rate of $14,000,000; Indiana at the rate of $14,000,000, and so on in our other lumber States.

OUR ABILITY TO COMPETE WITH EUROPE.

Now I want to bring home to every "protectionist" in the House this fact, namely, that, like Washington Territory in respect to timber, the magnificent domain with which God has endowed the American people is practically inexhaustible in its capacity for the production of almost every sort and species of material used in the industrial arts and manufactures. Having in respect to all other countries in the world this immense advantage, is it not absurd to say, in face of the statistics of our wages rates and manufacturers' profits, that, unlike the manufacturers of Puget Sound, all the other manufacturers of the United States are unable to enter upon an export trade, because, forsooth, they must compete with the "pauper wages of Europe."

PURCHASING POWER OF OUR WAGES.

Pauper wages in America is the result of your "protection." Why should our iron and steel manufacturers seek a foreign market, in which, like the English manufacturers, they could only get at most 10 or 12 per cent. profit, while your tariffs enable them to force on the American people steel rails at $60 a ton that could a year ago be made with good profit at $35 a ton, and now probably for $20? Why should our manufacturers seek a foreign market for any considerable portion of their annual products of nearly five and a half billions of dollars in value at the mills and factories, when they can force these products on our wholesale dealers and jobbers at a profit of 36 per cent. on the capital invested, and at the same time employ productive labor at an average of $1.16 a day? When you add this 36 per cent. to the cost of the products of the mills that the laborer and his family consume, do you not see that the purchasing power of his wages is at least 36 per cent. less than $1.16 would be under reform? When the manufacturers have recouped from the great army of producers and consumers all over the country, including farmers and miners and the railroad and other transportation companies, the full 36 per cent. returns to manufacturing capital accruing on the articles that army consumes, and you add to the amount recouped the profits of the jobbers and wholesalers, and of the small retailers with whom labor mostly deals, do you not think that under such recoupments $1.16 a day is coming very near pauper wages in purchasing power?

GENERAL AVERAGE OF WAGES.

"Oh," but some gentleman may say, "your wages average is not fair." Is it not? It is from official returns, sworn to by agents and manufacturers. I know as well as you that some skilled workmen earn $2 and $3 and even $4 and $5 a day, but you will find men equally skilled earning relatively as high wages in England. I am not speaking of special cases now, but of the general average in respect to our grand industrial army of privates and non-commissioned officers, and not the captains of the hundreds and the majors and colonels in the factories. Our Government is for the many, not for the few alone. If any one is disposed to question the averages given, I think I can satisfy the doubts he may have by referring him to a class of business in which he will acknowledge that the highest rates of labor wages are paid, namely, railroad transportation. I find on page 1266, Compendium of Tenth Census, that the pay-rolls of all railroad companies for the year covered by the census amounted to $195,350,013. This sum represented the earnings of all their officers and employés, from presidents down to trackmen, in number 418,957. Had all of these received equal wages they would have been paid, on the basis of 300 working days, about $1.55 a day each, or, since most railroad men are on duty every day, about $1.27 a day. There were paid on these rolls:

General officers	3,375
General officers' clerks	8,655
Engineers	18,977
Conductors	12,419
Total	43,426

The reports do not show the salaries paid these, but I know that a few presidents get $20,000 a year, and some clerks, engineers, and conductors receive over $100 per month. From these figures, Mr. Chairman, you can judge about how much the machinists, carpenters, and other shopmen, the trackmen, and other employés received per day under the laws that protected them from "pauper wages." Is there any better proof of the absurdity of your claims for high-tariff rates than these figures? Here is a class of labor in which all persons employed in it are skilled, in which all are employed the year round, and yet you see, beyond question, that the average wages can not have been up to $1 a day. And what is $1 a day to a laborer when at least 36 per cent. of it is recouped from his wages by your "protective" tariffs?

THE ENORMITY OF TARIFF EXACTIONS.

You can never by any legislation advance the rate of wages one cent beyond what the law of supply and demand may prescribe, but you can reduce—as for years past you have done—the purchasing power of wages to more than the full extent of your tariff rates. This is the plain, honest truth; but the laborers, the mechanics, and artisans have been deceived so long by the tariff orators and newspapers and self-interested manufacturers that I do not expect many of them to at once realize the enormity of the tariff exactions that you have imposed on their wages and industry. You have made the farmer, the mechanic, the artisan, and every producer of wealth your slaves. The result of your protective tariff is a condition of manufacturing industry in which every laborer engaged in it is forced by competition with the pauper wages of America (I speak it boldly) to sell his muscle and sweat to employers at any wages the latter may choose to offer, while food, clothing, shelter, and other necessaries of life are obtainable only at high-tariff rates.

ABOLISH TARIFFS.

In behalf of your own true interests, let us abolish the tariffs that only foster the ill-gotten gains of manufacturing capital. Let us devise a system of revenue and inaugurate an economical administration of government, under which the hard-earned dollars of productive labor shall not be filched from its scant purse. Let us no longer betray

our trust by the false kiss of "protection;" let not the apple of tariff forever turn into dust of Sodom on the parched lips of the child of toil. Give us free trade now, and you can double the area of your grain fields and the power in your mills to-morrow; for the world will always need the surplus products of every nation. The more that is produced the greater will be the consumption, and the higher will be the plane of civilized life.

I have preached to you, reasoned with you, pleaded with you, prayed to you [golden calves], lo! these many years, to relieve the people of this grievous burden, but ye would not. Ye Pharaohs, harden not your hearts still harder; let our people go ere the plagues of the strike, and the riot, and the commune be poured out on the land. At last you are moved a little, to the extent of a sliding scale of relief which retains 80 per cent. of iniquity and awards 20 per cent. of justice. If fear awards this much, let reason and common sense appeal to your cupidity to clean the infamous schedules of the whole measure of the oppression of our industries. Let me point out to you for the thousandth time that wages in all departments of our industries are already regulated down to the lowest rates that a full supply of labor and a steady influx of seekers for employment can reduce them to; and that it is not the *amount* of the wages, but their power to purchase the necessaries and comforts of life which American labor should enjoy, that is the true criterion of our industrial condition. We have no foreign markets for our manufactured products compared with those of England, nor ever will until we follow her example.

ENGLISH WAGES AND ENTERPRISE.

I boldly assert that, be England's standard of wages what it may—her standard in pounds, shillings, and pence, in dollars and cents if you will; be it a dollar a day or more or less—our wages would not and could not under a system of free trade lose a fraction of a cent in their present purchasing power; nay, more, a large percentage would be added to that power. England to-day is, and for years and years has been, compelled to bring the raw materials consumed in her factories and mills from the "four quarters of the globe." She does this at heavy expense of time and money, freight and insurance; whereas we, with our diversified soil and climate, rich and extensive domain, have at our own doors the capacity and conditions and material which would enable us, without abating one iota of comfort to labor, to at once compete with her for the lion's share of the trade of the world, if our producers were not taxed to exhaustion for the benefit of the capital invested in manufacturing monopolies.

Let me sit down with any intelligent mechanic, and, by figuring out his present cost of living, convince him that a lowering of wages to even the English rates—assuming the latter to be lower than ours—would not, under free and untrammeled trade with the world in the products of his labor, mean the loss of one mill in the purchasing power of such wages as compared with our present home rates. I would take an inventory of everything he pays for. Let me compute the tax levied on him under protective tariff, and show him that this tax more than offsets the difference in wages between the present English and American rates—that the latter are the lowest in value. I would further show him that our staples of domestic production, both of food for man and supplies for the mills and factories, could be obtained here cheaper than in England. I would show him that, under the impulse of universal demand, almost every article consumed in the arts and manufactures could be produced here on this broad continent of ours cheaper than elsewhere; and then I would ask him to give me any reason why he could not deal in the markets of the world and exchange the surplus of what we produce for the articles that we want for ourselves, or which other nations might want. Are we not as capable of trade as the English? Are we not as brave as the English, and as skillful and as intelligent? Are we so emasculated by protection, so dwarfed in enterprise, that we fear, with our ten thousand natural advantages, to meet our ancient foe on the high seas?

RECIPROCITY—BUY AND SELL.

Interchange means *import* and *export* on terms of reciprocity. Here let me give you an illustration of how this sort of trade operates. I will quote for this purpose from a gentleman who is qualified to speak on the subject (J. K. Cross, esq., M. P., in a speech in the British Parliament, August 12, 1881): "£1,000 will buy 2,000 tons of coal on board at Cardiff; the freight of this to San Francisco will be £1,500; the amount realized for it in San Francisco will be £2,500, which sum invested in wheat will purchase 2,000 quarters. The conveyance of this wheat to Liverpool will cost £1,500, and it will require to be sold at £4,000 in Liverpool to cover cost and expenses. In the import tables there will be an entry of £4,000, wheat; in the export tables there will be an entry of £1,000, coal; the one exchanges for the other." This is one of ten thousand similar transactions of England under free conditions—cargo out and cargo back, without which you can have no healthy commerce or American shipping. England exports coal to San Francisco, paying 50 per cent. duty on it, while away up on Puget Sound are vast undeveloped fields of coal.

THE INEXORABLE LAW OF COMMERCE.

We have few ships in the foreign trade. Deep-water navigation has almost become a lost art to us under the baleful influences of protection by act of Congress. All the subsidies you could grant, all the "free ships" that you may enact, will not, can not by any possibility restore our merchant flag to the high seas. You may try it from now until doomsday, and you will not accomplish it. Never will American merchant ships plow the blue waters of foreign commerce, while the Union Jack floats above them, until you meet on equal footing the fleets that carry it and submit to the inexorable, inflexible law of trade: cargo for cargo, in and out—equal barter. Ship your rum and your brass idols and your missionaries and your guns warranted to burst at the first discharge to Africa, and bring back gold, ivory, and palm oil. Ship pig-iron to Calcutta, as England does, and bring back jute. The honest face of the Connecticut clock welcomes us in every country of the world—long has been in every house in China—notwithstanding the pauper labor of Europe. If we had equal skill and enterprise in other manufactures, what might we not be!

Tariffs muzzle the ox of labor. Find the cargoes, and the ships will be launched.

You have maintained a Chinese wall, a commercial blockade, for almost a quarter of a century around our ports, through which labor alone can enter free of tariff. You well know that cargo for cargo is the law of commerce, yet you cut down our exports by refusing free entry to imports. What care you, so long as a handful of manufacturers can plunder 52,000,000 of people at the rate of 36 per cent. profit on capital invested.

THE TARIFF ON WOOL.

You will not allow the Australian sheep to compete with the Ohio sheep; but at the same time you eagerly sell millions of acres of the public domain to English capitalists for sheep ranches. Where does the cry against such disposal of our public lands come from? Not from the woolen mills of Massachusetts or Connecticut or Philadelphia, not by any means. Oh, no! The owners of these mills want free wool; but on the cloth with which 52,000,000 of people clothe themselves they want a tariff rate that will prevent the importation of any manufactured wool, and allow a profit of 30 to 40 per cent. on domestic shoddy. In the jugglery of tariff laws the sugar-planter and the wool-grower and the rice-producer are seduced into the ranks of the protectionists, and they imagine that they would starve under free trade.

PROTECTION IN THE SOUTHERN STATES.

Twenty-five years ago a great many of my Southern friends thought that rice, cotton, tobacco, and sugar could not be raised by free labor, well-paid free labor; but I think they will now admit that they were very much in error in that respect. Wages are not as high in amount in the Southern States as in the North, but low rents and fuel, cheap eggs, butter, meat, vegetables, and fruits more than make up the difference in rate. The advantage is with the Southern laborer. His wages have 20 or 30 per cent. more purchasing power in respect to providing food and house shelter than Massachusetts wages. I really think, my Southern friends, that you could continue to raise rice and sugar under liberal conditions. But whether you can or not, I am no more inclined to tax nine-tenths of your people and the rest of the 52,000,000 of American citizens for the support of your handful of sugar and rice planters than I am in favor of protecting a few Ohio or New York or Oregon wool-growers by putting a bounty of 10 cents a pound in their pockets for the wool that they raise, while by the general operation of the tariff we would filch 30 cents out of the pockets of the American people for every pound of wool they consume.

ENTERPRISE OF THE AMERICAN HOG.

Let the American sheep exhibit some of the enterprise of the American hog. The latter quadruped asks no tariff for his protection. He is our largest manufacturer, our largest employer of labor, our largest exporter His enterprise is beyond compare in all our manufacturing industries. Think for a moment of the army of labor he employs in our fields. Compute if you can the amount of transportation tolls that he pays. Not to speak of the retail butchering establishments, he paid in the year 1880 to the labor that raised and fed him for our then eight hundred and seventy-two slaughtering establishments, $267,738,902. This unprotected manufacturer turned out of these establishments products to the value of $303,562,413 that year. He paid to the 27,297 hands employed in these establishments, three-fourths of whom were employed only between the 1st of November and 1st of March, wages to the amount of $10,508,530—a sum which if the hands had been employed the year round would have made an average of $386 per capita; and to the $49,419,213 capital invested in these establishments he gave a gross return of $25,314,981—more than 50 per cent. of the capital employed. Now, match in any of your protected manufactures, if you can, this wages rate, or the number of persons employed by the American hog.

True, you can show larger ratios of profit to capital; for example, the profit on steel rails. This enterprising animal—the hog—while contributing to the tables of 52,000,000 of home consumers, in utter contempt of the pauper hog of Europe, exported in 1880 products to the value of $100,799,414. The gross weight of this product—amounting to 1,326,157,330 pounds, or 663,078 tons—would have furnished cargoes of 1,000 tons each for 663 American ships, if the protected manufacturers had not by their protective tariffs driven our flag from the ocean.

FOOD OF EUROPE'S PAUPER LABOR.

Are you aware, Mr. Chairman, that the American hog is not patronized

by the crowned heads and nobility and gentry of Europe, and that it is only the pauper laborers of that continent who consume this product? The increasing efforts of our protectionists to convince you that European wages do not admit of flesh meat in the laborer's bill of fare may well excuse you for supposing that our hog appeared only at the tables of the aristocracy. But the fact is otherwise. To the investigations of our energetic Department of State, the results of which are published in one of its interesting pamphlets, entitled American Pork, 1881 (page 17), I am indebted for the following porcine fact, namely, that the finest brands of Chicago bacon sold in England at from 9 to 10 cents a pound in February, 1881.

I challenge any gentleman on this floor to show that at the time referred to the American laborer in our manufacturing centers could have purchased the best brands of Chicago bacon at his grocer's for less than 15 cents a pound. Assuming that our wages are 50 per cent. more than English wages—which is not true, either in amount or purchasing power—the American laborer is to-day no better able to provide bacon for his family than the English laborer.

INFERIOR MEAT FOR AMERICAN LABOR.

The "better classes" of Europe do not consume the products of our hog, yet we only export the choicest of these products. The more inferior are retained for the American laborer, if Mr. Michael Foster, of Chicago, is correct in his statement, as reported in said pamphlet (page 21), respecting the packing of hog products for the foreign markets. He says that—

> Packing-day comes around in due time, and the meat is shipped out under the inspection of an inspector belonging to the house or one who has been sent to get out some order that has been bought from the house for shipment. In either case the strictest attention is paid to the quality of the meat, its age and condition; and everything that does not rank first class is reinspected and will ultimately be packed and shipped to the pineries, the mines, the plains, the fisheries, the collieries, and the South, or any other market where they wish a second-class article at hard-pan prices and where epicurean tastes are not cultivated as they are with the overfed Briton or the dainty Gaul.

Mr. Foster is an expert in regard to the trade on both sides of the Atlantic. As a member of the live-stock firm of Thomas Foster & Sons, Smithfield, Birmingham, he says he "handled 50 per cent. of the imported hog supply for the great manufacturing midland counties of England." What does he mean by the phrase "overfed Briton" in these manufacturing counties? Where is your pauper labor? First-class meat for the pauper labor of Europe, and the inferior quality at 50 per cent. additional price for American labor!

In this connection I will read the following extract from a statement by J. C. Black, esq., of the house of Armour & Co., of Chicago, published in the same pamphlet, on page 30. Speaking of the quality of the meat exported, he says:

> After the meat is cured, at the proper time the buyer sends his inspector to the packing-house to inspect, receive, and pack the meat. The man we sell to has his own expert who tries every piece of meat and sees it weighed. The meat is perfectly sweet, but he is compelled to be there and see to it. A soft hog, they throw that out; that is soft, they do not want it. He tries it with his trier and says it is a little sour; he does not want it. He rejects everything that is not proper, and goes off.
>
> * * * * * * *
>
> Different cuts of meat go into the home market. I want even more careful handling than at the home market; the American never finds any fault whatever.

Of course the American never complains. Why should he when his wages are so well protected by act of Congress? It is only the "overfed Briton" or "dainty Gaul" who can afford to turn up his nose at "soft hog" or second-class bacon.

I happen to have convenient for reference a statement of our fresh beef exports to Great Britain during the period from October 1, 1875, to March 31, 1877. You know that we ship abroad only our very choicest beef; because the overfed Briton of the manufacturing counties of England will expend his pauper wages on no inferior cuts. In the period referred to we exported to Great Britain 34,278,810 pounds of fresh beef, valued at $3,026,483, an average value of less than 9 cents a pound.

Was there any day in that period that American labor in our manufacturing counties could have purchased such beef at an average of 12 or even 15 cents a pound? It is rare indeed that such beef appears on the tables of our best-paid labor. American beef that was exported in January, 1877, at an average value of 10½ cents a pound sold in England at wholesale for 12½ cents, and by retail in Dublin to the pauper labor of that city at 16 and 20 cents a pound—"better," says the report, "than home [British] prices." (Agricultural Report, 1876, page 312 *et seq.*)

In the year ending December 31, 1882, we exported 7,587,670 barrels of wheat flour, valued at $46,218,785, an average of $6.09 a barrel, or 3 cents and 1 mill per pound. The transportation of flour from New York to Liverpool costs 25 cents a barrel. Allowing 16 cents a barrel for insurance and all other expenses, this flour could have been delivered to the importer at $6.50 a barrel. Allowing 20 per cent. profit to importers and dealers, this flour could have been sold to English consumers at 4 cents a pound, or $7.84 a barrel, and was no doubt sold to them at that price; for, let me tell you, large capital and small profits is the rule in the English provision trade.

THE FOOD OF OUR PROTECTED LABOR.

Our laborers employed in the large cities do not and can not buy flour by the barrel, they mostly buy by the pound at the small groceries where they can obtain credit when out of employment. Do you think that any of our laborers in these cities were able in 1882 to buy flour at 4 cents a pound? If you will investigate this matter you will find that they paid nearer 6 cents a pound than 4 cents. Provisions, fuel, clothing, medicines, gas, house-rent, and every item of necessary supply cost more in our manufacturing centers, when paid for by our laboring classes, than in England.

We have as cheap a market here in Washington as in any other city of its size in the country. I now exhibit a clipping from a copy of the Evening Star of the 22d of last month (February). Look at it, and see what a laborer could purchase for himself and family out of wages at the rate of $1.16 a day, when he deducted therefrom the proportion for groceries (including sugar taxed 3 cents a pound), fuel, gas, clothing, and house-rent at from $8 to $12 a month:

WASHINGTON MARKETS—RETAIL PRICES.

Meats.—Beef, porter-house, 25 cents per pound; sirloin, 20 cents per pound; rib roast, 15 to 20 cents per pound; round roast, 12½ to 15 cents per pound; chuck, 10 to 12½ cents per pound; beef, corned, 8 to 10 cents per pound; beef, dried, 20 cents per pound; beef, chipped, 30 cents per pound; beef-tongue, 50 to 60 cents each; lamb, 12 to 18 cents per pound; veal, 12½ to 25 cents per pound; mutton, 18 to 25 cents per pound; pork, 12½ to 16 cents per pound. Bacon—hams, 16 cents per pound; cut, 20 to 25 cents per pound; shoulders, 11 to 12½ cents per pound; cut, 12½ to 15 cents per pound; middling, 12 to 14 cents per pound; cut, 14 to 15 cents per pound; lard, 12½ to 14 cents per pound.

Fruit.—Apples, 35 to 70 cents per peck; lemons, 20 to 35 cents per dozen; oranges, 40 to 60 cents per dozen; grapes (Malaga), 30 cents per pound; grapes (Catawba), 40 cents per box; bananas, 25 to 35 cents per dozen; cocoa-nuts, 8 to 10 cents; cranberries, 15 to 20 cents per quart; strawberries, $5 per quart.

Butter and eggs.—Philadelphia print, 50 cents per pound; Western creamery, 45 cents per pound; New York, 35 to 40 cents per pound; roll, 25 to 35 cents per pound. Cheese, 12½ to 20 cents per pound. Eggs, 23 to 30 cents per dozen.

Fish.—Perch (white), per bunch, 25 cents; rock, 40 cents per bunch; salmon, 35 to 40 cents per pound; weak-fish, 12½ cents per pound; cod-fish, 10 cents per pound; haddock, 10 cents per pound; halibut, 20 cents per pound; mackerel (bay), 20 to 25 cents per pound; smelt, 12½ cents per pound; lobsters, 15 cents per pound; pickerel, 15 cents per pound; shad, $1 each; terrapin, $3 to $25 per dozen.

Vegetables.—Beets, 3 to 5 cents per bunch; beans, lima, 12½ to 15 cents per quart; cabbage, 10 to 30 cents per head; carrots, 3 to 5 cents per bunch; cucumbers (new), 25 cents to $1 each; squashes, 3 to 5 cents per pound; egg-plants (new), 40 to 60 cents each; lettuce, 5 to 10 cents per head; onions, 40 to 50 cents per peck; potatoes (Irish), 25 cents per peck; potatoes (new), $1 per peck; potatoes (sweet), 40 cents per peck; spinach, 40 cents per peck; turnips, 20 to 30 cents per peck; parsnips, 40 cents per peck; celery, 5 to 15 cents per bunch; tomatoes (new), $1 to $1.50 per dozen; asparagus, $1 per bunch; kale, 25 cents per peck; artichokes, 50 cents each; mushrooms, $1.50 per pound; water-cresses, 10 cents per bunch; radishes, 10 cents per bunch; rhubarb, 20 cents per bunch; mint, 15 cents per bunch.

Poultry.—Turkeys, 20 to 22 cents per pound; chickens (old), 75 cents to $1.50 per pair; chickens (young), 75 cents to $1.25 per pair; ducks, $1.50 per pair; geese, 50 cents to $1.25 each; squabs, $2.50 to $3 per dozen.

Game.—Wild duck (canvas-back), $3 to $4 per pair; same (red-head), $1.50 to $2 per pair; same (Mallard), $1.25 to $1.50; same (widgeon), 50 cents to 75 cents per pair; same (bar), 50 cents per pair.

Do you not see that by the time the average wages earner had put some cheap meat in his basket he would have very little choice of vegetables, while fruit, butter and eggs, fish and poultry, not to speak of game, would be rare luxuries?

I think, Mr. Chairman, notwithstanding all the talk about pauper wages of Europe, your protective tariff gives us small grounds for boasting of the condition of that portion of American labor that is employed in our manufacturing cities.

THE TERRIBLE THREAT OF CLOSED FACTORIES.

Of course your advocates of the "rights of American labor" will continue for some time to have it all their own way against us, while they can fright the souls of wages earners with the terrible threat of shutting up shop if Congress dares to cut down the tariff that gives an American citizen the nominal wages of $1.16 a day. Well, be it so. It can not last much longer. The Mount Sacer of the patricians was never more than a day's journey from the forum. The fable of "the belly and the members" can be read one way as well as another. Reciprocity is as well established as a law of trade, as a law of nature. You can not preserve the health of the nation while you glut the stomach of capital and tax labor to starvation.

I do not think you will many years longer be able to threaten your employés with closed factory doors. There is a limit to human endurance. I heard no such threats in my boyhood days. If I remember rightly, the American laborer of that period felt that he could compete with all the world. We had then a foreign commerce. Our glorious ensign then shone like a meteor over every sea. Who then asked for protection for American trade beyond what the guns of a frigate and an American crew could give it? Our flag was then where England's flag is to-day, in every commercial port of the world; now none so poor as to do it reverence.

PROTECTION OF WAGES BY ACT OF CONGRESS.

We have been so long under the shadow of protection, have so little confidence in our muscles, that we are afraid to lean on ourselves lest we fall to pieces. Moneybags is afraid to move lest he burst, and labor hangs onto a day's work like grim death, while the protectionist mill-owner looks happy at his last cargo of cheap contract labor sailing into port under a foreign flag. This is what your beautiful protective tariff has done for the "land of the free and the home of the brave." I have had enough of it. I want none of your wages tinkering and juggling and thimble-rigging; because I well know that if you double your tariff to-morrow, wages will immediately go down in purchasing power in proportion to the resulting increase of profits to

manufacturing capital. While man is human you can no more regulate the purchasing power of wages than the purchasing power of a dollar. Trade, commerce, the wind, and the rain and God's sunshine fix and change and fluctuate the value of the "almighty dollar." In the hands of the American laborer it is to-day worth 20 per cent. more in Mississippi or Georgia than it is in Massachusetts or New York; and we have no inter-State protective tariffs.

Let us reform in our statutes the horrible fiction under which you legalize the robbery of more than 99¾ per cent. of the American people for the enrichment and aggrandizement of the other ¼ per cent., and then I am with you for the levying of any constitutional tax by customs or internal revenue, or both or either, that will fall equally on the people in proportion to their ability to pay it. The old "direct tax" levied in proportion to population, unjust as it would now be, would be far less unjust than any protective tariff you could invent. I want neither one nor the other; and I want no tax on the necessaries of life while a luxury or large income remains untaxed.

Let us ascertain on a just economical scale the proper amount of revenue required to maintain the Federal Government. Let us then raise, by customs or excise or any other constitutional method, the necessary sum. Let us sink all partisanship in discussion. Abandon the heretical, slavish doctrine of protection of wages by act of Congress, and give repose and comfort to the weary toilers in productive industry. They alone create our wealth. Let us impose the burden of taxation, as far as can be accomplished by legislative ingenuity, upon the classes most benefited by government, and give relief to those whose frugalities we are bound to respect. Let our exactions fall equally, if not as gently, as the dew upon the grass.

In conclusion, let us make it our endeavor while supporting honest administration at the same time to enfranchise labor and give fresh inspiration to liberty. Thus we shall give most eloquent emphasis in this new realm of America to the "universal genius" of commerce, which civilizes to exalt mankind. Thus we shall illustrate that natural justice proclaimed by Vattel—who gave the purest code of taxation—when he urged that all citizens should pay their quota of taxes in proportion to their abilities and the advantages they reap from society for the preservation of lawful authority and the glory of the State.

Thus we will realize in our hemisphere a "New Atlantis" beyond the fancies and prophecies of Lord Verulam, the very picture which John Milton saw in solemn vision of a noble and puissant nation arousing herself like a strong man after sleep and shaking her invincible locks—an eagle kindling her undazzled eyes at the full midday beam, purging and scaling her long-abused sight at the fountain itself of heavenly radiance. [Applause.]

Fitz-John Porter.

SPEECH

OF

HON. WILLIAM C. OATES,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 1, 1884.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 1015) for the relief of Fitz-John Porter—

Mr. OATES said:

Mr. CHAIRMAN: No private bill ever came before the Congress of the United States which elicited so much discussion as the one now under consideration. I should not attempt to say a word in regard to it but for the fact that no one who was engaged in the battle on the confederate side has ever said a word on this floor either for or against the bill, and the further fact that certain gentlemen on the other side of this Chamber have insinuated that no one who was a confederate soldier but now occupying a seat upon this floor ought even to vote on this question.

Sir, no member of this House is in a position to vote on this bill more impartially, more completely emancipated from every bias common to human nature, than those of us who belonged to the confederate army. General Porter was our enemy then, whose skill and daring as a commander we had learned to respect at Mechanicsville, Cold Harbor, and Malvern Hill before we encountered him at second Manassas. Now, in respect to his conduct then we have no more sympathy or feeling than we have for any other brave Union soldier. In the Union Army then and at the time of General Porter's trial partisan politics cut no inconsiderable figure; all know that there were more or less of factions and jealousies.

There was a McClellan and an anti-McClellan party, and Porter, unfortunately for him perhaps, was McClellan's warmest friend. Now, what do I or any other member who was a confederate soldier care about this contention? Both factions were bent upon the destruction of the government we then served. They succeeded, and now I and others are in the anomalous position of having to pass upon the conduct of our late enemy. Have we any motive except to do justice? But some of the gentlemen on the other side seem to insinuate that Porter was guilty of treason to the cause of the Union—wanted Pope to lose the battle and thereby to aid the confederates in their efforts to free the Southern States from all connection with the Union. Let me say to those gentlemen that they have, even at this late day, a very erroneous conception of the material of which the confederate army was composed if they believe for a moment that any one of those brave men who hazarded life and fortune upon the altar of their convictions could ever be in sympathy with a traitor on either side.

Mr. Chairman, in that great war which sacrificed a million of men and billions of money heroes and statesmen were developed, but no Benedict Arnold. It is alleged by some that good taste suggests that none of the "rebel brigadiers" should pass judgment upon Porter's conduct. Why? Are we not American citizens, with all the rights, privileges, and immunities of any other citizens? Are we not here as Representatives of the people of sovereign States? Can we with any sort of propriety abdicate our functions as Representatives because forsooth it accords with the ideas of taste of the gentleman from Ohio [Mr. TAYLOR] and the gentleman from Michigan [Mr. HOBB], and like humiliated cowards stand aside and witness their judgment upon the pending measure? Such a course upon my part would render me unworthy of the generous confidence reposed in me by the people who sent me here. I am not ashamed of my record. The war was the logical consequence of a great conflict of ideas which could be settled by no arbiter but the sword. I, in common with my comrades, made a hard fight, and made it honestly. The award was against us. We accepted it honestly, and to-day I am as true a friend and supporter of the Constitution and Government of the United States as any gentleman on this floor, and will cast my vote on this bill with a proud consciousness of my right to do so, and as a Representative the peer of any other in this Chamber.

Mr. Chairman, I shall vote for this bill, and will as briefly as I can state the reasons which impel me to do so. I belonged to "Stonewall Jackson's foot-cavalry," as we were called. The whole country remembers how General Pope proclaimed his "headquarters in the saddle," and that he "had never seen the faces of the rebels, but only their backs," and that he never secured lines of retreat, that he had no rear, that nothing but disaster and shame lurked in the rear," on his assuming command of the "Army of Virginia." When Lee confronted him on the Rappahannock, about the 22d or 23d August, 1862, General J. E. B. Stuart penetrated to Pope's rear and captured his "headquarters," which happened to be out of the saddle on that occasion, and came so near capturing all the quarters he had, that he got General Pope's coat and important papers, by which General Lee learned that Pope's force present for duty was inferior to his own. Hence on the morning of the 24th Jackson, with his corps, consisting of about twenty-two thousand men, crossed the river north of Pope's right and marched rapidly through Thoroughfare Gap around to Pope's rear, reaching Bristoe Station a little after nightfall on the 26th. We marched sixty miles in two days, with no rations except green corn and half-ripe apples gathered by the wayside. My regiment then belonged to Trimble's brigade, which moved on from Bristoe the same night and captured Manassas Junction, where we drew rations from the Federal commissariat. The next morning General Taylor's New Jersey brigade arrived from this city and advanced on our position, but was soon broken and compelled to retire. Trimble's brigade marched in pursuit to Centreville, a distance of seven miles, and returned the same evening to the junction, where we lay that night.

On the morning of the 28th A. P. Hill's (the Stonewall) division and all of Ewell's, except two brigades, with which that officer remained at Bristoe until he retired before Hooker's advance that afternoon, marched across Bull Run, and turning northward recrossed at the stone bridge, and went into position on pretty nearly the identical ground occupied by McDowell at the first battle of Bull Run. After Ewell arrived from Bristoe, and near sunset, I heard distinctly the cannonading said to have been Longstreet driving Ricketts out of the Thoroughfare Gap, some fifteen or twenty miles distant. I saw a great cloud of dust in the woods to the right and right rear of Jackson's line just when I observed a heavy column of the Union Army moving down the pike across our front in the direction of the stone bridge. My apprehensions of a perilous situation were soon allayed by the arrival of an officer who brought to Jackson a message from Stuart that he was in position on Jackson's right. The order was then given to Ewell to advance. The head of the Federal column halted just east of Groveton, and as soon as the confederate advance began they gallantly advanced to meet us, and thus the bloody three days' battle began. A hard battle was fought that night with no decisive result.

The next morning, Friday, the 29th day of August, 1862, Jackson readjusted his alignment, taking position behind an old and imperfect railroad embankment, his right consisting of Trimble's brigade, at a point northwest of Groveton, and extending east-northeast to Sudley Ford, on Bull Run. During the forenoon there was no fighting except occasional discharges of artillery and picket firing. About the middle of the day I rode out in the direction our right pointed, where I found General Early with his brigade of four Virginia regiments massed in a

copse of woods, placed there by Jackson to guard against an attack on his right and rear. Riding on a short distance, I found at a spring, just under the bluff, quite a number of men, some of whom I knew to belong to Longstreet's corps. I inquired where their commands were located, and they pointed in the direction indicated as that held by Longstreet in General Grant's letter.

When I returned to my command a battle was raging, which I suppose was about 2 or 3 o'clock p. m. Starke's Louisiana brigade had been placed on the right of Trimble's, behind an isolated piece of the railroad embankment, and it was assaulted by a Federal brigade, which came up to the embankment on the other side and planted their colors on the top, where I saw the stars and bars and the Stars and Stripes flapping together in the breeze over two thousand American citizens in mortal combat, and each side apparently resolved to conquer or die. But Trimble's brigade behind the embankment beyond the gap was not so hard pressed, and the right of it, the regiment to which I belonged, fired right oblique to aid the Louisianians, who were then so hard pressed that they laid down their heated and smoking arms and fought with the cobble-stones which lay thick upon their side of the embankment. The contest was unequal, and the Federals retreated, leaving a large number of their comrades behind them. Just as this brigade retreated another assaulted the front of Trimble's brigade, and a major leading his regiment charged his horse up the embankment and fell dead, rider and horse, upon the top of it. But this assault was likewise repulsed. Some half-hour later an assault was made upon A. P. Hill's part of the line and kept up with only short intervals for two hours. This was that part of the field upon which the gentleman from Ohio [Mr. KEIFER] quoted me as saying that, on Sunday after, the dead lay so thickly that I could not ride over it. This was true. There was much hard fighting done upon that field that day.

But, nevertheless, the allegation made in defense of General Porter, that there was no general battle fought by Pope's forces that day is also true. The fighting was gallant and damaging, but it was done by detachments. I did not see a greater number than two brigades of the Union army engaged at one time. It is said upon the other side that without orders Porter should have marched to the sound of the guns and the roar of battle. Gentlemen seem to forget that the fighting was after Longstreet's arrival and when he was confronting Porter. Had he thus marched he would have at once exposed the left flank and rear of his corps to Longstreet, and there would have been nothing then to have detained Longstreet from going into action at once. He used his ten thousand men to the best advantage so long as he occupied the attention and kept out of the fight more than double that number of his adversary's men. The last engagement that day was a second attack, just after dark, made upon Starke and Trimble's brigades; or rather it began just before and continued until after dark, when Hood arrived with two or three brigades from Longstreet's corps, and, taking the Union troops in flank, drove them some half mile and put a stop to the conflict that night. Starke and Trimble's men, worn down by fatigue and loss of sleep and their ranks thinned by the fighting of that day and the previous night, still held their positions against fearful odds, but welcomed with shouts of joy the sound of Hood's guns upon the flank of their assailants.

Now, the only charge against Fitz-John Porter which is worthy of serious consideration in the light of the evidence is the second, to wit: His failure to attack Jackson's right and rear as he was directed to do by the 4.30 o'clock order, which did not reach Porter until near 6 o'clock on the evening of the 29th. Suppose General Porter had obeyed that order, what would have been the inevitable consequence? Had he marched directly to the front with his ten thousand men he would have driven his column squarely against Longstreet with twenty-five thousand. He would consequently have gained nothing, but would have been repulsed with considerable loss.

Some contend that, although this might and most likely would have been the case, nevertheless it would have prevented the re-enforcement by Hood of Jackson, over whom Pope was about to gain a victory. Not so. In the first place the assumption is wrong, for Pope was not anywhere in the neighborhood of gaining a victory over Jackson. The two brigades named as engaged on the night when Hood arrived were well-nigh exhausted, but such was not the case with Jackson's whole corps; and doubtless he would have relieved or supported these with others of his own troops had he not known that Hood would soon arrive. In the second place this reasoning is unsound in supposing that Porter, however vigorously he might have assailed Longstreet, could with his ten thousand men have kept employed and detained Longstreet's twenty-five thousand men, so that Hood could not have gone as a re-enforcement to Jackson. These gentlemen who reason thus seem to forget that Robert E. Lee, the ablest military chieftain that America ever produced, was present and commanding in person, and that he knew that Pope had but forty-three thousand men, while he had over forty-five thousand. Was Lee such a tyro in the science of war as to have permitted Porter to thus baffle him and enable General John Pope to win a victory over Jackson? Why, Pope believed when he issued that order to Porter to attack Jackson's flank that Longstreet and Lee would not arrive before the evening of the 30th, twenty-four hours later than he issued the order, and in point of fact nearly thirty hours later than they did arrive.

Again, suppose Longstreet had not arrived and had not been in Porter's front when he received the order and he had obeyed it to the letter and promptly. He was two and a half to three miles away. He could not have reached the point and made his dispositions for the attack before nightfall. In rear of Jackson's right, less than a quarter of a mile, are the creek and the Bull Run Mountains, and the ground so rough and uneven that the best troops could not preserve an alignment on it in daytime. Early's brigade would have instantly formed a line from Starke's right to the bluff, and Porter could not have driven Jackson from his strong position that night. But as it is not permissible to indulge in supposition in face of the overwhelming proof that Longstreet was at the place now assigned him on the map of the field, what would have become of Porter and his corps had he promptly obeyed Pope's order? To have attacked Jackson's right would have left Longstreet in his rear. In military tactical phrase, he would have placed his command in a *cul-de-sac*, and capture or utter rout and destruction would have been inevitable.

The opponents of this bill, however, say that Porter's case is not improved by confederate testimony. They say that he did not know that Longstreet with a superior force was in front of him. This presents sharply the real issue in this case, that is the animus of Porter—the motive which influenced his non-action on the 29th. Was it an indifference as to whether the army under Pope was defeated or not? Was this the spirit which caused him to remain on the defensive merely? If so, then he is not entitled to the benefit this bill will confer, nor indeed to any relief whatever. Those who have examined the great volume of testimony differ in their conclusions on this point. Before he could legally have been adjudged guilty, the proof before the court-martial should have been so clear, strong, and convincing of his guilt as to have dispelled every reasonable doubt. To begin with, we must indulge the humane presumption of innocence until it is overthrown by proof of his guilt.

It is a maxim of the law, of universal applicability to human affairs because of its reasonableness, that if upon an established or admitted state of facts you can with equal propriety impute a good motive or a bad one for the performance or non-performance of an act constituting the basis of a criminal charge, you are bound to attribute the good motive which makes the party guiltless. General Porter was in a better position to know what was in his front than any or all of his subordinates. Every channel of information was open to him, and the presumption is that he did have sufficient information to justify the course he took. That the course he adopted was, in the light of all the evidence now before us, wise and judicious scarcely admits of question. The evidence, I take it, when construed most strongly against him, still leaves the matter in doubt as to the extent of his information as to the numbers and position of his enemy. How far was his non-action influenced thereby? His criticisms of Pope showed that he had a pretty correct idea of the ability of that officer; but he was one of Pope's corps commanders, and being such, his criticisims were ill-timed and censurable. He looked on Pope pretty much as every one else did, Federal and confederate. He had but little confidence in him or respect for him as the commander of an army, and he did not blindly obey Pope's orders with that alacrity and zeal that he would have obeyed the orders of McClellan or any other general in whom he had confidence. This is a latitude not strictly allowable by military law; but it is in accord with human nature, and in the civilization of modern times, in governments not wholly monarchical, is never punished more severely than suspension from command. This is the worst that can be said of Porter's conduct by an impartial judge. This did not make him a traitor. Kleber was never adjudged a traitor by a court or historian for giving expression to his utter contempt for Lechelle, whose order to his army was to march into action "majestically and *en masse*."

I have referred to his high soldierly conduct previously to the date of the charge. How was it and what was it subsequently? General Pope knew early on the morning of the 30th that Porter had not obeyed his order the evening before. Did he arrest him then and there? No, but ordered him into action, and Porter went and fought with his accustomed gallantry and intelligence, and lost a greater number of men that day than any corps of equal size in the army. A traitor leading ten thousand men in battle under the eye of the commanding general! There is a spectacle for patriots to behold and a problem for philosophers to solve. He retained command of his corps, and seventeen days afterward at Antietam and Sharpsburg led it on the perilous edge of battle. McClellan was removed from command of the Army of the Potomac. Pope had lost a great battle, and the responsibility must rest either on him or some of his lieutenants. An official head must fall; a victim was demanded to satisfy the country. Should that victim be of the McClellan party or anti-McClellan? The latter was in favor with the administration. Porter was selected, and although the members of the court were doubtless honest, yet were swayed by the excitement of war, partisan bickerings, and jealousies to an extent that turned all the presumptions of innocence into presumptions of guilt.

This was not an unparalleled case. Courts-martial are less relia-

ble perhaps than other courts, owing to the circumstances which surround them. While there was more harmony and good feeling among the generals in the confederate army, yet there were courts-martial there. After Longstreet's failure to take Knoxville some one had to bear the responsibility. The commanding general very rarely has the nobleness of soul to assume that, like Lee did at Gettysburg when he said, "Men never fought better, and I alone am responsible."

General McLaws was court-martialed by Longstreet, and tried by a court composed of confederate generals doubtless as honest as those who sat on Fitz-John Porter's case, and he too was found guilty and sentenced. The case went to the president of the confederacy and his cabinet for examination, and the result was that the finding of the court was reversed and set aside and General McLaws restored to command. Courts-martial were not infallible in those days. The chief vice of the argument against Porter is the assumption of the probability that Pope would have gained a victory but for Porter's disobedience. I tell them that such a thing was scarcely within the range of possibility. Pope could make no move on the chess-board of war which would have worked out that result. Forty-seven thousand of the trained veterans of Jackson and Longstreet under the command of Lee in person and in a position of their own selection could not have been beaten by a less number of troops. Forty-three thousand of the Old Guard led by Napoleon Bonaparte and all of his marshals could not have beaten the confederates upon that field. It has always been matter of astonishment to me that Pope made as good a fight as he did and sustained no greater losses, and I have always given the credit not to him, but to the high soldierly qualities of the officers and men of his army.

Mr. Chairman, much force is given to the argument in favor of Porter by the opinions not only of the Schofield board, but of two of the most successful of commanders of armies, Grant and Rosecrans. Now, it is said by the opponents of this measure that to pass it is to reverse history and censure the men who composed the court. Well, if history is false it ought to be reversed. This bit of history says that Fitz-John Porter was a traitor and a coward. I believe both to be false, and as a lover of justice desire to see the truth authoritatively asserted. But such a reversal is not necessarily an impeachment of the integrity of the members of the court. How many thousand times have the judgments of enlightened courts, composed of the most learned and conscientious lawyers, been reversed on appeal and new trials granted by a higher court? Yet who ever imagined that such reversals were a reflection upon the integrity of the lower courts? This is legislation quasi-judicial, and questionable upon no other ground, if indeed upon that, and is in its effects and consequences a retrial before a higher court than that which sat upon his case in this city twenty-one years ago. His case is now being heard before the people acting through their Representatives, and while some of these may not be very competent judges in a case of this character, as charged by the gentleman from New York who has this bill in charge [Mr. SLOCUM], yet there are a much greater number than he admits, who, though not educated at West Point like himself, have received a far more practical education in the science of war than could ever have been imparted to them in that kid-gloved institution of military science, and these can see through this case as clearly, perhaps, as the distinguished and scholarly military gentleman from New York. General Porter may not have been entirely blameless, but it is the judgment of the majority of this House and the country that his punishment has been far greater than his conduct ever merited. It therefore gives me pleasure to vote for this bill as an act of justice long delayed.

Post-Office Appropriation Bill—The Railway Postal Service.

"To persuade my countrymen, as far as I may, that it is not in a splendid government supported by powerful monopolies and aristocratical establishments that they will find happiness or their liberties protection."—*Andrew Jackson*, April 5, 1834.

SPEECH

OF

HON. WILLIAM S. HOLMAN,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 11, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 5459) making appropriations for the service of the Post-Office Department for the fiscal year ending June 30, 1885—

Mr. HOLMAN said:

Mr. CHAIRMAN: The postal service interests every employment of human industry and reaches every fireside of the teeming millions of our widespread population. The great interests involved can only incidentally give rise to party antagonisms, for no party can incur the risk of impairing even for the moment the efficiency of the wide extended system which, in a large degree, underlies the progress of the living age.

The pending bill appropriates the money for the postal system and regulates its expenditure for the coming year. It incidentally deals with the great and powerful agencies which a system now involving an annual expenditure of nearly $46,000,000 necessarily compels the Government to employ. It will be found that these agencies are the principal objects of solicitude and interest in considering the pending bill.

The gentleman from Pennsylvania [Mr. BINGHAM] has charged, and he has again and again repeated the charge, that when providing for material to carry on this great Department the appropriations are liberal, but when providing for the force, the *personnel* and intelligence by which the business of the Department is to be controlled, then a parsimonious and partisan purpose is developed. A mere statement of the facts will dispel the charge.

There are but three items, strange as it may appear after what has been said, where the amount appropriated by this bill is below the appropriation for the present fiscal year, three small items—advertising, miscellaneous expenses, and trunks for registered mail matter—and the aggregate reduction in these items is only $39,000, while in every other instance in this great bill there is an appropriation equal to or in excess of the appropriations for the present fiscal year, the excess amounting, in the aggregate, to $1,772,380. Here, then, are three items of decrease in the appropriations for this year and in one of them—advertising—the reduction of $20,000 is made on the recommendation of the Postmaster-General.

Now as to the *personnel* of this great establishment. First, for compensation to postmasters. Here is a great item; the appropriations for the present year are $9,250,000. We appropriate by this bill for the next year $10,500,000—an increase of $1,250,000.

Take the next important item, letter-carriers, a service which while immensely beneficial to the great cities is at the same time, except in fourteen cities where the free-delivery system is self-supporting, a tax imposed upon the whole people for the local benefit of cities unable to support the system. I am not complaining of it. I concede that in the great cities this free-delivery system is of the highest value and indispensable.

But even here an increase is made, and for this service for the present year $3,500,000 was appropriated, while this bill appropriates $3,600,000 for the next, an increase of $100,000 for letter-carriers alone. Where, then, does the partisan purpose appear?

I now come to the item of post-office clerks. It is the last item to which I shall refer, because I believe it is the only other item specifically referred to by my friend from Pennsylvania [Mr. BINGHAM]. Salaries of clerks in the post-offices, $4,775,000. That is the same as the appropriation for the present year. I admit it is not an increase over the present year, but it is a large increase over the expenditures of the last year for this purpose. The entire expenditure for salaries of post-office clerks last year was $4,367,079. This bill appropriates $407,921 more.

When the present Postmaster-General, a competent and efficient public officer, whose ability and integrity are alike beyond question, recently, as gentlemen are aware, informed the postmasters of the country that they themselves, to the extent of their personal service, must perform the duties of their respective offices; that they should not depend exclusively on the clerks furnished them out of the general appropriation for clerical force, he understood very well the necessity for the order.

Mr. BINGHAM. That had reference to the money-order business.

Mr. HOLMAN. Certainly, but when the Postmaster-General made that order it occurred to me that Congress should cordially support him in a valuable reform. That order was undoubtedly issued upon a careful consideration of the fact that all over this country the moment the necessary clerical force has been obtained, after endless importunity, the postmaster disappears as a part of the working force of the office. You see the tendency to this in every Department of the Government. The steady pressure by which this particular item for clerical force has been increased to $4,775,000 indicates the tendency in the post-offices of the country—clerks to do all the work, and the postmaster, with ample salary, is a gentleman of elegant leisure. The real civil-service reform needed is to stop this everlasting increase in the employés of the Government, this endless increase of salaries, and require the public officers to earn the more than ample salaries you pay them. No other civil-service reform will pay the expense of the experiment. The recent star-route trials disclose how readily lavish appropriations in this important Department may corrupt the public service and open up a carnival of fraud and robbery in the very heart of a great public office.

Thus it appears that in the three items involving in the main the *personnel* of this Department—postmasters, post-office clerks, and letter-carriers—we appropriate by this bill $18,875,000, being $1,350,000 more than was appropriated for the present year by a Republican Congress. Yet gentlemen on the other side of the House, with their accustomed unanimity, cry out, "You are crippling the postal service." Surely this country will not misapprehend the motive for this demand for increased appropriations.

I come at once to the more important features of the bill, the only features I apprehend of real interest in this debate, and the real cause of offense, for I have shown that the appropriations are ample. I refer to the subject of the compensation to be paid to the railroads for transporting the mails. Ten years ago the amount paid to the railroads for this service out of the public Treasury was $8,589,663; for the present year it is $13,275,000, and the estimate for the coming year is $14,375,000, including the postal-car service. We reduce this item $1,075,000. The specific rates for this railroad service were fixed by law on the 3d day of March, 1873, six months before the great commercial crash of that year, and were greatly above the rates of the war period. We reduced them 10 per cent. in 1876, 5 per cent. in 1879, and now by this bill reduce them 5 per cent. more, 20 per cent., in all, from the period of our great monetary inflation. We reduce the rates on the land-grant railroads to 50 per cent. of those allowed to railroads built by private capital.

I think my friend from Pennsylvania [Mr. BINGHAM] did not listen to the incisive and animated speech on Saturday last of the gentleman from Michigan [Mr. HORR], for the gentleman from Pennsylvania tells us how we could have reduced the cost of transportation of the mails by railroads a million dollars on a sounder principle than the reduction we have made by basing the compensation on the space occupied by the mail service in the postal cars, and thus reducing the rate of compensation upon "the little railroads," the mention of which almost brought tears to the eyes of my friend from Michigan when he referred the other day to the wrongs done them by this bill.

Mr. HORR. I was talking of the 50 per cent. reduction.

Mr. BINGHAM. And I was talking about the horizontal reduction.

Mr. HOLMAN. Certainly. The effort made in this bill to oppress these "little corporations" seemed to the gentleman from Michigan one of the things too grievous to be borne, while the gentleman from Pennsylvania was perfectly willing to reduce the rates on the small corporations, but stoutly resisted the reduction on the large—was perfectly willing you should lay a heavy hand upon the small corporations, but insisted that you should let up on the great trunk lines!

Indeed, as to the 5 per cent. reduction the gentleman from Michigan seemed to acquiesce in its fairness, but was most solicitous for the small land-grant corporations affected by the 50 per cent. reduction.

Mr. BINGHAM. The gentleman must not assume because I do not interrupt him that I accept his propositions.

Mr. HOLMAN. No; I take it for granted you do not all the way through.

Mr. BINGHAM. Well, in that you are safe.

Mr. HOLMAN. But, Mr. Chairman, I am glad the gentleman from Pennsylvania, as well as the gentleman from Michigan, virtually admits that on the great body of these railroads the cost of transportation is too great. My friend from Michigan says he does not complain of the reduction of 5 per cent., and the gentleman from Pennsylvania admits that a reduction might be made to the extent of $1,000,000 without injustice; that is, if I understand him correctly.

Mr. BINGHAM. That is, taking the service generally.

Mr. HOLMAN. Certainly; with the great trunk lines of railroad on one side and the little railroads of my friend from Michigan on the other. So I trust we shall have no trouble, at least about this 5 per cent. reduction.

Gentlemen will readily see that if we reduce the rates of the railroad postal service as proposed by this bill, the reduction of more than a million dollars we have made on this item will be perfectly safe. Indeed, it would justify a much great reduction.

THE UNION PACIFIC RAILROAD SYSTEM.

There was an intimation that Congress could not reduce the rates allowed the land-grant roads, and a further argument that it was not fair to do it because it was unreasonable and unjust, and because the reduction does not reach the Union Pacific Railroad system; and I believe my friend from Michigan doubts whether it strikes the Northern Pacific roads. If the gentleman will examine the terms of the bill carefully he will see that it embraces the Northern Pacific; but in view of the opinions expressed by gentlemen touching the Union Pacific system, I ask the special attention of the committee to some facts in connection with the matter and the reasons for the action of the Committee of Appropriations. The Union Pacific system, formerly six, now virtually four corporations, stands alone, and is of special interest to the Government in a great many respects. They are not, according to the decision of the Supreme Court of the United States, to which I shall refer, bound by the provision of the law fixing the rate of compensation for mail transportation under the act of March 3, 1873, or of any law making a reduction enacted since that time. They charge whatever they think proper, receiving the amount that the Post-Office Department is willing and authorized to pay, according to the regular rates paid to other corporations, and demand of you, through the Court of Claims, the balance. They claim that under the sixth section of the act of July 1, 1862, incorporating the Union Pacific system, they are entitled to "fair and reasonable rates" (I mean for the transportation of the mails), and that the only limit is that these shall not exceed the rates paid by private parties for corresponding service. That is the state of their claim, and the result is they demand on countless ingenious devices nearly double the rates you pay to other railroads, excessive as they are. Until 1876 they accepted the same rates that were paid to other railroads for like service, but since then, growing stronger, they have enlarged their demand.

The question as to the right of these corporations to demand compensation beyond that allowed the other railroad corporations, under the postal laws, was carried into the Court of Claims by the Union Pacific Railroad corporation. This corporation claimed in the action that for transporting the mails over its railroad from January 1, 1876, to September 30, 1877, it was entitled to recover $1,168,720.22, including $140,000 for the fares for the postal-car clerks. This was $549,809.68 more than the amount allowed by law to the other railroads for like postal service. The Court of Claims held that the general provisions of law were applicable to this and the other Union Pacific corporations, and allowed $618,910.54 of the claim and rejected the rest, $549,809.68; but the corporation appealed to the Supreme Court, and that court, at the October term, 1881, reversed the decision of the Court of Claims, on the ground that the general laws enacted by Congress fixing the rates of compensation of railroads for transporting the mails did not apply to the Union Pacific system, and that the sixth section of the act of 1862 organizing the system to which I have referred, and under which the corporation claimed nearly twice the compensation allowed by law to the other railroads, governed the rates, and that Congress had not legislated on the subject by way of amending the act of 1862, but withheld any opinion as to the power of Congress to amend the charter and sent the case back to the Court of Claims to adjust the accounts virtually on the basis of the claim of the corporation. Mr. Justice Matthews delivered the opinion of the court.

It will be seen by reference to the case I have referred to that it was decided in favor of the corporation expressly on the ground that Congress had never applied the laws fixing the rate of postal transportation in specific terms to the Union Pacific system.

I have now occasion only to refer, in support of the authority of Congress to amend the two acts referred to and the sixth section of the act of 1862, to the Sinking Fund cases. (The Union Pacific Railroad Company *vs.* The United States, 99 United States Supreme Court Reports, page 700.) I presume there is no gentleman who hears me who fails to remember that famous decision.

Gentlemen will remember that the act of July 1, 1862, incorporating these Union Pacific corporations, as well as the act of 1864, amendatory of the original act, both contained the clause that "Congress may alter, change, modify, or repeal this act," and under this ample power to alter, change, or modify the sinking-fund law known as the Thurman act was sustained in the case I have mentioned. That act was an amendment of the act incorporating the Union Pacific system, and on exactly the same principle and authority the legislation we now propose can and must be sustained. And if it could not be, the monstrous fact would appear that you must pay for all time to a body of corporations created by your bounty, investing a few of your citizens with imperial fortunes, whatever they might exact for the public service you might require, the Government left as now completely at the mercy of the creatures of its own creation, corporations stronger than the Government.

But gentlemen will observe that this bill goes no further than to place this Union Pacific system, composed of the six corporations (the Union Pacific, the Kansas Pacific, the Central Pacific, the Western Pacific, the Sioux City Pacific, and the Central Branch of the Union Pacific), now consolidated into four (the Union Pacific, the Central Pacific, the Sioux City and Pacific, and the Central Branch of the Union Pacific), under the same laws that regulate and control the transportation of the mails by the other railroads of the country, and require them as well as the other railroad companies to transport the mails at a rate 5 per cent. less than is now authorized by law. Why not subject them to the provision touching the land-grant railroads? The Committee on Appropriations are of the opinion that in dealing with the Union Pacific system public interests can be better promoted by amending the sinking-fund act than through any other means. This system stands by itself, and wisdom and firmness can alone save the Government from heavy loss. These six corporations now owe you the enormous sum of $42,569,730.31 interest you have paid on the bonds issued for their benefit, and those bonds, amounting to $64,623,512, due in fifteen years, you will be compelled to pay, with a mortgage on their property inside of yours of an equal amount and due at the same time. The only safety to the Government will be found in a vigorous and ample sinking-fund law firmly administered. The Thurman act is found wholly inadequate. The crafty and unscrupulous devices of the gentlemen to whom you have given excessive fortunes have in effect defeated the law. With the gross earnings of these railroads amounting annually to a sum exceeding $50,000,000, and with dividends up to this time on the two main lines alone amounting to $34,963,479, the Thurman act, which only reaches 25 per cent. of their net earnings, is really set at defiance, and but a trifle over four millions have reached the sinking fund in five years, and that, in the main, simply the amounts they claim at extortionate rates for transportations made for the Gov-

ernment. The Committee on the Pacific Railroads it is hoped will report a bill wise enough and strong enough to secure to the sinking fund a sum sufficient to refund the interest you have paid and meet the bonds when they become due.

THE LAND-GRANT RAILROADS.

Now, Mr. Chairman, one other feature of this bill, and one only, and the most important of all. Is it just and proper to require the land-grant railroad corporations to transport your mails at 50 per cent. of the rates you pay to the corporations whose railroads were built by private capital? I think that it is. I think it liberal, and more than liberal, when the cost in public wealth is considered in the building of these land-grant railroads. I submit a table of the railroads (not including the great Pacific lines) built or authorized to be built under the land-grant system, and affected by this provision.

Grants of land made by the United States to aid in the construction of certain railroads.

	Names of railroads for which grants were made.	Number of miles covered by grants.	Estimated number of acres granted.
1	Atchison, Topeka and Santa Fé	470	3,005,870
2	Kansas City, Lawrence and Southern Kansas	143	800,000
3	Burlington and Missouri River (in Nebraska)	190	2,441,600
4	California and Oregon	291	3,724,800
5	Southern Pacific (Southern Division)	934	
6	Burlington and Missouri River (in Iowa)	279	948,643
7	Minnesota Central	110	
8	Southern Minnesota	167	3,462,403
9	McGregor and Missouri River	150	
10	Hastings and Dakota	75	
11	Chicago and Northwestern		
12	Cedar Rapids and Missouri River	271	1,298,730
13	Winona and Saint Peter (Saint Peter to Watertown)	323	1,852,989
14	Saint Paul and Sioux City	121	1,199,849
15	Sioux City and Saint Paul	122	551,148
16	West Wisconsin	177	999,983
17	North Wisconsin	42	1,408,452
18	Mississippi and Missouri River	317	1,261,181
19	Hannibal and Saint Joseph	206	781,944
20	Illinois Central	710	2,595,053
21	Dubuque and Sioux City	142	1,226,163
22	Iowa Falls and Sioux City	183	
23	Little Rock and Fort Smith	165	1,009,296
24	Memphis and Little Rock	133	804,185
25	Cairo and Fulton		
26	Southwest Branch of Pacific of Missouri	37	1,161,235
27	Saint Louis, Iron Mountain and Southern	514	4,106,647
28	Missouri, Kansas and Texas	183	1,520,000
29	Oregon and California	200	3,840,000
30	Oregon Central	47	100,000
31	Southwest Branch of Pacific of Missouri	37	
32	Atlantic and Pacific	203	
33	Lake Superior and Mississippi River	156	920,000
34	Stillwater and Saint Paul	13	
35	Saint Paul and Pacific	387	4,723,638
36	Southern Pacific (Northern Division)	934	11,964,160
37	Southern Pacific (Southern Division)		
38	North Louisiana and Texas	870	610,880
39	Denver Pacific	106	1,100,000
40	Saint Joseph and Denver City	227	1,700,000
41	Portage, Winnebago and Lake Superior	256	1,800,000
42	Florida Transit Railroad Company	155	1,171,200
43	Florida Central and Western Railway Company	155	1,405,440
44	Louisville and Nashville Railway Company	45	168,960
45	....do	112	433,920
46	Mobile and Girard Railway Company	85	858,624
47	East Tennessee, Virginia and Georgia Railway Company	156	641,285
48	Alabama and Great Southern Railway Company	270	944,640
49	Vicksburg and Meridian Railway Company	95	368,640
50	Mobile and Ohio Railway Company	472	1,286,784
51	Morgan's Louisiana and Texas Railroad and Steamship Company	83	967,840
52	Vicksburg, Shreveport and Pacific Railway Company	76	725,760
53	Saint Joseph and Western Railway Company	226	1,700,000
54	South and North Alabama Railroad Company	183	702,720
55	Chicago, Milwaukee and Saint Paul, La Crosse to Airlie	302	1,787,953
56	Flint and Pere Marquette Railway Company	168	586,828
57	Grand Rapids and Indiana Railway Company	333	921,280
58	Marquette, Houghton and Ontonagon Railway Company	73	755,200
	Total	13,071	85,073,773

I think that it is not unjust or oppressive to apply the provisions of this bill to this great body of corporations. The gentleman from Michigan [Mr. HORR] complains that by this provision you are oppressing the small corporations. Have gentlemen considered that through this land-grant system you have built and equipped, even as shown by the Postmaster-General's report, by your bounty 11,588.56 miles of the railroads I have named?

Mr. HORR. Outside of the Pacific roads?

Mr. HOLMAN. Yes; outside of the Union Pacific system and outside of the Northern Pacific, Texas Pacific, and Atlantic and Pacific roads. The following table presents these great grants grouped together:

Grants of land made by the United States to aid in the construction of certain railroads.

	Names of corporations.	Number of miles covered by grants.	Estimated number of acres granted.
1	Kansas Pacific	638	6,000,000
2	Central Pacific	737	7,997,600
3	Western Pacific	123	1,100,000
4	Central Branch of the Union Pacific	133	804,185
5	Sioux City Pacific	101	41,398
6	Union Pacific	038	12,000,000
7	Northern Pacific	1,317	48,215,040
8	Texas Pacific	2,870	14,000,000
9	Atlantic and Pacific	1,755	49,244,803
	Total	7,712	139,403,026

Mr. Chairman, it will be seen the aggregate length of railroads for which the grants were made is 20,803 miles—13,071 miles independent of the 7,732 mileage of the Pacific roads; and the report of the Post-Office Department shows that last year the Government paid on 11,588.56 miles of land-grant railroad, independent of the Union Pacific system and the great body of lapsed grants, $1,144,323.91 for postal service. The startling fact appears that in the gradual development of these grants, great as they are, they still swell in their proportions. I pointed out on a former occasion the startling discrepancies that appear in the official statements of these grants, and can only say now, as I did then, that in such enormous grants a few million acres either way is perhaps considered of no moment; but the corporations will lose nothing by this uncertainty. It will be seen that in many instances the name of the original corporation is lost by new combinations.

The gentleman from Michigan [Mr. HORR] says on the one hand we are taking away from these land-grant railroad corporations the lands granted to them, and on the other we are reducing 50 per cent. the compensation which they are to receive for the transportation of the mails. The gentleman is mistaken. If the railroad corporation does not receive the benefit of the land grant and the road was not built in whole or in part by your bounty, the law does not apply to it. To the extent that a given grant shall be declared forfeited the reduction prescribed by this bill will not apply. To the extent that these roads have been built by your bounty, why should not the fact be considered in determining the rate of compensation they should receive for services rendered the Government?

Mr. HORR. Will the gentleman permit me to ask him one question?

Mr. HOLMAN. My time is limited.

Mr. HORR. The statement you have just made is misleading, but I do not want to interrupt you.

Mr. HOLMAN. But the gentleman from Michigan says there is a reason why you should not act as he deems oppressively in dealings with the land-grant roads. He says that you did not make these grants with the expectation of any benefit being returned to the Government; that you did not expect your property and mails to be carried free, or at reduced rates; that you did it for the sole purpose of opening up the wilderness.

A large body of the citizens of Michigan differ with my friend, and in a memorial to this House, speaking of the Marquette and Ontonagon Railroad land grant, say:

> And we further assert that, with the rapid, almost alarming, absorption of the public domain by the instrumentality of grants of lands to aid the construction of railroads and other works of internal improvement, a strong current of public sentiment has set against all special legislation of this character, imperatively demanding the repeal of all unearned grants—a demand that can no longer be safely ignored. And the party that does ignore this issue will be held strictly responsible for its action before the people at the polls of every national election in the United States until the evil is rooted out. No evasion will satisfy. The issue must be squarely met.

What are the conditions on which these grants were made? What rights has the Government reserved in giving away the common wealth of its people? There are some reservations, two of them, meager and inconsiderable I admit, but still something. In all of these grants, running through all these years, these are the conditions, varied somewhat in terms, but still substantially the same:

> And the said railroad shall be and remain a public highway for the use of the Government of the United States, free from all toll or other charges upon the transportation of any property or troops of the United States.

This is the first right reserved to the Government; and even here in the beginning is a fraudulent purpose. Undoubtedly Congress understood by those terms that the railroad should transport the "property and troops" of the United States free of charge; but you observe a

slight ambiguity in the language, and under this ambiguity the Supreme Court has decided that the Government has the right to put its own locomotives and cars on these railroads and by its own employés transport its property and troops free (which of course is impracticable), but if the railroad transports the Government's property and troops, then the Government shall pay the railroad company 50 per cent. of the usual rates of transportation. This was decided in the case of the Atchison, Topeka and Santa Fé Railroad Company vs. The United States, and yet the land grant to that company was made four years after Congress had, by a joint resolution I had the honor to introduce in 1862, declared that the meaning of the terms employed in that reservation was that the land-grant corporation "should transport the property and troops of the United States free of charge."

The other right reserved in all these grants is in less ambiguous language and in all the same in substance:

The said railroad shall transport the mails of the United States at such price as Congress shall by law direct.

Now, these two provisions cover all the rights reserved to the United States in consideration of these imperial grants. Contrary to the manifest intention of Congress, these corporations have under the extraordinary decision I have named received millions of dollars from your Treasury for transporting your "property and troops," and are still annually receiving large sums and will for all time. But, as I have shown you, we have the clear and unquestionable right to fix the rate at which these land-grant roads shall transport our mails.

There are other grants, which I have not included in either of the foregoing tables, where not a spadeful of earth has been dug in the construction of a railroad, yet the lands are withdrawn from settlement and claimed by the corporations, although the grants were long since forfeited. The forfeiture of these grants will of course be declared. Of all of these grants near 109,000,000 acres, including over 16,000,000 this House has already declared forfeited, are beyond any reasonable question forfeited, and the declaration of that forfeiture by Congress is demanded by the highest consideration of public policy, common honesty, and justice to the people. Even to the extent these land-grant railroads enumerated in the first table were completed you paid them, as I have shown, last year $1,144,323.91 for transporting your mails. This bill would as to these roads, to the extent they are entitled to the lands granted and including the Pacific systems, save to the Treasury annually, I think, near a million dollars, perhaps more; but the restoration of the forfeited grants to the public domain is of far greater moment than any such monetary consideration; so that this bill cautiously declares that none of its provisions "shall be construed to waive or impair any right now existing in favor of the United States." While these corporations generally withhold the obtaining of patents for their lands to avoid local taxation and are in the main holding their lands until the Government lands shall be exhausted, they still had taken out patents up to June 30, 1882, for 47,745,941 acres. If in the adjustment of these vast grants they obtain over 70,000,000 more, it will be because incorporated wealth is stronger in controlling our affairs than the sense of justice and public duty which controls this Government in maintaining the rights of its people. So patents have already issued up to June 30, 1882, date of last specific report, for 47,745,941 acres, a territory in the aggregate as large as the two great States of Indiana and Ohio combined and nearly a half million acres more. And this is already done. In the last admirable report of the Commissioner of Public Lands we are told that during the last year "twelve railroad patents, covering one hundred and twenty-four pages of record, were issued." Yes, sir; and instead of these vast fields being covered with cheerful homes and a great multitude of prosperous and independent citizens, a handful of men became the proprietors of landed estates dwarfing the baronial possessions of Europe.

But the fact must now be apparent that no demands which the Government could make on these corporations for the free transportation of the mails, property, and troops, now and for all time, could compensate this Government and its people for the lands it has granted. The legislator who considers the mere monetary value of the land granted, enormous as it is, takes a very superficial view of the subject. Had the value of these vast millions of acres been granted in money from the public Treasury or been expressed in bonds issued by the Government payable in money, the only evil to our free institutions would have been the granting of great fortunes by the special favoritism of Government to a portion of its people at the expense of their fellow-citizens. (All monarchies present examples of this policy.) The evil, great as it might be, would not go beyond this, and an honest and earnest vigilance of the people would and could in the progress of time correct it. But the giving away in vast tracts to the favorites of Congress of the fertile lands which, on any just conception of our free institutions, ought to be the freeholds of our people, advancing the price of these lands beyond the reach of the laboring and landless men of the present period and early future, is an evil that admits of no remedy except revolution. To make these grants on the pretense of progress and opening up the wilderness to the developing power of labor, to give labor a chance, is to invite to our shores the theory of the Middle Ages, baronial estates, baron and serf, the power of the one to shelter the feebleness of the other! Was it through imperial grants the great country from the Atlantic Ocean to the Alleghany range was settled, and thence onward to the Mississippi, with a prosperous people, remarkable for the rugged virtues of their manhood, but still more remarkable (and without a precedent in history) for the general equality in their material possessions? Here was seen the natural outgrowth of our free institutions.

But the evils of this system are not limited to the withdrawal for all time from the great body of our laboring and landless people of more than 200,000,000 acres of public lands (a territory in the aggregate equaling in extent ten such States as Indiana); nor in creating corporations so great and powerful that they pervade every department of your Government, tampering with official authority and claiming the benefit of every doubt, putting the Government itself at defiance; nor in the creation of overgrown fortunes, which enter the controlling departments of your Government through States organized under the auspices of these corporations and exercise judicial, executive, and legislative power. No, sir; the evil does not terminate there, but under this perfidious system of progress, as an inevitable and natural result, land monopoly runs riot, the land jobbers hold high carnival, and the lands left after taking out the great grants, the lands left under this treacherous system for the people, are seized upon by the vigilant land-jobbing capitalist and his skillful and unscrupulous agents. Your land-grant roads everywhere meander through your most fertile lands, on the margin of rivers and through fruitful valleys, and even before the laboring men, your landless people, the men who long to become, with their wives and children, *bona fide* settlers of the new country, are able to turn their faces westward the remaining lands—every fertile valley, every inviting field, even the alternate sections reserved in the land grants, and far beyond—are taken up section after section, swelling into great private estates; and your pre-emption law, through fraud and perjury, is made to do service in this most infamous proceeding. Opening up the wilderness! For whom? The *bona fide* settler, whose labor would make the land fruitful and whose children, reared in virtuous industry, would give strength and stability to their country? No, sir; to the land-jobber and the land-holding barons who move so naturally alongside the land-grant corporations. You may travel for hundreds of miles even in Dakota, and, although you see no human habitation, every acre of the land has already ceased to be a part of our once grand public domain; in vast and solitary regions not an acre left for the settler. Under the old-time, honest system of our fathers and of the early period of our age every quarter-section entered would have been adorned by the home of an independent freeholder and the presence of his wife and children. Time will develop the great landed estates your land-grant system has rendered possible, even if that was not its original purpose, and will call down upon it the execration of mankind. Even now a list of some of them is made public. How does even this list become a republic? I clip the following from the San Francisco Daily Examiner, a leading journal on the Pacific coast:

THE GROWING MONSTER.

Besides the millions of acres belonging to railroad and other corporations, the amount of land that is being acquired by foreign capitalists and landlords is fairly amazing. Ireland is to-day groaning beneath the yoke of oppression, and not many years will roll around before the American tenant, upon his knees, will also look up into the scowling face of his master and acknowledge his obedience. Following are a few of America's foreign landlords, and the amount of their holdings expressed in acres:

The Holland Land Company, New Mexico	4,500,000
An English syndicate, No. 3, in Texas	3,000,000
Sir Edward Reid and a syndicate, in Florida	2,000,000
English syndicate, in Mississippi	1,800,000
Marquis of Tweedale	1,750,000
Phillips, Marshal & Co., London	1,300,000
German syndicate	1,100,000
Anglo-American syndicate, Mr. Rogers, president, London	750,000
Byran H. Evans, of London, in Mississippi	700,000
Duke of Sutherland	425,000
British Land Company, in Kansas	320,000
William Whalley, M. P., Peterboro, England	310,000
Missouri Land Company, Edinburgh, Scotland	300,000
Robert Tennant, of London	230,000
Dundee Land Company, Scotland	247,000
Lord Dunmore	120,000
Benjamin Newgas, Liverpool	100,000
Lord Houghton, in Florida	60,000
Lord Dunraven, in Colorado	60,000
English Land Company, in Florida	50,000
English Land Company, in Arkansas	50,000
Albert Peel, M. P., Leicestershire, England	10,000
Sir J. L. Kay, Yorkshire, England	5,000
Alexander Grant, of London, in Kansas	35,000
English syndicate (represented by Close Bros.) Wisconsin	110,000
M. Elierhauser, of Halifax, Nova Scotia, in West Virginia	600,000
A Scotch syndicate, in Florida	500,000
A. Boysen, Danish consul, in Milwaukee	50,000
Missouri Land Company, of Edinburgh, Scotland	165,000
Total	20,747,000

Twenty million seven hundred and forty-seven thousand acres! And the land-grant system was to enable the *bona fide* settler to reach the public land! I admit the railroad land grants are not responsible for two of the purchases set forth in the above list, but, omitting those, here is a territory which in the aggregate is nearly as large as the great State of Indiana, held by foreign corporations, lords, and capitalists, every acre of which, the two tracts omitted, I am assured is within the land-grant regions, and entered unquestionably through the aid of that

infamous system. I have before me a list of land purchases by thirty American capitalists in the land-grant sections, ranging from 25,000 to 2,000,000 acres, aggregating 7,427,000 acres. For what purpose did the Northern Pacific corporation invite the nobility of Europe to the recent festivities attending the pretended completion of that railroad except to invite attention to the princely possessions it could place within their reach? But why enter into detail? Did any member of Senate or House who supported those grants, making grant after grant until they permeated every fertile region of the public domain, and until the public voice changed the political sentiment of this House, expect any other result? Thus, sir, a magnificent public possession, the grandest on the face of the globe, which, under the statesmanship of any of the great political parties which controlled the destinies of this Republic prior to 1861 would have furnished a safe retreat and shelter for labor, happy and prosperous homes for independent freemen for generations to come, has been turned over to an accursed monopoly within so brief a period as twenty-two years. The homestead law, the wisest and most humane act of legislation since Moses pronounced the law that nourished into manhood the most masculine fragment of the human race: "Ye shall divide the land by lot for an inheritance among your families; to the more ye shall give the more inheritance, and to the fewer ye shall give the less inheritance"—the homestead law! What a mockery of human hopes! Before the hour for its real triumph had come Congress, in the recklessness of absolute power, yielding to the sordid motive of coining the common wealth of the people into private fortunes, had granted to monopoly the wealth in homes and human happiness the homestead law was intended to diffuse. The Indian reservations and forfeited grants are about all that is left.

Do gentlemen who defend this land-grant railroad system and complain so bitterly that we are seeking to impose unjust burdens on the men who have obtained the benefit of these grants forget, in estimating the value of those grants, that in a government like ours homes and intelligence are not only necessary to the well-being of the whole people, but indispensable to the peace and order of society and the stability of government? Do they think that a system can be inaugurated by Congress by which a few skillful and ingenious gentlemen may monopolize imperial wealth out of the common inheritance of the people and open up opportunity by which the greater portion of the lands of the Republic adapted to agriculture and the blessings of homes and of independent freeholds can and will with absolute certainty be seized upon by foreign and domestic capitalists, and the price thus advanced beyond the reach of the greater portion of our people, without inflicting a deadly wound on our free institutions and the rights of laboring men?

Does any intelligent man believe that our system of government can be maintained without the great body of our people being independent freeholders? And yet this land-grant railroad system, by its own direct monopoly of the public lands and by the opportunities it has opened up for capitalists and corporations, European as well as American, to monopolize them, has even now almost exhausted that portion of the public domain adapted to agriculture, rendering it absolutely certain that throughout a vast region the plow will not be "in the hand of its owner," but landlord and tenant, great estates and squalid poverty, will curse the land. Nothing but forces and currents now hid from our view can prevent this. So the rigid parsimony of our fathers in hoarding up these public lands for their posterity becomes the dishonor of their children; for it must be remembered that up to 1862, when this fatal and venal system was entered upon, the entire grants for internal improvements from the 17th day of September, 1787, to the 4th of March, 1861, made exclusively to States, not an acre to corporations, was but 31,600,846 acres, including the grant to the Illinois Central, so often mentioned, of three and one-quarter millions of acres—large for that period; how trivial for this!

With the public land exhausted, disposed of in immense grants or at nominal prices to foreign and domestic capitalists, then, and not till then, the period of peril to this Republic will begin.

Have gentlemen considered the extraordinary yet silent influence these unshorn, fertile, and virgin lands have exercised through all the years of our history over our people? They have been from the beginning not only the cause and the source of our prosperity, but, more than that, the cause of the unexampled internal and domestic quietude and repose we have enjoyed, under the shelter of which our greatness has been achieved. Where in all the world's history have a people through more than a century been so greatly exempt (only excepting the inheritance of African slavery) from internal strife? How seldom through all these years, though prolonged periods of commercial and industrial depression have often occurred, has labor, even in limited fields and for a brief period, like a swarthy giant in despair, girded up its loins for a struggle against oppression. Yet at times a loud cry for bread has been heard in our cities, and no overmastering army has stood ready to strike. I do not assert that the absence of disorder and unrest, which in other nations have organized standing armies and navies, is with us to be attributed exclusively to the existence of our public domain and the hope and confidence it inspired, for other great causes have contributed to that end; but I do assert that in the greatest degree the internal peace, order, and well-being of our people can and must be traced to this great common wealth of lands, which from the beginning has arrested the attention, animated the courage, and inspired the hope of the laboring men of this country. Cheap lands, the hope of home and fireside, and independent manhood have been our standing army and watchful navy, guarding for more than a century the repose and order of the American people.

For generations the towns and cities and mining regions east of the Alleghanies, and in more recent years westward of that ancient landmark, have swarmed with workmen in the countless industries of the forge, the loom, the mine, and the workshop; the overcrowded rural population have swarmed into your towns and cities; everywhere thousands upon thousands of industrious and strong men have been barely able to keep the wolf from the door. Have gentlemen considered the humane and hope-inspiring influence of the great public domain on the lives of this great and ever-growing multitude of our people? Follow the weary workman into his rented and cheerless tenement, furnished with the bare necessities of life; see him as he sits moodily at the fireside with his poorly clad and scantily fed wife and children around him—how dreary and cheerless! But in the midst of his hopeless despondency let the old hope revive, hear him talk of the oft-considered plans, by saving and scrimping year after year (cheese-paring, if you please, even on the bare necessities of life), to raise means necessary to emigrate to the once free fields of the West, and see how poverty and wretchedness vanish and hope revives, while visions of a blessed homestead, with its cheerful fireside, an honest and manly freehold, with green fields and lowing herds, and, above all, happy and hopeful children and prosperous and peaceful old age, give new courage to the man and bring a gleam of gladness to the weary heart of the careworn wife! Who shall say how many millions of laboring men, buoyed up by the hope your grand public domain inspired, have thus, through the patient savings of years, gone westward, and as independent and prosperous freeholders aided in developing that widespread field of human happiness stretching westward from the Alleghanies, where the public domain began, or how many millions more have toiled on inspired at least by the blessed promises of hope? Yes, sir; far beyond the hopes ever realized, your public domain has been a source of energy, industry, and peace.

Mr. BELFORD. I would like to ask the gentleman a question.

Mr. COX, of New York. Do not yield, Judge; go on, your time is running out.

Mr. HOLMAN. My friend from Colorado will have to excuse me; I can not yield now.

The States formed and settled within the public domain under the old system are and have been from the beginning alike remarkable for their prosperity and the diffusion of their landed wealth; those formed and forming under your legislation of the last twenty-two years are smitten with the deadly blight of the Old World, the curse of the Middle Age—land monopoly—the hope of labor blasted by its overshadowing and baneful power, while wealth stalks into the council chambers of the Government at its own volition and manhood stands silent and abashed!

Do not the gentlemen know that this vast wealth which attends the apparent prosperity of this period is not the wealth that gives greatness and strength to a republic, but the wealth that builds palaces, undermines the foundations of free government, and wrings from the heart of labor the cry of despair? With the public lands exhausted, with the remnants of the Indian tribes despoiled of their reservations, and the lands seized upon by capitalists and merciless speculators (except so far as you have pledged them in advance to the railroad corporations), and lands everywhere advanced in price beyond the reach of laboring men, with the hope of better fortune and of independent homes dying out of the heart of labor, with men fully conscious of the wrong you have done them by your legislation, can the peaceful order of society be hoped for as of old? I am not astonished that gentlemen deem this early hour an opportune moment to urge the policy of a great navy; it will come, if it does come, in the natural order before a great army. Capital is timid and full of suggestions; the Navy is the most remote, but I am not surprised that here and there comes also the intimation that your Army is too small. These too may be some of the bitter fruits of your imperial grants. I fear that it will be seen soon enough that when you have destroyed the very foundations of security and hope upon which labor has rested so long, the old time repose and peaceful order will be no more. Gentlemen should not forget that the wrong that has been done to laboring men and their children by giving over their natural inheritance to an accursed monopoly will in due time be considered by the most intelligent body of laboring men who ever debated a public wrong—men fully aware of their rights and capable of asserting them.

I have been unintentionally led into this discussion of the results of the land-grant railroad policy by the assumption of gentlemen that that policy was wise and beneficent, and that the Government should treat with kindly consideration the corporations which have obtained the benefit of these grants; but I know of no subject which so imperatively demands the earnest consideration of Congress; and this House has I think most wisely given this great question of the public lands and forfeited grants a commanding position. For myself, I demand, in the name of every laboring man in America, that these corporations whose

railroads were built and equipped by your bounty shall bear public burdens on the basis of the benefits you have so lavishly bestowed on them. These corporations to the extent they fulfilled the terms of the grants will hold them until our ever-swelling population and the labor of our millions of laboring men in every field of human industry shall have enhanced their value. To this extent there is no remedy for the evil done. But common justice to the whole people and the highest public policy demand that to the extent that default has been made by the land-grant corporations the forfeiture should be sternly declared and the lands restored to the public domain. I indulge the confident hope and belief that before this Congress shall adjourn this House at least will have declared the forfeiture and restoration of over 100,000,000 acres of these grants to the people, and with every acre of the public land adapted to any form of agriculture placed under the safeguard of the homestead law alone; all that remains of our once great inheritance will at least be secure. I can not doubt that the people with one voice will command that it shall be done.

But, Mr. Chairman, no remedy can be complete. The evils done to our free institutions by this indefensible legislation of Congress will survive the memory of the men who passed the laws as well as of those who at every step resisted their enactment. A great monopoly of land admits of no remedy; it is a crime against the human race and deserves the execration of mankind. No time can palliate the wrong. No, sir; when the time shall come to consider and write the history of these grants and the measures of public policy you have gathered around them, when the fruits of that legislation shall have ripened in all its bitterness, the philosophical historian will pause with astonishment at this robbery of the common inheritance of our people. How could it happen that, after the public lands had been guarded against monopoly for near a century with sleepless vigilance for homes of successive generations, shoring up free institutions by the freehold of the citizen, a party which in its first advent into power was capable of enacting so wise a measure as the homestead law should go back on all the traditions of the Government and within fifteen years after its advent into power turn over to soulless monopoly and heartless speculation the grand inheritance of the people? Of course there has been and will be a marvelous development of resources, towns, and cities; but out of it all there rises up a deadly presence in a republic—private estates greater than any king in the plenitude of power ever conferred on a favorite; wealth and perpetual franchises, arrogant and exacting, cautious and timid, intrenched as in a citadel in every department of your Government, and silently controlling every avenue of power; while in the near future—how humiliating the thought!—millions of our people with their wives and children homeless and miserable, who but for these overgrown estates would have been independent freeholders with prosperous and happy homes adding to the stability and true glory of their country.

The legislation that fosters the wealth of the few and facilitates the growth of private fortunes out of the common wealth of the Republic is a harbinger of dishonor and decay to free institutions; that which firmly upholds the equal rights of all men to protection and justice, and leaves all else to the enterprise and industry of the people, diffuses wealth and elevates all silently and surely as the dews of heaven fall upon and refresh the earth. The one appeals sooner or later to the arbiter of power for support; the other, to the heart of the human race. Free institutions could not survive for a century the theory of government in its complete development unrebuked by the public voice, which rendered these extraordinary grants of the public lands to favored citizens possible. The words I have more than once quoted on this floor, uttered by Saint Pierre, the humane philosopher of France, as he stood on the verge of the first great revolution of his country and beheld with aching heart the miseries of its people, are true: "Great estates destroy the spirit of patriotism in those who have everything and those who have nothing."

The Bonded Extension Bill.

SPEECH

OF

HON. SEABORN REESE,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 20, 1884

The House being in Committee of the Whole, and having under consideration the bill (H. R. 5265) to extend the time for the payment of the tax on distilled spirits now in warehouse—

Mr. REESE said:

Mr. CHAIRMAN: Before entering upon the discussion of the merits of this bill I desire to make an explanation. A few days ago, when an effort was made to call this matter up for consideration, yielding to the earnest appeal of my distinguished friend from Kentucky [Mr. WILLIS], the zealous advocate and author of the bill, I voted with him. In doing this I was actuated by a spirit of fairness to the measure and friendship for that gentleman. At the time, however, I distinctly stated to him that I was unalterably opposed to its passage and should vote against it.

Mr. WILLIS. Nothing needs be added to that statement. I only desire to say, in justice to the gentleman, that it is the exact fact, and we are very much obliged to him for helping to give us a hearing on a great question.

Mr. REESE. But, sir, when its friends continued to press it upon the attention of the House, and not desiring in any way to be responsible for the enactment of any such law, should the bill by any possibility pass, I declined to give them further aid. This much I felt was proper for me to state, in order that no misunderstanding could arise as to my position.

Mr. Chairman, I now propose, in the ten minutes so kindly yielded me by my colleague, to discuss the merits of the bill and succinctly give my reasons for opposing its passage. I regard this in many aspects the most important question that has come or is likely to come before this Congress. The suspension of the collection of taxes imposed by law is always a grave matter and should be most deliberately and seriously considered before undertaken. I do not believe that the collection of any tax should be suspended, or the person or interest relieved from its payment, except in extreme cases. Indeed, I do not think it wise in any instance.

All taxes, whether specific or general, whether levied by the Federal Government, a State, county, or municipality, are intended to raise revenue for the support and maintenance of that government, the citizens receiving as a consideration its protection in the enjoyment of life, liberty, and property. Nor is it competent for the subject to determine the necessity of the levy.

When we once depart from the rule requiring the prompt payment of taxes, be their character what they may, we at once involve ourselves in a labyrinth of difficulties, we impair the protective power of the Government, we expose ourselves to the danger of partial legislation, we convert Congress into an immense relief committee, and we engender in the minds of the people a feeling of expectancy if not a hope of relief. Therefore I think it wiser for the Government and better for the citizen to lay down a Procrustean rule requiring the prompt payment of all taxes without exception. Then the machinery of government moves smoothly on, unclogged by the impediments of departure. The propriety and wisdom of adopting such a course can never be better demonstrated and illustrated than by the bill now under consideration. The law now requires the tax on whisky in bond to be paid within three years from the date of entry or at the time it is withdrawn for consumption. There is now due the Government the taxes on 70,000,000 gallons of whisky, which at 90 cents a gallon, as provided by law, amounts to the aggregate sum of $63,000,000.

By this bill we are asked to change existing laws by extending the bonded period on whisky for two years. In other words, we are called upon to relieve the owners of this whisky from the payment of that amount of taxes for that length of time—a request as marvelous as it is startling. But when we remember that in 1878 this same interest received at the hands of Congress similar relief, it will not seem altogether strange, fortified as it now is with precedent and a plethoric treasury, that it should again be insisting upon further indulgence. Without meaning or intending to criticise the individual conduct of members of that Congress, I am constrained to say that their action was wrong, as is abundantly shown by subsequent events. Two wrongs never make a right.

The friends of this bill tell us that the owners of this whisky, a large majority of whom are bankers, bought in good faith, believing that there would be a sufficient demand to enable them to sell; that by reason of an overproduction of whisky the markets of the world have become gorged; that there has been a shrinkage in value; that there is no demand for the bulk of this immense stock; and, finally, they say to us that unless we grant the relief prayed for these men will be bankrupted and a financial crash will come upon us.

Sir, this same argument was urged with equal earnestness upon the Forty-seventh Congress when a similar bill was pending. More than twelve months have elapsed, and still they live. No panic has come or bankruptcy ensued as was then predicted upon the failure of that bill. Nor do I believe that the horrible consequences so graphically depicted by the friends of this bill will occur upon its certain defeat.

Mr. Chairman, I always regret the misfortunes of my fellow-man, and while I earnestly and truly sympathize with these men and all others in distress, it matters not with me from what source it comes, whether from misfortune, affliction, or financial embarrassment, yet these are not sufficient reasons to influence my conduct as a public servant or cause me to hesitate in the discharge of what I conceive to be a public duty.

Considering this question from a business standpoint, as I am requested by its friends to do, after a most careful and diligent inquiry I am unable to discover any essential difference between the purchasers of this whisky and any other class of speculators. Indeed, if difference there be, I regard them more favored than the speculator ordinarily is, in that they knew at the time of their purchase almost with mathematical accuracy the amount of whisky that would be con-

sumed annually. A rare privilege, indeed, and one that few traders enjoy. Instead of learning lessons of wisdom from their past experience, instead of availing themselves of the indulgence so beneficently bestowed by Congress in 1878, the distiller, encouraged by these purchasers, recklessly continued to increase the production of whisky at the rate of 30, 60, and 90 per cent. annually, until perhaps the last year. In 1879 they made 71,000,000 gallons; in 1880, 90,000,000 gallons; in 1881, 117,000,000 gallons; in 1882, 105,000,000, and in 1883, 74,000,000 gallons more than the country required.

Sir, such conduct, instead of commending itself to the favorable consideration of this House, deserves at its hands the severest condemnation.

Again we are told by the friends of this measure that these men do not ask, nor do they expect this relief to be bestowed as a donation or gratuity by the Government, but that they propose to pay 4½ per cent. interest for the indulgence. Sir, we are asked to take money out of the pockets of the people of this country who are carrying State, county, municipal, and individual debt obligations bearing an average rate of interest of 8 per cent., and loan $63,000,000 of it to these whisky speculators at 4½ per cent. Was ever a proposition so monstrous submitted to an intelligent House of Representatives? I would invite my friends, the advocates of this bill, to a business reflection upon this proposition, and ask them in all candor and fairness if they believe a business man would entertain it for an instant of time. Then away with your suggested business view. I find in our Constitution ample authority for the Government to borrow money for legitimate governmental purposes, but I have searched in vain for that provision which authorizes it to loan money.

I claim no gift of prophecy; but pass this bill if you will, make the Government a partner of these whisky-men, liable in common for the losses without participation in the profits, and, my word for it, we will no longer have reason to complain of a surplus in the Treasury. I, for one, will never give my consent to make the Government a partner in any private business enterprise. Laws should be general in their operations. To grant the relief asked for in this bill would be class legislation pure and simple. It would be wrong in principle, dangerous as a precedent, and destructive of every governmental regulation.

Sir, there is not a single reason assigned by the friends of this measure going to show the propriety of its passage that could not with equal force be urged for the relief of every business interest in this country. Why, then, should this particular interest, in which the profits are perhaps larger than in any other in the world, be singled out as the ward of the nation and her broad arms of protection thrown around it? Why not extend the bounty of the nation to the other industries of this country which are now tottering and reeling under the burden of overproduction? Why not with equal propriety go abroad in this land among the 7,000,000 of debt-ridden and tax-burdened tillers of the soil, who contribute so largely to the material wealth and prosperity of the nation, and dispense your charity?

Sir, while every other interest has its friend, its protector, and its defender upon this floor, there is none so bold as to champion the cause of the driver of the plow and slinger of the flail.

But it is said by the friends of this bill that an invidious discrimination is made against this product; that an exception is even made in the case of tobacco and malt-liquors, upon which a special tax is also imposed but not required to be paid until it goes into consumption. This, sir, leads us to inquire why the exception is made. When the law imposing internal taxes was first enacted, all these taxes were paid when the article upon which they were levied was sold and went into consumption.

In 1868, on account of the colossal frauds practiced by the "whisky ring," Congress was induced to change that policy and adopt the limit of one year. This continued without complaint until 1878, when, at the instance of these very men, a period of three years was fixed. The wisdom of this requirement is not now debatable. "*Ita lex scripta.*" If the law be an unwise one, if its requirements be harsh and unjust, the remedy is not a suspension of its operation, but an absolute repeal.

While I can not obtain my consent to vote for this bill, yet if the condition of the owners of this whisky be as perilous and distressing as represented on this floor, let me say to them that while I can not come to their present relief, I have a panacea for their future woes. And I now invite their friends and this House to join me in an honest effort to repeal the whole internal-revenue system. [Applause.]

It has been intimated on this floor and noised around that a repeal of the internal-revenue tax would necessitate a higher import duty. This I do not now propose to argue. But if I have learned anything from the discussion of my political friends on tariff reform, it is that to a certain limit the lower the duty the greater the revenue, and the higher the duty the smaller the revenue. Be this as it may, I am convinced of one fact, and that is, if we would have intelligent tariff legislation there is no shorter or surer road to that much-desired end than a repeal of the internal-revenue tax system. With this fluctuating source of revenue out of the way, with a definite knowledge of the wants and necessities of the Government, the adjustment of the tariff is at once made easy. But so long as we allow this tax to remain we are left in doubt and to speculation.

The main object in establishing the present Constitution was to allow Congress to raise revenue by duties upon imports. In my opinion it would bear less heavily upon the tax-payers, and this is the paramount question that we as legislators should consider, though this method may incidentally give aid and protection to our American industries. Tariff duties properly laid will in my judgment yield an abundant revenue. And I am not so sure but that the most wholesome thing that could occur would be a deficiency in our revenues. Certainly nothing would contribute more to checking the reckless spirit of extravagance so prevalent in every department of this Government.

But be the effect of the repeal of this system of taxation what it may, I am persuaded to believe that, whatever other burden this Government may legitimately impose upon my people, they will cheerfully bear to be rid of a law so odious, a law so aptly characterized by Mr. Jefferson in a letter to Mr. Madison when he said, "The excise law is an infernal one." I would repeal it because I believe it to be a most prolific source of perjury and subornation of perjury. I would repeal it because I believe this system of taxation to be contrary to the general principles of our Government, vicious in practice, dangerous to liberty, and oppressive to the poor.

Excise laws have always been unpopular with and revolting to a free people. They were not favored by the fathers of the Republic. They were looked upon as of British origin and carried with them the odium of Toryism. No legislation was ever more abhorrent to the American people even in their colonial condition. They were regarded by the framers of the Constitution as a war resource, to be resorted to only when foreign trade is interrupted. Thus they were resorted to in time of the Revolution by the States. In the war of 1812, after the adoption of the present Constitution, they were again resorted to of necessity, but were not adhered to longer than the necessity existed. The system was adopted in the administration of the elder Adams, when war was expected with France. One of the first acts of Mr. Jefferson's administration was to wipe them from the statute-books. The present system was adopted during the late war between the States, and, perhaps on account of the immense war debt, their continuation was authorized for a time at least after its close. But, sir, the necessity that authorized their adoption in this instance, as in former instances, has ceased to exist. Let us, then, emulate the worthy example of our illustrious forefathers and extirpate them, root and branch, carrying with them all of their odious machinery.

Sir, while the tax is onerous and unjust, nothing contributes so much to its offensiveness as the method of its collection. When we think of the 4,000 partisan agents employed at an expense to the Government of $5,000,000 annually, with power to enter the counting-room of every business man in this country engaged in the sale of tobacco, cigars, or whisky, and inspect his private books, and if perchance they should find some unintentional irregularity, to arbitrarily seize and confiscate his property; when we think of this host of spies and detectives, this army of political bummers scattered over the country practically authorized at any moment to inflict domiciliary visits on the people, to make arbitrary seizures, and commit other vexatious acts, is it strange that the "Shay rebellion" should have occurred, the suppression of which cost the Government one-fourth of its then revenue? Need we be surprised at the whisky insurrection which followed in quick succession? Sir, the same reasons which prompted the people of Massachusetts and Pennsylvania to open revolt against this system of taxation still exist. The system is as repugnant to the American people to-day as it was then.

Laws which can not be enforced but by such means, no matter what may be their object or moral nature, will always be revolting to the spirit of our people and be executed with difficulty, or often evaded, laying the foundation of distrust in the Government, and want of mutual confidence between it and the people, which no fancied or real good can ever compensate. With the steady reduction in the charges for legitimate annual expenditures of the Government, and the steady increase of revenue glaring him in the face—with a surplus of $137,000,000 in the Treasury, with but about $400,000,000 of our public debt payable at par prior to 1891, when the 4½ percents mature, and sixteen years later, or 1907, when the 4 percents fall due—I can not be brought to believe that there is a member of this House who would vote to perpetuate a system of taxation which abstracts from the American people $144,000,000 annually, not one dollar of which is required by the legitimate expenditures of the Government, including pensions, interest on the public debt, and appropriations for public buildings and the improvement of rivers and harbors.

Sir, I would disband this horde of petty officers and invite them to fields of more honorable pursuit. Then I would say to the tobacco-raiser, sow your seed, worm your plant, gather your crop and sell it to whom you please, when you please, and in such quantities as you choose. I would say to the fruit-grower, manufacture your peaches and your apples into brandy if you feel so inclined. I would say to the mountaineer farmer, who, by reason of climate and remoteness from market, is at last the greatest sufferer under this system of taxation, overcome your difficulties of transportation by converting your grain into whisky as your necessities may require. Yes; I would plant on the summit of some high mountain a liberty-pole with the banner of freedom floating over this entire land, with the motto inscribed upon its folds, "Liberty, and no excise."

Pensions to Soldiers and Sailors of the Mexican War.

SPEECH

OF

HON. JOHN J. KLEINER,

OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 7, 1884.

The House having under consideration the bill (H. R. 5667) granting pensions to the soldiers and sailors of the Mexican war—

Mr. KLEINER said:

Mr. SPEAKER: In advocating the passage of this bill I am prompted by a desire to do justice to men now old and decrepit with age, but who nearly forty years ago responded at the call of their country, invaded a malarious and hostile country, suffered as men rarely suffer, but who, after a service of less than two years, returned to their homes covered with glory, the price of their valor adding new luster to the American name. I am also prompted to support this measure because the State I in part represent has charged this duty upon its Representatives in Congress. Nor is Indiana alone. Almost every State in the Union has sent similar instructions to its members of Congress at different times.

I am in favor of this bill because it meets with the approval of a generous and patriotic constituency, many of whom were participants in that war as well as in the Indian wars that preceded it. Although confined now in my remarks to the main question under consideration, I can not refrain from expressing my sincere regret that the old worn-out and gray-haired octogenarians of the Black Hawk and Florida wars were not included under its benefits. In my opinion, justice and humanity demand that the latter soldiers shall be duly remembered by this great nation, and I am ready even now to include them in this bill, thus proving that republics are not always ungrateful, but, on the contrary, remember with gratitude their heroic defenders.

Mr. Speaker, it has been charged that the Indian war in Florida in 1836 was not dignified by anything more than a "disturbance" caused by runaway negroes and their captors. If this be the opinion of any considerable number of gentlemen on this floor, I respectfully ask them to read again the history of that war.

Major Dade and his gallant little army were troops of the United States carrying the flag of their country. All but two men were ambushed and slaughtered by their savage foes. For months the war-whoop echoed around the desolate homes of the peaceful settler; and I appeal in behalf of the descendants of the victims of this savagery that their names shall not be stigmatized as disturbers of the peace. I appeal in behalf of and to the memory of the dead who fell in the defense of their homes while defending their wives and little ones from the tomahawk and scalping-knife of the savage. I appeal in behalf of the memory of the patriotic dead who went to their relief and fell victims while rendering succor, and who now sleep in unknown and unadorned graves among swamps and everglades. I appeal in behalf of the living, only a remnant of whom are left among us, and to the sense of justice of the American Congress, to pension this little band of men—men who at the first call went to repel the assaults of a treacherous and murderous foe, before whose brutality neither age nor sex escaped.

We should grant a pension to these men in order to conform to unbroken precedents, with a view of giving encouragement to the young men now coming on the stage and upon whom we must depend to fight our battles in the future. When Jackson cried "To arms!" men from every hill and valley responded, and with these patriotic, poorly clad and poorly armed American volunteers he completely routed and overwhelmed the combined forces of the British at New Orleans. I mention this as an instance where undisciplined valor was more than a match for pomp and ceremonious display, and which resulted in achieving a triumph for the plain volunteer that in its results has no parallel in ancient or modern times.

Now, Mr. Speaker, such achievements must not be expected in the future if partisanship and ingratitude combine to push the old heroes that left us this great inheritance through the open doors of the poor-house into a pauper's grave. Can we afford to ignore the appeals for justice at the hands of that gallant little army, now bent, gray, and wrinkled with age? Can we afford to drive from our doors the men who at the price of their lives and future happiness gave us an empire, with millions of treasure, and all that which makes us the most powerful nation on the earth?

I am not alarmed at the future of this country provided the soldier whose valor won it and whose fidelity maintained it is duly recognized by our law-making powers. Refuse that even-handed justice to the old veteran now, and your Commander-in-Chief may cry in vain for volunteers in time of danger; but when the nation is in peril he will drag from their homes a disorderly, sullen, and mutinous army of conscripts, whose fighting qualities would be discounted by the hireling Hessians or the Bashi Bazouks. It is now fifty-two years since the close of the Black Hawk war, and the average age of these old soldiers is over 80 years. But a few hundred remain alive to-day. A few thousand dollars distributed among them now would remind them of the nation's remembrance and smooth their way to the already yawning grave.

The soldiers of the Florida war now average over 78 years of age. Death is thinning their ranks rapidly, and if we delay there will soon be none left upon whom to bestow our tardy offer of justice. If this House would listen to my appeal, every soldier herein mentioned would receive a pension before to-day's sun had sunk to rest.

The veterans of the Mexican war now average 63 years. They are quite as old as were the soldiers of the Revolutionary war when Congress gave them a gratuitous pension for life. The same rule was applied to those who served in the war of 1812. Thus unbroken precedents have been established granting gratuitous pensions after a lapse of about thirty-five to forty years after the wars in which the soldiers had served had expired.

Congress did this when the country was poor compared with its present opulent condition. Shall this Congress appear less patriotic or grateful than those that preceded it? I most earnestly hope not. If we but listen to the people we will pass this bill, for with but few exceptions every member on this floor stands instructed by his State that sent him here to vote to pension the old Mexican veteran.

Mr. Speaker, it may sound a little singular when I state that nearly one-third of this House is composed of men who were either unborn or in their cradles when the first call for volunteers to serve in the Mexican war was first proclaimed. The beneficiaries left their homes and went down into a hot, malarial climate, into a foreign land, to conquer a fierce and semi-barbarous foe. Among the great-hearted people where I live the little child whose tender years have not yet enabled it to read the martial history of its country is taught to bow low when the veteran warrior of the Mexican war passes by. On Decoration Day, in the sunny month of May, when all the people wend their way to the cemeteries made sacred by the ashes of the patriot dead, the graves of the heroes who conquered in Mexico are carefully sought, while men, women, and children enwreath them with the choicest of nature's immortelles.

Those of us who witnessed their last national reunion, in this city last December, were pained to see so few assembled. On that occasion a last grand rally was expected, and it was hoped by the projectors that all parts of the Union would be represented. But the reasons given why so few gathered here was soon generally known. Those who remained away proclaimed the nation's shame by the declaration that they were too poor, while others came through the charity of friends. Those who sent messages to their comrades excusing their absence in nearly every instance pleaded old age or poverty.

The few who attempted a parade on the avenue in front of this Capitol certainly excited pity if not admiration. Yet this was all that remained of that magnificent army whose story is sung throughout the land, that conquered an empire under Scott and Taylor and shed imperishable luster on the American name. This little band of decrepit and gray-haired men was all that was left to tell the story of their triumphs in Mexico.

But the opponents of this bill are bold in their declarations that the vast domain acquired by reason of the war with Mexico was really made by purchase. That the United States by the treaty made subsequent to the capitulation of the City of Mexico stipulated $25,000,000 as the price for an empire greater than that comprising all of the States of the Union at the time. Well, all I can say to that is that all of Arizona, New Mexico, California, Utah, parts of Colorado and Wyoming, nearly a million square miles, worth $2,000,000,000 at Government prices, could not have been bought had not Ringgold, Clay, Butler, Armstrong, Graham, McKee, Walker, Ayres, McIntosh, Merrill, Baxter, Drumb, Gannt, Howell, Smith, Gillespie, and Morange, in addition to more than 20,000 brave men, first laid down their lives in its acquirement. Purchased, yes, but not with money, but by the shedding of the best young blood of the nation; and it is in my opinion a calumny on the heroic dead to make such statements.

Since Congress has committed the country to the granting of gratuitous pensions I desire to see the brow of the Mexican warrior wreathed in the laurel chaplet while the oak decorates those of the heroes of 1776 and 1812. By the side of the patriot who defended us at Lexington, Bunker Hill, Saratoga, Monmouth, Princeton, Brandywine, Eutaw, and the Cowpens, I place him who glorified his country at Vera Cruz, Buena Vista, Palo Alto, Molino Del Rey, Resacca, Cerro Gordo, and Chapultepec. Objection is made to this bill in official quarters on account of the cost. Therefore we should look at the economic side of this question also. From the best obtainable information now at hand, the whole number of beneficiaries under this bill is placed at about 10,000, who, if none died during the flight of time, would cost the nation, at $96 per year for each soldier or his surviving widow, $960,000 per annum, or less than the average daily receipts of the National Treasury. Even if this sum were doubled or quadrupled, we could well afford to pay it without crippling any department of the Government.

Compare this insignificant payment with the acts of former Congresses, when money and lands by the hundred millions were voted in aid of railroads and private corporations, thus depriving the actual settler or the

soldier who desires to acquire a home on our frontier from the benefits of the public domain. It would have been far more just to have divided this land among the men through whose valor and intrepidity it was obtained.

Mr. Speaker, the time to square accounts is now. The soldier is poor, while the Treasury is full to overflowing. Indeed, statesmen are debating on ways and means to relieve the vaults of the millions hoarded up and now idle. Some desire it distributed among the States, while others, equally sincere, favor its distribution as a national school fund, while in my humble judgment justice and the great interests of the nation are best subserved by a fair and equitable distribution among the citizen soldiery, to whom we are indebted for all that we are as a great and powerful nation.

Relief of Sufferers by Flood.

SPEECH

OF

HON. J. FLOYD KING,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, March 26, 1884,

On the joint resolution (H. Res. 215) reappropriating the sum of $125,000, not expended, for the relief of sufferers by the floods of the Mississippi River.

Mr. KING said:

Mr. SPEAKER: I had hoped it would be unnecessary to say anything to the House on this occasion. The people involved in the calamity caused by the flood in the Mississippi Valley are my people, and though ever ready to defend or to advocate their interests on this floor or before the world, their present situation is one that can only fill the heart with grief and sympathy of all who understand the situation. Bowed down in mind, Mr. Speaker, by the distress of those at the will of the cold merciless flood-waters of the great river, I am here to speak out in their cause, not as a suppliant, but as their Representative demanding their right to be relieved in this the hour of their suffering by the strong hand of this, their Government.

My friend from Massachusetts speaks of this disaster as local. Would he consider a flood that covered an area many times greater than the area of the State of Massachusetts local, and which in the district alone that I represent reaches as far in length as from here to New York and as wide as from Philadelphia to that city, embracing a population of a hundred thousand souls?

Again, Mr. Speaker, the gentleman speaks of these floods as annual occurrences. In this I beg to assure him he is entirely in error. Such a flood as that now prevailing there was never known before in many places, not excepting, I am informed, the great flood of two years ago, when the entire country was submerged, and when, as the gentleman will remember, Congress appropriated some $600,000 from first to last, in addition to the many and large contributions made by good citizens throughout the United States for the rescue and relief of these people. On that occasion there was no constitutional question raised by the gentleman from Massachusetts, nor was there the other day when we here first voted $300,000 and subsequently $200,000 for the relief of the sufferers along the banks of the Ohio River.

If there was ever room for such an objection it has long since been dismissed by the usages of this Government too often to be recounted at this time.

I know the gentleman too well to believe that his heart is in the opposition he is making to this measure; and whatever reason he has found for it, I am certain it will not stand in his mind long against so humane and so just an object as this measure proposes.

Seeing from the reports of the Signal Service Department here, and from inquiries made of its officers, that this flood was coming down upon the valley of the Lower Mississippi, more than two weeks ago, as the House will remember, I introduced a joint resolution appropriating $500,000 for this purpose, which was referred to the Committee on Appropriations, and a substitute was reported back to the House directing the Secretary of War to report to this body, from time to time, such measures of relief as he should recommend. This he has done, and it comes to us in this form.

But, Mr. Speaker, knowing the country as I do from personal knowledge, having traveled all over it from one end to the other and from side to side and across it in every way many times, I am convinced the sum here asked for is entirely inadequate to the demands of the occasion. And at the proper time I here give notice I shall feel compelled to move that it be increased to $500,000, which ought now to be appropriated at once for this purpose of mercy and justice to a brave and a good people.

Who, Mr. Speaker, pay taxes more freely or more out of proportion to their means than do they to this Government? I answer, none; and no one will contradict me. That this House may see for itself the condition of affairs there, I will submit the following telegrams, and will add that they are but a few out of many that have reached me in the past few days:

TALLULAH, LA., *March* 22, 1884.

To General J. FLOYD KING, *Washington, D. C.*:

Madison Parish is practically overflowed; negroes can not get any work by which they can make a living, and whites, owing to the disasters of the past two years, are unable to furnish them. Some provision must be made for the negroes at once or great suffering will ensue. The white people can care for themselves. Buckhorn and Milliken's still intact; water coming in from Biggs and Diamond Island overflows us.

S. B. & J. T. McLELLAN.

VIDALIA, LA., *March* 22, 1884.

General J. FLOYD KING, *Washington, D. C.*:

Monorache Levee has been given up. It is intact, but water will be over to-morrow. You know the suffering that follows.

W. T. EVANS.

SAINT JOSEPH, LA., *March* 22, 1884.

To Hon. J. F. KING, *Washington, D. C.*:

We must have relief. The whole country will be overflowed. Food will be needed for man and beast.

T. W. CASELMAN.

NATCHEZ, MISS., *March* 22, 1884.

To J. FLOYD KING, *Washington, D. C.*:

Levee from Arkansas line down or breaks threatening. Anticipate more distress than in 1882. Government aid needed immediately for overflowed district. Act prompt.

W. T. MARTIN.
H. A. GARRITT.

LOUISIANA TROYVILLE, CATAHOULA PARISH, *March* 23, 1884.

To General J. FLOYD KING:

Country entirely submerged; people and stock need immediate relief.

R. B. W. WALTERS.

VICKSBURG, MISS., *March* 25, 1884.

To Hon. J. FLOYD KING, *Washington, D. C.*:

River at Saint Joseph six inches above 1882; levees all gone, with river rising from Cairo down. Too late to make a crop.

C. C. CORDILL.

RODNEY, MISS., *March* 25, 1884.

To General J. FLOYD KING:

Tensas Parish entirely inundated. Rations will be required for 20,000 destitute people, and feed for stock. Emergency very great. Immediate relief necessary.

JOSEPH MOORE,
ROBT. MURDCOCK,
THOS. P. CLINTON,
WM. DAVIDSON,
D. H. CHAMBERLAIN,
Saint Joseph, La.

NATCHEZ, MISS., *March* 25, 1884.

To Hon. J. FLOYD KING, *Washington, D. C.*:

Much suffering among the laboring class. Water over 1882.

ALEX. CAMPBELL.

NATCHEZ, MISS., *March* 25, 1884.

To Hon. J. FLOYD KING, M. C., *Washington, D. C.*:

Water running over levees, and country being submerged. Great distress among laboring class, and appealing for sustenance. Supplies needed at once.

JNO. C. SEAMAN,
P. M. Bullitt's Bayou, La.

RODNEY, MISS., *March* 24, 1884.

Hon. J. FLOYD KING, *Washington, D. C.*:

Kempe Levee gave way at 12.15. This makes the disaster complete and the Mississippi Valley one vast inland sea. This will make the loss beyond calculation, to say nothing of the loss of life and suffering of the people. Congress must come to our relief and feed the people at once. The lofts of gin-houses and floating rafts will be the only places of abode. The best mode of distributing supplies is through the engineer department of river improvements. They have every appliance necessary, and less waste and imposition would attend their efforts. I believe the wire is down from Saint Joseph.

E. L. WHITNEY.

BATON ROUGE, LA., *March* 23, 1884.

General J. FLOYD KING:

Great distress. Morganza, Scott, and Waterloo Levees gone. Have wired the Secretary of War for rations, same amount as 1882. Be on the alert; use your best endeavors; the laboring class is in distress.

S. D. McENERY, *Governor.*

In addition to these I have received telegrams and letters from other officials and prominent citizens, all telling the same sad story, among which is a dispatch from Hon. George W. Montgomery, president of the police jury of the parish of Madison, and Hon. Jay I. Davis, who occupies a similar official position in the parish of Caldwell, some seventy or eighty miles distant across the valley. These gentlemen are all of highest standing and responsibility, official and otherwise, and whose patriotism and devotion to the public good stand far up above question. Floods like these, when they spread over the lower valley as this has done, can not pass off in a few days or weeks even; it has required months for them to do so when they have occurred in the past, and I anticipate no shorter period of duration for the present one, which is carrying desolation to thousands of homes in that section of our country. The relief asked is but little as compared with the ability of the Government to afford it, and I trust the same generosity and sympathy will prevail here now as it has done in the past.

Pensions to Soldiers and Sailors of Mexican War.

SPEECH

OF

HON. JAMES K. JONES,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 7, 1884,

On the bill (H. R. 5667) granting pensions to the soldiers and sailors of the Mexican war.

Mr. JONES, of Arkansas, said:

Mr. SPEAKER: The bill now under consideration, and which it is proposed to pass under a suspension of the rules, is not in my opinion so just and fair as the bill reported by Mr. HEWITT, of Alabama, from the Committee on Pensions, and now a special order. That bill provides for pensioning the old soldiers of our Indian wars; and as a longer time has elapsed since those wars than has passed since the Mexican war, I must say that it seems to me an ungracious thing to pass by them while we are doing justice to others no more meritorious than they are. I do not believe that the soldiers of the Mexican war would, if they were consulted, favor this act of injustice, and I sincerely hope that this House will make haste to repair this wrong, and do equal and exact justice to all these old men; but as nothing in this world is ever perfect, and as I heartily favor this bill as far as it goes, I shall endeavor to give briefly some of the reasons why I think it, even in its present shape, should pass.

If, when the roll is called upon the passage of this bill, there shall be, as I anticipate, a large majority in its favor, I shall for myself feel amply repaid for the part I took, a short time ago, in an all-night struggle to make Mr. HEWITT's bill a special order, and which resulted in success, even though the effect of the present action may be for the time, at least, an injustice to a class of men whose claims we have no right to ignore.

In every State of this great Union there are men who will be benefited by the passage of this bill. They are men now in the decline of life, many of them in extreme old age, and so far as my observation goes they are poor.

In fact, our armies are not generally made up of those who live in ease and splendor, but are usually composed of that class in which nerve, energy, and determination have been developed by conflicts in the stern struggles of life.

I wish in the outset to say that I favor the most liberal policy on the part of the Government consistent with careful and prudent financial policy in this matter of pensions. Nor do I rest this upon any mere sentiments of sympathy, humanity, or gratitude, though I may as well say now that I believe these considerations are perhaps a sufficient reason for this policy. I propose to place my advocacy of liberal pension laws upon the higher ground of public policy, and I insist that nothing will so foster and strengthen the military spirit of any people as entire confidence on their part in the liberal care by the Government of its old soldiers when their power of caring for themselves has in a measure ceased, and when old age and its attendant evils has come upon them. The cheerful service and devotion of young men to do battle in the hour of need will never be wanting in a free country, where a grateful public certainly provides for its old soldiers.

This I believe the framers of our Constitution knew and relied upon when they organized a government without the idea of a standing army, and where arms should be in every man's hand. I believe this Government will grow and prosper as long as this spirit is encouraged and kept alive, and whenever it is no longer a characteristic of our people that then our Government will be no more; and further, that whenever the decadence of this spirit sets in permanently, then this Government and civil liberty have entered upon their course to sure destruction.

To get the full force of this position it is necessary that we look a little at our surroundings and also at those of our European neighbors, and to consider very briefly some strong points of difference in our manner of government and theirs.

We all know the rule has long existed of keeping large standing armies in all monarchies. They are, I believe, considered the chief bulwark and support of that form of government. The armies of kings have often been used by their masters against the people and to repress civil liberty. The observation of this system implanted in our fathers the conviction that a standing army was dangerous to the liberties of a free people, but at the same time it was recognized by them that a state dependent upon the assistance of mercenary troops was constantly at the mercy of her neighbors; hence we find, at the time of the ratification of the Constitution of the United States, that public sentiment formulated itself in the declaration that "A well-regulated militia being necessary to the security of a free people, the right of the people to keep and bear arms shall not be infringed." So important was this declaration in the minds of the people then, that as an amendment to the Constitution it was postponed only to the article providing for freedom of religious worship, &c.

The wisdom and foresight of the fathers in framing the Constitution has been so striking in many instances in our history that the hand of Omniscience has been wont to be recognized by devout men in that great work; and, looking the whole field over, I think there is nothing in that wonderful instrument more calculated to strike the human mind with admiration or to suggest something more than human in the wisdom of its framers than this provision, departing so radically as it does from long-established methods of government and relying absolutely upon the patriotism of the people for protection to the Government. It clearly shows that at the very beginning of our experiment in an untried form of government that the founders of our system fully understood and correctly estimated the character of our people, as well as the effect upon character likely to result from the enjoyment of freedom; and the history of this country has demonstrated that they reckoned wisely when they intrusted the preservation of this Government and of civil liberty to the military spirit of the people.

The influence of this departure from old methods upon our progress and prosperity, on our phenomenal development, has been very great. Compare our condition with that of Europe. Here, each man is free to follow whatever active trade or business his circumstances or his interest suggests. Each man is a producer or an active worker in the promotion and development of our prosperity. In Europe, on the other hand, a large percentage of the most active and efficient of those who should be workers in the hive of life must give a number of the best years of each life to the standing army. They are not only withdrawn from the pursuits for which the Creator designed them, but they become an actual incubus upon the decreased corps of producers.

In France, with a population smaller by many millions than ours, an army of half a million of men withdrawn from pursuits of civil life must materially affect the interest of all. So of all other countries where large standing armies are kept. This difference alone in producers and consumers would serve to make one country prosperous and another the reverse. With all the energies of all our people turned in the direction of development and increasing wealth, is there any wonder we have far surpassed nations which have wasted valuable lives and time in maintaining standing armies? To compensate for the necessity of armies for protection in case of war, our fathers preferred to rely upon our own citizens, turned to soldiers in times of need. They felt that as long as citizens were accustomed to the use of arms, the exercise of liberty, and the consequent development of habits of independence and self-reliance, would insure the Government all the protection it could need in time of danger.

The history of our country has fully demonstrated the wisdom of this belief; and if we will only keep alive the military spirit of our people and the confidence in and respect for our Government which has hitherto prevailed among us, we have no cause to fear any enemy. Every consideration of public policy urges that we take a broad and liberal view of this question of pensions. A niggardly course in this matter, especially now, when the national Treasury is overflowing, will naturally excite the contempt of every man who ever bore a musket or ever felt a patriotic impulse.

These old soldiers have been asking for this recognition of their patriotism and devotion for years, and Congress after Congress has considered the matter. They are a body of men whom the nation delights to honor. One of their number has had the extraordinary honor to represent three States in the Senate of the United States. Others of them are now and have been for many years eminent on account of their talents, patriotism, and devotion to duty; while the mass of them in their humble homes all over the country, less gifted perhaps than their more distinguished comrades, but not less patriotic, have contributed all in their power to the general good. Their history is the history of this country through an era that shed luster on American arms. Their marches and battles have excited the admiration of some of the most distinguished military men the world has ever produced, and have been the subject of pride and exultation in our own country. Almost every State has some name honored in song and story whose life was offered upon the altar of his country on the plains of Mexico. The survivors now ask, and have a right to ask, this recognition at our hands.

This measure is in no sense sectional or local, but embraces in its beneficent provisions worthy men from all sections of our great country. It is in my judgment a just recognition of the services of a class of citizens who in the prime of their lives rendered great service to their country, and are now many of them realizing that "age and want" are in terrible reality an "ill-matched pair."

If we consider this matter in a mere business aspect, leaving out of consideration all sentiments of gratitude, all motives of public policy, and all feelings of humanity, and consider it only by the cold and rigid rules of merely business transactions, we shall be surprised to find how great are the advantages accruing to the Government of the United States and to us as a people from the efforts of our soldiers in Mexico.

If gentlemen who are called upon to vote for or against this bill will for a moment look at a map of this great country of ours, and will bear in mind that the results of the Mexican war were the addition to our domain of California, the great Golden State of the Occident, with her

almost fabulous resources, absolutely astounding the world by the productions of her mines, in her delightful climate surpassing the dreams of poets—in the wealth and variety of the productions of her soil proving a gem in the galaxy of States; and also remember that Nevada with her mines of gold and silver, capable of supplying the world with precious metals, presenting in reality treasures in comparison with which the land of Ophir pales into insignificance; that Utah with her fertile valleys, and mountains great storehouses of treasure; New Mexico, Arizona, Wyoming, and Colorado, swarming with countless herds, ready to supply the world with cheap food, leaving the great Lone Star State entirely out of consideration, are all the fruits to us as a people of the war with Mexico, we begin to appreciate how great results came to us and will go to our children after us as the reward of the labors of our old soldiers.

This great country is said to embrace 937,875 square miles of territory, or about 600,000,000 of acres of land, is adding annually about $75,000,000 in gold and silver alone to the wealth of this country, and has already contributed precious metals to an amount greater than our bonded national debt, to say nothing of the wealth flowing from pasturage and agriculture, and taking no account of the limitless possibilities of the future.

Besides these material considerations, the commercial and political value of this great country must not be overlooked.

With the acquisition of this domain, seven or eight times as great in extent as Great Britain and four times greater than France, it opened up the American continent to the American people from the Atlantic to the Pacific. It made the building of the transcontinental railways not only a possibility but a necessity, thereby opening up a great highway for commerce "to the East by way of the West."

The results of this acquisition in all its magnitude and importance will not be fully appreciated in a century to come. In the face of such enormous results, will this country hesitate longer to pass this bill?

The opposition to a measure similar to this was some years ago avowed to be on account of a depleted Treasury, and that time enough had not elapsed since the conclusion of the war. There was force and perhaps justice in those positions then, but these arguments certainly do not apply now.

The Committee on Pensions in their report on Mr. HEWITT's bill state that they really thought the annual outlay that will be made necessary by this bill, including the survivors of the Indian wars, would not exceed $1,370,496; but for safety, and to be sure they did not underestimate it, they added one-fourth and adopted $1,713,220 as the amount probably required. They estimated the average duration of these pensions at fourteen years, which would have made a total of less than twenty-five million dollars.

There is now no lack of money with the Government. One of the great problems of the hour is how to get rid of the surplus revenue. All sorts of schemes are started and discussed by the managers of national affairs (except perhaps the reduction of taxation) to accomplish this purpose, and there can certainly be no argument for want of money. Whatever of force the other objection had has too been weakened by the lapse of time, until I scarcely think any reasonable man can longer urge it. It is true that argument has been urged, as it seems to me, in a very extreme and absurd manner. For instance, in the discussion of this matter in a former Congress the following language was used:

> The pension act of 1871, as stated by its strongest advocate, Senator Morton, was passed upon the principle that when fifty-six years had elapsed after the conclusion of the war, and when but few of the soldiers survived, when the youngest must be 75 years, it was proper and right to give those few men in the declining years of their life a gratuitous pension.

And the same speaker, I believe, protesting against the passage of a measure similar to the one under consideration, said:

> It will not be pensioning men because they are in the decline of life; it will not be pensioning men because they are aged and infirm, because they are poor and but few of them left, or because they have received wounds or contracted disease in their country's service; it will not be pensioning men because we have a plethora of money in the Treasury. We are not pensioning these men because our resources are great, and because we are not already taxed almost beyond the power of endurance, but for reasons which I utterly fail to comprehend.

I believe the same gentleman asserted in the same debate that it never had been the policy of the Government to pension soldiers, except the indigent, until after they had passed three-score years.

Such sentiments as these utterances avow and seem to imply I feel sure find lodgment in few hearts in this great country. That indigence is to be made a condition precedent to the taking care of an old soldier is a sentiment which the American people will despise. The indigent under our humane institutions are taken care of in entire disregard of their previous lives or conduct.

The old soldier ought not to be placed on a level with the man who has passed his life in debauchery and crime, and the American people will never consent to it.

The Committee on Pensions estimated the average age of the beneficiaries of their bill to be 62 years. This is far beyond the average life, and if the Government is ever to do anything for these men certainly the time has come. The American people do not wish to withhold this act of justice until all are dead or too old to enjoy its benefits, and they will not countenance further delay in the matter.

Since Mr. HEWITT's bill has been made a special order I have been surprised to hear gentlemen say there are no precedents for this bill. So far from being correct, it seems to me the rule has been that long after the close of all our wars the survivors are granted gratuitous pensions. Those wounded or injured in the line of their duty are of course provided for from that date, and all have been provided for after many years. The survivors of the Revolutionary war were pensioned in 1818; the officers had long before been provided for. The survivors of the war of 1812 were also provided for in a similar manner.

The old soldiers for whose benefit this bill is designed, by their service to their country in bearing the Stars and Stripes in triumph into the capital of a foreign land, and the great acquisition of territory as one of the results of their labors, as well as by their age and condition, have a right to ask this bill. Many of them will never realize any benefit therefrom if longer delayed. In their old age and poverty they feel they are being neglected, and the consciousness of duty well done on their part makes this apparent neglect all the more galling. I have seen and talked with them in this Capitol since the beginning of this session, and know their feelings.

They have lived long enough to see splendid cities grow up all over the land their valor won for you. They have seen untold wealth accumulate as the result of its occupation, and they ask through us now, while the country is rich, prosperous, and happy, that they in their declining years may have their hearts and homes cheered by the generosity of the Government.

When this is done, they and all the country will "rise up and call you blessed."

Bureau of Animal Industry.

SPEECH

OF

HON. WILLIAM CULLEN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 23, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 3967) to establish a bureau of animal industry—

Mr. CULLEN said:

Mr. CHAIRMAN: The bill under consideration is an important one and well worthy of a careful consideration. The committee which reported this bill anticipated opposition and are not disappointed. They knew to a reasonable certainty the sources from which the opposition would come—from the gentlemen who consider themselves the guardians of the Texas cattle interest, and those who adhere to the dogma of State rights and State sovereignty. In anticipating this opposition the committee framed this bill in as mild terms as possible, in their judgment, not to impair its efficiency. They had no desire to raise questions which have in any measure divided parties. Their sole object was to recommend a measure which would, if approved, be a practical remedy for an evil which threatens a great and valuable industry. I shall not attempt to speak at length nor to go through the entire bill, but to call attention to its leading features and to answer some of the objections urged against it.

The first section of this bill proposes to organize a bureau of animal industry, and provides for a chief of said bureau at a salary of $3,000 per annum and a clerk with a salary of $1,500 per annum. It also authorizes the Commissioner of Agriculture to appoint a force sufficient for the collection of information in regard to the numbers, value, and condition of the domestic animals of the United States, their protection and use, and also to inquire into and report the causes of contagious, infectious, and communicable diseases among them and the means for the prevention and cure of the same, and to collect such information on these subjects as shall be of value to the agricultural and commercial interests of the country. It provides that the chief of this bureau shall be a "competent veterinary surgeon."

This section is objected to because it is charged that it will create an army of officers to be "pensioned" on the Government. Gentlemen speak flippantly of the proposed head of this bureau as a "horse-doctor." Yet some of the best minds in this and other countries have been given to the study of the structure of domestic animals and the treatment of diseases to which they are subject. They are men of science, and graduates from some of the best universities in Europe and America.

There are no permanent officers created by this section or bill save the chief and clerk of bureau, and this is more in form and name than fact. The Agricultural Department have this matter now in charge, but not in an organized form so as to make it as efficient as this bill proposes to make it. While it is proposed that the chief of this bureau shall gather statistics on the number, value, and care of domestic ani-

mals, the main object is set out in the title: "A bill for the establishment of a bureau of animal industry, to prevent the exportation of diseased cattle, and to provide means for the suppression and extirpation of pleuro-pneumonia and other contagious diseases among domestic animals." That is the main object of the bill. The force provided for to secure these objects is a temporary one.

The second section may be taken in connection with the first. It provides for the appointment of two agents, if deemed necessary, at a per diem allowance, to examine and report upon the best methods of "treating, transporting, and caring for animals, and for the suppression and extirpation of pleuro-pneumonia and other contagious diseases and preventing their spread." Gentlemen oppose these provisions because they say it involves an army of Government spies, who will claim the right to enter every man's barn-yard and make a close inspection of his domestic animals down to his "chickens." I submit that this kind of treatment of a subject of grave importance will not satisfy the demands of the thousands of men who have invested millions of dollars in the cattle industry of this country, and upon whom the people at large depend for a supply of healthy meat. Not only are our own people thus supplied but to a large extent the people of Europe, and past and present experience shows the importance, nay the necessity, of demonstrating that our meats are healthful in order to retain the European market.

Gentlemen speak of the investigation necessary to secure the facts aimed at as an unwarrantable interference with individual rights. How else can the information needed be secured? But we are told that we must not invade the soil of sovereign States in making investigations. Has it come to that point that the National Government has not authority to send its agents into States to gather information deemed necessary for the general welfare? A rigid construction of this doctrine would forever prevent the taking of a national census; yet the census agents did visit every hamlet in the land, regardless of State lines, and propounded many pointed interrogatories, even to the ages of maiden ladies. They sought and obtained the information which this bill contemplates only in part, and we have yet to hear the first complaint of a violation of either State or individual rights. The Constitution provides for a census of the people once in ten years, and under that head statistical information is compiled every decade, giving information on all the material industries of the country. These sections go no further.

In any attempt to extirpate pleuro-pneumonia it will be readily conceded that it must first be located. This bill does not propose to strike wildly and indiscriminately at the cattle of a State or part of a State because that in certain herds the disease may be found to exist. Hence the third section provides that the Commissioner of Agriculture may prepare such rules and regulations as may be deemed necessary for the speedy and effectual suppression of the disease when found, and certify such rules and regulations to the executive authority of each State and Territory and invite said authorities to co-operate in the execution and enforcement of this act. The necessity for some general rules in such case as is contemplated must be apparent to all thinking men. A few diseased animals may be found in a large herd, when separation and the isolation of those infected and the quarantine of those which were exposed might be sufficient, while in the case of a small herd or an individual animal a heroic remedy in the destruction of the whole might prove the safer and better plan. The matter of disinfection would also be an important consideration, upon which there might be a general rule.

It will be observed that up to this point the United States would act independently, and be at all the expense of investigating and marking the location of the disease. But now the State authorities are invited to co-operate and share the expense to be incurred in the destruction of diseased animals and in disinfection and quarantine. The committee gave this matter very careful consideration, and thought it best to require the States to actively co-operate and to be a party in interest in the expenditure of money. They thought it would be in the interest of economy, as a double accounting would be required to the State and National Governments, and at the same time give more efficiency in executing the trust.

Now we come to the fourth section of the bill, which provides that when a State or Territory, in which contagious or communicable diseases in cattle are found to exist, refuses or neglects to co-operate with the National Government for the extirpation of the disease, on presentation of the facts by the Commissioner of Agriculture the President may declare such State or Territory in quarantine and prohibit the exportation of cattle therefrom. Gentlemen who have taken ground against this bill think, or seem to think, that in this section lurk heresies which if enacted into law will sap the foundations of the Constitution and violate the most sacred doctrine of State rights. I wish to say here that I am a believer in State rights, properly interpreted, and I would protect each and every State in all the rights recognized by the Constitution. But I do not believe that any State can claim the right to breed pestilence and scatter it over adjacent States, whether that scourge may affect man or beast. If a State insists on the retention of a dangerous and destructive disease among its stock when means are provided for its suppression, I submit that on the same line of reasoning the adjacent States have a right to insist that it be kept within State lines and that it shall not be allowed to destroy the property of their citizens.

If it be true, as decided by the courts in the Missouri case (5 Otto, page 465), cited by the gentleman from Missouri [Mr. HATCH], that one State can not interdict the importation of cattle from another State because it comes under the head of regulating commerce among the States, it follows that Congress alone has jurisdiction over the whole subject-matter, and may, for the general good and in the interest of interstate commerce, regulate or prohibit commerce in cattle between the States presumed to be infected with a dangerous communicable disease. The gentleman from Texas [Mr. LANHAM] seems to fear that this bill discloses a conspiracy against the Texas cattle interest. I would not presume to mar the beautiful picture he has drawn of Texas, its grand domain, healthful climate for cattle, nor dispute his statement that it possesses more than one-seventh of the cattle of the United States. It is not necessary for my argument to mar his rhetoric in the slightest degree by the statement of facts. If the cattle interests of Texas are as large as represented, it is all the more important that they should be protected from the ravages of this fell disease. The disease is not climatic, nor is there any climate on earth that can resist it should it once be introduced. But the gentleman seems to fear that the Government officials would act dishonestly and conspire with dealers and transportation companies to destroy the commerce in cattle in one section of the country for personal advantage or the advantage of other sections. The intimation, it seems to me, is unworthy the gentleman or any other gentleman on this floor.

But however that may be, if it be true that there is no vestige of contagious disease among cattle throughout the length and breadth of Texas, but that they are uniformly healthy, as represented, no Government "horse-doctor" will dare to lay his ruthless hand upon them to prevent their exportation to the markets of the country and the world. However it may be with other portions of our common country where diseases among animals are known to exist, Texans may rest assured that their cattle can move forward with impunity and the utmost safety.

The very distinguished gentleman from Texas [Mr. REAGAN], who is an authority on interstate commerce, concedes that the latter clause of the fourth section, authorizing the President to declare States and Territories in quarantine, comes within the authority of Congress under the constitutional provision for regulating commerce. He says:

> I admit that the closing provisions of this section may be within the authority which Congress may properly exercise in regulating commerce between the States, interstate commerce.

While making this concession the gentleman finds fault with this section on the ground that it is a menace to the State governments, "requiring them to do certain things which lie wholly within their exclusive jurisdiction and control." In other words, he thinks it in bad taste. But he concedes the only question upon which it seems to me there can be any doubt on constitutional grounds—the right to declare in quarantine and prohibit the exportation of cattle from infected States. This question covers all of the minor questions, involving transportation companies, prosecutions, and penalties; for if this right be conceded, it follows that the power possessing the right has authority to enforce it.

In framing this provision the committee were careful, so far as possible, to avoid any controversy on the matter of State rights. It will be observed that this is the only point on which the authority of the National Government is asserted, with, of course, the right of enforcement. It was put in because without it it was believed the bill would be worthless if enacted. It will be seen that throughout this bill there is no provision for the "coercion of a State." Each State is asked to co-operate and share the expense with the General Government. They are not obliged to do so; they may absolutely refuse. In that event the United States withdraw, leaving them to manage the matter in their own way, or not at all, as they may elect. Under such circumstances the people of a State can not reasonably complain if the General Government requires them to keep their cattle within their own borders—not as a penalty, but simply for the protection of the general interest outside and in the interest of commerce.

But gentlemen grow eloquent in expressing their love for the Constitution, which they say this bill contravenes. They say this is a dangerous measure and a "fraud upon its face," that our liberties are in danger from the encroachments of Federal power; and the gentleman from West Virginia [Mr. GIBSON] takes occasion to criticise and condemn the action of the Federal courts, whose proceedings he says "have been felt by this land as the breath of a pestilence." Yet the judiciary is the creature of the Constitution, and it might be thought that the gentleman's great love and reverence for that instrument should lead him to respect the judiciary created by its authority.

We are asked with an air of triumph, "What article or section of the Constitution authorizes the organization of a bureau of animal industry in the Agricultural Department?" We might ask with equal confidence, What section of the Constitution provides for the creation of the Agricultural Department, or the Post-Office, or Interior, or any other Department, with their many bureaus and divisions? Yet we have them all, and we have them under the Constitution. The Constitution gives Congress alone authority to provide for the general defense and the general welfare, and to regulate commerce with foreign nations and among the several States and with the Indian tribes.

Under the narrow and shallow doctrine of State rights and State sov-

ereignty contended for by the opponents of this bill no State could have a commerce or transport its products beyond its own borders without the consent of the adjoining States. The regulation of interstate commerce was necessarily given to the General Government for the protection of the equal rights of the respective States. If the power to regulate does not give the power to prohibit the transportation of animals afflicted with a dangerous contagious disease, scattering death in their pathway and endangering the property of citizens, then indeed is the boasted power a "delusion and a snare."

But objection is made to this bill on account of the great expense to the Government. The answer to that is simple and brief. This bill proposes to appropriate $250,000, or so much of that sum as may be necessary. The Commissioner is prohibited by law from expending more than the appropriation. The charge that there will be an army of officers employed and that millions will be expended answers to round out a paragraph and give seeming importance to the objection, but viewed in the light of fact and of this bill, it is seen to be only the phantom of an overworked imagination.

I have said nothing in regard to the nature and extent of this malignant disease, nor do I propose to examine that branch at length, assuming that most members of this body are well informed on the subject and knowing that the owners of live-stock all over the cattle-growing sections are well informed and greatly alarmed at its continuance and threatened spread. The result of scientific investigation and the experience of thousands demonstrate that the disease is incurable. That would seem to be enough. It has existed in Russia for hundreds of years, and owing to the common pasturage on the steppes of that country, similar to our western plains, its extermination seems an impossibility. It ravaged Holland, Denmark, Norway, and Sweden; but the three latter countries have exterminated it. It reached Western Europe and the British Isles in 1842, and since that time the loss in Great Britain alone, according to the London Times, has been $500,000,000. Since 1858 Australia has lost 40 per cent. of all its cattle from this disease. It is safe to say that over this broad field, including Africa, where a single animal from Holland scattered the seeds of death, the losses have by far exceeded the total value of all the cattle in the United States at the present time.

In 1859 this disease appeared in Massachusetts from importation, but heroic treatment by the State authorities extirpated it, but not until the stock-raisers suffered to the amount of $250,000 and the State had expended $77,000. It is now known to exist in the District of Columbia, Maryland, New Jersey, and parts of Pennsylvania, New York, and Connecticut. It has assumed dangerous proportions, extending along a strip of three hundred miles in length along the coast. The local inspectors of New York city report during the past year more than five thousand cases, mostly cows which supply milk to the citizens. The same state of facts exists in Brooklyn, Philadelphia, Baltimore, and Washington, and their suburbs. These are facts undisputed and indisputable. What shall be done to circumscribe its bounds and finally eradicate the disease? That is the practical question. We are told that the respective States can accomplish the work and are pointed to Massachusetts as an evidence. It will be noticed that Massachusetts did not dally. It began early and overcame the difficulty before it became great. It was not exposed along its borders. Had the disease existed in the adjoining States and had those States been inactive, all that Massachusetts could have done would have been abortive.

New York could, doubtless, by diligence and a large expenditure suppress the disease within its borders, but of what avail would that be so long as cattle were constantly being brought in from New Jersey and Pennsylvania? So with the other infected States or districts. To exterminate the disease will require simultaneous action in all infected districts. No power less than that of the General Government seems to be able to grapple with it. Should they succeed, the American people would indeed be fortunate. I say the American people, because every man in the nation is interested in the supply of healthful beef, butter, and milk, as well as in purchasing at the lowest prices. Even now the shippers of live beef cattle to Great Britain, because pleuro-pneumonia is known to exist in this country, are obliged by law to slaughter their cattle on the wharves ten days after landing, and not allowed to put them on grass to recuperate, causing great loss.

The cattle interests of this country demand protection from this plague. They have a right to demand it. Men of intelligence and practical sense, who have many millions of dollars invested in cattle in the Western States and Territories, have thought it worth while to hold a national convention on this subject and to memorialize Congress. This convention appointed a committee to represent their views here, and that committee had many interviews with the Committee on Agriculture, and very ably represented the views of their constituents. This bill does not propose as large an appropriation nor is it as radical as was desired by those very intelligent gentlemen. But it satisfies them in its main features, and I think I may say that a measure less heroic will fail to either satisfy or protect them.

The West is thus far free from pleuro-pneumonia because the line of cattle exportation is from west to east. But cattle for breeding purposes are, in limited numbers, constantly being shipped from the East to the West. Should this disease once gain a foothold among the herds in the cattle-raising States of the West, and on our Western and Southwestern plains, the experience of Russia and Australia will doubtless be ours. A single animal may sow the seeds of death in a vast herd. What a few hundred thousands of dollars may do now will require many millions hereafter, and then in all probability fail to accomplish the purpose. The cattle industry of this country is entitled to the dignity of a national industry. The farmers, comprising one-half of the population, have a direct interest in it. They are not *doctrinaires* who split hairs on controverted constitutional questions, but practical men of sense who look for practical results. They ask Congress to protect their property from impending destruction. Will you give them that protection, or will you continue to "fight the war over again" on the "barren idealities" of State sovereignty and State rights? Have the farmers of this country any rights which the legislative authority is bound to respect, or must all legislation be in the interest of the manufacturing and commercial classes and the corporations of the country?

Agriculture is the foundation of the nation's wealth and prosperity, and yet the welfare of this intelligent and industrious class of citizens, whose surplus products give us the balance of trade with foreign nations, seem to be the last thought of in our legislative halls. The very stability of our republican institutions rests on the virtue and moral stamina of the farmers, and yet we grudge an appropriation of $250,000 to protect one of their principal industries. Let it not be said that the American Congress, composed so largely of professional men, will vote millions for vessels of war and allow them to decay on their stocks, millions for the support of an army and navy in view of future contingencies, millions for public buildings in the cities, millions for the improvement of rivers and harbors, but nothing for the encouragement of agriculture and the protection of the animal industries.

Political Rights of Women.

SPEECH

OF

HON. JOHN D. WHITE,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 27, 1884.

The House having under consideration the report from the Committee on Rules, and especially a proposition by Mr. WHITE, of Kentucky, to amend Rule X by inserting after the line "on revision of the laws, to consist of eleven members," the following, to wit, "On the political rights of women, to consist of eleven members"—

Mr. WHITE, of Kentucky, said:

Mr. SPEAKER: I do not know that I can occupy my time better than by reciting what has been better said on this subject by other persons.

It seems to me at least to be an anomalous state of affairs that in a great nation like this one-half of the people should have no committee to which they could address their appeals. If a petition on this subject comes here in one form it goes to the Judiciary Committee, and if it comes here in another form it will go to another committee; and petitions in reference to the political rights of women cover such a great field of investigation, at least eleven members of this House ought to be given to the consideration of that subject. In the Senate a committee has been given to the women of the nation where they can be heard. In this House, at the last Congress, a select committee was provided very much in the nature of the four additional clerks given this morning to the House post-office, only to run through the session of Congress and then to be dropped out. Now I propose that such a committee shall be a part of the rules of the House.

My proposition is to amend Rule X so that the Speaker shall appoint at the commencement of each Congress a standing committee which shall consist of eleven members, and shall be known as the committee on the political rights of women. During the last session of Congress the chairman of the Select Committee on Woman Suffrage failed to call the committee together, and I was requested to do so in his absence, being second on the committee, as follows:

WASHINGTON, D. C., *December* 6, 1882.

SIR: In the absence of the chairman of the Select Committee on Woman Suffrage, the undersigned respectfully request that you do at an early day give notice of a meeting of said committee for the purpose of considering matters referred to the same.

Respectfully, &c.,

W. P. HEPBURN.
J. C. SHERWIN.
E. F. STONE.

Hon. JOHN D. WHITE.

Pursuant to that request, I called a meeting, and from time to time we considered petitions like the following, which was referred to that committee January 11, 1883:

To the Senate and House of Representatives of the United States:

The undersigned, citizens of Massachusetts, officers and members representing the National Woman Suffrage Association of Massachusetts, respectfully petition your honorable body to submit an amendment to the United States Consti-

tution which shall prohibit the several States from disfranchising citizens on account of sex.

Harriette Robinson Shattuck, president National Woman Suffrage Association of Massachusetts; Harriet H. Robinson, Louise Bright; Hannah M. Todd, secretary; Nancy Willard Covell, Emma Frances Clarry, M. A. Dunbar, J. D. Foster; Sarah Stoddard Eddy, vice-president; Julia A. C. Smith, Salome Merritt, M. D.; Mary R. Brown, treasurer; E. S. Barker.

Finally our committee adopted a report, which was referred to the House Calendar, and ordered to be printed, March 1, 1883, as follows:

The Select Committee on Woman Suffrage, to whom was referred H. Res. 255, proposing an amendment to the Constitution of the United States to secure the right of suffrage to citizens of the United States without regard to sex, having considered the same, respectfully report:

In attempting to comprehend the vast results that could and would be attained by the adoption of the proposed article to the Constitution, a few considerations are presented that are claimed by the friends of woman suffrage to be worthy of the most serious attention, among which are the following:

I. There are vast interests in property vested in women, which property is affected by the taxation and legislation, without the owners having voice or representation in regard to it. The adoption of the proposed amendment would remove a manifest injustice.

II. Consider the unjust discriminations made against women in industrial and educational pursuits, and against those who are compelled to earn a livelihood by work of hand or brain. By conferring upon such the right of suffrage, their condition, it is claimed, would be greatly improved by the enlargement of their influence.

III. The questions of social and family relations are of equal importance to and affect as many women as men. Giving to women a voice in the enactment of laws pertaining to divorce and the custody of children and division of property would be merely recognizing an undeniable right.

IV. Municipal regulations in regard to houses of prostitution, of gambling, of retail liquor traffic, and of all other abominations of modern society, might be shaped very differently and more perfectly were women allowed the ballot.

V. If women had a voice in legislation, the momentous question of peace and war, which may act with such fearful intensity upon women, might be settled with less bloodshed.

VI. Finally, there is no condition, status in life, of rich or poor; no question, moral or political; no interest, present or future; no ties, foreign or domestic; no issues, local or national; no phase of human life, in which the mother is not equally interested with the father, the daughter with the son, the sister with the brother. Therefore the one should have equal voice with the other in molding the destiny of this nation.

Believing these considerations to be so important as to challenge the attention of all patriotic citizens, and that the people have a right to be heard in the only authoritative manner recognized by the Constitution, we report the accompanying resolution with a favorable recommendation in order that the people, through the Legislatures of their respective States, may express their views.

Now, Mr. Speaker, women consider they have the same political rights as men. I might read from such distinguished authority as Miss Susan B. Anthony, whose name has been jeered in her native State, and who has been prosecuted there for voting, but who stands before the American people to-day the peer of any woman in the nation, and the superior of half the men occupying a representative capacity. It does seem to me hard that when a woman like this comes to Congress, instructed by thousands and tens of thousands of her sex, in order to be heard she should be compelled to hang around the doors of the Judiciary Committee, or the doors of some other committee-room, preeminently occupied with other matters. But we are told there is no room. Yet we have a room where lobbyists of every sort are provided for. And are we to be told that no room in this wing of the Capitol can be had where respectable women of the nation can present arguments for consideration, for the calm consideration by their friends in this body? I say that such should be the case puts this House in an anomalous situation. I ask simply for the opportunity to be afforded the representatives of the political rights of women to be heard in making respectful argument to the law-making power of the nation. I ask that you give them a suitable room where their friends on this floor may hear their petitions and be able to present in the best shape their side of the question.

Now, I do not propose to go into the constitutional question in reference to the political rights of women, as that would extend my remarks far beyond the time allotted to me in this debate. I yield for one minute to the gentleman from Michigan [Mr. CUTCHEON].

Mr. CUTCHEON. Mr. Speaker, ever since the organization of this House I have received petitions from my constituents in regard to this matter of the political rights of women, but under the action of the House in its organization there seems to be no committee to which they could properly be referred. A few years since, when this question of woman suffrage was submitted to the people in my State, more than 40,000 electors were in favor of it. I believe much more than that number are at the present time in favor of it. It seems to me, without putting ourselves on the question of political rights of women, it is but respectful to a very large number of people in all our States that there should be a committee to receive and consider and report upon these petitions which come to us from time to time.

Mr. WHITE, of Kentucky. I desire now to call the attention of the House to what I consider a grievance. Not long since we occupied weeks in considering the wrongs that a general in the late war (Fitz-John Porter) was supposed to have suffered, and we undertook to rectify those wrongs. I call the attention of the House to the greater wrong that Miss Carroll has suffered, the lady who planned the campaign of the Tennessee which resulted in Sherman's victorious march to the sea, during the late war, and which prevented the recognition of the Southern confederacy, and which to-day makes our flag float over one nation, and simply I believe because she is a woman and can not help herself, and because she has no political power to bring to bear. She can not go to West Point and get the whole strength of that institution, nor bring to bear its various instrumentalities for influencing legislation here. Consequently for twenty years her claim has been dishonored.

That this House and the country at large may know something of the great injustice to which Miss Anna Ella Carroll has been subjected, I submit the following report, which was committed to the Committee of the Whole House March 3, 1881:

The Committee on Military Affairs, to whom the memorial of Anna Ella Carroll was referred, asking national recognition and reward for services rendered the United States during the war between the States, after careful consideration of the same, submit the following:

In the autumn of 1861 the great question as to whether the Union could be saved or whether it was hopelessly subverted depended on the ability of the Government to open the Mississippi and deliver a fatal blow upon the resources of the confederate power. The original plan was to reduce the formidable fortifications by descending this river, aided by the gunboat fleet then in preparation for that object.

President Lincoln had reserved to himself the special direction of this expedition, but before it was prepared to move he became convinced that the obstacles to be encountered were too grave and serious for the success which the exigencies of the crisis demanded, and the plan was then abandoned, and the armies diverted up the Tennessee River, and thence southward to the center of the confederate power.

The evidence before this committee completely establishes that Miss Anna Ella Carroll was the author of this change of plan, which involved a transfer of the national forces to their new base in North Mississippi and Alabama, in command of the Memphis and Charleston Railroad; that she devoted time and money in the autumn of 1861 to the investigation of its feasibility is established by the sworn testimony of L. D. Evans, chief-justice of the supreme court of Texas, to the Military Committee of the United States Senate in the Forty-second Congress (see pp. 40, 41 of memorial); that after that investigation she submitted her plan in writing to the War Department at Washington, placing it in the hands of Col. Thomas A. Scott, assistant Secretary of War, as is confirmed by his statement (see p. 38 of memorial), also confirmed by the statement of Hon. B. F. Wade, chairman of the Committee on the Conduct of the War, made to the same committee (see p. 38), and of President Lincoln and Secretary Stanton (see p. 39 of memorial); also by Hon. O. H. Browning, of Illinois, Senator during the war, in confidential relations with President Lincoln and Secretary Stanton (see p. 39, memorial); also that of Hon. Elisha Whittlesey, Comptroller of the Treasury (see p. 41, memorial); also by Hon. Thomas H. Hicks, governor of Maryland, and by Hon. Frederick Feckey's affidavit, comptroller of the public works of Maryland (see p. 127 of memorial); by Hon. Reverdy Johnson (see pp. 26 and 41, memorial); Hon. George Vickers, United States Senator from Maryland (see p. 41, memorial); again by Hon. B. F. Wade (see p. 41, memorial), Hon. J. T. Headley (see p. 43, memorial), Rev. Dr. R. J. Breckinridge on services (see p. 47, memorial), Prof. Joseph Henry, Rev. Dr. Hodge, of Theological Seminary at Princeton (see p. 30, memorial); remarkable interviews and correspondence of Judge B. F. Wade (see pp. 23-26 of memorial).

That this campaign prevented the recognition of Southern independence by its fatal effects on the Confederate States is shown by letters from Hon. C. M. Clay (see pp. 40, 43 of memorial), and by his letters from St. Petersburg; also those of Mr. Adams and Mr. Dayton from London and Paris (see pp. 100-102 of memorial).

That the campaign defeated national bankruptcy, then imminent, and opened the way for the system of finance to defend the Federal cause is shown by the debates of the period in both Houses of Congress (see utterances of Mr. Spalding, Mr. Diven, Mr. Thaddeus Stevens, Mr. Roscoe Conkling, Mr. JOHN SHERMAN, Mr. Henry Wilson, Mr. Fessenden, Mr. Trumbull, Mr. Foster, Mr. Garrett Davis, Mr. John J. Crittenden, &c., found for convenient reference in appendix to memorial, pp. 47-59. Also therein the opinion of the English press as to why the Union could not be restored).

The condition of the struggle can best be realized as depicted by the leading statesmen in Congress previous to the execution of these military movements (see synopsis of debates from Congressional Globe, pp. 21, 22 of memorial).

The effect of this campaign upon the country and the anxiety to find out and reward the author are evidenced by the resolution of Mr. Roscoe Conkling, in the House of Representatives, 24th of February, 1862 (see debates on the origin of the campaign, pp. 39-63 of memorial). But it was deemed prudent to make no public claim as to authorship while the war lasted (see Colonel Scott's view, p. 32 of memorial).

The wisdom of the plan was proven, not only by the absolute advantages which resulted, giving the mastery of the conflict to the national arms and evermore assuring their success even against the powers of all Europe should they have combined, but it was likewise proven by the failures to open the Mississippi or win any decided success on the plan first devised by the Government.

It is further conclusively shown that no plan, order, letter, telegram, or suggestion of the Tennessee River as the line of invasion has ever been produced except in the paper submitted by Miss Carroll on the 30th of November, 1861, and her subsequent letters to the Government as the campaign progressed.

It is further shown to this committee that the able and patriotic publications of memorialist, in pamphlets and newspapers, with her high social influence, not only largely contributed to the cause of the Union in her own State, Maryland (see Governor Hick's letters, p. 27, memorial), but exerted a wide and salutary influence on all the border States (see Howard's report, p. 33 and p. 75 of memorial).

These publications were used by the Government as war measures, and the debate in Congress shows that she was the first writer on the war powers of the Government (see p. 45 of memorial). Leading statesmen and jurists bore testimony to their value, including President Lincoln, Secretaries Chase, Stanton, Seward, Welles, Smith, Attorney-General Bates, Senators Browning, Doolittle, Collamer, Cowan, Reverdy Johnson, and Hicks, Hon. Horace Binney, Hon. Benjamin H. Brewster, Hon. William M. Meredith, Hon. Robert J. Walker, Hon. Charles O'Conor, Hon. Edwards Pierrepont, Hon. Edward Everett, Hon. Thomas Corwin, Hon. Francis Thomas, of Maryland, and many others found in memorial.

The Military Committee, through Senator Howard, in the Forty-first Congress, third session, document No. 337, unanimously reported that Miss Carroll did cause the change of the military expedition from the Mississippi to the Tennessee River, &c.; and the aforesaid committee, in the Forty-second Congress, second session, document No. 167, as found in memorial, reported through the Hon. Henry Wilson the evidence and bill in support of this claim.

Again, in the Forty-fourth Congress, the Military Committee of the House favorably considered this claim, and General A. S. Williams was prepared to report, and being prevented by want of time, placed on record that this claim is incontestably established, and that the country owes to Miss Carroll a large and honest compensation, both in money and honors, for her services in the national crisis.

In view of all the facts, this committee believe that the thanks of the nation are due Miss Carroll, and that they are fully justified in recommending that she be placed on the pension-rolls of the Government as a partial measure of

recognition for her public service, and report herewith a bill for such purpose, and recommend its passage.

Hon. E. M. Stanton came into the War Department in 1862, pledged to execute the Tennessee campaign.

Statement from Hon. B. F. Wade, chairman of the Committee on the Conduct of the War, April 4, 1876.

DEAR MISS CARROLL: I had no part in getting up the committee; the first intimation to me was that I had been made the head of it. But I never shirked a public duty, and at once went to work to do all that was possible to save the country. We went fully into the examination of the several plans for military operations then known to the Government; and we saw plainly enough that the time it must take to execute any of them would make it fatal to the Union.

We were in the deepest despair, until just at this time Colonel Scott informed me that there was a plan already devised that if executed with secrecy would open the Mississippi and save the national cause. I went immediately to Mr. Lincoln and talked the whole matter over. He said he did not himself doubt that the plan was feasible, but said there was one difficulty in the way, that no military or naval man had any idea of such a movement, it being the work of a civilian, and none of them would believe it safe to make such an advance upon only a navigable river, with no protection but a gunboat fleet, and they would not want to take the risk. He said it was devised by Miss Carroll, and military men were extremely jealous of all outside interference. I plead earnestly with him, for I found there were influences in his Cabinet then averse to his taking the responsibility, and wanted everything done in deference to the views of McClellan and Halleck. I said to Mr. Lincoln, "You know we are now in the last extremity, and you have to choose between adopting and at once executing a plan that you believe to be the right one, and save the country, or defer to the opinions of military men in command and lose the country." He finally decided he would take the initiative; but there was Mr. Bates, who had suggested the gunboat fleet, and wanted to advance down the Mississippi, as originally designed; but after a little he came to see no result could be achieved on that mode of attack, and he united with us in favor of the change of expedition as you recommended.

After repeated talks with Mr. Stanton, I was entirely convinced that if placed at the head of the War Department he would have your plan executed victoriously, as he fully believed it was the only means of safety, as I did.

Mr. Lincoln, on my suggesting Stanton, asked me how the leading Republicans would take it; that Stanton was so fresh from the Buchanan Cabinet and so many things said of him. I insisted he was our man withal, and brought him and Lincoln into communication, and Lincoln was entirely satisfied; but so soon as it got out the doubters came to the front; Senators and members called on me; I sent them to Stanton and told them to decide for themselves. The gunboats were then nearly ready for the Mississippi expedition, and Mr. Lincoln agreed, as soon as they were, to start the Tennessee movement. It was determined that as soon as Mr. Stanton came in the Department Colonel Scott should go out to the Western armies and make ready for the campaign, in pursuance of your plan, as he has testified before committees.

It was a great work to get the matter started; you have no idea of it. We almost fought for it. If ever there was a righteous claim on earth you have one. I have often been sorry that, knowing all this as I did then, I had not publicly declared you as the author. But we were fully alive to the importance of absolute secrecy. I trusted but very few of our people, but to pacify the country I announced from the Senate that the armies were about to move and inaction was no longer to be tolerated, and Mr. Fessenden, head of the Finance Committee, who had been told of the proposed advance, also stated in the Senate that what would be achieved in a few more days would satisfy the country and astound the world.

As the expedition advanced Mr. Lincoln, Mr. Stanton, and myself frequently alluded to your extraordinary sagacity and unselfish patriotism, but all agreed that you should be recognized for your most noble services, and properly rewarded for the same. The last time I saw Mr. Stanton he was on his deathbed; he was then most earnest in his desire to have you come before Congress, as I told you soon after, and said if he lived he would see that justice was awarded you. This I have told you often since, and I believe the truth in this matter will finally prevail.

B. F. WADE.

Now, Mr. Speaker, contrast the case of this brave, patriotic, self-sacrificing woman with that of the selfish, jealous, and disobedient Fitz-John Porter.

So far as the action of this House can do it, the latter has been complimented for the inactivity which resulted in the loss of a great battle to the Union cause during the late unpleasantness, while it has done nothing but ignore the just claim of the former.

Does any one doubt for one moment that had Miss Carroll possessed the powerful political influence of Fitz-John Porter, and he obscured by the lack of it, that he would have been shot as a traitor, and she long ago received every dollar advanced by her to save the nation and her name honored as Sherman's and Grant's?

Wendell Phillips says:

Suppose that woman is essentially inferior to man; she still has rights. Grant that Mrs. Norton never could be Byron; that Elizabeth Barrett never could have written Paradise Lost; that Mrs. Somerville never could be La Place; nor Sirani have painted the Transfiguration. What then? Does that prove they should be deprived of all civil rights? John Smith never will be, never can be, Daniel Webster. Shall he therefore be put under a guardianship and forbidden to vote? Suppose woman, though equal, to differ essentially in her intellect from man; is that any ground for disfranchising her? Shall the Fultons say to the Raphaels, "Because you can not make steam-engines, therefore you shall not vote?" Shall the Napoleons or the Washingtons say to the Wordsworths or the Herschells, "Because you can not lead armies and govern States, therefore you shall have no civil rights?"

In the language of Governor Hoyt, of Wyoming Territory:

I see a castle on yonder plain, a castle beleaguered, and there are found within its walls a band of noble, heroic women. They are in peril of their precious lives and of all that is dear to them and their hearthstones. Were this vision a reality, and of you accepted as a fact, how quickly every man would leap from his seat, secure arms, and rush to the rescue. But when woman's spirit is enthralled, immured, not her person; when her rights have been usurped, when her spiritual powers have been repressed and subordinated to the selfish will of man, and the call comes for help, how slow we are to fling wide the gates and bid her be free. * * *

Man himself can not stand before God in his uprightness, man himself can not develop into his completeness while he is halved, while he is less than himself, because of denying the full development and exercise of powers to her whom God gave to be his completement. A woman who is only half a woman, who is cramped, suppressed, restricted, and restrained, she can not be all that a man needs; and so I plead in the interest of my own sex while pleading for her. I shall walk freer myself when I know that no denial is made to woman of what belongs to her—not to my wife only but to every woman on the earth. I shall be more a man, I shall stand up in the presence of mankind and before the Father of all with an uprightness, with a conscious dignity and nobility, which I can not possess so long as aught is denied to her.

* * * * * * * *

A majority of questions to be voted on touch the interests of woman as they do not those of man. It is upon her finer sensibilities, her purer instincts, and her maternal nature that the results of immorality and vice in every form fall with more crushing weight. Ay, it is woman who hath given hostages to fortune of all that is most precious on earth. Trust her, then, O ye doubting men! Trust her, and so receive, in countless ways ye know not of, the unfailing benediction of Heaven.

I defy any one to suggest any fundamental principle to substantiate our right as a nation to exercise free government which does not apply to woman as well as man. She is the equal of man in every vicissitude in life, and it is a shame to require her to ask as a charity what she is entitled to as a right.

In this free country "the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity," did in 1787 ordain and establish a Constitution for the United States of America. Before the end of the year 1790 that Constitution was amended by the people of the United States, the very first article of which amendment read as follows:

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances. (See Constitution of the United States, amendment I, article 1.)

Now, it seems to me that the right to assemble and to petition the Government carries with it the right to present the petitions to the Congress of the United States, in which reposes all legislative powers granted under the Constitution of the United States. If this be so, is it not our duty as the representatives of the people to appoint a committee to hear the petitions of the thousands, yes, tens of thousands, of men and women who, by resolution or by vote at the ballot-box, have petitioned for the recognition of the political rights of women?

By article 5 of the amendments to the Constitution, "No person * * * shall be deprived of life, liberty, or property, without due process of law," and under that guarantee every criminal has the right of trial by jury.

Is it more important to the life, honor, and prosperity of the nation that Congress should establish courts to grant trials by jury to criminals like Guiteau or men like the alleged star-route thieves than that Congress should appoint a committee to consider the petitions and hear the accredited representatives of many of the best people of the United States who are or may be here to be heard on subjects affecting the political rights of women?

Mr. Speaker, I trust that the House will sustain me in this effort to amend Rule X, so that we shall have in the list of the standing committees of this House a committee, to consist of eleven members, whose duty it shall be to consider the political rights of women.

Chalmers vs. Manning.

SPEECH

OF

HON. ROBERT LOWRY,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 14, 1884.

The House having under consideration the contested-election case of Chalmers *vs.* Manning—

Mr. LOWRY said:

Mr. SPEAKER: It may be well regarded as an act of temerity on my part to enter upon the discussion of this question at this time under the peculiar circumstances surrounding us. This report has now been discussed for two days and many able and experienced gentlemen have engaged in the debate. It is, therefore, with extreme hesitancy and the utmost diffidence on my part that I undertake to participate. Indeed, it is only by reason of the fact that it seems to me there are yet some views of this case which have not been fully presented to the House, but which are essential, and should be clearly understood in order to dispose correctly of the primary question now pending before this body, that I am induced to do so.

It has been said here, and that by gentlemen learned in the law, that this committee has mistaken its duty, and that it has undertaken to discharge functions which were not devolved upon it by this House. And these gentlemen, without having heard the discussion which took place before that committee, many of them without claiming to have examined at length the authorities bearing upon the question, undertake to announce *ex cathedra* that there was no case in which the Committee

on Elections of the House, or the House itself, according to the principles of parliamentary law, was authorized to look behind the certificate of the governor of the State, under the great seal of the State, with the view of determining as to the *prima facie* right to a seat upon this floor.

Much has been said here as to what constitutes the *prima facie* case. There has been no controversy among the members of the Committee on Elections; there has been no controversy, as I apprehend, here or elsewhere, in reference to the point that as a general rule the certificate of election or return of the officer upon whom the duty is incumbent to make the certification as to the election of a member of this House is in the first place *prima facie* evidence of the right to the seat. No such question is properly a subject of contention. Many eloquent tongues have therefore spent, and possibly may continue to spend, their energies for naught in seeking to impress us that a rule exists the existence of which is not only granted but constitutes the very postulate of the report of the committee. But, sir, like almost all rules of the law, whether it be the common law, whether it be equity jurisprudence, or whether it be under the provisions of our respective codes, so in this case there are exceptions to that rule. And while I admit that the author of the only work we have distinctively upon the subject of contested elections has seemed to set his face strongly in favor of the doctrine of excluding these exceptions and of insisting upon the principle that the certificate of election shall not be gone behind under almost any ordinary state of circumstances, yet I think we ought to consider the influences under which that gentleman lived and the atmosphere in which he moved at the time he was receiving the education and training which prepared him for the compilation of this treatise.

This book (McCrary on Contested Elections) was prepared before its author had assumed the judicial ermine, before he took his seat upon the bench of the United States court, before he yielded to the seductive influences which have taken him away from the bench of that court and prompted him to ally his fortunes with the interests of one of the great corporations of this country. He was for a long time connected with this same Committee on Elections of this House. We all know, sir, how during that period of time the majority of this House was constituted. The history of our legislation and of the administration of parliamentary law at that time conveys to us the painful intelligence that that majority during the period of its ascendency here ruled with a somewhat high hand, and that there was not under all circumstances the strictest regard paid to the rules of parliamentary law in determining the question of the admission or rejection of members to their seats. It will be found upon even a cursory examination of the questions which were before the House and before the Committee on Elections during the time that Judge McCrary was connected with it that it was for the interest of the great party with which he was connected to presume the fact that the member holding the certificate of the governor was entitled to peculiar protection and to avoid going behind those certificates, lest by doing so the majority of the House of which he was a member should be deprived of a part of their representation upon the floor of the House. Held together by certain cohesive principles often described and having reference to the fatness of an overflowing Treasury, they presented a picture in such cases of delightful unity, and when a member of the party now in the majority here presumed to question the right to a seat of one of their number, he was not only received with a brow of adamant but disposed of on some pretext or another with a hand of steel.

Mr. ROBERTSON. I would like to ask the gentleman from Indiana a question.

Mr. LOWRY. I should prefer not to be interrupted, but I will hear the question.

Mr. ROBERTSON. Does not every authority sustain the position taken by Mr. McCrary; that is, that the certificate gives a man the *prima facie* right to a seat in every legislative body on the face of the earth?

Mr. LOWRY. There is a homely adage, Mr. Speaker, that the proof of the pudding is in the eating, and I commend it to my enthusiastic friend from Kentucky. I think if he had endeavored to get at the gist of this question by as industrious efforts as some others of us have adopted for that purpose he would not have ventured on the assumption he has just made.

And now for the proof of the correctness of my position. I have conceded the tendency of Judge McCrary's mind at the time he compiled this treatise was in favor of attaching the utmost possible sacredness to the certificate of election. But he does not contend, by any manner of means, that there are not cases in which it is proper to go behind the certificate. And the authority which I shall cite in addition to Mr. McCrary will show, I think, beyond all peradventure that, as appears from the very reason and necessity of the case must be so, these exceptions to the general rule as to the authority of the certificate as evidence *prima facie* of the right to the seat do exist, and the principle that such certificate imports absolute verity is not in all circumstances to be applied.

The section of this work I now refer to has been read repeatedly, and I now call the attention of the House to it simply for the purpose of showing that Mr. McCrary, acting under the influences I have suggested, has not favored us with a citation of the cases in which the doctrine has been held that the certificate may be gone behind, but has contented himself with referring to the case of Hunt *vs.* Chilcott, and adding in addition to the reference to that case that there are a few others. Why not give these few? Sir, an impartial author might at least have done that. More accurate and reliable parliamentarians have given many others. But to our distinguished author. He says:

SEC. 224. The case of Hunt *vs.* Chilcott (2 Hartlett, 164) is one of the very few cases in which a certificate of election signed by the proper authority has been held insufficient to entitle the holder to be sworn in as a member of the House of Representatives of the United States and to occupy a seat pending the contest. The reason for this action, however, was that the party holding the certificate had voluntarily offered evidence which impeached it.

I desire to call the attention of the House to the fact that during the pendency of that case the late revered and lamented Speaker, a Representative from my own State, Hon. Michael C. KERR, was a member of the Committee on Elections; and the Committee on Elections reported as a reason for going behind the certificate that Governor Cummings, who was the gentleman who issued the certificate and appeared before the Committee on Elections as counsel on behalf of Hunt, testified as to the facts which transpired at the time of the issuance of the certificate of election, and that by reason of the then contestee (who subsequently became the contestor) introducing that evidence, it authorized the House and the committee to go behind the certificate. While the committee so reported, Mr. KERR, on the other hand, said he had been present at the meetings of the committee, and had heard of no evidence of that kind being introduced through the instrumentality of Governor Cummings as a witness, and indeed had not heard Governor Cummings even admit in his argument in the case that there was any such state of facts existing.

The evidence which it is claimed was submitted by Governor Cummings before the Committee on Elections was to the effect that he conceived himself to be a member of the returning board of Colorado, from which Territory the contest came, and, acting in concert with one other member of the returning-board, he had voted against the two votes, constituting a majority, of those members who regularly constituted the returning board, and had then issued a certificate to Hunt because he conceived that Hunt was entitled to it upon the return of the vote.

Mr. ROGERS, of Arkansas. I would not ask leave to interrupt my friend from Indiana [Mr. LOWRY] at this point did I not know that he was an able and experienced lawyer and it would not break the chain of his argument. But I do ask leave to interrupt him just one moment in this connection.

The SPEAKER. Does the gentleman from Indiana [Mr. LOWRY] yield?

Mr. LOWRY. In view of my great apprehension that by reason of the embarrassment arising from the situation in which I find myself placed, being in some measure forced into this discussion and that without time for anything like due preparation, and fearing that I would be unable to proceed as satisfactorily if I were interrupted, I took occasion near the opening of my remarks to indicate to the honorable gentleman from Kentucky that I would prefer not to be interrupted until I had got through with my argument. However, if it will not occupy too long a time, I will be only too glad to yield to my friend from Arkansas.

Mr. ROGERS, of Arkansas. Just one moment is all that I expect to occupy.

Mr. LOWRY. I understood the gentleman to desire to propound a question.

Mr. ROGERS, of Arkansas. Not a question. I wanted to read one passage and then to make a single statement; that is all.

Mr. LOWRY. Will this come out of my time?

The SPEAKER. It will.

Mr. LOWRY. Then I must beg leave to decline the interruption, because I have promised all the time I have to spare to other gentlemen.

The SPEAKER. The gentleman will proceed.

Mr. LOWRY. In the case of Hunt against Chilcott, the proposition upon which the House rested its decision was that the governor who issued the certificate appeared as counsel before the Committee on Elections and had made a statement of certain facts which had transpired before the returning board, and that thereby the Committee on Elections and the House were justified in going behind the certificate and in inquiring whether Hunt or Chilcott, as it appeared from the returns of the election, had received a majority of the votes cast and was entitled to be seated upon the *prima facie* case.

Judge McCrary concedes, without favoring us, as I have said, with a citation of the authorities, that there have been other cases of a like character. During the course of this argument gentlemen have assumed that that is all the authority there is upon the subject. Supposing, sir, they are right and McCrary wrong, what precedent could be more pointed or more powerful?

Mr. Speaker, I know there has been some confusion in the administration of parliamentary law in this country. We have thirty-eight States of this Union, in each of which there is a Legislature composed of two branches. We have here in this city the two Houses of Congress. All of these legislative bodies have been engaged in the administration of parliamentary law as they understood it to exist. The systems adopted by all these, as is well known, were founded on the originally crude and certainly yet somewhat abstruse principles and

practice which have been handed down to us from the British Parliament.

It must be conceded that there has been great diversity of decision in the cases which have arisen in the various parliamentary bodies in this country. It must be conceded as a lamentable fact that the decisions in all those cases have not been always with reference to the principles of the Constitution and the laws. It must be conceded that here, especially, cases very often have been conducted rather with regard to party expediency and the interest of majorities upon this floor. But I apprehend there is no longer any such great uncertainty upon this branch of the law. I think it has come to be what may be termed a branch of the common law of this country, and it is to be hoped we are now settling down to sounder constitutional and legal principles in its administration. Shall those of us now in the majority fail to aid in securing so great and desirable a result?

Some of the gentlemen who have compiled treatises upon parliamentary law and practice have aided largely in enabling us to come to a conclusion as to what are the correct principles to be applied in cases of this kind. It has been, sir, in that respect, as was the case in regard to the common law before the time of Blackstone and until he brought his magnificent powers of condensation and arrangement to bear upon the subject, and, as it were, brought order out of chaos. Just so here. The rules of parliamentary law have been commented upon and digested, and principles have been eliminated upon which I think we can safely proceed in adjudicating all questions of this character and without any apprehension that mistakes will be committed.

The time allotted me in this discussion, Mr. Speaker, forbids any attempt at an examination and criticism of the individual cases. Let me, therefore, now call the attention of the House for one moment to the principal authority upon the subject of the law and practice of legislative assemblies. I refer to Mr. Cushing, a man whose mind was never warped or contaminated by being brought into contact with the partisan methods that so long existed within these walls; an author who never found it incumbent upon himself to bend a hair's breath in order to accommodate himself to the demands of supposed party interest, or the real or imaginary exigencies incident to the preservation of party majorities independently of either fact or law. In section 167, after having set forth in other sections the more general rules, and coming now to treat especially of the certificate, or what is the same thing, the return, and enlarging upon it more extendedly than McCrary, this author says:

It has already been stated that the right of a member to his seat may depend upon or be involved in—

What? I beg gentlemen on this side of the House to mark well the language—

or be involved in the return, either in form or in substance, without regard to the election. Cases of this description are now to be considered.

And in considering these cases he proceeds to say, in section 170:

Where returning officers make a mistake in the name of the person elected, and, in consequence thereof, return one who was not chosen, the mistake may be corrected, either upon the petition of the person really elected, or on motion merely, or, it is presumed, upon the representation of the returning officers.

171. Where the returning officers, by mistake, consider votes which are really given for one person as given for two or more, as, for example, where they regard votes given for A B and for A B, junior, as given for two persons; or, where, in copying the lists of votes to be transmitted by the receiving officers to the returning officers, a mistake is made in the name of any of the persons voted for, so that a part of the votes given for one appear to be given for another person, thereby apparently defeating the election of the former; and, in consequence of such mistakes, in either case, a person is returned who was not in fact elected, the return will be set aside, and the person really elected admitted as a member.

172. Where a return is obtained by means of some fraud or trick practiced by or with the consent of the returning officers, or where they are intimidated by riots and disturbance from making return of the person duly elected, and are compelled to return another; or where they are corrupted by bribery to make a false return—in all these cases the return will be set aside and the person duly elected admitted to a seat.

Now mark you, Mr. Speaker, treating exclusively of the return as contradistinguished from the election of the member, treating exclusively of the certificate of the governor, because these are interchangeable terms, I ask might not this House, in view of these well-settled principles of parliamentary law; in view of the allegation that the secretary of state, instead of following the certificate of the commissioners of elections of Tate County, followed a paper attached to that certificate which is not recognized by the law of Mississippi and is no part of this record; in view of the allegation that the holder of this certificate, both before and since the commencement of the Congressional term on 4th of March last, has declared that he would not ask to be enrolled under it and would not take a seat in this House until, in his own explicit language, he had vindicated his right to the seat—if all these allegations should be made to appear to be true, might not this House, acting upon the established principles of parliamentary law, our distinguished friend from Pennsylvania [Mr. RANDALL] to the contrary notwithstanding, but my scarcely less distinguished friend from New York [Mr. COX], distinguished like the former both as a statesman and a parliamentarian, concurring with me on this question—might not this House well determine that it would look to the facts as they are spread upon this record for the purpose of determining whether upon the face of it the title of Mr. Manning is good or bad.

What is *prima facie?* We are perhaps not all lawyers, not all accustomed to interpreting these somewhat technical terms, *prima facie*—on first appearance. The title upon the first appearance is the title that we are determining here; and the question now at issue is whether or not the House in the first place had authority to refer to the Committee on Elections the determination of this question; and next, whether it did in fact exercise that authority. The first proposition being established, let us proceed to the next.

What did the House do? Brought up as one of the strictest of the sect, not of Pharisees, but of the household of the faithful; living, as I have ever done, in the ranks of and intimately associated with the Democracy of the country, I felt it to be my duty when the question as to the force and effect of the certificate merely was presented here to follow in the footsteps of my friend from Ohio [Mr. CONVERSE]. When he was seeking to have Mr. Manning seated simply upon his certificate, and before anything was brought to the attention of the House as to the infirmities connected with that certificate, I followed as meekly as a little lamb, and voted every time in favor of seating Mr. Manning upon the certificate itself. But a halt was called in the proceedings of the House. It was whispered around, and somewhat audibly, that a mistake was probably about to be made here. We paused; and upon deliberation the resolution which the gentleman from Ohio subsequently introduced here was determined upon as the proper one in this case. I desire now to call attention to the meaning of the phraseology of that resolution.

Can it be possible that the purpose of the House, having arrived at that stage in the consideration of this question, was simply to refer to the Committee on Elections the certificate of Governor Robert Lowry of Mississippi? And that name being identical with my own, allow me to say, Mr. Speaker, that were there not, as there are, other and higher reasons, I have the very highest respect and regard for it. Was it intended that the committee should perform merely the perfunctory duty of ascertaining whether the certificate was properly sealed and properly signed, and whether Mr. Manning was properly named in it, so as to entitle the House to swear him in as a member? Was it not well understood that there was no question raised here about that matter, that not a syllable had been uttered against the authenticity and completeness of the certificate so far as its form or substance was concerned? The resolution being adopted, what was its phraseology? Observe the exact words. It referred the question to the Committee on Elections when appointed—

With instructions to report immediately whether upon the *prima facie* case *as presented by said papers* said Manning or Chalmers is entitled to be sworn in as a member.

As presented by what papers? Adhering closely still to the text, let me quote again:

Resolved, That the certificate and *all other papers in the contested-election case* of J. R. Chalmers *vs.* Van H. Manning, from the second Congressional district of the State of Mississippi, be referred to the Committee on Elections with instructions, &c.

Ah! "Whether as presented by said papers" Mr. Manning or Mr. Chalmers was entitled to be sworn in! But gentlemen would have us read this resolution in these words: to "inquire whether, as appeared by the *certificate* of the governor, Mr. Manning *or* Mr. Chalmers," whose name was not mentioned in or connected with it, was entitled to be sworn in. Why, sir, some of us must have been much at fault, I apprehend, when that resolution was passed if the doctrine of gentlemen on the other side of the proposition is correct. If they are correct, then this resolution *ought* to read "with instructions to report immediately whether upon the *prima facie* case presented by said *certificate* Mr. Manning or Mr. Chalmers is entitled to the seat." May I ask, in language such, perhaps, as might be used by the honorable gentleman from Colorado [Mr. BELFORD], why in the name of Heaven these papers should have been referred to the committee at all if it had not been intended at the time of the reference that the committee should inspect "the papers" and determine from them the question of the *prima facie* right? Was the House engaged in a mere matter of mummery? Were they mocking this committee? Did they intend the committee to go through with the examination of these papers and then come in and say in their report that they had examined the papers as they understood the resolution said in plain terms they should examine them, for the purpose of determining the question involved, but the House had done wrong in making the reference, and by reason of that error on the part of the House they would report upon the certificate itself?

Why did the House see proper to make this reference? One reason was that it was alleged there had been a mistake made in this case by the officer of the State of Mississippi upon whom the duty devolved of making out this return, of issuing this certificate. Another mistake was alleged to have occurred in the county of Tate, where James R. Chalmers had been returned as having received 1,472 votes, and in the making out of what was then called a tally-paper the amanuensis or scrivener who made it out by mistake wrote the name of *Chambliss* instead of Chalmers, and the secretary of state in certifying the return to the governor had acted on that so-called tally-paper and certified that *Chambliss* instead of *Chalmers* had received those votes. Now, one of the papers referred to this committee is the return of the election

commissioners of the county of Tate. They certify in unqualified and unmistakable terms that J. R. Chalmers received 1,472 votes in that county, adding to the certificate "as appears by the tally-paper" on the opposite side of the sheet. I will not occupy the time of the House in reading from the code of Mississippi. The section of the code defining the duties of the election commissioners prescribes that they shall certify the vote cast by the various counties at the general election. The board of commissioners so certified. The statute does not require any tally-sheet to accompany the returns. In four out of the nine counties composing the district there was no such thing as any paper purporting to be a tally-sheet accompanying the returns.

I give the names of the counties in order that there may be no misapprehension about the matter. In the counties of De Soto, Tallahatchee, Panola, and Union there was a simple certificate, such substantially as was signed by the commissioners of election of the county of Tate. The secretary of state followed in the other cases the body of the certificate, but in the case of the county of Tate he accepted what appeared on the face of what I think, with all respect and without going out of the record, I may denominate a mere thumb-paper, which had no existence under the statute of Mississippi, and incorporated in the certificate to the governor of the State what appeared on the face of that paper. And among the papers referred to us is the affidavit of the amanuensis or scrivener who made out those figures purporting to constitute a tally-paper. He swears, and his affidavit is uncontradicted—and in this respect I beg leave to differ with my distinguished friend, the chairman of the committee, who drew the report, when he says that that affidavit is not entitled to the utmost credence as an authentic document; it is here on the file, referred to the Committee on Elections, never contradicted and no motion made to strike it out—that gentleman solemnly swears that he does not believe he wrote the name of *Chambliss* in that thumb-paper, and if he did it was a clerical error. And subsequently to that time the same board of commissioners certified in an amended return that the vote of that county was cast for *Chalmers*, and not for *Chambliss*. Now, sir, I hold, and I think any gentleman who will take the pains to inquire into the authorities on this subject will agree with me, that this is regarded as a mere mistake of the scrivener, and that any officer charged with the performance of any duty in connection with an election may, after performing the function incumbent on him, correct an error of that kind.

But if they have once determined a question upon which they have discretion to act, having acted, they can not rescind that act and certify a second time to a different conclusion. In other words, that their discretion having been once exercised is exhausted. But the error, if indeed there were one which was material, which I deny, was merely clerical and subject to correction. This board of election commissioners did correct the informal paper and recertify; and the reformed certificate is one of the papers also referred to the committee, and one which I think they have properly considered in determining this matter.

Now, sir, can it be possible that in the case of a board of election commissioners making up their certificate of election, if their scrivener shall insert a name by mistake, no one connected with the high duty of making that certificate has the power to correct a manifest error? And after it is sent to the officer whose duty it is to consummate the transaction by issuing the final certificate, and such officer is constrained or misled into the issuance of the final certificate—as I grant must have been the case with Governor Lowry—and such final certificate is presented, even if it was presented here by the beneficiary, can it be that it cannot be called in question, but that the person whose name appears in the body of it must necessarily occupy a seat here until such period of time elapses as the Committee on Elections and the House itself can go through the masses of testimony and voluminous proofs accompanying a contested case on the merits?

Why, sir, our distinguished friend from New York [Mr. DORSHEIMER], I think it was, referred to one Rutherford B. Hayes in the course of his remarks on yesterday. Suppose now for a moment we transplant from the shades of Louisiana to the vales of Mississippi the celebrated returning board of the memorable year 1876—*redivivus* J. Madison Wells. There is, we will suppose, another Congressional election. Of the candidates in this district for Congress one happens to be Rutherford B. Hughes; and J. Madison Wells is the supervisor of elections, authorized to make up the returns. Suppose further that he has, as he would probably have, an accommodating amanuensis, and whispers in his ear for convenient purposes, "*Let your pen slip.*" The young man takes the hint and writes the name Rutherford B. Hayes instead of Rutherford B. Hughes. Suppose that gentleman should then come here on that certificate, and claim, with characteristic effrontery, the right to occupy a seat which but for that chirographical slip would be shown to belong to another man, and should claim the right to draw the salary belonging to that other man. Would the members of the majority of this House take the certificate thus presented to them and accept it as valid and binding, and say that they cannot go behind it and inquire whether that certificate had not issued wrongfully and proceed to rectify the mistake? Why, sir, I understand that so far as the majority of this House is concerned this question is already *res adjudicata*. It is settled law. I understand that the great party in this country that supported and elected Tilden and Hendricks in 1876 is irrevocably committed to the doctrine that returns which are based on fraud or mistake are worthless and entitled to no consideration.

Indeed, it is a well-recognized principle of law that mistake or error, mutual mistake in the case of contracting parties, mistake on the part of a public functionary who is directed to perform an *ex parte* duty, voids the whole transaction and may be relieved against. And it was decided by the supreme court of Florida in a case before them in reference to the contested election of a seat in the electoral college that they had the power to compel the canvassing board to correct their returns, whether they were arrived at through mistake or fraud. Of the many cases on this point, this I am sure is on this side of the House best known and most revered.

Why, sir, in this very case this question too is *stare decisis*. The courts of Mississippi have had this question under adjudication, and so far as the principle involved is concerned it remains as the solemn decision of the circuit court of the county in which this controversy originated that the certificate was improperly made up by the secretary of state as to the return showing that James R. Chambliss received 1,472 votes in the county of Tate. This question having come up in the court, and the question of fact being tried by a jury, the decree of the circuit court was to the effect that a mandamus should be issued compelling the secretary to make a return of Tate County as being cast for James R. Chalmers instead of Chambliss. The case went on appeal to the supreme court. I have here by accident a report, not official but authentic, as I understand it, of the decision of the supreme court of Mississippi. There has been some controversy here in reference to the result of the adjudication. The supreme court in reviewing the decision of the court below virtually affirmed it while formally reversing it; and why? Simply for the reason that to undertake to enforce the decree rendered by the circuit court would be vain by reason of the fact that the discretionary duty had been already performed by the secretary of state and that the certificate had been issued by the governor, the court recognizing at the same time, however, the jurisdiction of the court below over the question involved and omitting altogether any criticism upon the conclusion to which the court below had arrived. The court above quotes largely from authorities. One of them is the Florida case in regard to the electoral vote. They then say:

> In this case, the secretary of state having declared Manning to be duly elected, and the governor having commissioned him upon such declaration, we adopt the language of the supreme court of Missouri in the similar case of Bland against Rodman, 43 Mo., 256, and say: "The case has passed beyond any control of this court, and the only redress the relator has, if he considers himself aggrieved, is by a legal contest made in pursuance of law." In that case the writ was denied because the secretary of state had certified to the governor the result of the election, and the governor, acting on that, had commissioned another than the relator.
>
> If we were to require the secretary of state to make another declaration of the result of the election, it would be nugatory; it would not constitute the required credentials. If we were to command the secretary to issue a certificate of any sort to the petitioner, we would require what no law requires of him in reference to the election. If we assume that the governor would deem it his duty to regard a new declaration of the result of the election, enforced from the secretary of state by the court, nothing still would be effected, because the governor has no power to recall or vacate the commission heretofore issued.

And citing the authorities which hold that the circuit court had jurisdiction to consider these questions, although appertaining to the election of a Representative in Congress, they conclude that the decision below should be reversed simply for the reason that it would be an idle and vain thing to affirm a decree which could not be enforced by reason of the power of the authorities having been exhausted in the making of the previous certification and the issuance of the certificate by the governor.

It is said here, however, that the question is anomalous in its character; that while there is no court in all this land, no court in Christendom, in which mistakes as well as frauds can not be relieved against, when it comes up to this high court of chancery, having under the Constitution complete control "of the elections, returns" (as contradistinguished from elections), "and qualifications of its members," it is not in the power of this House to look beyond the parchment that is brought here, and look behind it for the purpose of determining the *prima facie* right. Why, sir, suppose we were in any court of justice having complete and absolute jurisdiction as we have of the question presented, whether it be a court of common law, with chancery powers, a court exclusively of equity, or a court organized under any of the codes, and the holder of any document, deed, mortgage, bond, promissory note, or what you will should come and say to the court in his pleadings, "There was a mistake in the execution of this instrument; it was intended to be executed to another; the owner of this property, or the man on whom it was incumbent to make the deed, mortgage, bond, or note, intended it for another, but my name was inserted by mistake; and I ask you to render judgment in my favor, notwithstanding that fact." Would not that case be parallel to this? And what court would hesitate to refuse to affirm the right claimed by any such party under any such circumstances?

I ask the distinguished gentleman from New York [Mr. DORSHEIMER] who assumed to deal so summarily with this report, and who is familiar with the practice in his State by which, in the administration of law, judgment of nonsuit is rendered—I ask him what tribunal there is within the confines of the Empire State in which if a litigant

were to come and present such a record he would not be driven unceremoniously out of court by a judgment of nonsuit?

But, sir, in addition to this point of manifest mistake and error, there is proof *aliunde*. There is the proof by parol, and not parol merely, because it has become a solemn matter of record.

Now it is said, I think not quite ingenuously, by the honorable gentleman from Missouri [Mr. CLARDY] that the contestee has said nothing that should conclude him; it was said before him by the gentleman from Pennsylvania, my colleague on this committee [Mr. ELLIOTT], who represents in his own person the entire Commonwealth of the Keystone State—I think it was substantially affirmed by the gentleman from New York [Mr. DORSHEIMER] who spoke on that side, and I know it was affirmed by my highly respected colleague from Indiana [Mr. COBB]—that this committee and this House had no right to take into consideration any statement by Colonel Manning in reference to the circumstances under which he came into possession of this certificate.

It is said that the district has rights, and that he can not make admissions that will be binding upon the district to its prejudice. Sec. 359, McC. on El. is citited as affirming this.

Sir, assuming that it would be to the prejudice of the district, can this be so? Is it possible that these three hundred and twenty or more Representatives, many of them experienced debaters, statesmen, and civists, are but mere automatons, or that they each come up empowered to represent a constituency and bind that constituency in all other respects, but that they can not by any act or word or deed, however solemn, affect their rights so far as the isolated question of representation on this floor is concerned? What then shall become of the solemn provisions of the law whereby it is provided that persons engaged in controversies about seats on the floor of this House shall make up certain issues? When they come to have these issues made up are they of no avail? I would like some of our friends who are so constituted that they have the happy faculty of determining seemingly by intuition some of these grave legal questions to explain to me how it is that for all other purposes the Representative can bind his constituency, but that, notwithstanding the provisions of the statute, when he comes to make up the issues in the case as the statute provides, and by reference to which the parties shall be guided in taking testimony, he can not bind his constituency by impairing his own right to sit here. Suppose this were the doctrine of McCrary and that it had been supported by one of the divisions of this House? Could they override the plain provision of the contested-election law? Section 121 of that act provides that:

> The testimony to be taken by either party to the contest shall be confined to the proof or disproof of the facts alleged or denied in the notice and answer.

But such is not the doctrine of McCrary or the view enunciated by the House.

I believe it was the remark of a distinguished judge resident in Tennessee that he never was very much of a legal student; that, although he had some little credit for a knowledge of the law to which he thought he was entitled, he had not got it by hard labor, but that as a practitioner he had always taken occasion when an authority was cited to look a little way in advance of the clause that was read or a little way behind it, and he generally found authority to suit his purpose. And it seems that, notwithstanding such was the spontaneous way in which he acquired his knowledge of the law, General Jackson nevertheless recognized his merits as a distinguished lawyer to such an extent as to place him on the bench of the United States Supreme Court.

Now, if my friends had looked a little further into their authorities, I think they would have found that the citation they were making was not applicable to this case. Without detaining the House by referring to it again, I will simply say that it appears from the section itself, which is cited from McCrary, that the principle enunciated by the House in the cases relied on was that where a contestee failed to make answer to the notice of contest the House would not by reason of that fact turn the sitting member out of the seat; the House would not pronounce judgment by default.

I think I might appeal to even less learned gentlemen of the legal profession than my friends who have entered upon the discussion of this question with so much alacrity; I think I might appeal to them to say whether or not it is not the practice of the courts in some similar cases of non-appearance merely, to require proof unless there is something on the record tending to show a *prima facie* right to recover. I do not know how it is everywhere else. Among the people which I have the happiness to represent, however, it does not require even a tyro in the law to understand that in the absence of such apparent right, as, for instance, if a man comes into court and merely asserts that his neighbor owes him on an account, and there is a default on the part of the defendant, the plaintiff is not entitled by reason of that default to recover, but must prove up his account. But if he has a promissory note, a bond, or some legal instrument upon which he is suing, or an account verified by oath, the rule would be different So in the practice of the common law. You get your judgment of default; but if you seek to recover non-liquidated damages you have your writ of assessment and make proof. Instead of being divergent very similar is the course pursued here.

A contestant comes in here and files notice of contest. The contestee takes no notice of it, sometimes possibly by reason of sickness, sometimes perhaps by reason of overconfidence in his case. After a time the contestee becomes aware of the fact that it is necessary for him to pay some attention to the contest, and he asks to have his rights recognized in that regard, or his friends ask it for him. In such case as that the utmost extent to which the House went was to say that they would not turn a member of this House out of his seat by reason of the fact that the contestee had not answered as to the merits of the case.

But in view of the provisions of sections 2 and 3 of the statute in reference to contested elections, which sections require the parties contesting in this House to make up the issues and to take testimony in reference to them, is it not a work of supererogation on my part to propound the inquiry here, Can it be possible, if there is, either in the notice or answer, solemn admissions of fact that those facts are not beyond controversy and taken out of the arena of proof so as to entitle this House to consider them as being established in the case?

The SPEAKER. The time of the gentleman has expired.

Mr. HOLMAN. Would my colleague [Mr. LOWRY] like more time?

Mr. LOWRY. I would like to have a little more time, say the same which I have yielded to others.

Mr. HOLMAN. I move that the time of my colleague be extended.

Mr. LOWRY. I ask a very few minutes.

The SPEAKER. How long?

Mr. LOWRY. Seven minutes will do, the same amount of time which I yielded to my friend from Pennsylvania [Mr. RANDALL].

The SPEAKER. Consent is asked that the gentleman from Indiana [Mr. LOWRY] be allowed to proceed for seven minutes longer. Is there objection? [After a pause.] The Chair hears no objection, and the gentleman will proceed for seven minutes.

Mr. LOWRY. As a strictly legal proposition I assume, first, that questions which are settled by pleadings, and I think it will not be disputed that in this case the notice of contest and the answer constitute the pleadings as pertaining to contested-election cases, when there is presented upon the face of the papers certain facts affirmed on the one side and admitted on the other, those facts are put beyond the domain of controversy, and it would be idleness and folly for the contestant or contestee to proceed to take testimony upon the questions so put beyond dispute.

It will be seen that according to the maxim in which it glories, the rule of the law is here consistent with the reason and the spirit of the thing. It will be seen, I think, that the parliamentary law of this country is in harmony with the general law of the land, and with the law of all the States of the Union on this point; that when the issue is made up in reference to which the parties are at variance, then the proofs are taken on that question, and proofs not addressed to it are outside of it and *dehors* the record.

What is the character of this issue? What reference to and bearing upon it has the answer of General Manning and the papers in this case? Are not the pleadings in the case part of the papers? Was not this answer of General Manning referred to us by the language of the resolution, and were we not required to look at that answer, and if it appeared upon the papers, including the answer, that this question was put beyond controversy, that there was no *prima facie* case, or, on looking at those papers, no right to a seat apparent on their face, was it not the duty of the Committee on Elections so to report?

But there is another point of view in which this matter is to be considered, and it is this: What equity lawyer on this floor will deny that if there is a statement made in an answer in chancery it may be put in evidence even by the adversary, although it may not have been, as in this case, put in by agreement at the instance of the party himself making the answer? Is there a gentleman in the hearing of my voice who will dispute that as an established proposition? This answer was before the Committee on Elections; how does it come there? It is put there not merely on the demand for profert of the record in the case as to the merits; it is put there voluntarily by the contestee himself; and by the terms of this resolution we are asked to determine where the *prima facie* right is according to the admission in that answer, for it is a part of the papers.

Sir, that answer has been read repeatedly by other gentlemen, and I will not occupy time by repeating the whole of it; but what is the phraseology of that portion of it applicable here. It is:

> I admit that the inspectors and clerks of the several election precincts did certify to the county commissioners of election in their respective counties that you received a majority of the votes cast; and I further admit that the 1,472 votes which the commissioners of Tate County returned as cast for J. R. Chambless were in fact cast for you, and that the name Chambless was inserted in the return by clerical error instead of your name. And in this connection I state that because of said error to your prejudice I will not take a seat in said Congress, or ask the Clerk to enroll my name as a member thereof, until I have vindicated, and the House shall have affirmed, my right thereto.

That was the principle upon which the contestee acted in the first instance. All honor to him for it; all honor to him as a former Representative from the great State of Mississippi. Sir, I regret that he has come down from that high estate. What is the position that he now occupies? When that certificate was first placed in his possession he said to himself, What have I here? A certificate issued upon the assumption that James R. Chambless had 1,472 votes in Tate County instead

of James R. Chalmers. That certificate would constitute my death-warrant. It is an unclean thing, whose touch is pollution, and whose companionship is political death.

Yet, sir, we find the contestee coming here now and asking us to take up this condemned thing, to roll it as a sweet morsel under our tongues, as I have no doubt our friends on the other side would be glad to have us do, to make up the record in that misshapen way and then take it home to our districts and call upon the one hundred and ninety-eight Democratic constituencies represented on this floor to commend and approve of it as a thing of good report and altogether lovely. Sir, others may take such course as they will; but acting, as I understand myself to do, in harmony not only with a large majority of the committee but with the predominant sentiment of this side of the House, I trust that on this question the voice of the majority here will be of no uncertain sound, and will be not only in harmony with the principles proclaimed by us elsewhere, but will be such as to meet the approval of the great Democratic party of this country, now assured in case of the predominance of prudent counsels and fearless and patriotic action of another victory equaling, if not surpassing, in its magnitude that of 1876, but differing therefrom in that the country must and shall be permitted to realize and enjoy its fruits.

Pensions to Soldiers and Sailors of the Mexican War.

SPEECH

OF

HON. ANDREW J. CALDWELL,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 8, 1884,

On the bill (H. R. 5667) granting pensions to the soldiers and sailors of the Mexican war.

Mr. CALDWELL said:

Mr. SPEAKER: The policy of pensioning soldiers is the practice of the civilized world. Great Britain, France, Germany, Austria, and the United States have for years pursued the policy of rewarding the services of their soldiers in war by providing to some extent at least for their comfort in after life. In 1878 Great Britain paid about 3½ per cent. of the total annual expenditure of the government for military pensions. In France about the same percentage of the total annual expenditure of the government is thus bestowed. Germany gives 4.1 per cent. of her total annual expenditure to her pensioners, while Austria gives only 1.1 per cent. The United States paid in 1878 11¼ per cent. of her entire expenditure for the benefit of her veterans of all wars.

In Great Britain and the European nations most of the fund goes to officers of high rank, pensions for wounds being limited to officers, while the common soldier is taken care of in different institutions and hospitals, or paid a small stipend graded just above starvation point, for the recipient. For instance, the invalid outpensioners of England receive from one and a half pence per day for the negro and sepoy troops of the East Indian army to three shillings and ten pence a day for more favored pensioners. In exact proportion as the citizen is esteemed by his government, in exact proportion to that government being for his benefit is his patriotism, devotion, and fealty in peace or in war. The policy of the monarchies of the world has been and is to require heavy and oppressive military service, to pay poor wages, and when the war-worn veteran is no longer able for duty, to decorate him, give him a cross of honor and a cold potato and let him go. The United States, as became a great republic, has not pursued that policy. The military duty required of the American citizen is the minimum of that of all the nations of the world. Having no large standing army, she relies upon her citizen-soldiery at her need to fight her battles for her. In her history that reliance has never been in vain; but when she needed soldiers they came to her call like Clan Alpine to her chief that day when mountain-side and valley waved with tartans and flashed with claymores.

Hidden away in the peaceful pursuits of life, they appear not to exist till full-armed and mighty they shake the earth with martial tread. They fight for the Government because they love her and are satisfied she will honor their valor and take care of them in age and decrepitude.

This Republic is not ungrateful, the proverb to the contrary notwithstanding. In her own good time she has sought out and aided every deserving soldier of the Revolution and the war of 1812. Her hand has been opened in bounty to her veterans of the war for the Union. Between the years 1868 and 1878 Congress voted sums varying from twenty-eight to thirty-four millions of dollars per annum to our pensioners of all wars, and between 1878 and 1883 the sums rose from thirty-five to sixty-six millions. Shall it be said we can not afford it? Nay, rather let it be said that we can not afford to neglect our soldiers. It is the people's money, paid for the nation's safety and honor. And he who has risked life and limb under the flag has a right to expect to be protected from ultimate penury and destitution. That is all a pension is, except that it has not attached to it the idea of a charity; but it is the nation's honorable bounty to the valor and devotion of her citizens. So far from being a shame to receive it, it is an honor to a man and his posterity; and this characteristic is its chief merit.

The name of an ancestor on the pension-roll of this great Republic is more to be cherished than a patent of nobility. It is not a badge of beggary. If it were, no American soldier would be willing to wear it. It is the jewel of a nation's honor and gratitude that would glitter even amid the rags of an outcast like the star of an unforfeited nobility. That people that honors its own brave honors and perpetuates itself. Our late civil war, which made a continent a battlefield, has dwarfed by its tremendous strategy and terrible conflicts all preceding history. But we should not forget the services of the gallant band who bore our eagles to unbroken victory under the Tropic of Cancer and added to the Republic the Lone Star State and the immense empire that stretches its leagues over prairie and sierra and gold-grained river to the coast line of the Pacific. The veterans of Mexico enabled the young Hercules, who in 1776 could scarcely strangle the serpents around his cradle, to bestride the continent like a colossus.

The heraldic blazons of the arms of great States through which the sun lights this Hall are the witnesses of the valor and conduct of the battle-scarred men who emancipated them from sloth and savagery, and gave them to liberty and progress. Texas, California, Utah, Nevada, Colorado, Arizona are the captives these legions brought to Rome. In these ranks were 930 men from Massachusetts, 1,690 from New York, 420 from New Jersey, 2,117 from Pennsylvania, 1,274 from Maryland and the District of Columbia, 1,182 from Virginia, 805 from North Carolina, 1,120 from South Carolina, 1,987 from Georgia, 2,981 from Alabama, 7,392 from Texas, 2,235 from Mississippi, 7,341 from Louisiana, 5,392 from Tennessee, 4,694 from Kentucky, 5,334 from Ohio, 1,037 from Michigan, 4,329 from Indiana, 5,791 from Illinois, 146 from Wisconsin, 229 from Iowa, 6,441 from Missouri, 1,372 from Arkansas, 289 from Florida, 541 from California, 578 from Salt Lake City—a total of 67,339 volunteers, who, with regulars, marines, and sailors, made in all, in round numbers, 100,000 men, of whom there survive, it is thought, from 11,000 to 13,000 men. Coming from every part of the Union, their claim to pension can not certainly excite prejudice in any generous heart.

The confines of sectional animosity between the North and South being long since passed, shall it not again be written, the Parthian drinks of Arar and the German of the Tigris? It would sound like a twice-told tale to recount the story of their services. Under circumstances that put to the test all soldierly qualities, these men deserved well of their country. From Palo Alto to Buena Vista; from Vera Cruz to the city of Mexico; whether fighting in plain or plaza; through chaparral or the walls of Monterey; facing guerrillas or the vomito, their patience, fortitude, courage, and discipline did honor to the American arms. As the host went down the Cordilleras on their march upon the capital the mists of the mountain wrapped them round like winding-sheets. Each snow-crowned peak lifted its white summit like a marble cenotaph for the devoted band, while in the torrid sky above them the Mexic eagle soared with the serpent in its talons and screamed defiance and ill-omen. They lost no fight. Under that sky of brass they made no retrogrades. Right onward was the march, till they poured like a stream of fire over the causeways that ran with Castilian blood upon the *triste noche* of Cortes, and burst through the Gate of Innocence into the city. The great bell tolled out from the cathedral tower as when, three hundred years before, the teocallis of Montezuma wailed its despairing music over the conquest of Mexico. Perhaps 33,000 of this army, and certainly 25,000, gave up their lives.

Thirteen thousand soldiers and widows remain to receive recognition at the hands of their country. The million and a quarter of dollars necessary to pension them will grow less and less as death each year carries them off. But it is said that pensions for service can not be given. Since 1818 that has not been an open question in this country. By the act of that year Congress pensioned the survivors of the Revolution then alive, and widows, for service rendered. This principle has received recognition by the act of 1871, which swelled our pension-list to its present dimensions, if, indeed, that needed any recognition which had been the settled policy of every party and every warrior and statesman who ever had control of the councils of this Government. But it is said you must draw the line somewhere. You must not pension the Indian fighter. The Government has never recognized them. Yes, but the Government *has* recognized their services by granting them land-warrants. And where is the distinction in principle? A man is to be pensioned for fighting British and Hessians and Mexicans and rebels, but he must not be pensioned for fighting Indians. I regret that the bill reported by the chairman of the committee [Mr. HEWITT, of Alabama] has been pushed aside by the bill now under consideration. But this bill, as a matter of sound policy, as a matter of historic justice, should pass, and this great Government acquit itself of the debt of gratitude it owes to the veterans of Mexico.

Fitz-John Porter.

SPEECH

OF

HON. BARCLAY HENLEY,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 1, 1884.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 1015) for the relief of Fitz-John Porter—

Mr. HENLEY said:

Mr. CHAIRMAN: Owing to the elaboration and exhaustiveness with which this subject has heretofore been treated, I shall endeavor to present my views with great brevity. The point has been made by the opponents of this measure that the finding of the court-martial against General Porter was and is conclusive, and should be accepted as *res judicata*. There is force in this plea, unless since the adjournment of the court the innocence of General Porter has been made to appear; and that phase of the case gentlemen upon the other side seem to have completely lost sight of. Let us suppose, for example, that since the verdict of that court new evidence has been discovered from which it appears that the defendant was wholly and absolutely guiltless of any misconduct, and that, so far from deserving the obloquy which has attached to him ever since the judgment of that military court, he should have been the recipient of the emoluments of office and the gratitude of his countrymen. I want to ask my friends on the other side whether, if such is the case, they would still maintain that the verdict of that court should stand and that no reparation was due to General Porter. Not a man upon the other side will rise in his place and say so.

If General Porter is innocent, and that fact is sustained by proof, then reparation to him is due, and the propriety of this measure can not in any such case be questioned. If he is guilty, then this measure should not prevail; hence it will be seen that this discussion should simply be confined to the question of his guilt or innocence, and that all reference to the alleged finality of the judgment of the court-martial and the doctrine of *res judicata* must necessarily be the idlest irrelevance. I say again, if it is made to appear here that General Porter was innocent of the misconduct of which he was found guilty by the court-martial, then I presume that no one will have the hardihood to say that some reparation is not due him, and that, too, with as little delay as possible.

Some gentlemen on this floor have lashed themselves into a glow of indignation because it has been intimated that they ought to accept the judgment of others upon this matter. I am quite frank to say that I have not that intellectual grasp of all things upon earth that enables me to decide all questions without availing myself of the riper experience and more extended observation of others. If we can not in our legislative capacity rely upon the opinions and good judgment of others and upon the reports of committees, &c., if we were driven to the necessity of examining personally into the facts in support of or against every legislative measure, then it is plain to be seen that very little would be accomplished by any Congress. I presume that no member understands by personal examination or personal knowledge the facts in support of one bill in ten that receives his vote. Hence it is that in reference to matters which come before this body we must of necessity depend upon the probity, knowledge, and good judgment of our committees and our fellow-members. The majority report of the committee to whom this bill was referred is signed by eleven members out of thirteen. *Prima facie* that establishes the rightfulness and justness of the measure. But the views of a majority of the committee are assailed upon this floor and wide discussion has been opened up, extending back to the origin of the court-martial; and therefore, for the sake of argument, setting the report of the committee to one side, I shall consider the other matters that have been alluded to in the discussion upon this bill.

But I may at the outset be permitted to say that I think the remark of the gentleman from New York [General SLOCUM] was so obviously plain that it goes almost without saying that as to certain phases of this matter the civilians on this floor will much more likely arrive at a correct conclusion if they submit to the judgment of military experts than if they rely upon their own untrained minds.

I am glad to announce to the House that in following the guidance of my colleague [General ROSECRANS] in his opinion as to what General Porter should have done upon a given emergency I am simply taking the shortest cut to a correct conclusion. If, upon these particular matters, I can not trust Generals ROSECRANS and SLOCUM, then who can I trust?

If it were a question of law, I should probably expect them to submit to my dictation; but being a question of war, what am I to do? To this there can be but one answer. That is, that those two gentlemen, both members of the committee, first, are men of high character, and second, that their training and experience in life qualifies them in the highest degree to pass upon the military aspects of this case. The man who doubts this as to my colleague, if there be one on this floor, let him read of the battle of Rich Mountain, of the scarlet glories of Iuka, and of the imperishable renown that attaches to the name and fame of the victor of Corinth. Sir, the forked tongue of jealousy and detraction have hissed through serpentine lips at the name of Rosecrans; he, too, has felt the weight of official disfavor, but as decades shall roll on brighter and purer shall grow his fame as patriot and warrior, while his traducers shall go down to ignoble oblivion. Sherman was condemned by the same influences as a lunatic; and I might go on at any length, but the task of exhuming the putrid and forgotten animosities engendered by the heat of a bitter contest is an ungracious one, and I forbear. I conclude this digression by saying that it is no humiliating abdication of my intellectual functions as a representative of the people when in a case like this I follow the judgment of men like these.

I shall endeavor to be absolutely and perfectly candid, as I intend to vote according to my conscientious convictions. I admit that the verdict of the court-martial is entitled to very serious and grave consideration, because it was a court organized under the usage and laws of military warfare, composed presumptively of honorable men, whose sole object was the impartial consideration of the matters submitted to them. But, sir, under what circumstances, when and where did that court sit? It sat in this city and at a time when if you turned your gaze heavenward nor sky nor sun could be seen through the dark and lurid smoke of battle, at a time when from end to end this continent rang with the detonation and crash of war; at a time when through all ranks and ages of society, from lisping child to hoary grandsire, the people were wild, mad, delirious with the excitement of that mighty contest—an excitement that left no department of human life unvisited, that was felt in the marts of commerce, in the field of agriculture, on sea and on land, which penetrated to the forum and was even felt within the hallowed precincts of the pulpit; an excitement as all-pervading as the ambient air. Amid this seething chaos of heat and passion this court-martial convened, and under such circumstances found its verdict of guilty. As I have said, it was convened here in the city of Washington, the capital of the nation, where every one, where everything sentient and animate, was dominated by the spirit of war.

I ask gentlemen upon the other side whether such a state of affairs could be conducive to that patient, dispassionate, painstaking examination of a case without which justice may be defeated? On the contrary, is it not plain to the comprehension of every man upon this floor that the intensity of feeling that then existed, the solicitude, deep and heartfelt, for the fate of the Union, the asperities and animosities that were aroused throughout the land, made it well-nigh a sheer impossibility that the facts of the case could be considered as they should have been considered? And then it will be remembered that the dominating spirit of that day, the Secretary of War, sent that communication to the court-martial urging dispatch—a communication which under the circumstances was such that it can hardly be fitly characterized in this place

Remember that dream of a soldier's life, promotion, depended upon the favor of the Secretary of War. He sent that court-martial a communication urging dispatch. And the same day upon its receipt, and without hearing another word of testimony, the court adjourned, failing to heed the demands or entreaties of General Porter to send for or produce his witnesses. The secrecy of the deliberations of that court-martial has never revealed how the nine men composing it voted upon the final question of guilt or innocence. But the world does know that one of them stepped down from the bench of the judge and took the witness-stand, thus casting upon himself the delicate duty of passing upon the weight and credibility of his own evidence.

And the world also knows that soon, very soon, after the adjournment of this court many of its members received their promotion.

I need not pause here to refer to facts that crowd the pages of all antecedent history, nor to turn the leaves of books upon moral philosophy, written by the great masters of thought, all of which go to show that in times of intense popular excitement the mere accusation of a crime amounts to conviction. The tumultuous and lawless history of our frontier country, even of my own State, California, afford many examples of it. Near my own locality I know many years since a brutal and mysterious murder was committed; as to who committed it was and has been ever since a mystery; but upon a mere accusation, soon after the discovery of the murder, and when the minds of men were mad with excitement and frantic with rage, a crowd came near hanging a man whose innocence was subsequently thoroughly demonstrated. These facts are trite. No one can deny them. Now, then, so much for the verdict of that court-martial. Year after year passed away; one decade is gone, another one nearly so. A President of the United States, animated as I dare assume by proper motives, creates a board of inquiry to review the facts in connection with the prior conviction of Fitz-John Porter. Why was that board created?

It has been said on this floor that were Garfield alive he would antagonize this bill. Let us see. On the 18th day of January, 1875, he himself moved in this House the appointment of a board of officers to re-

view the findings of the court-martial by introducing the following resolution:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That it shall be the duty of the President of the United States to convene a board of officers of high rank in the Army, unconnected with the armies or transactions in question, to examine the evidence alleged to have been discovered by and to be in the possession of Fitz-John Porter, unattainable at the time of this trial, and report what, if any, bearing such evidence, if substantiated, would have in the findings and sentence of court-martial in his case.

And then wrote a letter to General Porter upon the matter, of which the following is a copy:

WASHINGTON, D. C., *February* 19, 1875.

DEAR SIR: Your two letters came duly to hand, together with the pamphlet. I owe you an apology for not answering you sooner.

I introduced the bill to which you refer, not because I was conscious of any intentional wrong done you by the court, for I have never concurred in the severe reflections which have from time to time appeared in the public press on the motives and conduct of that court, but I am willing that any new evidence you may have shall be presented to the Government in an official form, and reported to the President by a board of officers who were in no way connected with the trial or with the operations of the army to which the trial related.

I have spoken to several members of the Committee on Military Affairs, and understand them to be willing to report the bill to the House. They have not yet had an opportunity to do so, but I hope they will before the session closes.

I shall consider your pamphlet as confidential, unless you otherwise direct me.

Very respectfully, your obedient servant,

J. A. GARFIELD.

General FITZ-JOHN PORTER,
Morristown, N. J.

To those gentlemen who talk about the judgment of the first court being *res judicata* and the creation of the board of inquiry being without authority of law I cite the fact that General Garfield at all events had a different opinion, and wanted this second investigation to be made, and surely did not consider that its finding would be void or amenable to the animadversion that is launched at it on this floor.

That board consisted of three officers of the United States Army, each and every one distinguished for his military eminence, and selected presumptively because of his supposed capabilities to discharge the duty devolving upon him. The red specter of war, the distracting tumult and the wild swirl of civil strife, are not present to disturb that investigation. The blue sky is no longer obscured by the smoke of battle. The hearts and minds of those men are no longer racked by solicitude for the perpetuity of this Union. The Union's integrity for the time has been established and is no longer a matter of concern or doubt. There is nothing to disturb the mental or moral equipoise of that court. There was no Secretary of War, fierce, vengeful, and malignant, demanding hasty and precipitate conviction. Politics were never obtruded into the counsels of that court. It sat for six months, patiently, fairly, calmly, sifting, analyzing, weighing, and considering testimony and law. This court, mark it, had not only all of the testimony that was before the court-martial, but in addition to that it had testimony that was inaccessible to that court; testimony of the most important and material character; that is, testimony relating to the whereabouts upon a particular time of the respective armies, Union and confederate. The court makes a finding which is a complete exoneration and vindication of General Porter. But in addition to that another actor now steps upon the scene.

A man of majestic stature in the military annals of American history, the most successful general of modern times, and a man upon whose brow the universal acclaim of Christendom has placed the chaplet of chiefest of victors in the late civil war; victorious in war, for eight years President of this Republic, still a Republican in politics, he tells us in an elaborate published article, on his honor as a man and on his reputation as a soldier, that Fitz-John Porter is an innocent man!

A gentleman upon the other side has marshaled before the House the opinion of the Comte de Paris, who is eulogized as a dispassionate foreign military critic, and who it was claimed had pronounced in favor of the guilt of General Porter. But the research of the gentleman from New Jersey [Mr. PHELPS] has furnished the country with the fact that upon the newly-discovered evidence which was brought to the attention of this critic he also changed his opinion, and in a later edition of his work vindicated Porter by a full retraction of his former opinion; that while for many years he was in error in respect to certain of the facts upon which General Porter was convicted, a subsequent review of the testimony and of the additional evidence adduced before the court of inquiry had completely revolutionized his judgment. If it were not for wearying the House I might cite the names of many other distinguished men whose opinions coincide with that of General Grant, but time presses. It is impossible, amid the duties of this session, for each individual to examine all of the testimony in this case. In order to make up our minds and to determine as to the propriety of this measure, we must avail ourselves of the opinions of others. I am asked to say that the finding of the court-martial should be entitled to greater weight than that of the military commission. I can not do it; I can not do it for many reasons. I can not do it because I am bound to say that I distrust the entire sincerity of the professions of faith made by gentlemen upon the other side. Is there anything to impeach the finding of the Schofield board of inquiry? Listening to the observations of some of my friends upon the other side, it seems that there is. Now, I am not a military man, as are some gentlemen on the other side. They may know more than I do about General Schofield. They apparently appreciate the force of the finding of the Schofield board, but seek to impeach or break it by saying and charging that General Schofield, when he rendered that finding upon the Fitz-John Porter case, was a candidate at the hands of the Democratic party for the Presidential nomination; that while he (Schofield) summoned witnesses and heard testimony and sat weeks and months and listened to the arguments of counsel, administered oaths and went through the entire investigation, he was governed by his political aspirations rather than by the testimony in the case, and rendered his verdict with an eye single to facilitating his Presidential aspirations!

Now, I have never seen General Schofield. But he may merit these imputations, though I hardly think so, because I have read something of the history of this land. I have read something of the "battles, sieges, and conquests" by which the perpetuity of this Union was established; I have heard orator, poet, preacher, layman, and historian, and I tell gentlemen upon the other side that the united voice of our people bears testimony in reference to General Schofield which, if true, entitles him to the deathless gratitude of every lover of the American Union; and without pretending to the intimate knowledge with reference to him claimed on the other side, I express it as my belief, founded upon universal public assumption, that no more gallant or accomplished soldier ever drew blade, and that before he would have penned the judgment of exoneration of General Porter actuated by the motives imputed to him here he would have plucked his right arm from its socket.

The opponents of this measure have asserted with "dammable iteration" that Reverdy Johnson, General Porter's counsel before the court-martial, had admitted that his client had had a fair and impartial trial; but the gentleman from New Jersey [Mr. PHELPS] exhibits a letter on this floor from this lawyer denouncing this statement as absolutely false. How, then, stands the case? We are asked to reject this bill with the following facts staring us in the face, namely: Against the bill we have the report of two members of the military committee out of thirteen, and the judgment of the court-martial; and that is about all.

THOSE FAVORING THE BILL.

In favor of the bill and for many years heartily indorsing its justice we have a long list of eminent statesmen, civilians, military chieftains, jurists, and public men.

Take a glance at a few of them. I cull some of their names from the elaborate and classic speech of the gentleman from New Jersey [Mr. PHELPS]. But let me present in recapitulation and in logical order the points impelling us to a support of this measure.

First. The majority report of the Committee on Military Affairs.

Second. The order of the President of the United States ordering the creation of a board to investigate and report upon the case.

Third. The report of that board after a patient hearing of many months, completely vindicating General Porter; and in this connection should be considered the commanding abilities and high character of Generals Schofield, Terry, and Getty, constituting the board.

Fourth. The opinion of General Grant.

Fifth. The opinion of Benjamin R. Curtis, a Republican, and for many years on the Supreme Bench of the United States, who said:

I think General Porter was improperly convicted on the evidence before the court which tried him, and he is at liberty to use this opinion when and where he chooses.

The opinion of a lawyer of loftiest eminence, Daniel Lord, another Republican. Said he:

At the time of General Porter's trial I read the proceedings with astonishment at the testimony received and acted on, and am convinced that the trial was substantially conducted on an order to convict.

Of the same tenor are the following opinions of Sydney Bartlett, J. G. Abbott, and Judge Shipman, all jurists of great distinction.

Said Bartlett:

You are entitled to my judgment in the matter, which is that the evidence fails to support the charges against you, and that acquittal instead of conviction should have been the result.

Said Abbott:

The finding of the court seems to me so unwarranted by the whole evidence that I should be glad to think it was the judgment of a tribunal utterly illegal and not recognized by the laws of the land.

Said Judge Shipman:

With all deference to the members of the court, I thought then, and still think, their conclusions unwarranted by the evidence.

Charles O'Conor, recognized wherever the English tongue is spoken as the head of the American bar, and whose repute as a jurist is coextensive with the limits of Christendom, says:

I am convinced that a new trial ought to be had in the case of Fitz-John Porter. There is no adequate evidence of the misconduct alleged, and the record leaves it very doubtful whether any opinion was ever formed against him which can justly be regarded officially authoritative.

Said Governor Newell, of New Jersey, a Republican:

I had several conversations with President Lincoln. The President was much interested, and said cheerfully that he would gladly grant a reopening if any new evidence exculpatory of General Porter could be adduced. He said that he had no prejudice, but had been obliged to form his opinion from Judge Holt's examination, as in his multitude of cares he had not been able to make a personal investigation.

These are the unbought, unpartisan opinions of America's most distinguished and patriotic citizens, and when to them we add the names of Generals ROSECRANS and SLOCUM, upon what ground can we base our objection to this bill? The human understanding shrinks from the fruitless endeavor to cope with the swarm of reasons that multiply as we proceed in the investigation. Who is Fitz-John Porter? Bred to the profession of arms at our National Academy, early in life he gained imperishable renown upon the fields of Mexico; up to the hour of his accusation he wore unstained the "white flower of a blameless life;" up to that time were an example wanted of intrepid demeanor in the face of the enemy, of tireless vigilance, of soldierly accomplishment, and an absolute insensibility to fear—were such a man wanted, I say the Army without dissent would have pointed to General Porter. And with all this I am told he exemplified in his social life the poet's words—

The bravest are the tenderest,
The loving are the daring.

To conclude, then, Representatives, give him back that blade that in an hour of frenzy and partisan madness you wrenched from his grasp; its brightness has been dimmed by no dishonor. For many a weary year this gallant soldier has waited for this act of tardy and imperfect justice. For many a year has he been a "fixed figure for the hand of scorn to point its slow, unmoving finger." Oftentimes has hope died out in his heart to return again with a reviving sense of earthly justice. Join us, then, in this benign act of reparation; forget your prejudices; be just; do right. For over twenty years has he been an outlaw from his profession, his hopes desolated and his character defamed. Lift him up, then, to the sunlight again, and by your decree obliterate every mark and stain that haste and passion and partisanship and malignity have placed upon him, and he need ask no more.

Does Prohibition Prohibit?

SPEECH

OF

HON. PETER V. DEUSTER,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 27, 1884,

On the bill (H. R. 5265) to extend the time for the payment of the tax on distilled spirits now in warehouse.

Mr. DEUSTER said:

Mr. CHAIRMAN: I have listened with a great deal of interest to the adverse and favorable arguments on this bill. From my standpoint it does not involve the temperance question, but simply the question whether justice shall be done to a great industrial interest; an interest whose legitimacy is recognized by the laws of the land; an interest that has paid more toward the support of the Government than any other in the vast category of enterprises of the New World. I take it, sir, that we have only to deal with questions as we find them, without drawing in side-issues distinct from and entirely foreign to the subject under consideration. If there is a moral phase of the pending question, it attaches to the organic law under which high wines are recognized as property and taxed, rather than to the present stage, where simply justice is demanded for taxable property. Still, gentlemen have spoken upon this floor of what they are pleased to term the moral phases of the bill, thus dragging in an issue which should have remained wholly foreign to its discussion. In spite of these reprehensible tactics, I am, however, not afraid to meet this question now or, moreover, at any time when it is presented in proper form and can be legitimately discussed. If this bill is to be defeated as a means of advancing the cause of teetotalism, misnamed temperance, equal and exact justice would seem to demand that it be reclothed in the verbiage of a law far-reaching enough to wipe out all intoxicants, whether they appear in the form of high wines or beer. I contend, sir, that drunkenness and disorder result in a greater degree from the social proscription of liquors and continual agitation on the part of fanatics than from any other cause. It is the old story of Eden repeating itself; the tree in the center of the garden was a temptation because it was forbidden, and the same may be said of whisky and other intoxicants. The intemperate use of intoxicants is confined almost exclusively to those reared amid customs which proscribe the social glass and which leave it to inherent human viciousness, allied to independence of all restraint, to break down the barriers and turn the social glass into a lawless and protracted debauch. A remedy of such an evil surely does not lie in a refusal to pass the bonded warehouse bill. Teach manhood self-respect, not by curbing and treating it as a thing unable to take care of itself, but by allowing it the largest and broadest degree of personal liberty, and a long step will be taken in the direction of reform.

A FORCED ISSUE.

Several gentlemen on the other side of the House, I regret to say, have obtained a pretext through the pending bill for the delivery of temperance orations; and as their argumentation challenges contradiction, I consider it my duty, although reluctantly, to reply thereto on this occasion, not as the champion of intemperance, but as the advocate of a personal liberty which makes manhood not only responsible but respectable, rather than the cringing slave of arbitrary law.

THE USE OF STRONG DRINKS NOT UNLAWFUL.

As regards the manufacture, sale, and use of alcoholic or intoxicating beverages known under the common designation of liquors, I confess that I have been unable to find any law, either in ethics, or among the statutory enactments of this or any other civilized country, that forbids the drinking of liquor. And this is the most unanswerable argument that I can advance to my prohibition friends in support of the assertion that there is no wrong *per se* in drinking. The practice has been sanctioned by all the nations of the earth since the dawn of time, and nowhere can any evidence be discovered of its discontinuance by virtue of legislative prohibition. I claim, therefore, and the irrefutable logic of facts sustains me, that it is a right within the sacred province of human liberty that can not be abrogated or interfered with without invading and endangering the safeguards of personal freedom. If you seriously assert the counter-theory you arrogate to yourselves an assumption of authority that is inconsistent with the eternal principles of justice, and which, if allowed to prevail, would enable you with equal propriety to prescribe and control my diet, my dress, my mode of living, my religious faith, and to violate every right with which the law of nature has endowed me. If we even listen to this remarkable proposition, can the human vision see or the prophetic mind foretell the end? The very principle of rational self-government is threatened with annihilation. The right that is dearest and most sacred to all, the right to regulate our private affairs and to pursue our own happiness under the guidance of our own judgment and by the use of our own property, is denied.

THE DUTY OF GOVERNMENT.

Government is the creature of the people and is established for the prime purpose of securing to its citizens the full enjoyment of all the rights and privileges which naturally belong to man, and it should always be its first supreme effort to guarantee by its legislative enactments the greatest liberty in the pursuit of happiness consistent with the rights of others and with justice.

A law curtailing the personal liberty of a citizen is unjust and tyrannical and will operate against the best interests and the welfare of society. Edmund Burke says: "Bad laws are the worst sort of tyranny." In a country like ours they are of all bad things the worst. A law ill advised and badly executed is worse than the vices and injuries it would restrain.

THE EVIL OF INTEMPERANCE.

The great argument used by the prohibition advocates in their crusade against the use of liquor is that it brings ruin and degradation to the body and character of the drunkard and desolation and woe to his hearthstone. Their theme is a pathetic theme. The field of oratory presents no better opportunity for the graphic portrayal of misery. But it is a misery which is in no manner amenable to a legislative cure, however it may appeal to the heart of the legislator, and from this unhappy picture of despair we must simply draw the lesson and profit of adversity. No cloud but hath its silver lining. If there is drunkenness there is also sobriety, and where you find misery and ruin you will also find happiness and prosperity. If you find abuse, look and you will see use. There it is in a nutshell—the use and abuse. And let me say right here to the advocates of prohibition that it is beyond all earthly province to control a single human passion. That power rests alone in the Supreme Ruler. It is, therefore, rank folly, in my estimation, to legislate against the continuation of drunkenness. Does any one candidly believe that by a stroke of the pen we can repress the desire to drink even cold tea? Prohibitory legislation can not prohibit, and never will.

DRUNKENNESS AS A CAUSE OF CRIME.

Very frequently it is urged in behalf of prohibition that liquor excites the passions and, like a spark dropped into a keg of powder, causes an explosion of anger that is often attended with tragic and fatal results. I admit this. But no less is it true that where one murder is the consequence of drunkenness, statistics will point to ten murders committed in cold blood by assassins whose feelings were not inflamed by drink. Such a proposition is untenable, and no argument can be drawn from it to justify sumptuary legislation. The whole hue and outcry against the use of liquor is indeed extremely offensive and insulting to the intelligence of our people. Their appetites can not certainly have become so universally depraved that it is necessary to legally regulate them; we can not have lost so much of our manhood that we are no longer able to maintain our private lives with sobriety and self-respect.

MODERN LUNACIES.

The same false and morbid sentimentality which ostracizes spirituous

beverages of all kinds has, besides, culminated at different times in this country, especially in New England, in a ludicrous opposition to the most popular forms of social amusement. The theater has been made an object of proscription upon the puerile ground of immorality; card-playing has been inveighed against and interdicted, and other lunacies have been allowed to sway more or less a diseased public opinion. The time is indeed not yet distant when the spirit of the blue laws reveled in a new revival, and sometimes it would even now seem as if it were still rampant among us. But notwithstanding its occasional manifestation, it is safe to say that its strength is broken; the genius of civilization advances with such progressive strides that blue laws and sumptuary laws must soon entirely pass into the traditions of the past—grim relics of Puritanical bigotry and fanaticism. We are gradually emerging from the era of a false severity and asceticism in morals and we begin now to incline rather to the broadest ideas of personal liberty consistent with the decalogue. Public opinion indorses in fact in the most unequivocal manner the doctrine of the fullest enjoyment by the individual of all the rights and privileges known to man.

THE TRICKERY OF PROHIBITIONISTS.

The public good demands protection to the citizen in all his rights, and any curtailment or abridgment of them can be only justified when the public safety is threatened. But the public good and the good of society are catch-words that are very frequently misused; and it is a striking instance of this abuse that prohibitionists invite us now to destroy coolly and ruthlessly an industry that furnishes vitality to the people, that represents an enormous investment of capital, that has its ramifications through every town and hamlet in this country, that defrays two-fifths of the expenses of this Government, and that is in itself entirely proper and right. Under the plea of protection to society they say, "Close the saloons and groggeries and we won't have any more drunkenness."

PROHIBITION IN ITS RELATION TO THE CRAVING FOR LIQUOR.

But drunkenness, Mr. Chairman, does not come from the groggeries. It exists in the depraved appetite. You may drive the liquor trade under cover, but it will still flourish, because you can not banish the inordinate craving for liquor from the human heart. As well attempt to pass a law enforcing chastity among mankind. The one would be about as successful as the other. We ought to reconcile ourselves to the fact that this frailty does exist. It can not be eradicated by any process which the ingenuity of human wisdom can devise, if this process be not confined to the application of moral suasion, and viewed from this standpoint, prohibition can not too strongly be condemned. However leniently we may look upon it, it must ever appear to us as the queerest invention of modern legislation. It is a contrivance that does not assume to regulate or control the liquor traffic. It reaches further than that. It goes away down into the heart of man, lays hold of his wayward passions, and attempts to destroy all traces of wickedness and frailty. It aims to act as a tonic. Yet I am inclined to be skeptical. I am rather of the belief that prohibition, if it were to prevail, would result in evasion—in the evasion of the very ends for which it would be instituted.

THE PRACTICAL SIDE OF THE LIQUOR QUESTION.

Thus far I have shown that justice does not demand a prohibitory law for the suppression of the vice of drunkenness, in contravention of the fundamental principle which guarantees to each individual the inalienable right of personal liberty in the pursuit of happiness. Now, however, I will endeavor to show that it is to the interest of the General Government as well as of the governments of the States to uphold and protect this right.

It is needless to remark that the Government of our Republic can only be maintained by large expenditures for which the necessary money must be contributed by the people, either through direct taxation or through other sources, as the wisdom of the law-making power may direct; but at present these expenditures are mainly covered by the income which the General Government derives from duties on imports of foreign merchandise and from internal contributions which are known as revenue taxes.

The annual report of the Commissioner of Internal Revenue for the fiscal year ending June 30, 1883, puts the amount of internal revenue taxes so far as they are derived from liquors as follows:

On spirits distilled from fruit	$1,127,950 25
On spirits distilled from grain and other materials	67,957,906 48
Rectifiers' special tax	180,800 12
Retail liquor-dealers' special tax	4,624,587 77
Wholesale liquor-dealers' special tax	455,915 51
Manufacturers of stills, special tax	1,160 43
Stills or worms manufactured, special tax	4,020 00
Stamps for distilled spirits intended for export	7,434 00
Total	74,368,775 20

And the beer tax during the same fiscal year is thus given:

On ale, beer, lager beer, and porter	$16,426,050 11
Brewers' special tax	184,885 49
Special tax of dealers in malt liquors	289,680 20
Total	16,900,615 81

Altogether the General Government derived between the 1st of July, 1882, and the 30th of June, 1883, the subjoined sums as taxes from liquors of all kinds:

From distilled liquors		$74,368,775 20
From fermented malt		16,900,615 81
From vinous liquors		216,559 00
Duties paid on imported liquors:		
On beer, ale, and porter	$511,382 75	
On champagne and other sparkling wines, in bottles	2,219,372 31	
On still wines, in casks or bottles, and on vermouth	3,148,078 22	
Total on spirits and imitations of brandy	3,350,898 96	
Total on spirits and wines and beer, ale, and porter		9,253,340 71
Total of additional and discriminating duty on said imports		12,053 42
Sum total received by the General Government on duties paid for imported, and revenue taxes paid on distilled spirits and fermented malt and vinous liquors		100,751,344 14

FIGURES THE BEST REFUTATION OF PROHIBITION.

The expenses of the General Government in all its branches, civil and military, for the last fiscal year amounted to $265,408,137, and more than two-fifths of this large sum were raised from the manufacture and sale of alcoholic liquors. In view of this fact we may well doubt whether a statesman of average ability and intelligence will ever be found who would dare to advise the prohibition of an industry so fertile of revenue as this liquor industry. By what means would he supply the loss of income which the Government would have to bear if the excise laws became superfluous? All civilized nations draw large revenues from their excise laws. But of us it is asked that we satisfy a morbid moral sentiment, entertained by a fluctuating and comparatively small fraction of our people, by the passing of laws which would deprive the Government of its main source of income--of those immense sums which are now paid into the Treasury of the nation by the producers and sellers of spirituous beverages, but which would fail to come in if we destroyed and banished our liquor industry.

CONFISCATION THE END OF PROHIBITION.

It can not be questioned that with the Government rests imperatively the duty of giving protection to property and a fostering care to all the lawful occupations of its citizens. For this reason mainly the Constitution of the United States forbids the taking away of the property of any person, except in case of necessity and for the public good, and in such a case it ordains that the full value be paid for the same. But as regards alcoholic, malt, and vinous liquors, it is undeniable that they are property in the legal sense of the word, and as such they ought therefore to be entitled to a considerate treatment. Liquor is property—an article of merchandise. To forbid its sale can not but be equivalent to its confiscation; and at this the advocates of prohibition are certainly aiming. Their motive is solely destruction without compensation "Thou shalt not steal," we read in the Decalogue. But to injure the neighbor's property, to make it useless to him, is as sinful as theft. And equal in heinousness to theft would be the injury which it is contemplated by a band of fanatics to inflict upon our distillers and liquor-dealers through a wholesale proscription of one of the staple articles of merchandise. Is there really no wrong in despoiling thousands upon thousands of good and industrious citizens not only of their property, but of the very occupation by which they acquire not only subsistence for their families but wealth for the nation? Is the Constitution of the United States a dead letter and indeed powerless to protect the owners of distilled and fermented liquors and wines in the free use and disposal of these articles of merchandise, on which they pay such heavy taxes not only to the national, but also to State and municipal governments?

MAGNITUDE OF THE LIQUOR INDUSTRY.

But, Mr. Chairman, let me now show the vast amount of property which would be made valueless by prohibitory laws, and also the magnitude of the industry which would thereby be affected, or rather destroyed. I again quote from the report of the Commissioner of Internal Revenue and subjoin the following statement of the quantities in taxable gallons of each kind of spirits passing through the distillery warehouses during the fiscal year ending June 30, 1883:

	Gallons.
Bourbon whisky	8,662,245
Rye whisky	4,784,654
Alcohol	10,718,706
Rum	1,801,960
Gin	545,708
High wines	8,701,951
Pure, neutral, or cologne spirits	28,295,253
Miscellaneous	10,502,771
Production of fruit brandy	1,253,278

The sum total of this table puts the entire production of distilled spirits for the last fiscal year at 75,266,586 gallons. On the 1st of last October there was, however, a still larger quantity of distilled spirits in the United States, as is shown by the following figures, which, by the way, do not yet include the fraction of spirits which was locked up at that time in the customs bonded warehouses:

	Gallons.
In distillery and special bonded warehouses	73,847,103
In hands of wholesale liquor-dealers	13,921,482
In hands of retail liquor-dealers	28,180,650
Total	115,949,235

Here we have property in the distillery warehouses amounting to

73,847,103 gallons from which the General Government may derive an income of $66,462,392.70. The real value of this property I am not prepared to state, but taking a low figure at $2 per gallon, it will reach $147,694,206. Add to this the value of the 42,102,132 gallons in the hands of wholesale and retail liquor-dealers at the same figure, and we have an additional sum of $84,204,264, or a total value of $231,898,470.

The report of the Commissioner of Internal Revenue also gives the following figures relative to the extent of this industry and its daily operations during the last fiscal year: Distilleries, with a daily spirit capacity not exceeding 30 gallons, registered 673, operated 616; with a daily grain capacity not exceeding 5 bushels, registered 575, operated 439; with a daily grain capacity exceeding 5 and not exceeding 10 bushels, registered 178, operated 136; with a daily grain capacity exceeding 10 and not exceeding 20 bushels, registered 136, operated 123; with a daily grain capacity exceeding 20 bushels and not exceeding 60 bushels, registered 163, operated 135; with a daily grain capacity exceeding 60 bushels and not exceeding 100 bushels, registered 42, operated 29; with a daily grain capacity exceeding 100 bushels and not exceeding 500 bushels, registered 139, operated 101; and with a daily grain capacity exceeding 500 bushels, registered 100, operated 91. Here we have 1,660 distilleries in operation whose daily use of grain averages 42,132 bushels.

The materials used for the production of distilled spirits were:

Malt, bushels	1,478,971
Wheat, bushels	291,368
Barley, bushels	73,380
Rye, bushels	2,987,473
Corn, bushels	13,428,469
Oats, bushels	122,583
Mill-feed	240,340
Molasses, gallons	2,373,106
Other materials, bushels	22,203
Total number of grain, &c., bushels	18,644,787

The same report gives, besides, the number of cattle and hogs fed at registered grain distilleries in the United States in 1883 as follows:

Number of cattle	63,272
Number of hogs	53,396
Average increase in weight of cattle, pounds	217
Total increase in weight of cattle, pounds	13,779,266
Average increase in weight of hogs, pounds	108
Total increase in weight of hogs, pounds	5,818,759
Total number of cattle and hogs fed	116,668
Average increase in weight, pounds	167
Total increase in weight, pounds	19,598,025

All these figures give a fair exhibit of the extent and magnitude of the distilling business and of the amount of property involved in its maintenance. But this point is perhaps yet made clearer by the following table:

Amount of revenue taxes from spirits in 1883	$74,368,775 20
Capital invested in distillery buildings, machineries, &c	24,247,595 00
Value of spirits lying in distilleries and special bonded warehouses	147,694,206 00
Value of spirits in the hands of retail and wholesale dealers	84,204,264 00
Total value, excepting revenue tax	256,226,065 00

Increase in weight of cattle and hogs fed in grain distilleries in 1883, 19,598,025 pounds.

BEER AS AN AMERICAN BEVERAGE.

But let us now consider the value of the production of beer and vinous liquors. As regards beer, it is of very great antiquity as a beverage, but in modern times its manufacture has assumed such a magnitude that probably no other industry employs so large an amount of capital. The use of beer in this country was common among the first settlers. William Penn established the first brewery in Pennsylvania and furnished beer to the German immigrants who settled in Germantown. And before him even the Plymouth Pilgrims established a brewery in Massachusetts. They must indeed have been quite fond of beer, as we find in Mourt's Journal of the Plantation, published in 1632, that shortly before the landing of the Mayflower a consultation was held on board, and that one of the principal reasons for landing as soon as possible was that the stock of beer was nearly exhausted. But for that the Pilgrims would have sailed farther south, as Massachusetts was not their original destination. From the above work (edition by H. M. Dexter, page 39) this passage is of high interest:

> We had some Beere, Butter, Flesh and other such victuals left, which would quickly be gone, and then we should have nothing to comfort us in the great labour and toyle we were like to undergo at the first. Munday the 25, being Christmass day, we began to drinke water aboard (the Mayflower) but at night the Master caused us to have some Beere, and so on board we had divers times now and then some Beere, but on shore non at all (because the stock was getting low).

By the last United States census we are informed that the number of establishments engaged in 1880 in the manufacture of fermented malt liquors was 2,191, while their invested capital amounted to $91,208,224. The cost of materials used by them was, according to the same source, $56,836,500, and the value of their product amounted to $101,058,385, while the wages paid to their employés amounted to $12,198,053. For the year 1882 the report of the Commissioner of Internal Revenue puts the number of breweries at 2,371, which indicates an increase of 180 breweries since the year of the census.

The census also shows the number of persons employed to be—male, above 15 years, 26,001; female, above 15 years, 29, and children and youth 190. The report of the Commissioner of Internal Revenue for 1883 puts, besides, the number of retail dealers in malt liquors at 8,006, and the number of wholesale dealers at 2,186. The whole number of persons employed in the brewing business it puts at 36,412. It also puts the product of this industry for the year 1883 at 17,757,892 barrels, or 552,375,654 gallons, representing a market value of $124,305,244, exclusive of the revenue tax, which at $1 per barrel amounts to $17,757,892.

VALUE OF A BREWERY.

As a complement to these statistics, it may perhaps also be of interest to show the capital invested in a single brewery and the sums of money necessarily used in one year for its operation, and I subjoin therefore the following figures, which were furnished to me by a friend for whose character for truth I can vouch. They are these:

Capital invested in real estate, brewery, buildings, ice-cellars, &c	$100,000
Capital invested for machinery used in its operation	60,000
Capital invested for vats, barrels, &c., used in its operation	20,000
Capital invested in horses, harnesses, wagons, &c., used in its operation	10,000
Yearly expenses for fuel, wood, coal, &c., used in its operation	5,000
Yearly expenses for repairings	3,000
Yearly expenses for feed of horses and shoeing of same	3,000
Total	201,000
Malt used in 1883, 70,000 bushels; cost of malt	80,000
Hops used in 1883, 38,000 pounds; cost of hops	35,000
Capacity of the brewery, or its yearly product, 32,000 barrels.	
Value of said product	224,000
Taxes paid thereon	32,000

EXTENT OF OUR BEER CONSUMPTION.

From the Brewers' Journal it appears that in the last year the sale of beer in six of our States alone amounted to 12,528,297 barrels, of which there were produced in the State of New York 5,843,254 barrels; in the State of Pennsylvania, 1,706,946 barrels; in the State of Ohio, 1,585,852 barrels; in the State of Wisconsin, 1,298,183 barrels; in the State of Illinois, 1,071,403 barrels; and in the State of Missouri, 1,022,659 barrels. In 1882 the sale of beer amounted altogether to 16,952,085 barrels, at a value of $122,616,680.

PRODUCTION OF VINOUS LIQUORS.

As regards, further, the manufacture of vinous liquors, we learn from the census of 1880 that in that year they were produced, in one hundred and seventeen establishments, to a value of $2,169,173, and at an expense of $1,557,188, of which the sum of $216,559 was paid out in salaries. The capital necessary for the buildings and machinery used in their production amounted to $2,581,910. This industry is yet in its childhood and is destined to become a factor in the wealth of the nation. If no hostile legislation breaks it down it will expand and develop itself into a great source of wealth to our wine-growers, who raised, by the way, in the last year 17,487,000 gallons of grape juice, at a market value of not less than $17,000,000.

THE CALAMITOUS EFFECTS OF PROHIBITION.

The persons, Mr. Chairman, who are directly employed in the manufacture and sale of alcoholic liquors are, however, by no means alone interested in the prohibition issue. That issue extends further; it affects the whole nation. Destroy by the operation of a prohibitory law the great wealth involved in the liquor, beer, and wine industries; make useless the enormous capital invested in the buildings, machineries, and utensils necessary for the operation and maintenance of distilleries, breweries, and wine-cellars, and see then how this will affect the other industries of the nation. Drive from our market articles of merchandise of a value of hundreds of millions of dollars, and make these articles valueless to their rightful owners, without giving them any other return for the property thus made valueless, and see whether such action will not depress the money market and depreciate all other values of the nation. It would be an undertaking pregnant with ruin. Many industries would suffer and be crippled by it. The farmer who cultivates the soil would be injured in the home market relative to his surplus of cereals. Corn and barley would be reduced in price perhaps one-third of their present value, because the brewer, the maltster, the distiller would not be found as purchasers, and the enormous quantities which are now used and bought by them would hardly be taken and paid for by those who clamor for prohibitory laws. The planting of hops would have to be abandoned, and also the cultivation of the grapevine, which promises such a rich and paying yield. The great outlay which the farmer has hitherto made in procuring posts for his hop-fields and for his vineyards would be wholly lost to him, for he would find no purchasers for the products which once constituted the main part of his income.

But not the farmer alone, numerous other occupations would also be crippled. The cooper would find his toil a dreary one, because his best customers, the distiller and the brewer, would have no more work for him. The blacksmith, the harness-maker, the carriage-maker, would no longer have any big bills to present to the brewer, and they would feel sorry over the loss of their best customer. The coal merchant could no longer send his cart to the brewery or to the distillery, and he would look in vain for the ready cash which was once there for him in abundance. The blower of glass bottles would receive no new orders; bottles would become superfluous articles. The foundry-men would lose their best customers for numerous and costly machines.

The railroad, steamboat, and canal-boat companies as common carriers would find their income greatly reduced on account of the loss of extensive freights. Even the dealer in groceries, the baker, the butcher, and other trades would have cause to regret the breaking-up of the brewery and the impoverishment of its owner, who would no longer be able to give employment to a large force of employés and workmen upon whom these smaller trades depend in part for their subsistence.

TEMPERANCE PETITIONS IRRATIONAL AND BASED ON FANATICISM.

If all these facts were well understood and conscientiously considered, could a just and fair-minded man sign a petition to Congress for the enactment of prohibitory liquor laws? And yet the fact exists that numerous petitions from all parts of the country for the suppression of the manufacture and sale of intoxicating liquors in the Territories of the United States and in the District of Columbia have been sent to former Congresses and also to this Congress with thousands of signatures. The Ladies' Christian Temperance Union, if I am correctly informed, has taken it upon itself to procure signatures to these petitions, and there is no doubt that further petitions will receive thousands upon thousands of names. But do numbers add to the merits of a petition? Suppose that the Communists should send petitions to Congress praying for a law that no person should be allowed to possess any property, but that all property should be condemned and held by the Government in common for all its citizens—would not such petitions be disregarded and thrown aside? If, for instance, all the poor people in the country could be induced, through the aid of well-disciplined organizations, to sign such petitions, so that the petitioners would number several hundred thousan ds or even a million, would that number change the real merits of the case, or would it induce one member of Congress to pay the least regard to their prayer? The merits of the request contained in a petition, its justice, and not the number or social position of the signers ought to be considered by Congress.

AUDACITY OF OUR TEMPERANCE FANATICS.

The honorable Senator BLAIR, from New Hampshire, presented, if I mistake not, on January 31, ultimo, a petition of 3,741 inhabitants of the District of Columbia asking for the passage of a law prohibiting the manufacture and sale of all alcoholic beverages within this District; also three other petitions signed by inhabitants of the Territory of Washington and one from Dakota and the Territory of Idaho respectively, asking for the same law. In vain I search for a substantial reason that could prompt non-residents of this District to concern themselves in so lively a manner with its affairs. In vain I ask for a substantial motive for such unwarranted interference, and I fail, indeed, wholly to perceive the particular advantage which any inhabitants of those remote Territories could derive from the destruction or maintenance within the limits of the District of Columbia of the manufacture or sale of malt or spirituous liquors. I can not ascribe this interference to any other agency than that of the fanatic crusade which misguided enthusiasts in the cause of temperance have organized over the whole United States so as to overwhelm this Congress with petitions of this sort and make it appear that the American people desired the destruction of one of the main industries of the country. How many of the signers of such petitions have likely themselves at least for the term of one year abstained from the use of alcoholic liquors? If every individual signer of them were indeed obliged to make affidavit that he had not taken or used any spirituous liquors within a year anterior to the signing of his name, how small a number of signatures would these petitions not contain!

THE WORKING OF PROHIBITION IN KANSAS.

Besides the petitions in question, the honorable Senator from New Hampshire [Mr. BLAIR] laid, however, further before the Senate a statement from James A. Troutman in illustration of the efficiency of the prohibitory liquor law of Kansas, and he took care to say that it had materially decreased the number of saloons; that under it an unusually large percentage of prosecutions had ended with convictions, and that the principle of prohibition had grown stronger in the State of Kansas.

But as regards the first point, we are unfortunately not told how many side-places, club-rooms, or other contrivances for the clandestine sale of liquor have sprung into existence in that State since the inauguration of the prohibitory liquor legislation. In refutation of this point I need merely direct the attention of Congress to the experience of the State of Maine.

The second point mentioned by the honorable Senator [Mr. BLAIR] only shows the futility of each and every measure which makes men transgressors of the law for following their own inclination in the choice of their food and drink. Such laws are not and will not be recognized as binding. They are evaded and broken whenever an opportunity is offered.

As to the third point, the overwhelming defeat of St. John, the late Republican and temperance candidate for the governorship of Kansas, gives, it would seem, a quite curious illustration of the spread of the prohibitory sentiment. Another illustration of this spread is perhaps also presented by the fact that a prominent brewer in Milwaukee stated to a friend of mine, who passed through Milwaukee and inspected there one of the largest breweries in this country, that the sale of Milwaukee beer in Kansas had experienced a large increase during the last two years.

ANTIQUITY AND GENERAL USE OF SPIRITUOUS BEVERAGES.

The source of the evil of intemperance lies not in the saloons nor in the breweries and distilleries, and with a prohibition of the sale of liquors the evil is not banished or done away with. It rather takes root in the inclination and appetite of man, in the frailty of human nature. Man craves for a change in his food and drink, and from the earliest time history informs us indeed that water and milk were not the only fluids used for drink. After the flood Noah planted the grapevine and made wine from its fruit. The old Egyptians and the Romans knew the art of brewing beer and they used fermented malt liquors, besides wine, for drink. In modern times coffee, tea, and chocolate, and divers other articles are used in the preparation of drinks, and in modern times also the art of distilling liquors from cereals, potatoes, &c., came into general use, and the product generated by distillation became an article of merchandise and came into great demand among all civilized nations. Thus liquors are now generally used as beverages all over the civilized world.

DRUNKENNESS NOT CURABLE BY HUMAN LAW.

Human nature is the same now as it has been in former times, and the desire for a beverage stronger than water exists to-day as strong as ever. The moderate use of strong drink, as experience teaches us, is not hurtful to a healthy man; it is alone the abuse of intoxicating beverages which makes drunkards and constitutes the source of so much crime and misery among us. Nobody can detest the vice of drunkenness more than I do. But what unfailing remedy can we apply to remove or at least to lessen it? To entirely banish this vice from human society is a task which will prove impossible, because we can not change by law human nature. Society must bear with the drunkard the best way it may, because morality can not be established by legal enactments. To lessen in a great way the extent and frequency of drunkenness can only be the work of wise and strict license laws.

THE TRUE CAUSE OF CRIME.

The assertion that liquor begets crime is one of the sophistries of temperance orators. The greatest and most crafty criminals keep aloof from the use of liquor. They fear that it may dull their intellect and thus become an obstacle in the successful execution of their criminal enterprises. That many crimes are committed by men under the influence of liquor nobody will deny; neither, however, can it be denied that numerous crimes are committed by men who would never taste liquor. Liquor alone is not the cause of crime; the evil, unbalanced passions for gain, for revenge, for lust, for hatred, are rather the inward springs for the commission of crime, and drunkenness furnishes sometimes merely the opportunity which sets the spring in operation.

A DEMAND FOR WISDOM AND MODERATION.

Excessive drinking is an insanity of the appetite. But to treat the appetite of all individuals as if they were insane brings on the same confusion that we should have if we took our mode of living from the life of the insane. We should then make ourselves crazy without aiding the few insane who require a special treatment. On the same principle we ought to deal with this vice of drunkenness. Persons who from an inherent abnormal desire, or from indolence, or poverty, or want of occupation, from inability to bear the constant toil of hard work, or on account of disease or a weak and sickly constitution, or by excessive indulgence in other passions, become addicted to drink and by and by fall an easy prey to the vice of drunkenness, should not be the cause or furnish the pretext for laws which deprive the people of their personal liberty, destroy the value of property, and drive to poverty thousands of hard-working men by the destruction and prohibition of their lawful occupation.

ILLICIT DISTILLATION THREATENED.

Alcohol and distilled spirituous liquors are too great a factor in our national life to be entirely banished or dispensed with. They are used all over the country for scientific, medicinal, and commercial purposes, and if it were possible to exclude them to a considerable degree from the reach of the people, numerous illicit distilleries would be established in places difficult of access and carefully hidden. The opportunity of obtaining liquor clandestinely would be as ample as it is now. The use and abuse of liquor would by no means assume smaller proportions, and the main object of prohibition would be badly frustrated. Drunkenness would hold its victims with firmer clutches than ever, because men fond of liquor would buy it cheaper and in larger quantities; and you could not regulate the sale of liquor as you can now by wise and well-enforced license laws.

Illicit distillation, if once generally established and tolerated among us, would give rise to perjury, murder, and all sorts of crimes; a general demoralization and disregard of law would indeed follow in its wake. Were prohibition the law of the land there can be no question but that illicit distilleries would spring up like mushrooms in our rural districts, and as they would furnish an inferior whisky they could not but exercise the most deleterious influence upon our rural population. The farmers would distill whisky from their superfluous corn crop,

regardless of spies and the dread of the law; they would clandestinely sell it or exchange it, and they would thrive on the ruin of the once legitimate but now outlawed distillers. Nothing less than an interdiction of the planting and raising of corn could indeed stop the spread of illicit distillation were it once started by prohibitory legislation. Nothing less than an interdiction of the planting of corn, barley, hops, and the grapevine can in reality ever put a stop to drunkenness.

LEGAL REGULATION AS AGAINST PROHIBITION.

Mr. Chairman, it is impossible for me to comprehend how intelligent men can advocate the prohibition of the manufacture and sale of spirituous and fermented liquors and wines for no other than the avowed end of suppressing thereby the vice of drunkenness when they should know that they aim at an object which must forever lie beyond the reach of the legislative power. Can they not see that their advocacy of prohibition must ultimately result in the aggravation of the very evil which they think it incumbent upon themselves to eradicate? And do they not understand that their demand for the suppression of the liquor traffic involves an immense confiscation and destruction of property of various forms and the enforced idleness of thousands of skilled and unskilled workmen? A contemplation of a few of the more pernicious effects of prohibitory enactments might perhaps cause them to hesitate, and if they would once hesitate and study the liquor question with an unprejudiced mind they could not fail to advocate the legal regulation of the traffic in liquors rather than its legal prohibition.

THE RANK OF SPIRITUOUS BEVERAGES IN OUR FOREIGN COMMERCE.

In my remarks I have as yet not alluded to the high importance which the export of distilled and fermented liquors has attained in our foreign commerce, and that I may rectify this omission, I subjoin herewith the following figures relative to the quantity and value of our domestic exports of distilled, spirituous, and fermented malt liquors and wines during the fiscal years of 1880, 1881, 1882, and 1883.

Liquors and wines.	Quantity.	Value.
BEER, ALE, AND PORTER.		
1880:		
In bottles—dozen (quarts or equivalent)	146,739	$262,450
In casks—gallons	111,308	36,368
Total		298,818
1881:		
In bottles—dozen (quarts or equivalent)	164,276	292,421
In casks—gallons	201,376	55,367
Total		347,788
1882:		
In bottles—dozen (quarts or equivalent)	176,426	328,405
In casks—gallons	141,978	55,791
Total		384,196
1883:		
In bottles—dozen (quarts or equivalent)	220,792	409,348
In casks—gallons	215,938	81,094
Total		490,442
DISTILLED SPIRITS AND WINES.		
1880:		
From grain, gallons	10,112,598	2,568,685
From molasses, gallons	1,285,268	397,247
From other materials, gallons	20,640	43,613
Total		3,009,545
Wine, gallons	154,887	123,317
1881:		
From grain, gallons	13,920,984	2,878,388
From molasses, gallons	839,599	296,448
From other materials, gallons	59,160	73,095
Total		3,274,931
Wine, gallons	68,181	69,915
1882:		
From grain, gallons	8,374,990	1,727,526
From molasses, gallons	563,911	191,871
From other materials, gallons	51,345	69,641
Total		1,989,038
Wine, gallons	65,140	67,909
1883:		
From grain, gallons	3,925,586	1,620,912
From molasses, gallons	578,786	250,361
From other materials, gallons	133,463	111,610
Total		1,982,883
Wine, gallons	80,972	77,280

STATISTICAL MEMORANDA OF THE BREWING INTERESTS IN THE CITY OF MILWAUKEE.

In addition, and in the form of an appendix, I deem it also appropriate to insert here the following statistical statement relative to the magnitude of the brewing interest of but one city, the city of Milwaukee, and of one of the principal brewing establishments of that city:

THE PHILIP BEST BREWING COMPANY.

Capital invested		$3,387,825 00
Number of employés		643
Wages paid per year		$385,523 22
Number of horses in use		207
Number of wagons in use		112
Taxes paid in 1883		$30,246 18
Revenue taxes paid to the United States Government, after deducting the 7½ per cent. rebate		$348,150 50
Raw material purchased in 1883:		
809,136 bushels of barley, at 80 cents per bushel		$647,308 80
800,314 pounds of hops, at 66½ cents per pound		$532,208 81
2,362,000 pounds of rice, at 3 cents per pound		$70,860 00
The latter all of domestic growth, raised in Carolina and Louisiana.		
Ice used, 48,207 tons, at $1 per ton		$48,207 00
Disbursements of various kinds:		
Revenue-stamps (as before stated)		$348,150 50
Barley (as before stated)		647,308 80
Hops (as before stated)		532,208 81
Rice (as before stated)		70,860 00
Ice (as before stated)		48,207 00
12,920 gross of new bottles bought		84,193 00
New cooperage bought:		
Whole barrels	$898	
Half-barrels	5,528	
Quarter-barrels	29,418	
Eighth-barrels	20,922	
		89,551 40
Labor (as before stated)		385,523 22
Other operating expenses		836,548 55
Making the total disbursements for the year 1883		3,042,551 28

Special attention is called to the amount expended for the following purposes:

For feed—hay, oats, corn, &c.	$14,211 73
Postage-stamps	2,913 28
Wagon repairs	4,333 46
Machinery repairs	24,750 00
Cooperage repairs	17,752 81
Stationery	5,977 72
Signs, show-cards, &c.	10,888 43
Coal (22,469 tons)	97,436 00
Insurance	30,048 52
Repairs on buildings	31,280 00
Freight paid to the railroad companies for the transportation of barley, hops, and empty packages returned to Milwaukee	122,420 00
Revenue paid to the railroad companies from our customers on beer shipped to them	187,998 13

Of the employés of this company, taken from all nationalities, there are 341 married males, and, figuring for these the average census figure of five persons to a family, we get 1,705 persons; there are unmarried males, 179 persons; and, as dependent on these, 21 persons; from which we get a total of 1,905 persons directly deriving their living from the brewery.

In order to show the importance of the brewing interests to farmers and the community at large, the following figures are offered:

The average yield of barley per acre is at the highest estimate 30 bushels; based upon this average it will require 26,971 acres to raise the 809,136 bushels before-mentioned. Figuring on an average of 100 acres to a farm, this would give 269 farms, and figuring each farm with 5 persons, we get 1,345 persons. The average yield of hops per acre is 405 pounds. To raise the before-mentioned 800,314 pounds of hops it would take about 2,000 acres, and figuring the farms on the same basis as above, 20 farms and, at 5 persons to a farm, 100 persons would depend for their income on this single brewery. Of the rice used we have no statistics at hand, as far as the yield per acre is concerned, but we can safely presume that 100 persons obtain their living from the raising of this product, so far as it is consumed by this brewery. Altogether there are therefore 1,545 persons directly earning their living through the brewery.

The Philip Best Brewing Company has over 3,000 accounts with saloon-keepers in its books, not including the accounts of private families, and 2,766 saloon-keepers out of the 3,000 are married, supporting and employing help. Figuring 5 persons as dependent on each of these 2,766 business men, we get 13,830 persons.

In making a recapitulation of the number dependent for their living, directly or indirectly, upon this one establishment, we get the following figures: Directly connected with the brewery, 1,905 persons; farmers, their families and help (low estimate), 1,545 persons; customers, their families and help, 13,830 persons; mechanics, such as carpenters, masons, coppersmiths, machinists, wood-turners, sign painters, &c., constantly employed, 100; these with their families would amount to 500 persons, making at a very low estimate a grand total of 17,780 persons.

The Philip Best Brewing Company has over 3,000 customers in business, occupying houses or parts of houses; some of them have their business in their own houses, but a greater number of them do business in rented premises, and occupy dwelling-houses separately, making at a low estimate over 3,000 tenants. What, if the traffic in beer and liquor be abolished, or greatly diminished by prohibitory laws, is to be done with all these vacant stores or buildings?

On the basis of the Philip Best Brewing Company's statistics I would figure the result of the Milwaukee brewers' operations approximately as follows: Total sales for 1883, about 1,059,762 barrels, of which the Philip Best Brewing Company sold about 36 per cent., or a little over one-third. Not having the accurate sales of all the Milwaukee brewers at hand, I figure them at just two-thirds more than those of the Philip Best Brewing Company, and on this basis I arrive at the following figures for the Milwaukee brewers:

Capital invested approximately	$8,000,000 00
Number of employés, approximately	2,000
Wages paid per year, approximately	$1,156,569 66
Number of horses in use, approximately	700
Number of wagons in use, approximately	336
Taxes paid in 1883	$90,738 54
Revenue taxes paid, after deducting the 7½ per cent. rebate	$980,279 85
Raw material purchased in 1883:	
2,427,408 bushels barley, at 80c.	$1,941,926 40
2,400,942 pounds of hops, at 66½c.	$1,596,626 43
4,724,000 pounds rice, at 3c.	$141,720 00
(The latter all of domestic growth, raised in Carolina and Louisiana.)	
Ice used, 144,621 tons, at $1 per ton	$144,621 00
Disbursements of various kinds:	
Taxes paid in 1883	$90,738 54
Revenue stamps (as above stated)	980,279 85
Barley (as above stated)	1,941,926 40

Hops (as above stated)	1,596,626 43
Rice (as above stated)	141,720 00
Ice (as above stated)	144,621 00
New bottles bought	252,579 00
New cooperage bought	268,654 20
Other operating expenses	2,509,645 65
Labor	1,156,569 66
Making the total amount expended during 1883	9,083,360 73

Out of these enormous expenditures special attention is called to the following items:

Feed, hay, oats, corn, &c	$42,635 19
Postage-stamps	8,739 84
Wagon repairs	13,000 38
Machinery repairs	74,250 00
Cooperage repairs	53,258 43
Stationary	17,933 16
Signs, show cards, &c	32,665 29
Coal (67,407 tons)	292,308 00
Fire insurance	90,145 56
Repairs on buildings	93,840 00
Freight paid to the railroad companies for the transportation of barley, hops, and empty cooperage packages returned to Milwaukee	367,260 00
Freight paid to the railroad companies by the customers of the Milwaukee brewers	563,994 39
Based on the itemized calculation of the Philip Best Brewing Company we get 5,715 persons as directly depending upon the Milwaukee brewers for a living	5,715
On the same basis I figure that it will require 80,913 acres of land to grow the barley used in Milwaukee for brewing purposes, and that from this source 4,035 persons (farmers, their families, and help) obtain their living	4,035

To raise 2,400,942 pounds of hops will require about 6,000 acres of land or 60 farms, and the owners of these farms with their families and help constitute about 300 persons.

To produce the rice above mentioned will surely require 200 persons; trebling the number of customers in the beer business, their families and help as estimated by the Philip Best Brewing Company we get 41,490 persons; trebling the mechanics and other artisans, 1,500 persons; making at a low estimate a grand total of 53,240 persons who make their living directly or indirectly from the Milwaukee brewing interest.

Figuring on the above basis we find that the Milwaukee brewers alone furnish the means of subsistence of from 9,000 to 10,000 tenants doing business in rented buildings or stores. If the traffic in beer, &c., be abolished, or greatly diminished, where will the owners of these stores and buildings look for occupants?

In conclusion, Mr. Chairman, no one regrets more than I the channel into which the discussion of this bill has drifted. The projectors and advocates of the measure had little reason to expect that it would call forth the best oratorical efforts of the so-called temperance champions in the display of their staple in trade, of the long-drawn-out tales of misery and woe—of a misery and woe, which are the mere results, as I have shown, of unrestrained appetites, irritated and maddened by an ever-awakening and aggravating agitation and pernicious social proscription of alcoholic stimulants. They have made drinking rather than drunkenness a vice, without recognizing that man is so constituted that he rebels against unwarranted restraint. It is this characteristic that in ninety-nine cases out of one hundred transforms him into the monster they have so eloquently depicted. I am sorry, Mr. Chairman, that the demon of drunkenness sleeping within the heart of man should have been awakened upon this floor by these noisy champions of sumptuary law. While sleeping he was harmless, and the sons of men touched glass with glass in social joy without baneful effect to the home and the hearthstone. The bill before the committee calls for a simple act of justice to a recognized industry, in no wise involving the wide range the discussion has taken, and as an act of justice it should be enacted into a law.

Mississippi Overflow.

SPEECH

OF

HON. WILLIAM C. OATES,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 24, 1884,

On the joint resolution appropriating $300,000 to prevent the overflow of the city of New Orleans, La., and the country adjacent thereto.

Mr. OATES said:

Mr. SPEAKER: No man sympathises more deeply and heartily with a people in distress than I do. But, sir, the Congress of the United States never was intended to be an almshouse. We are not here to dispense charity, nor to take charge of and direct, nor indeed in any manner to interfere with, the domestic or local affairs of the people of this country. These belong to the States. Should any overpowering calamity or uncontrollable disturbance occur within a State and the proper authorities thereof appeal to Congress for assistance, I should not withhold my vote, but would feel that it was my duty as a Representative to do what I could to save the State and its people from destruction. But, sir, what is the resolution now before us? Its title answers the inquiry, "A joint resolution appropriating $300,000 to prevent the overflow of the city of New Orleans, La., and the country adjacent thereto."

No calamity has actually occurred. There is simply a probability, as shown only by letters and telegrams of an unofficial character. A great and wealthy city of 300,000 people, without having made an effort or expended a dollar of her own money, so far as this House has been advised, appealing to Congress for an appropriation of as many dollars as it has population to prevent an overflow is a fitting commentary on paternal government.

Mr. Speaker, Congress has no constitutional power to make such appropriations as that now proposed. The only clause in the Constitution under which any crank pretends to find authority for it is the following, in section 8 of article 1:

The Congress shall have power to lay and collect taxes, duties, imposts, and excises to pay the debts and provide for the common defense and general welfare of the United States.

This invests Congress with the taxing power and expresses only in a general way the three grand purposes for which this power may be exercised. As to the manner in which Congress may use the money obtained to effect these grand purposes we must look further on in the same instrument for more minute and specific directions or grants of power.

The first, to pay the debts, is so unambiguous and self-defining that nothing more is necessary, notwithstanding "to borrow money" and "to coin money" follow as express grants.

The second, to provide for the common defense, is followed by the express grants, "to raise and support armies," and "to provide and maintain a navy."

Now, in the absence of these specific directions as to how the grand purpose of common defense is to be accomplished, Congress might adopt some other method, such as buying our peace by paying an invader the money of the Government to withdraw from our shores, or using the money to pay for assassinations and poisoning of the common enemy. But the Constitution comes to our aid and tells us plainly how to provide for the common defense: by raising armies and providing a navy.

The third grand object, to provide for the general welfare, finds its field of operation and application in all of the other express directions or grants of power. For example, to regulate commerce, to establish rules of naturalization, to make uniform laws upon the subject of bankruptcy, to provide for the punishment of counterfeiting, to establish post-offices and post-roads, to promote the progress of science, to constitute judicial tribunals inferior to the Supreme Court, to define and punish piracies and felonies and offenses against the law of nations committed upon the high seas, to declare war, to make rules for the government of the land and naval forces, to provide for calling forth the militia, to provide for organizing, &c., the militia, to exercise exclusive legislation in this District, and "to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof." I presume it is not necessary for me to enumerate the "other powers" named in the paragraph just read. No one is so obtuse as not to be able to distinguish them.

As there is, then, no express grant of power to Congress to bestow the largesses of the Government upon either real or fancied objects of charity, there is nothing from which such a power can be implied, since the general welfare, as we have seen, is provided for and specified in many ways in the Constitution. And the tenth article of amendment declares that "the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." Such measures as that now proposed, not being among the powers expressly nor impliedly delegated, reside in the States, and Congress can not exercise them.

This is not a government of original but of derived powers. Its powers are limited and enumerated in the instrument of its creation. The third and most comprehensive grand purpose for which taxes, imposts, and excises are to be laid and collected, it should be observed, is not to provide for the general welfare of the people of the United States, for such is not the language employed. That purpose as expressed is "to provide for the general welfare of the United States;" that is, to provide for the general welfare of that government called "the United States," or that government which the States unitedly established. The purpose was and is political, and not domestic; hence the enumeration and particular specification, so far as the cardinal principle of brevity applicable to a constitution would admit, of what should be done and to which the revenues of the Government should be applied.

I do not contend for a strict construction but a strict observance of the Constitution. I do not contend for a strict or narrow construction, but I do contend for the Constitution which I have sworn to support and defend; and I do so because it is the palladium of the liberties of the people, and the oath is binding on my conscience. Whenever by express words a power is delegated to the United States, I, as a Representative, will vote for any measure proper in itself, though not within the expressed power, if it be necessary to give full operation,

force, and efficacy to such expressed power. Everything which I can conscientiously concede to have been confided to "the Congress" by the Constitution I will most cheerfully, yea, generously and liberally, exercise to ameliorate suffering humanity or to advance the interests of the whole people of the United States, without distinction as to locality or previous condition.

But further than this I will not go, because I believe in the restraints on discretion imposed by a written constitution. If it be admitted that Congress can do anything which the Constitution does not prohibit, which is the rule of construction a Legislature puts upon a State constitution, there are so small a number of these that you in effect subvert the Constitution and substitute the unbridled will or discretion of a majority of the members. Legislation would then depend more on the state of Congressional stomachs than upon a written Constitution. Centralism in all of its amplitude would be then established, enthroned where boasted American Liberty once presided.

"To regulate commerce with foreign nations, and among the several States, and with the Indian tribes" is an express grant of power to Congress. Publicists, statesmen, and scholars have held, and in fact it has been judicially determined, that Congress, to give force and amplitude to this provision, may exercise an implied power to appropriate money out of the Treasury for the improvement of the navigation of rivers and harbors. Under the express grant of power to Congress "to provide and maintain a navy" we can appropriate money for the maintenance of the Naval Academy at Annapolis under an implied power, for the reason that no one can deny that by this means skillful officers are supplied and the Navy made efficient at least in that respect. Incidental to this naval power is the right of Congress to appropriate money for the relief of Lieutenant Greely and his party. The expedition in my judgment was a foolish one, but the Government ordered or permitted him to go, and, having done so, humanity and duty unite in demanding that the Government shall do all it can to rescue and save him and his party from destruction.

So, too, there being an express grant to Congress of power "to raise and support armies" and to make rules for the government of the land and naval forces," there is an implied power to maintain at the expense of the public the Military Academy at West Point for the education of officers to command the armies in an efficient and skillful manner. The same or a similar rule applies, and very properly, too, to the power "to establish post-offices and post-roads," and in fact to all of the express delegations of power. Many acts of Congress are claimed by the thoughtless, and sometimes even by the members of Congress, to be violations of the Constitution when they are not obnoxious to that censure. But the force of precedent in this House and the Senate is so much honored that hoary error stalks abroad on stilts and violates the Constitution with impunity, and with no better apology or excuse for it than that some American Lycurgus had set him the example.

I have no veneration, sir, for age nor precedent when panoplied in error and fatally bent on mischief. If, as we are told, in 1812, Macon, Calhoun, Johnson, King, Randolph, Troup, and other great men voted $50,000 to be used in purchasing and shipping flour for the relief of the starving people of Caracas, in Venezuela, who were suffering from the effects of a terrible earthquake, and also for the people of the island of Teneriffe, who were starving in consequence of their crops having been eaten up by locusts; or if, still later, in 1847, Calhoun, Webster, Cameron, Corwin, Sam Houston, Reverdy Johnson, and other noted statesmen voted with the majority to tender provisions to Great Britain for the relief of the people of Ireland and Scotland during the prevalence of a famine, do these justify the adoption of the resolution now before the House, or the appropriation for the overflow on the Ohio?

In 1812, the House of Representatives struck out of the resolution the latter part, providing for the island of Teneriffe, ostensibly because they did not have evidence sufficient of the suffering of the people, but really because the island was under British dominion, and it was not probable that any advantage to the foreign policy would be obtained thereby. Mr. Rhea spoke against extending aid to Teneriffe as a mere charity, but in favor of Caracas, and he said in doing so he was "actuated by a regard to the interests of the United States, which peculiarly required them to cultivate amity with and conciliate the South American provinces." Mark you, a war was then in progress with Great Britain. After the resolution was so amended as to apply only to Caracas, it was passed unanimously.

In 1847, March 1, now a little over thirty-seven years ago, when Mr. Crittenden introduced into the Senate his bill to appropriate $500,000 for the relief of the people of Ireland and Scotland from famine, among other things he said:

> So far as the constitutional argument is concerned, with the voice of suffering ringing in my ears and this precedent before me (Caracas), I lay down all objections at the feet of charity.

Mr. Niles said they had better leave the business of dispensing alms to the liberality, generosity, and better judgment of their constituents. He felt that he had no authority to vote half a million of money for the people of Ireland—none at all in his representative capacity. He did not feel justified in taking the people's money for any object which was not committed to our charge. It was all wrong. Senators seemed to rely on the precedent established by the act of Congress—an inconsiderate act he considered it—giving a portion of public money in the case of the earthquake at Caracas. He did not regard that as establishing a precedent for this appropriation, which would be placed on record to justify similar appropriations for all time to come. He would not put his hands into the public Treasury to make an improper, he had almost said unconstitutional, use of the public money, of the money of his constituents.

Mr. Butler, of South Carolina, said that with the views he entertained of the Constitution and our national policy he could not vote for the bill. Mr. Bagby, a Senator from Alabama, said that he denied that they had any constitutional authority to appropriate money for such objects. He thought he could see some of the consequences of such a precedent as this would be. * * * If this system of national charity was to be indulged in, he asked where would it end? He said they had no such power; and if they had, human imagination would not be able to fix to it a limit. The revenues of this country were derived from one source, and one only. They are derived from the people of the United States, and they were derived for specific purposes. Mr. Mason, of Virginia, said that he could not but see in it a perversion of the trust reposed in them under the Constitution of the United States.

One Senator alone, Mr. Hannegan, of Indiana, contended that there was constitutional power to make the appropriation, and he put it upon the ground that there was no prohibition against it. But when Mr. Bagby asked if the Senator contended that Congress could do anything not prohibited in the Constitution, he put it on the teaching of the Saviour in the parable of the good Samaritan. Mr. Webster, in his remarks, did not touch the constitutional question, and Mr. Dayton said they had a precedent in 1812, which in this instance he desired to see followed. Mr. Fairfield, of Maine, said no Senator had put his finger on a single section of the Constitution which authorized them to give this appropriation, although they were contending for the constitutional power to do so. It was a very easy thing to expend charities in this way; but he thought they should put their hands in their own pockets and do it, but they had no right to put their hands in the pockets of the people.

Mr. Calhoun spoke in a very low tone, so that he could not be very distinctly heard, but the remarks of the Senator from Indiana caused him to explain why he had no constitutional objection to the measure. He drew a distinction between the foreign and domestic policy of this Government. Entertaining these views, he had voted for the appropriation for the relief of the people of Caracas in 1812. And it is true that the Constitution does not undertake to deal with, prescribe, nor limit the external or foreign powers or policy of this Government. The Constitution is a compact between the States, while outside to all the world this is a nation and may use the money of the Government in advancing whatever international policy the Congress and President may deem best for the general welfare of the United States as a nation.

When Mr. Crittenden's bill was put on its passage in the House of Representatives G. W. Jones, of Tennessee, moved to lay it on the table, and there were 75 yeas to 79 nays. John Quincy Adams, John Bell, T. H. Benton, Andrew Johnson, Jacob Thompson, Seaborn Jones of Georgia, Chase of Ohio, Houston, Cobb, and Chapman of Alabama were among those who voted to table and against the bill.

There are plenty of precedents still later and more in point which not only tend to show the impropriety of such legislation, but how, in their administration, such munificent appropriations may be used for corrupt partisan purposes. I will mention one:

In May, 1874, there was an overflow of the Alabama and Tombigbee Rivers, reports of which to Congress, in an unofficial way, were doubtless greatly exaggerated, as they almost invariably are in such cases, and Congress appropriated $400,000 for the relief of the suffering people along those rivers. Rations were purchased and distributed under the then Republican administration; but how? A large portion of the money was laid out for bacon, which was distributed, not in time of the overflow, but in the following September and October, not only in the river districts, but in the hills and mountains of Middle and Eastern Alabama for the purpose of corrupting and controlling the November election in the interest of the Republican party.

The carpet-baggers with the overflowed bacon sought the voters on the hills and in the high mountains during the prevalence of a drought and tried to tempt them like the devil did the Saviour, and doubtless with much greater success as to a certain class of them. The Democrats then raised a great outcry against such flagrant violations of the Constitution and corrupt administration. If it were unconstitutional then, why is it not so now? The gentlemen who favor this measure are not harmonious for the reason that one class of them want the money to be immediately expended in strengthening the levee along the river front of the city of New Orleans, while the others desire a larger appropriation for the relief of the destitute and suffering people higher up the river, where it is said that more than 100,000 have been driven from their homes, and that these are generally poor laboring colored people who are dependent on the country merchants to advance supplies to them on the prospect of the crops they may make, and the flood so impairs that prospect that they can not get supplies, &c.

Now, allow me to analyze this charitable business upon the part of Congress and see if it is right.

Take three citizens of Barbour, the center county of the district I have the honor to represent, of equal standing, wealth, and merit. Two of them are farmers and the third is a merchant. One of the farmers sells his possessions, and to better his prospects in life removes to and purchases a plantation in the rich bottom of the Mississippi, the most productive land in the world. The grand old Father of waters affords him splendid commercial facilities. The merchant, with a like purpose in view, locates in New Orleans. The third remains away from any grand river or great metropolis upon his poor lands in Barbour. He has no rich soil, no great commercial advantages, but he is content by incessant toil to dig out of the impoverished soil but little if any more than a bare subsistence after paying his taxes. These have to be paid. The poorest laborer in the land may not have any property, and can thus avoid the payment of State and county taxes, but the exactions of the tariff, like death, are inexorable and will not be evaded nor postponed. These taxes, you will remember, in section 8 of the Constitution, are to pay the debts and provide for the common defense and general welfare.

The farmer on the Mississippi, with comparatively little expense, sees his crops grow and bear in all the luxuriance and abundance of his most fervent hope. At the marketing he sees his cotton bales by the hundreds rolled upon the steamer, upon which he is entertained with all the elegance that any lord of the earth could desire. Four to five millions of dollars a year which are appropriated out of the Federal Treasury on river and harbor bills have been expended upon the improvement of the navigation of that great river, which insures his safe and speedy landing in New Orleans. He finds his old friend, the merchant, and sells him a good bargain in cotton, buys his large stock of supplies, and returns, he and his merchant both benefited and happy. They did well that year.

But the next year the river rises, the levee breaks, and the plantation is flooded, submerged, the stock drowned, the corn is swept away, and there is distress and weeping where but a few days before smiling plenty greeted the eye and happiness reigned supreme. He appeals to Congress and says, "Your coffers are full to overflowing; you collected it from my old friend in Barbour, in common with the other people of the United States, to pay your debts and run your Government, but you do not need it; your credit is good. Go on paying interest; it does not matter about paying the debt now. Give me a few hundreds or thousands of this money to aid me; I need it; I am overflowed; and whatever others may say, I know that my old friend in Barbour does not mind it. He has poor land, it is true, lives in the back country, and is not going to live near a river; but he sympathizes with me and wants so badly to be taxed for my benefit that he demands that his Representative and Senators in Congress shall legislate a little outside of the Constitution in order to do it."

But what of the merchant? Why, the first time we hear from him since the flood set in he is not yet overflowed but he does not know how soon he may be. He says the Legislature of his State is not in session; that the one million of dollars which Congress gave to the Mississippi River Commission less than two months ago has been expended, and he does not intend to spend 20 per cent. of what he is worth to strengthen and raise the levee along the river front to save the city from an overflow and his property from destruction, and if he does not get security some one will hear from him at the next election. He says that he knows that his poor old farmer friend in Barbour would be delighted if Congress would add a few nickels more to his taxes in common with all the other people, to build up and make that levee a magnificent breakwater and render him, his merchandise and his home, his wealth and his splendor, perfectly secure against overflows for all time to come. This would of course bring joy and gladness to every farmer throughout the land. The language of these flood appropriations is: "Blessed are those who make their homes upon the banks of great rivers or in the lowlands hard by, for if an overflow occurs Congress will see to it that no great loss is sustained provided the money in the Treasury holds out." The title of the bill under consideration should be changed to that of "A bill to insure against water," with the honorable Secretary of War as chief actuary.

It is, in fact, worse than the hypothesis I have used for illustration. It is confessed that the people to be benefited along the river are improvident negroes, to whom the country merchants will not make advances. It is notorious that when the Government begins to distribute rations to that class of people they utterly refuse to work and will live upon Government rations as long as they can get them and will not try to help themselves. It encourages thriftlessness and vagabondism. If there be anything in which the people of this country ought to be free, it is in disposing of their own property or money, every man in his own way. The burdens of government are always onerous and its revenues coerced from the people. Therefore, the people have the most vital interest in seeing to it that their hard earnings, which through the channel of taxation go to the Treasury, are applied to the purposes of government for which they are collected. And if gentlemen wish to popularize themselves by a munificent display of generosity and charity, let them do so at their own expense. When that test is applied the country will be able to determine whether any of that benevolence which is now exhibited at public expense is pure demagogy or true charity.

The utter injustice of thus appropriating money, which is the common property of all, for the benefit of the few is manifest when we examine the precedents and practice of Congress. It illustrates with emphasis the wisdom of the framers of the Constitution in withholding from Congress such powers. Why, sir, the cyclones which have recently swept through portions of Alabama, Georgia, the Carolinas, Virginia, and other States destroyed more property and killed or wounded more people than all the floods that have occurred in the United States within the last three years; and yet—how strangely inconsistent—a resolution to appropriate $100,000 for their relief was smothered in the Senate. Why was this? Were the unfortunate people who suffered by these cyclones to the extent in many cases of all their property and bodily disability by wounds less worthy objects of the nation's charity than the man whose house was carried away by the overflow of a river upon whose bank he purposely erected it?

Why should Congress be thus partial and unjust? There can be but one answer, and that is that the precedents, the ridiculous precedents, do not extend to cyclones; they only authorize appropriations for relief from suffering caused by earthquakes or the overflow of rivers. Efforts are being industriously made to extend the precedents so as to relieve against storms, fire, locusts, and grasshoppers; and Kansas, being a progressive, reliably Republican State, has half-way succeeded in establishing a precedent for appropriating money out of the Treasury to cure all the diseased cattle. The appeals were so overpowering that the Senate passed an appropriation of $50,000 to stop the ravages of the foot-and-mouth disease, which, according to the prophetic statesmen, was contagious, and was going to kill all the cattle in the United States unless this big Government interposed and throttled it. But this bill or resolution met with some objection in this House. The veterinary surgeons have carefully examined the fatal disease and found it to have been caused by an unusually large deposit of ergot in wild oats which had been gathered unawares in much of the hay which had been fed to the cattle, and not contagious at all; and now the cattle-disease appropriation bill sleeps that sleep which knows no waking, upon the Speaker's table.

If the relief of a single section, district, city, or community is for the general welfare of the United States, and therefore within the power of Congress to protect out of the Treasury, then the people of any and every village, hamlet, and neighborhood, yea, every individual in the United States, are equally within that power, and it is the duty of Congress to extend that protection to them. If the power exists to extend such aid to large communities in time of great distress or misfortune, it extends likewise to small ones similarly circumstanced; and if aid is extended to the one, why not to the other? But such is not the practice. No instance can be found where Congress has made an appropriation, through charity, for the relief of one man, or a dozen men constituting a neighborhood, on account of a total destruction of their property by fire, storm, drought, caterpillars, or any other calamity which befalls men, except one case of earthquake in Caracas, floods, and grasshoppers. For of such are the precedents.

If a village or small community is swept away by a terrible tornado, as some have been, a thing which comes without previous warning and against which men can not well provide, and one-half of the people residing there are killed or severely wounded and shorn of all their means of subsistence, and Congress has the power, without awaiting a certification from the State that the suffering and destitution are beyond its power to relieve or control, to appropriate money for their relief, it is criminal neglect and damnable partiality not to do so. But there is no precedent. The logic of the position of those who claim such power or favor such appropriations as that now proposed, or the two recently made for the sufferers by the Ohio overflow, answers for them the petition of the mangled, bleeding, groaning villagers in these words: "We are sorry for you, but the precedents show that you are really too insignificant and your calamity too small for Congress to notice."

I boldly assert that any citizen who, by misfortunes usually called providential, has lost his property and been reduced to utter poverty and want has as much right to be relieved from the United States Treasury as any person who received benefits from the $500,000 given for the relief of the Ohio sufferers; just the same; no greater, no less. The Legislatures of the great and prosperous States of Ohio and Kentucky were in session, and those of West Virginia and Indiana, I presume, could have been assembled in two days. No requests came from these to Congress, no certification of inability to take care of their suffering people and tide them over the flood; and the city of Cincinnati protesting against aid and saying by telegram that she would provide for her own people, there was a scramble in this Chamber between Republicans and Democrats from the river districts to see which could first obtain the recognition of the Chair to move for a larger appropriation or to speak his piece in exaggeration of the high waters and great suffering. It presented a scene altogether at variance with the high notions of dignity and due deliberation which a new member thinks should usually appertain to the proceedings of the House. The gentleman from New York [Mr. HISCOCK], a leading Republican, twitted this

side of the House as State-rights men and sticklers for the observance of constitutional limitations. He said that the Constitution was not in his way at all, but he thought that on that particular measure it might give this side some trouble, and that he would like to hear from some members whom he named. Hon. S. S. COX, admitting that the measure was outside of the Constitution, gave reasons for his affirmative vote similar to those given by Senator Crittenden concerning his for the Ireland resolution in 1847. Mr. COX said:

I know how painful it is to discuss matters of this kind. Feeling has no words. Emotion is still. Our babble is the tossing buoy, indicating where the anchor is. Why not have voted this measure in graceful silence; and if by our inconsiderate vote there may be any breach of the Constitution God Almighty in His infinite goodness will pardon and condone it.

Mr. REAGAN said that many things had been done in the history of the Government for which it might be difficult to find a precise warrant in the Constitution. But when the things so done are not of that class in which the rights of the States or liberties of the people are involved no great harm results, and that such emergencies were not contemplated by the framers of the Constitution, and now come up to be acted on by the representatives of the people, and all they can do in such cases is to avoid such a violation of the Constitution as trenches upon the powers and rights of the States and upon the liberties and securities of the people.

Here we stand, in the presence of a great calamity—no right of a State involved, the liberty of no citizen involved—and on such an occasion our attention is called to the dangers of violating the Constitution, and we are challenged for a warrant for the appropriation of money to relieve the people so situated. Why, sir, in the history of the action of Congress for the last twenty years, when the liberties of the people have been stricken down by the acts of Congress, when the rights of the States have been trampled upon and denied them, we have heard no protest from the Republican side of this House.

To which Mr. HISCOCK responded, "Oh! the gentleman hears none now."

The appeals made and the horrible condition of the flood sufferers was described with such sympathetic vividness on all sides that it required extraordinary courage upon the part even of those members who believed it wrong to vote against it. Many, doubtless, whose convictions were the other way were intimidated, morally coerced, into voting for it. The pressure was so great that of the two hundred and forty members present, upon a call of the yeas and nays only twelve were found to have voted against it. But a few days later, when the second appropriation was passed, twenty-nine members voted against it. And now that the flood has assuaged and all the suffering and destitution consequent upon it have been relieved, the Secretary of War reports an unexpended balance of upward of $125,000. Three hundred and seventy-five thousand dollars, the amount expended, could have been paid by either one of the great and wealthy States whose people were involved without draining the State treasury. But it is getting so that the people do not look to their State governments for help, and seem to think that the United States Treasury is on tap for the public and gives forth the elixir of life for the healing of all the ills that flesh is heir to.

We have a list of soldier or military pensioners requiring annually at least $75,000,000. Then we have civil pensioners and special civil pensioners, including the widows of the deceased Presidents, and some members of Congress desire to greatly extend these. There are also judicial pensioners, under a law which allows all United States judges at seventy years of age to retire from service on full salary for life. Except as to honest pensions to soldiers, reasonable in amount, which I favor, I am opposed to the entire business of special legislative favoritism. The fault and the correction of these evils lie with Congress.

As to these special appropriations called charities my objection is twofold. They are unconstitutional and they are unjust. If a great calamity befalls a people or city—such, for instance, as the Ohio overflow—occurs when Congress is not in session, the waters assuage before the assembling of Congress, and no appropriation is made. There has never been one for or on account of any calamity, however destructive and deplorable in its consequences, if Congress is not in session and does not assemble until the suffering people have pulled through a space of forty days. The uncertainty, want of uniformity, spasmodic and partial character of such appropriations satisfy me that the framers of the Constitution did see these evils and purposely withheld from Congress the power to thus appropriate the revenues of the Government; and it is to be hoped that these unwarranted precedents will be followed no longer.

Air, fire, and water, the three great elements essential to existence, when in unbridled commotion are the source of destruction. Why should there be a difference if Congress is to relieve against the destructiveness of either? Water is the least harmful and easiest avoided, as members of Congress are supposed to know. Perhaps their unfamiliarity with it prompts this strange inconsistency of conduct.

I am aware of the fact, and am sorry that candor compels me to admit it, that the Constitution is well-nigh an obsolete instrument in the legislation of Congress. I know, too, that in the estimation of some people a man subjects himself to ridicule who objects to a measure for unconstitutionality, notwithstanding every member here has sworn a solemn oath to support the Constitution. At the beginning of the present century the Democratic party was founded by Jefferson upon the doctrine, which has ever since been fundamental with it, and without which it could not survive a single day, that the Government is one of limited and enumerated powers. Eliminate that doctrine from the Democratic creed, and I would not give the snap of my fingers for all that would be left. How can men professing Democratic principles so recklessly and inconsistently set them at defiance in practice? It is not ignorance, but ambition which prompts it. It is traceable directly to that cause.

The Republicans are not inconsistent with their party principles when they vote for such appropriations. They are never restrained by any constitutional shackles. With them it is a question of expediency merely. The fundamental doctrine of that party is that this is a Nation, spelled with a big "N," and that it is the judge of its own powers. They regard the Constitution as useful only in maintaining the forms of the Government. They hold that there is no restraint upon the power of Congress except these, and that the will of the majority is the supreme law. That party, true to its principles, adheres to paternal government, undertakes to be the guardian of all the people and provide for their wants, regulate their domestic affairs, furnish them employment, regulate wages, bestow bounties to aid one industry, subsidies to aid another, and to a third a monopoly. It is the friend of monopolies, the champion of jobbery, the author of corporation insolence, the originator of bossism, believes in high taxation, and is the ally of the money power.

Such has been its teaching and tendency, with some honorable exceptions among its members, ever since it originated with Alexander Hamilton and John Adams. The Democratic creed opposes interference by the Government in any manner with the domestic affairs of the people; does not believe that the Government can aid one class except at the expense of some other, opposes bounties, subsidies, and monopolies; is in favor of low taxes and an administration of Government on the most economical basis, and looks with an eye of distrust and jealousy upon any enlargement of Federal power or diminution of the reserved rights of the States. Its slogan is, "The people are best governed when governed least."

But the Republican side of this Chamber say, "Why talk you of the Constitution and the reserved rights of the States? They were settled by war twenty years ago." Not so! Prior to the war State-rights men adhered to the doctrine that secession was a legitimate and proper remedy for the States to resort to in case the Federal Government invaded the sanctity of their reserved rights. The Virginia and Kentucky resolutions of 1798 and 1799 declared that the States were themselves the judges of infractions of the Constitution, as well as of the mode and measure of redress. There were but two questions settled by the war. One of these was African slavery, and the other was the right of a State to secede from the Union for any cause. These were submitted to the high court of force and decided in the negative. I was on the losing side in that trial.

I, in common with my confederate comrades, made the best fight we could, and with the same degree of good faith, manhood, and courage with which we fought we accepted the award and will ever stand firmly by it. But that which was not involved was not decided, and consequently, speaking for my single self, I have not surrendered on the character of this Government and never will. I maintain that this Government is now just what it always has been since the ratification of the Constitution, a federal republic, made so by that instrument, a government of limited and enumerated powers; in other words, a great government without power further than is expressed or necessarily implied in the instrument of its creation. He alone who observes the Constitution and respects its provisions is a true friend of constitutional government.

If anything more were wanting than what I have already said to prove that a government of limited powers is best, the annually increasing number and variety of bills brought before Congress demonstrate its utter inability to do the legislation which ought to be done, and if it goes outside of the Constitution in order to enlarge its jurisdiction it will but hasten the ultimate failure of the Government as a republic, to be succeeded by anarchy or monarchy. The late war had no other effect on the Constitution than is shown by the last three articles of amendment. In all other respects the Constitution is the same, and these three did nothing more than to emancipate the slaves, enfranchise them, and make them citizens with equal political and civil rights with white people.

The late Chief-Justice Chase, the most lucid and learned judge who ever sat upon the bench of the Supreme Court of the United States with the exceptions of Marshall and Taney, in the case of White *vs.* Texas, in one short sentence emblazoned upon the judicial record in letters of crystal splendor the true character of the Government of the United States when he declared that the Constitution established an indissoluble union composed of indestructible States. The one can not subsist without the others. This declaration was at once the illumination and comprehension of a grand system of government as it is and as it was after the crucial test of a war that shook the continent; yes, and as it will be recognized with advancing years when the young men who are to succeed us, growing with the marvelous growth and development of the country, shall assume the enlarged responsibilities of their time. Let them find no bad precedent without a protest, and in the dim vista of the future this great Government will be more perfect and its hundreds of millions of people will in all that makes them great surpass

those of any nation, ancient or modern. This is my Government and the only one to which I shall ever owe allegiance. I was once its honest enemy for cause. So were my people. With no repentance, no apology for the past, we are now its friends, and cordially unite our voices with those who sing—

The Star-Spangled Banner! long may it wave
O'er the land of the free and the home of the brave

The Bonded Extension Bill.

SPEECH

OF

HON. BISHOP W. PERKINS,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 27, 1884,

On the bill (H. R. 5265) to extend the time for the payment of the tax on distilled spirits now in warehouse.

Mr. PERKINS said:

Mr. CHAIRMAN: I can not in the few minutes allotted me discuss the many features of this proposed legislation, nor do I expect to contribute to the information already gained by this committee during this discussion. In fact, in my judgment, the distinguished gentleman from Massachusetts [Mr. LONG] in that admirable speech of his exhausted this debate.

But believing this proposed legislation to be bad in principle, and thinking it would be vicious in practice, I desire to briefly notice the logic of some of the appeals made to us by the advocates of this bill.

We are told that these taxes are imposed and these restraints enacted as penal legislation—the taxes imposed as penalties and the restraints enacted to prevent fraud and a corrupt debauching of the public service; and we are assured that the legislation has been measurably successful, and hence it is argued that it should be stricken down or repealed.

If the eloquent gentleman from Ohio [Mr. HURD] is correct in his statement of the proposition, to my mind the logic of the argument furnishes one of the strongest reasons that can be offered in opposition to this bill.

But by others we are told that this is a great industry struggling against adverse circumstances to sustain itself, and that, involved in debt in consequence of the non-consumption of its manufactured products, it should as a debtor to the Government be favored by this proposed legislation.

The logic of this argument is that temperance and sobriety have been growing in this country until we find the distillers organized and at the doors of Congress asking for relief, and confessing they can not sustain themselves without governmental assistance. They beseech us to modify existing law, enacted, as is admitted by all, for worthy purposes, that they may thrive and prosper upon the favorable legislation. This is their demand, and in the piteous tones of old they cry, "Save me, Cassius, or I sink;" and this demand necessarily involves one of the great moral questions of the day. Why should this aid be extended? Why should this industry be encouraged by special legislation? Why should the Government of the United States become a partner in this business, furnishing the capital as a banker, while the work of manufacture and of accumulation goes on? In what do these distilleries contribute to our growth and grandeur? In what do they contribute to our material prosperity and greatness? In what do they contribute to our happiness and honor? In what do they contribute to education, Christianity, and a better government? In what do they add to our greatness abroad and to our pride and boast at home? In what do they contribute to comfortable homes and to the happy prattle of innocent childhood? These are some of the many questions that necessarily press themselves upon our attention in considering this appeal to our sympathies and to our favors in behalf of the millions invested in the manufacture of rum in our land.

Again, we are told in this debate that the taxes due to the Government from manufactured whisky are not needed, that we have an overflowing Treasury, and that without wrong or prejudice to any interest or to any branch of the service this favor can be granted the distillers. With what consistency does this argument come from the Democratic side of this House, when we remember that from the first day of this session to the present it has been assuring us that we must have a retrenchment of governmental expenditures; that the country could not stand the vast sums annually appropriated for carrying on its affairs, and in consequence of which the several departments of this Government could not be given the appropriations requested.

If this statement is true, why was it that the advocates of this bill voted to cripple the railway postal service of the country and refused to appropriate money enough to pay the faithful and overworked servants of the people now employed in that service? Was it that the railway postal service, which carries happiness and pleasure to every home in the land, visiting every hamlet and contributing to every industry, might be sacrificed that rum-making might be preserved and encouraged? But in my judgment this tax is needed, and sorely needed, and will be so long as we have poor, illiterate children to educate and maimed and crippled defenders of this nation to pension.

If this tax is not needed for other purposes, I would have it levied upon the manufacture of whisky until every poor and deserving soldier of the recent war is pensioned, and until every widow and orphan left in want by that merciless conflict is made happy by the nation's charity. And again we are told, in pathos and genuine sympathy, that if this proposed relief is not granted ruin and disaster will break down their industry. And then they ask us, What will you do with the farmer's corn? I answer in the language of the Hoosier in Indiana, when DAN VOORHEES, from the hustings, put substantially this same inquiry to the people of his State: "If," said the old Hoosier, "they manufacture less whisky and consume less corn, we will have better men and less hell." And, Mr. Chairman, with the logic of the old Hoosier, I submit this debate.

Liberal Pensions to Soldiers and Sailors and their Dependent Ones, but No Pensions for Civil Services.

The more you examine this matter the more you will come to the conclusion which I have arrived at, that this is neither more nor less than a gigantic system of outdoor relief for the aristocracy of Great Britain.—*John Bright on England's civil-pension list.*

SPEECH

OF

HON. S. M. STOCKSLAGER,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 2, 1884.

I would persuade my countrymen that it is not in a splendid government, supported by powerful monopolies and aristocratical establishments, that they will find happiness or their liberties protected, but in a plain system, void of pomp, protecting all and granting favors to none, dispensing its blessings like the dews of heaven, unseen and unfelt, save in the freshness and beauty they contribute to produce. It is such a government that the genius of our people requires—such a one only under which our States may remain, for ages to come united, prosperous, and free.—*Andrew Jackson*

On the bill (H. R. 999) granting a pension to Septimia R. Meikleham, sole surviving granddaughter of Thomas Jefferson.

Mr. STOCKSLAGER said:

Mr. SPEAKER: Together with three of my colleagues of the Committee on Pensions, I signed the minority report of the committee which has just been read, and which recommends that the bill and amendment be indefinitely postponed.

What is this bill? It is a bill to grant a pension of $2,500 per year during life to Mrs. Meikleham, who is the sole surviving grandchild of Thomas Jefferson, author of the Declaration of Independence, and the third President of the United States.

It is based upon the ground that for the great services performed by Thomas Jefferson in framing that matchless instrument, which has no equal in literature, the Declaration of American Independence, and other services as President of the United States, we should pension his grandchild, Mrs. Meikleham, because she is his sole surviving grandchild and because she is in need.

Mr. Speaker, I confess that if the basis of our legislation was sympathy and sentiment, this is a case which would appeal to both. Certainly to none of the great founders and preservers of this Republic do we owe a greater debt of gratitude than to Thomas Jefferson. Even Washington, who is sometimes called the father of the country, did no more, in my judgment, to give us our matchless form of government than did Thomas Jefferson. To Jefferson more than to all others together we are indebted for the exclusion of the Hamiltonian theory of "a stronger government" or a "kingly form of government" and the adoption of our democratic-republican form of government, under which we have grown and prospered without a parallel in the history of the world—a government which to-day challenges the governments of the world ancient and modern, for an equal in all things which tend to the liberty, peace, and prosperity of all the people. Far be it from me to detract aught from the name, fame, or achievements of this greatest of Americans. But, Mr. Speaker, this body is not a great eleemosynary institution to provide for the poor and needy, however illustrious or however humble their ancestry. It is a body controlled and limited by a written constitution, and whose powers and duties are therein plainly

laid down. And no man who ever lived in this country was a more powerful advocate of a strict construction of that instrument than Thomas Jefferson. He was indeed the founder of the great party of which I am proud of being an humble member, and one of its chief tenets then was, and ever since has been, "equal and exact justice to all; favoritism to none."

But, Mr. Speaker, aside from the constitutional phase of the matter, there are other very grave reasons why this bill should not pass. That the principle involved in the bill and the practice to be inaugurated by its passage are thoroughly wrong and mischievous, my good friend, the gentleman from New York [Mr. ROBINSON], who is the author of this bill and who prepared the report, will freely admit. I am sure he is opposed to the inauguration of a system of civil pensions in this Government. I am sure he condemns it as heartily as any one upon this floor. But he will appeal to the sympathies of members in behalf of this poor woman and say that it should stop after this bill is passed. Does my honored friend not know that such appeals will always be made in favor of the inauguration of such a system, or the enlarging it by adding class after class to the list? He must, he does know it. Why, sir, one of the cases in which this odious system was enlarged in the last Congress was gotten through this House by the most earnest appeals to members. I refer to the bill increasing the pension of Mrs. Lincoln to $15,000 per year. It was stated that she was poor and sick and had not the means to procure necessary medical treatment. It was passed. A short time ago she died, and it was stated at the time by the newspapers that she had $70,000 in bank. If you legislate upon any such a principle you are at sea without rudder or chart.

In the early days of the Republic such a thing as a civil pension was not dreamed of. Even Hamilton, the great advocate of a kingly form of government, admitted the inexpediency of civil pensions in this Government. In the seventy-ninth number of the Federalist, written by him, in discussing that feature of our Constitution which provides that the salaries of the judges of the United States courts shall not be diminished during their term of office, and in opposing an enforced retirement of judges after they arrived at a given age, he uses the following language:

> In a Republic where fortunes are not affluent and pensions not expedient, the dismission of men from stations in which they have served their country long and usefully, on which they depend for subsistence, and from which it will be too late to resort to any other occupation for a livelihood, ought to have some better apology to humanity than is to be found in the imaginary danger of a superannuated bench.

From the foundation of the Government down to the year 1869, no attempt was ever made to establish a civil-pension list in this country. The Republican party in 1869, when they increased largely the number of Federal judges, added to the bill making the increase the following provision:

> Any judge of any court of the United States who, having held his commission as such at least ten years, shall, after having attained the age of 70 years, resign his office, shall thereafter, during the residue of his natural life, receive the same salary which was by law payable to him at the time of his resignation. (Statutes at Large, volume 16, page 45.)

Many of us remember too vividly the humiliating spectacle which we witnessed during the last Congress growing out of the operation of this vicious law. The Supreme Court was overwhelmed with work and was years behind. One of the judges, who had not served long enough to entitle him to the retired pension under the law, was a hopeless invalid and could do no work at all; but he tenaciously held on and refused to resign so some one could be appointed who could perform the duties of the position, drawing his salary and performing no service, waiting until the time should elapse that he would be entitled to a pension. Congress was appealed to, and an exception was made in his case so he could draw his pension, and he resigned. I hope we may never witness such another scene. I am glad to know a bill has been introduced in this House repealing this provision. I hope it will be repealed, and we will not be troubled with it again.

When that measure was under consideration in this House, my predecessor, the illustrious Michael C. Kerr, with his clear, statesmanlike vision, saw the danger from such a precedent, and used this language in opposition to it:

> I have, however, several objections to the substitute offered on behalf of the Committee on the Judiciary. The first objection is that it undertakes, as a pioneer measure, as an initial enactment, to introduce into our system of government the practice of pensioning retired officers. It proposes to pension judges not only of the Supreme Court, but of the circuit and district courts, whether State or Territorial; to pension all of them after they shall have served in a judicial capacity for ten years. It is the first attempt, so far as I know, to organize in this country a civil-list, a pension-list of retired officers, and that, too, upon full pay. I think it is intrinsically a pernicious and a vicious proposition. I think it is not in harmony with the principles of our Government, with the principle of representative, elective, republican government. * * * Once establish the practice of retiring and pensioning officers, although now limited to the judiciary, and it will be speedily extended to numerous other classes, and will soon become a great source of additional expenditure, and, in my judgment, a very great evil. Establish the principle, and its rapid growth will be assured.

No language could express the objections to this whole system more tersely and fully than was done by Mr. Kerr.

One of the very evils against which he then inveighed so ably and eloquently we find present with us to-day—that of adding other classes. The last Congress was fruitful in precedents. A bill was passed to pension Mrs. Garfield, Mrs. Polk, and Mrs. Tyler, which, with Mrs. Lincoln, who had been previously pensioned, are all the widows of Presidents who were then living. A precedent was thus made of pensioning widows of Presidents at $5,000 per year, more than five times as much as the poor soldier who lost both his eyes and goes wandering up and down the earth in total darkness.

My friend from New York, Mr. ROBINSON, is disposed to criticise the minority of the committee because some of the members signing the minority report were members of that Congress, and did not protest against the passage of that bill.

Mr. Speaker, that bill originated in this House. We were in the midst of the deepest sorrow over the assassination of the Chief Magistrate of the nation. His long and painful suffering and the devotion of his wife to her husband had filled the hearts of our people with sadness and sorrow, and with deep and tender sympathy for Mrs. Garfield. The Senate amended the bill by including Mrs. Polk and Mrs. Tyler. In this connection I desire to repeat what I said in the last Congress upon this subject, the first opportunity I had:

> With undue haste, within a few months after the death of President Garfield, we gave his widow a pension five times greater than that received by the widow of any soldier who lost his life in any of our wars. The poor soldier who lost both his eyes in defense of his country, and who must spend the balance of his life wandering up and down the earth in total darkness, now gets a pension of less than one-eighth the amount given her; and all this, Mr. Speaker, with the full knowledge of the fact that she was the owner of property estimated to be worth $400,000, over $300,000 of which is in bonds, money, and stocks. Sir, I regret that Mrs. Garfield did not refuse to accept the pension voted her, and thus rebuke our action in voting it to her. It would have been a noble example to which we could have pointed with pride in all future time. After the bill passed this House the names of Sarah Childress Polk and Julia Gardner Tyler, the widows of ex-President Polk and ex-President Tyler, were added by the Senate, and they were each given $5,000 per year. It was represented that these ladies were needy. A precedent for pensioning the widows of ex-Presidents has thus been firmly established during this session of this Congress. The Government has been gradually drifting into a paternal government; and opposition to that bill would have been useless in this House; and the person who would have dared to interpose an objection would have made himself an object of ridicule in this House, and, I fear, by a great many persons outside of this House.

It did not stop there. That Republican Congress added persons disabled or incapacitated by disease in the Life-Saving Service and also in the revenue-marine service, all strictly civil employments. Bills were also introduced placing employés of the railway mail service and the internal-revenue service who were disabled in service on the pension-roll. In the Senate, the great apostle of the Republican party, Mr. EDMUNDS, introduced a bill to place all the employés of the Government who may retire or be retired one year's pay, and after fifteen years' service, two years' full pay; after twenty years, a pension of half-pay; after twenty-five years, a pension of two-thirds; after thirty years, three-fourths pay; after thirty-five years, four-fifths pay; and after forty years' service, full pay. This was certainly a grand scheme to pension upon the country the Republicans who have been employed so long in the public service, but whom he expected to be retired after the next Presidential election. This shows the growth of the system if once entered upon, and is a warning to us to stop here and now and not go further in this way.

I beg gentlemen to pause before they establish another precedent, a precedent which will be construed in favor of the grandchildren of all our Presidents. My distinguished friend from New York says the pension is not asked on account of his services as President, but because he was the author of the Declaration of Independence, and the precedent could do no harm, as there can be but one author of that instrument. That is true. But it is also true there can be but one author of the emancipation proclamation, and so we will find that pensions will be asked for many other persons who have performed distinguished civil services. The whole system is wrong. It rests upon a theory of government which our fathers abhorred. It is an outgrowth of monarchy. It is the worst kind of class legislation. It fastens the governing class, party, or family as pensioners upon the Government. John Bright, the great English Liberal, in referring to England's civil-list, says:

> The more you examine this matter the more you will come to the conclusion which I have arrived at, that this is neither more nor less than a gigantic system of out-door relief for the aristocracy of Great Britain.

If we would avoid a similar condition of affairs in this country, let us beware of establishing the dangerous and subtle precedent proposed by this bill.

It may be said, We are granting liberal pensions to the soldiers and sailors of our wars; why not pensions in the civil service. I admit we give our soldiers and sailors and their dependent ones larger and more liberal pensions than any other country in the world, and I thank God for it. I would go further. I wish to say here and now I am in favor of the most liberal pensions for military and naval service. The principle is right, and has been acquiesced in ever since the foundation of the Government. It has never been our policy to keep up a large standing Army in time of peace, like the locusts of Egypt, to eat out our substance, but we depend upon the patriotism and intelligence of our people, upon our volunteer soldiery; and if we are true to our pledges and promises to the soldiers and grant liberal pensions, we need never fear that they will fail us in the hour of need.

The hazard of the service and the insignificant pay they receive is another reason for pension. The soldier, for the mere pittance of $13 per month, leaves home, family, friends, and loved ones behind, takes

his life in his hand and offers it a sacrifice, if need be, on the altar of his country.

How is it with civil employés of the Government? Government positions are sought because of the honor and emoluments they offer, and for no other reason. A hungry band of them is always on hand, Micawber-like, waiting for something to turn up. They are not compelled to remain in the service. Even a Federal judge who has urged his appointment, if a railroad corporation offers him more, accepts it and resigns his position. This illustrates the difference.

Again, civil pensions are anti-republican and anti-American. They savor of orders, classes, and royalty. We want no more of them in this country. There is too much of them already. The great masses of the people heartily despise them. We have our swells and our snobs everywhere. New York is said to be more essentially English than either Manchester or Liverpool. Indeed, it is said coats of arms and such toggery are more common in the fashionable drives in New York than in London. Sir, they are even found in the offices of the Federal Government. The Attorney-General of the United States, Mr. B. Harris Brewster, has his coat of arms, which he not only displays upon his carriage and the gilt trappings of his horses, but has even had the amazing hardihood to have it stamped upon the portfolio of his office. Out upon such aping of royalty! Why, sir, what would Washington, Jefferson, or Old Hickory have thought of such performances? It is a disgrace to our time.

Mr. Speaker, even out West, in my own State, we have a great man, an aspirant for the Republican nomination for the Presidency, who, according to the public prints, is not satisfied with being the grandson of his grandfather, but is now busily engaged in an attempt to trace his ancestry back to the Plantagenets of England. But, sir, I am persuaded that this will not aid his Presidential aspirations. I believe he will find that on the broad plains and prairies of the great West, in the pure democratic atmosphere of that region, if not in this whole country, a plain farmer in homespun blue-jeans, if worthy and qualified, is more popular than a kid-gloved scion of royal aristocracy. The people of this country do not believe in "blue blood" or in a "divine right to rule," and they will have none of it.

But, Mr. Speaker, the rapid growth and the effect of a civil-pension list may be seen by an examination of England's civil pension list.

I desire to call the attention of the House to a partial list. Many amusing things appear in it, and it will repay perusal.

I will first call attention to the dukes, marquises, and earls only, leaving out viscounts and barons:

Dukes	28 families and	519 relatives have drawn	$48,800,450
Marquises	33 families and	626 relatives have drawn	41,529,950
Earls	200 families and	3,391 relatives have drawn	240,906,010
Totals	261	4,536	331,236,410

Then follows the royal family, to wit:

Her Majesty the Queen	$3,096,895
The Prince of Wales	600,915
Prince Alfred	132,980
Prince Arthur	132,500
Prince Leopold	126,750
Princess Royal	40,200
Princess Helena	30,000
Princess Louisa	30,000
Duchess of Cambridge	30,000
Princess Augusta	15,040
Duke of Cambridge	111,015
Princess Mary	25,000
Prince Edward (of Saxe-Weimar)	16,785
Princess Leiningen	7,300
Prince Victor of Hohenlohe	9,300
Households of deceased sovereigns	29,825
Total annual payments in connection with royal family	4,434,865

Then follows a very singular list, called civil-list (royal) pensions. This class is made up of the special pensions granted by the Crown, contains hundreds of names, and the imperfect list which I have seen only runs back to 1838. The civil-list, however, began in 1760, upon the accession of George III, in consideration of his surrendering the prerogative of the Crown to grant lands and rents, called the hereditary revenue of England.

In 1782, on account of abuses, Parliament fixed the limit of the civil-list at $475,000, and provided that until the list was reduced to that sum the Crown should be limited to $3,000 per annum, and the grounds for granting future pensions by the Crown are fixed as "distress" and "desert."

In 1837, on the accession of Queen Victoria, Parliament empowered her to grant new civil pensions to the amount of $6,000 per annum, in lieu of prerogatives surrendered.

These pensions are granted for almost every conceivable reason, I will call attention to only a few: Sir John Newport put down "for half-century a well-paid comptroller of British exchequer and chancellor of the Irish exchequer, pensioned at $5,000 per annum." Comptrollers of the United States exchequer all get rich, I believe. Seven teachers to her majesty, namely, German, Italian, singing, writing, French, music, and dancing, pensioned at an average of $500 per annum; Annie E. Drummond, sister of Sir R. Peel, private secretary, at $1,000 per annum; a large number for literary merit, at an average of about $750 per annum; John Britton, an impoverished author; Joshua Alder, marine zoologist, suddenly reduced to poverty by circumstances over which he had no control, $350; Gerald Massey, a lyric poet sprung from the people, $350; Dinah Muloch, authoress of "John Halifax, Gentleman," $300; W. T. Best, organist of Saint George's Hall, Liverpool, $500; John Hullah, of tonic-sol-fa reputation. What that is I do not know. It may be the Committee on Ways and Means or the late Tariff Commission might inform us. But this is enough to show upon what flimsy pretexts the Crown of England has placed civilians upon the pension-list.

This list, however, is small when compared to the whole list of England's civil pensions.

I have in my hand a list containing thousands of names of persons who have been pensioned by the legislative department of the British Government. This is only a partial list, and includes men whose pension is not less than $750 per annum. The total civil list of England now amounts to over $20,000,000 annually.

The oldest pension named in the list is that to the heirs of Sir Thomas Clarges, the date of which is put at 1673, or two hundred and nine years ago. The amount paid to him and his heirs is put at $905,000.

The next is the Duke of Schomberg, who was accidentally killed by a shot from his own side in the battle of the Boyne, in 1690. In 1695 his heirs were granted a pension of $20,000 per annum, which was paid to 1854, when it was reduced to $2,000. The amount which has been paid to his heirs is put at $3,400,000.

The next oldest is that to the Duke of Marlborough, the date of which is put at 1710, or one hundred and seventy-two years ago. The amount which has been paid to him and his heirs is put at $3,420,000.

One man was pensioned for the sum of £7,191 on the excise, and for £3,384 on the post-office revenue, making the annual sum $52,875, because he was descended from an illegitimate son of Charles the Second.

Of the thousands of names upon this list, as published, less than one hundred and fifty of them have been pensioners for more than twenty-five years. Less than 5 per cent. of the names upon England's civil-pension list are of more than twenty-five years' standing. Let us take warning from this. Notwithstanding the fact that England's civil-pension list is more than two hundred years old, yet 95 per cent. of the names upon the pension-list, according to the best information which we can get, have been added within the last twenty-five years. And I think I would be safe in saying that fully 75 per cent. of them have found their way there within the last ten years.

But this is enough to show that the system of civil pensions should not be adopted in this country.

In England the royal family and its favorites are pensioned upon the government for civil services or for no services at all to the government. But our policy has always been, liberal pensions to soldiers and sailors and their dependent ones, but no pensions for civil services. It illustrates the difference between republicanism and monarchy.

The desire to create a civil-list in this country and the precedents thus far being entirely the work of the Republican party, and the opposition coming mainly from the Democratic party, illustrates forcibly the difference between the two parties. It is the same difference which existed at the formation of the Government. The Republican party, being the legitimate descendant of the old Federal party, maintains the old Hamiltonian ideas of government. And the cry of a few years ago in favor of a "strong government," a Nation with a big "N," and for "the man on horseback," as well as the declarations of Mr. Garfield in a speech in this House, in which he said, "The fame of Jefferson is waning and the fame of Hamilton waxing in the estimation of the American people, and we are gravitating toward a stronger government, and I am glad we are," indicate to thinking persons that that party is still the party in favor of a "kingly form of government." When you remember that Hamilton advocated a Senate for life and regarded the British constitution as the *ne plus ultra* of perfection, you will see the full meaning of Garfield's declaration.

The fact that the Democratic party under the lead of Jefferson originally combated that theory of government and favored the nearest approach to a democracy consistent with public order and the public good, and has continued to do so to this day, opposed centralization and favored home rule as strongly and as forcibly, marks its position and emphasizes the difference which will always exist in this country between the Democratic party and its opponents, under what name soever they may appear. And when the questions growing out of the war, the tariff question and all kindred questions, are disposed of and settled, the same difference will be found to exist.

For one, I rejoice at being an humble member of the Democratic party; and I appeal to my Democratic friends in this House to be true to the tenets of the party, and never let it be said of us that we established a precedent for civil pensions, a position which even Alexander Hamilton, the great leader of the monarchical party at the foundation of the Government, admitted was not tenable in a republic, but let us follow the teachings of the fathers; let us be governed by the teachings of Jackson, who said:

I would persuade my countrymen that it is not in a splendid government, supported by powerful monopolies and aristocratical establishments, that they will find happiness or their liberties protected, but in a plain system, void of pomp, protecting all and granting favors to none, dispensing its blessings like the dews of Heaven, unseen and unfelt, save in the freshness and beauty they contribute to produce. It is such a government that the genius of our people requires—such a one only under which our States may remain, for ages to come, united, prosperous, and free.

Retirement and Recoinage of the Trade-Dollar.

SPEECH

OF

HON. RICHARD GUENTHER,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 1, 1884,

On the bill (H. R. 4976) for the retirement and recoinage of the trade-dollar.

Mr. GUENTHER said:

Mr. SPEAKER: I am in favor of retiring the trade-dollar from circulation, if for no other, for the reason that they are used to defraud ignorant people not only in this country but in Europe. Many complaints have lately reached us that poor emigrants are imposed upon by being induced to buy these trade-dollars, worth in this country 85 cents, for $1. I wish to have these poor people protected by withdrawing the trade-dollars, and I am in favor that the Government should give what it received for them, $1. I am in favor of the passage of the bill as reported from the committee. This bill simply retires the trade-dollar and treats them as bullion.

But after this House voted to strike out the fourth section the effect of the bill will be to increase the coinage of silver dollars. Section 4 reads as follows:

SEC. 4. That the trade-dollars so received at the coinage mints shall be regarded and treated as silver bullion, and, at their bullion value, shall be deducted from the amount of bullion required to be purchased and coined by the act of February 28, 1878.

The effect will now be an increased coinage of the silver dollar containing 85 cents' worth of silver. I am of the opinion that there are already too many of these silver dollars in circulation. They are now piled up in the vaults of the Treasury, and nobody wants them. I do not want to see all the gold go out to buy silver bullion, have this coined into standard dollars and then hoarded up in the Treasury. I want money for the convenience of the people; the people do not consider it convenient to have so much silver in circulation as we now have. They certainly not in favor of having the amount increased; but still this bill with the fourth section omitted, will do this very thing.

Mr. Speaker, I am prospectively interested in silver mining, and my individual interests would lead me to vote for any measure which would tend to enhance the value of silver, as this bill, with the fourth section out, undoubtedly would. But, Mr. Speaker, I also bear in mind that I have public duties to perform, and I mean to perform them to the best of my ability, whether by doing so my private interests may or may not suffer.

This consideration and the conviction that this bill as amended is not for the best interests of the whole people, but intended to bull the silver market, I must cast my vote against it.

The Bonded Extension Bill.

SPEECH

OF

HON. D. H. SUMNER,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 27, 1884,

On the bill (H. R. 5265) to extend the time for the payment of the tax on distilled spirits now in warehouse—

Mr. SUMNER said:

Mr. CHAIRMAN: The measure under discussion, proposing to extend the time within which the internal-revenue tax on the manufacture of whisky shall be paid, is purely a question of policy, to be determined in accordance with a wise and rightful exercise of the authority vested in the Government for the purpose of laying and collecting taxes.

The only purpose for which taxes may be laid and collected is that of revenue for the necessary and legitimate uses and expenses of the Government. Beyond that the Government has no right or authority to go, and any taxation outside of that is an arbitrary and unwarrantable exercise of power.

There are two methods of obtaining revenue for the General Government: One by indirect taxation under tariff laws imposing duties upon imports; and the other by direct taxation—never resorted to except in cases of great emergency caused by the existence or results of war—imposed and collected, not by the general officers of the Government, acting under and by virtue of general laws, but under the direction of a special act brought into existence because the revenues from tariff taxation were, for the time being, insufficient.

Under the indirect system of taxation, that imposed by tariff laws, it is settled that one of the resultant or incidental objects may be the encouragement of or protection to our domestic industries. In considering such a law a very wide range of thought and discussion is entirely legitimate and proper, because it involves questions of international policy, commercial relations with foreign countries, and their bearing upon our national policy and welfare. But here we have nothing of that kind. The taxes involved under the terms of this bill are only those direct taxes that are imposed upon the products of the labor of our own people. In this case, then, no one will claim that the Government has a right to collect revenue beyond the necessary and legitimate uses of the Government. That would be drawing from the business of the country a large part of the capital invested in that business and locking it up in the vaults of the Treasury and keeping it in idleness. The power to tax gives no such power as that. The power to collect revenue gives no power to hoard the money of the people and prevent the legitimate use of it by them in their own business affairs. A failure to pass this bill will have just that effect.

The facts out of which arises the necessity for the relief asked in this bill are as follows: The Government imposed, as a war measure, an internal-revenue tax of 90 cents per gallon for all whisky manufactured in the United States, which tax must be paid and the liquor removed within three years from the time of distillation. This, in effect, throws the article upon the market when the three years expire, whether there is a demand for it or not. The taxes on about 70,000,000 gallons are now, or soon will be, due, amounting to more than $60,000,000, for which there is no immediate demand, and the relief asked for in this bill is that the time for removing the liquor and paying the tax may be extended for another three years, upon the express condition, however, that the owners secure and pay to the Government interest on all taxes due and not paid at the rate of 4½ per cent. as long as the extension is accepted and taken advantage of. Another feature of the situation is that at the time this relief is asked there is a surplus of revenue, amounting to about $150,000,000, lying idle in the Treasury, with an estimated increase for the year of about sixty millions, from which it appears that there has been collected and is in the process of collection in the neighborhood of $200,000,000 of taxes in excess of what was and is needed to meet all the legitimate uses and expenses of the Government. Then, it must be remembered that the tax the payment of which this bill is intended to suspend for a time is a tax of about 400 per cent.—that is, a tax that is four times the amount of the original cost of the thing taxed.

Suppose, for the time being and for the sake of the argument, we do not take into consideration the fact that the Government has already assessed and collected a very much greater amount of revenue than it has any right or authority to do, because in excess of the needs of the public service; also, that it has assessed under this special internal-revenue system vast sums in excess of what it has any right or authority to collect, because not needed as revenue to be expended for the support of the Government, and that it is now hoarding in idleness a hundred and fifty million dollars of the people's money which ought to be in circulation as a part of the business capital of the country—we ask what right has the Government to demand and what wisdom is there in the policy that requires the withdrawal of upward of sixty millions more from the circulating medium of the country, and to that extent lock up capital and cripple the business interests of the country just at the time when all departments of the Government are industriously inquiring for a plan that will supply a circulating medium to take the place of the present currency that is being gradually but surely contracted, and must soon go below the demands of business and the wants of the people?

One of the answers we have heard is that the necessity for the extension arises from overproduction, and that overproduction is not a good ground for relief. This we regard as a mere pretext. Overproduction! Think of it! One of the very worst features of the present political situation, that which tempts every man in or out of Congress, that which incites and inaugurates extravagance in the public expenditures and fosters corruption in partisan politics, is an overproduction of revenue. Does it follow that because the Government has been and still is guilty of an overproduction of revenue by excessive taxation, by and under the acts and advice of the opponents of this bill, that these manufacturers are guilty of that which merits condemnation because they furnished the farmers of the country with a good market for their grain and cattle somewhat beyond the demand for the manufactured article three years after the exercise of their judgment? It seems to me not.

But the strangest part of this overproduction argument is found in the allegation that the overproduction was brought about by the distillers with the intention to cheat and defraud the Government of the taxes thereon. This charge is sufficiently answered by the fact that it is now and always has been utterly impossible for distillers to cheat the Government out of one cent of internal-revenue taxes. Every dollar's worth of property, real and personal, that is in any way connected with the distiller's business is under the absolute control and in the possession of revenue officers, and every move that is made and every

act done by any one in connection with the business is by and under the sole and direct supervision of Government officials. They weigh the grain, take proof of the standard, measure the product when done, and finally keep it in charge until the taxes are all paid. And this even is not all. The distiller is at all times under bonds in at least double the amount of any and all possible liability, with good and sufficient sureties, and the minute that any crookedness is discovered all his property is liable to be seized and forfeited, fines and penalties imposed, and imprisonment enforced. Fraud is impossible on the part of the distiller.

We are asked, however, what about the whisky-ring frauds? I am glad of an opportunity to answer this question. The whisky-ring frauds were inspired by the demands of the Republican party bosses for a corruption fund, and inaugurated and carried on by the Republican officials in charge of the distilleries. It was the result of a conspiracy between the Republican bosses and certain disreputable distillers by which it was expected to furnish a perpetual campaign corruption fund with which they could defy and defeat all appeals for reform and honest government. But the whisky-ring frauds have nothing whatever to do with the questions arising under the provisions of this bill. Those frauds were perpetrated during the process of manufacture by secretly drawing off and not delivering to the Government a certain proportion of the whisky manufactured, while this bill only asks for an extension of the time within which to pay the taxes upon what has been manufactured, delivered to, and is now in the possession and under the control of the Government. One word further in regard to overproduction. For every 22½ cents the distiller expends in the manufacture of a gallon of whisky he becomes liable to the Government for 90 cents tax. Who, then, is most benefited by overproduction? The Government gets four to one.

The opposition to this bill is founded, as it appears to me, almost entirely upon selfish motives, coming from as many different sources as there are different interests having particular ends to serve. At the head of the list we find the prohibitionists, whose sole object seems to be a desire to cheapen whisky and in that way cause an increase of drunkenness, so that they can have a larger field from which to select examples to illustrate the doctrines of their party. Next in vehemence of denunciation is that party of great moral ideas, known of late years as the Republican, whose death struggle is being waged, so far as this question is concerned, upon the hope of being able to win back the prohibitionists by joining hands with them against this bill, and the success of their plan to gain the support of those representatives of the liquor interests who desire to escape taxation by advocating the repeal of all laws imposing a tax upon the manufacture of whisky. What a combination! How comprehensive and all-satisfying is this great plan—this much-lauded God-and-humanity party framing a platform that both liquor dealers and prohibitionists can stand upon, at least for one political campaign. Whose throat will first feel the knife? Which lamb shall be sold first to relieve the necessities of this combination of contradictions?

The two elements I have just been speaking about, Prohibitionists and Republicans, act from the inspiration of partisan zeal, always Republican. But much of the opposition to this bill seems to come from Democrats. I expected to see protection Democrats join with protection Republicans in working for its defeat, because the continuance of protection in all its glory depends upon the repeal of the internal-revenue laws. A reduction of taxation is demanded by the people generally, and both parties recognize the fact. The point of dispute is, shall that reduction of taxation be by reducing the tariff on imports, as advocated by the Democracy, or by repealing the tax on whisky, as advocated by Republicans and protection Democrats? This is the way the issue is being joined, although, if we were to take them at their word, that a reduction of tariff rates will increase the revenue, the repeal of the whisky-tax might be joined with the reduction of the tariff rates.

This, then, is the issue: Protectionists, Democrats as well as Republicans, demand cheap whisky as a luxury, and the tariff reformers, Democrats and Republicans, demand cheap clothing, coal, salt, sugar, lumber, and other necessaries and conveniences of life. Can any friend of the workingman hesitate as to which side he will support? But that tariff-reform Democrats should oppose this bill I did not expect. They do, however, on this ground: that any favor extended to the manufacturers of whisky may, and probably will, be construed to mean not only relief by extending the time for the collection of the tax, but an act amounting to an indirect pledge to repeal the tax on whisky within the period of extension, to which they stand unalterably opposed.

This combination of adverse circumstances and conditions will probably defeat the bill. But that fact will not influence me in the least in regard to the vote I intend to cast in its favor, for I believe it to be founded upon the just rule that relief should be granted in all such cases where it can be done with perfect safety to the Government, without injury to any, and with advantage to many of our citizens.

There is another principle indirectly involved and discussed in a general way by the friends of the measure that I wish to indorse and emphasize in this connection, which is that the *collection* of a special tax upon manufactured articles intended for sale and not to be used until after sale, the market for which must depend upon supply and demand, should not be enforced until it is ready, in the judgment of the owner, to be put upon the market for sale. This ought to be provided for by a general law which would obviate the necessity for special legislation upon any such subject.

The discussion of the temperance question has entered quite largely into this debate, although wholly inappropriate, as it seems to me. So far as that question is concerned, I wish it distinctly understood that, according to my judgment and understanding, Congress has very little to do with it under the Constitution. The regulation of the sale and use of alcoholic liquors is a mere local question that belongs almost exclusively to the States. Several gentlemen have indulged in radical temperance speeches composed mainly of denunciations of the men engaged in the manufacture and sale of alcoholic liquors, which I regard as very much out of place, unfounded in fact, and opposed to right principle. They proceed upon the assumption that the use of alcoholic liquors is injurious to the human system. That is very far from being a settled question. It must not be assumed that because the abuse of the article is an evil, and a calamity to the individual guilty of it, the right and reasonable use of it is to be condemned.

I feel safe in assuming that if we find the peoples most advanced in the arts and sciences, most distinguished in war and accomplished in peace, and standing at the head of civilization and enlightenment, have always been and still are most notorious for their general and free use of alcoholic liquors, we can very safely assert that human observation and experience does not prove that the mere use of them is injurious. In illustration of this position look at the French, the Germans, and the English-speaking peoples, and tell me what conclusion you arrive at, favorable or unfavorable. The use of alcoholic liquors in this country has for a long time been steadily on the increase, while drunkenness has as steadily and surely decreased. I mean by this that the use is more general but less excessive. The principle upon which our Government is based, the right of individual action coupled with individual responsibility, is the true one, and not only in the exercise of the right of suffrage but in the regulation of individual conduct. It is in fact a matter of personal liberty. Every man has a right to think and to worship according to the dictates of his own conscience, and every man has the same right to eat and drink according to the demands of his own physical and mental requirements and condition, he being the sole arbiter and judge so long as he does not interfere with the rights and privileges of others. Equality of rights and equality of responsibility is the foundation of safe and durable government.

Post-Office Appropriation Bill.

A self-supporting postal service made inefficient and the great business interests of the people jeopardized in order that an appropriation bill may aid in consummating political results.

SPEECH

OF

HON. HENRY H. BINGHAM,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 11, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 5459) making appropriations for the service of the Post-Office Department for the fiscal year ending June 30, 1885—

Mr. BINGHAM said:

Mr. CHAIRMAN: I come to the discussion of the bill now before the House, making appropriations for the Post-Office Department for the next fiscal year, ending June 30, 1885, with but one governing purpose and one controlling line of thought—that the postal service of the country, a great governmental monopoly, should receive through the wise legislation of Congress every necessary appropriation, properly guarded, that will contribute to the wants, convenience, and business requirements of the millions of our people who daily use the service and who by direct taxation contribute the revenue for its maintenance. If the Republican party last year or at any time failed to intelligently appreciate the necessities of the people and by limited appropriations crippled or in any wise impaired the efficiency of the postal service, which I deny, it becomes an example to be shunned and not in this debate to be quoted as an authority warranting a like procedure. The appropriations for the current year and the preceding year are only to be examined from the standpoint of their fruitfulness and completeness. Where failure is apparent we must apply a remedy, where there has been a surplusage we should curtail, and where there has been a non-appreciation of growth and healthy development we should, without regard to party or party advantage, judiciously and generously legislate. Certainly there should be no difficulty in ascertaining the necessary requirements for a wise, progressive, efficient, and complete postal serv-

ice. It is a department where the great mass of work done is clearly exhibited in the annual reports and expressed in figures easily understood. In its every division or bureau the percentages of the increase are apparent and well defined. Its employés are paid fixed salaries and its work is done under statute requirements or contract obligation.

No department of the Government is so nearly allied to the people. No appropriation bill passed by Congress so directly reaches the great mass of the educated and uneducated as the bill now under consideration of the House. You may legislate for the Navy and your action may destroy the *esprit de corps* so essential; by the mustering out of great sailors or by the consolidation of grades in the service present a seeming economy, and thereby limited appropriation. The legislation affects but few and the murmurs of condemnation never reach your ears. You may refuse to build new cruisers and properly arm your vessels for offensive and defensive purposes, and while conditions of peace and prosperity surround us no severe criticism or condemnation will be visited upon the dominant party responsible for the legislation. The same line of illustration might be fairly presented with reference to your action upon other departments of the Government. They concern but the limited number, and so long as your measures are not radical assaults upon the industries and labor of the country they are accepted, provided disaster does not follow. But the one exceptional appropriation is contained in the bill now before us; it is individual; it has a character of its own. When you fail to give the necessary means for the complete usefulness and efficiency of the postal service you will find a response from the country neither pleasant to be heard nor agreeable in its application. The people prefer a high rate of postage and assured efficiency of the service rather than a low rate if with it should come inefficiency and curtailment. Reduced postage must not be made the excuse for reduced and insufficient appropriations.

Our Post-Office Department to-day compares favorably in its administration of the service with any in the civilized world. It has a vast body of trained, experienced, and faithful subordinates. Recent legislation has contributed to broaden its usefulness and strengthen its organization, its *personnel* scores a high standard, and its equipment is modern and advanced.

By the act of March 3, 1883, a readjustment of the salaries of 48,000 postmasters was effected, and for the first time, for absolute work done, a corresponding compensation has been allowed—no compensation secured through influence or favoritism, but specific salary fixed for specific work done. Every postmaster in the country knows just what he is entitled to, and the great body of these officers, indicated as fourth class, receive under the act of 1883 an increased allowance, because of heretofore inadequate compensation. In the comprehensive act of readjustment but one exception has been made by the committee presenting this bill, and that applies to some nine offices, and to which unjust discrimination I shall refer later in the debate.

The money-order business, aggregating during the past fiscal year upwards of $125,000,000, was by legislation in the Forty-seventh Congress extended, the fees charged for service reduced, and the introduction of the postal note effected a convenience which, when offered to the people, they have not been slow to accept.

The letter-carrier service for the first time is now upon a basis of capacity and fitness for admission, efficiency and honesty for advancement, and an allowance of compensation that increases with service until the subordinate reaches a fair, living, just salary for the hard and extreme labor rendered.

The postal clerks are now grouped under one organization, with promotion assured only after examination if qualifications are possessed, with compensation reasonable and acceptable, and with an adjustment of labor and relief calculated to make the service reliable and trustworthy, not only as to exactness in work done but in the integrity and honesty of the official. I affirm that the administration to-day of the general service is excellent and the *personnel* efficient, because the legislation governing is wise, reasonable, generous, and the tenure of office certain. Civil-service legislation has already made its mark upon the several Departments of the Government, and while its great usefulness can not in so short a time be fully demonstrated, nevertheless two admirable results are conclusively ascertained: first, that there must be fitness for admission into the Government service; and second, once admitted, faithfulness, honesty, and capacity secure continuance. Not only is the Department in a healthy condition to properly expend for the benefit of the public the necessary appropriation, but the reduced rate of postage on letter-matter has been so generously accepted by the people in their great business and personal relations, that instead of large deficiency as estimated by the Postmaster-General in his annual report to the present Congress, every data thus far available would indicate a limited and small deficiency, should any occur. Every estimate thus far ascertained by the Department shows an increase in work because of reduced postage, which in addition to the natural growth will exhibit at the close of the present fiscal year the largest percentage of increase in the history of the service.

Will the bill now under consideration in the specific appropriations allowed carry on the service in the next fiscal year so that the wants and requirements of the people can be properly met and satisfied by this governmental monopoly? I unqualifiedly submit that it will not, and the gentleman who presents this bill knows that it will not. The Committee on Appropriations has failed, willfully failed, to recognize the magnitude of the service, the great growth of the work, and increasing business demands. The gentleman who presents this bill exhibits no familiarity with the requirements of that magnificent and mighty metropolis that adorns and makes beautiful his own industrious State—Chicago with its wealth of intelligence and activity, the business emporium of our western empire. The distinguished chairman of the Committee on Appropriations, for whom I entertain more than a high personal regard, should have brought to the examination of this bill his critical judgment and trained experience. He represents ably and at times with marked wisdom the second city of the nation; but if this measure has received his approval, certainly he has failed to know the wants and needs of that manufacturing city of homes which heretofore has found in him a willing and brave advocate.

The gentleman from New York [Mr. HUTCHINS] could not have been unmindful of the demands of his commercial and financial center, the mere mention of which typifies all that is progressive, advanced, and developed in American civilization. I am sure when we come to the details of this bill and discuss it by paragraphs there will be one of the New York city delegation [Mr. COX] who will give his vote, his rare intelligence, his thorough knowledge, and his earnest, eloquent voice in condemnation of all that is illiberal, ungenerous, inadequate, and defective. He, of all men upon this floor, knows the wants of his active business world, and his vote is never bound by party when the business interests of the people call for necessary appropriations.

In every essential that goes to the perfection of usefulness and capacity to meet the exactions of the growing work and business of the Post-Office Department the bill fails, and it fails deliberately and with malice prepense. That which is important yet secondary is allowed. The essential is always in the vocative. The bill is nominally for the conduct of the business of the Post-Office Department. It is really a bill to prevent and prohibit during the next fiscal year, because it is a Presidential year, the increase of force or appointments of men in the postal service. Whenever the estimates of necessary appropriation would allow the employment of additional men we are restricted to the allowance of the present year. Whenever material is required a reasonable appropriation is provided. The percentage of increase is admitted in appropriating for material; it is not recognized when the appropriation means additional force.

Not only is the bill political in the form and purpose I have indicated, but it carries out the notorious declaration which the metropolitan press has informed the country is to be the policy of this House in the consideration of appropriation legislation: that the estimates of the Departments submitted as necessary to maintain the Government during the next fiscal year must be reduced $50,000,000 in order that the party in control of the House can go before the people and claim special consideration because of their alleged economical and careful legislation. This magnificent result is to be accomplished without regard to either the law or the wants of the people. The contest of a Presidential year is to color all the work of this Congress. You regard legislation as but the instrument whereby you hope to accomplish purely political results. The demands of our great business world are to be wholly ignored. You think if the party in power can be prevented from appointing a few men to official place your political ambitions and hopes may be accomplished. Make no mistake; the people read motives, purposes, and results far more easily and rapidly than your Committee on Appropriations imagine. You can not starve the Post-Office Department for a single day or hour. The people are ever in relation with it, and upon this Democratic House will rest the responsibility. I emphasize and reaffirm, Mr. Chairman, wherever a division or department of the postal service requires for its natural as well as for its great increase of work because of reduced postage during the next fiscal year a single additional subordinate or employé, the bill under consideration as presented by the committee ignores the necessity and confines the Department to existing conditions of labor and men. The appropriations for men force, physical force, brain force are to be the same in 1884 and 1885 as they are in 1883 and 1884, notwithstanding the 20 per cent. of increase of work in letter-mail matter or domestic postage.

That is the teaching of this bill. That was the record made in the naval bill. It will become more and more apparent in every other bill that will be presented from your committee to this House. I will clearly demonstrate, in considering this bill in its details, that your appropriations are so limited and so meager that under the statute the service can not be maintained, and you will be forced to come to this Congress at its next session and ask for large deficiency to meet, not the growth of the service but simply its statute requirements.

Again, this bill presents to you another opportunity for political capital. Corporations receive under the statute a consideration in the form of appropriation for service rendered. This is a rare chance, and you must not let it escape.

Not content in refusing to vote additional force to meet the necessities of the service in the period of its greatest annual growth and development; ruthlessly marking down estimates and crippling the people's only means of communication which you have monopolized, you must in addition provoke possibly greater complications and incon-

veniences by attacking the railroad corporations that carry the mails, by legislating a horizontal reduction of compensation without regard to the roads that do your work in an efficient, complete, and thorough way, but at the same time give you facilities far beyond the spirit or expectation of the legislation of 1873, whereby the rates of compensation were established. The great trunk lines, which are the lungs and life of the service, are to have their rates reduced without even the opportunity of being heard, either by arbitration or by intelligent examination. They are corporations, therefore, for your political purposes, must be assaulted; and should any complications unfortunate for the mail service result you are ready with your cry, "It is another exaction and demand of corporate power!" The people will not be slow to discover your seemingly hidden purpose, and condemnation will be loud and pronounced.

I make no reference at this time to the legislation contained in the bill with reference to the land-grant, bonded, and subsidized roads. They received large aid from the generous gifts of the Government, and are therefore, by their charters, under and subject to special legislation. But it is the 5 per cent. horizontal-reduction clause in this bill that I consider unwarranted. It is a provision neither justified by examination nor investigation. It is not predicated either upon information or fact. This word horizontal has a familiar sound to the House, and is not unknown to either the industrial or labor classes of our people. Perhaps there has been a friendly and good-natured rivalry between the chairman on Ways and Means and the chairman on Appropriations as to which committee should claim precedence in submitting this novel development of statesmanship to the House and the country. It is to be regretted the Committee on Ways and Means did not secure a standing for their horizontal tariff reduction before the presentation of this bill.

The underlying general principle, which I am sure the gentleman from Pennsylvania, chairman on Appropriations, would have clearly and forcibly shown to this House as being pernicious, unequal, and unjust, might in addition and at the same time have afforded others an opportunity to quote his clear and clean-cut sentences as applicable to a horizontal reduction of railroad compensation for the carrying of the mails, especially upon the great roads that give the Department and the people every facility, convenience, and requirement. I will consider this paragraph of the bill later in the debate and submit in detail my arguments, fortified by figures and official statements.

The gentleman from Illinois, in presenting his bill, uses this language:

> While we have kept steadily in view the fact that the postal more than any other branch of the public service is constantly growing with our population, development, and business, and have conscientiously sought to make provision sufficiently liberal to promote its efficiency and avoid danger of crippling the public service, we have at the same time been mindful of our duty to the taxpayer, believing as we do that economy in expenditure is necessary in order to lead the way to the reduction of taxation. The gravest duty resting upon this Congress is the reduction of taxation. In order to accomplish that beneficent result we must see that wise economy is enforced.

Again, he states:

> Our rates of postage are almost as cheap and our facilities for conveyance as efficient as in any other country. Our system is, however, marvelous in its proportions and its efficiency. In many respects it has outstepped that of any other country in the world.

Certainly, from the gentleman's appreciation of the progressive and comprehensive character of the service and the exacting demands of 50,000,000 of intelligent people, a reasonable recognition of the necessary appropriations for a healthy and wise administration was fairly to be expected. The gentleman but raises our hopes to enjoy the pleasure of our disappointment. He indulges in rhetoric, with sentences beautiful and well rounded, but his bill carries no appreciation of the people's demands. He tells us how our "service is constantly growing with our population, development, and business," and there he stops to say "the grandest duty resting upon Congress is the reduction of taxation," and therefore you must conduct your postal business under the same allowances as last year. Grow and develop, but we can give you no additional allowance to meet the pressing wants of your growth. With what magnificent and forcible declamation did the gentleman utter the following, which I quote *verbatim* from his speech:

> As I have already remarked, we have reduced but three items below the appropriations of last year, while on the other hand we have increased the appropriations on twenty-one items over and above those of last year. The committee has investigated as far as was in their power all the items contained in this bill, and reported what they believed to be necessary for the public service.
>
> In the Third Assistant Postmaster-General's department we left every estimate made untouched in any particular whatever, because his estimates are moderate and no doubt justified by the increased business resulting from change in rate of postage.

Certainly the casual reader and those who heard the gentleman would presume his bill had been carefully framed and every requirement of the service fully considered. Let us examine it in detail, and I promise you a verification of my original proposition, that the bill fails in every essential and in every demand made necessary by the growth of the service; that where men are needed—brain force, physical force—they are not allowed, but where material is necessary, either under contract or otherwise, it is allowed, and that the summary of the bill, claiming a reduction in appropriations of $5,000,000 below the estimates of the Department, is specious, equivocal, and misleading. With what self-sufficiency he declares, "We have increased the appropriations on twenty-one items over and above those of last year."

True, the gentleman is literally correct, and I will read the paragraphs in order that the House may truly appreciate this lordly generosity and his full recognition of the wants of the people, who have by their acceptance of reduced postage increased the business on letter mail alone fully if not more than 20 per cent.—"twenty-one items increased over and above those of last year, and the entire estimate of the Third Assistant Postmaster-General left untouched in any particular whatever."

So the gentleman says. Let me read to you the items:

	Amount.	Increase.*
Rent, fuel, and light	$450,000	$10,000
Office furniture	30,000	5,000
Stationery in post-offices	65,000	5,000
Wrapping-paper	30,000	5,000
Wrapping-twine	70,000	15,000
Post-marking, rating, and canceling stamps	25,000	5,000
Railway postal-car service (not the clerks, but cars)	1,600,000	25,000
Inland transportation (star-routes)	5,600,000	350,000
Railway postal clerks	4,000,000	93,000
Mail messengers	900,000	50,000
Mail locks and keys	25,000	5,000
Mail bags and catchers	230,000	10,000
Letter-carrier service	3,600,000	100,000

*Increase over this year.

Let us now examine the items asked for by the Third Assistant Postmaster-General and the foreign mail service generously allowed by the Committee on Appropriations:

	Amount.	Increase.*
Office of the Third Assistant Postmaster-General:		
Postage-stamps	$146,000	$16,000
Stamped envelopes and wrappers	644,000	12,000
Postal cards	268,000	15,000
Registered-package, post-office, and dead-letter envelopes, locks, and seals	(?)	(?)
Engraving, printing, and binding drafts and warrants	2,500	300
Office of the Superintendent of Foreign Mails:		
Transportation of foreign mails	425,000	75,000

*Increase over this year.

Over one million appropriated to the office of Third Assistant Postmaster-General, but of this great sum, with the exception of $33,000, the whole amount is required by contract obligation. Great concession and liberality to the estimates of the Third Assistant Postmaster-General! You have given it because you were compelled to under your contract and by the requirements of your statutes. Great recognition of the growth of the postal service in the twenty-one items so willingly given to the Department. An abundance of office furniture, plenty of scales, mail-locks, wrapping-paper, stationery, letter-balances, wrapping-twine, mail-bags—quantities of this material—necessary, I concede, but not a man, no additional brain-power, no added physical force, no increase of railway postal clerks, no carriers, no mail messengers, no post-office clerks—the necessary force to handle your 20 per cent. increase of letters in their various stages from deposit to delivery—not an additional cent allowed, but ample scales to weigh them, paper to wrap them, twine to tie them, and stamps to mail them; but there you stop, and stop deliberately. The shadow of a Presidential year paralyzes your statesmanship and blinds your judgment. I repeat, plenty of material, but not one cent for brain force. Truly does the gentleman in the twenty-one items recognize the growth of the postal service.

The items of the Third Assistant Postmaster-General are allowed because under contract, and in addition the gentleman desires the people, if they want to buy postage-stamps or stamped envelopes, wrappers, postal cards, or other conveniences for mailing their correspondence, that every opportunity should be afforded, every inducement to buy offered, but no arrangement or facilities adopted to handle the vast increase of mail matter after you have purchased and paid for your stamps to mail your letters. And why? Because to appropriate for material will seem to comply with the demands of the service. Material can not vote—men can; therefore for additional force no appropriation. The bill is political, and the gentleman knows it. The gentleman comes to this House and claims with loud declamation that "the committee has allowed all the items estimated for by the Third Assistant Postmaster-General." If the gentleman when preparing the bill had taken the precaution and had followed the wise example of his predecessors and made inquiry at the Post-Office Department whether in view of the presentation of this bill, in the month of March, 1884, there was anything in error in the estimates made up and submitted by the Department five or six months ago, he would have found that there has been a radical and decided change in some of the items for which the gentleman from Illinois says "the full amount estimated for by the Third Assistant Postmaster-General was given by the committee."

I have a copy of a letter which has been in the public prints for two days (the fact has been known for some time), transmitted to the Com-

mittee on Appropriations, in which the Third Assistant Postmaster-General informs the committee that in view of the general acceptance of the 2-cent rate of postage by the people, for the first time in the history of the use of postal cards there has been a falling off from what has heretofore been an annual increase of 14 per cent. Since their introduction the annual increase has averaged 14 per cent. up to this time.

In the debate in the last Congress upon the 2-cent postage proposition it was stated that the cheapness of the rate of postage would do away with a large amount of the business that had heretofore been transacted by the use of postal cards. It was claimed, as between 1 cent for a postal card and 3 cents for a letter, the people would use the postal card; but as between 1 cent for a postal card and 2 cents for a letter, the people would use the letter. Such a declaration I made on this floor, and to-day we have the first verification of the correctness of that opinion.

We are told in this letter of the Third Assistant Postmaster-General, whose estimates the gentleman says the Committee on Appropriations "have given every cent asked for," that instead of there being 14 per cent. increase in the use of the postal card, taking the last seven months for the basis of the estimate, there was actually a decrease in their use. Therefore the Department informs the Committee on Appropriations "the estimates for postal cards can be cut down $36,000."

I charge that the gentleman presenting this bill has given all the estimates asked for by the Third Assistant Postmaster-General without consultation or that critical examination which the House and the country is entitled to in a bill carrying millions, and the letter of the Postmaster-General proves my position, and I further assert the same neglect and contempt of official experience has been followed by the gentlemen with reference to the estimates of the First and Second Assistant Postmasters-General.

As the consideration of this bill progresses we will find the gentleman will willingly accept the recommendation of the Third Assistant Postmaster-General as to cutting down the estimate for the postal cards, but when we come to any item (and there will be items) requiring necessarily an increase of the estimate, the committee, in their all-sufficient way, without any consultation with the Department, will say: "We will not accept your judgment as to an increase; we will accept it only as to a decrease."

I have given you the items where the Committee on Appropriations have acceded to the estimates of the Department. Now let me show you the paragraphs where the committee do not give the amounts estimated for by the Department, and where, to my mind, they fail to meet the demands of the growth and development of the service this year, which is but the precursor and forerunner of larger percentages for the next year. The Postmaster-General asks, "for compensation to postmasters, $12,750,000;" the bill gives $1,750,000 less than the estimate. For clerks in post-offices, $4,900,000; the bill gives $4,775,000, the same as this year and $125,000 less than the estimates. For letter-carrier service, $4,000,000; the bill gives $3,600,000; $100,000 more than the present year, but $125,000 less than the law gives and $400,000 less than the estimate. For inland transportation, $12,750,000; the bill gives $1,050,000 less than the estimates. For railway postal clerks, $4,295,000; the bill gives $4,000,000; $23,000 more than this year and $295,000 less than the estimates. For mail messengers, $1,100,000; the bill gives $900,000; $50,000 more than this year and $200,000 less than the estimates.

These are the items that appropriate for the man force and the power to do the real work of the service. Abundance of material, but curtailment of subordinate force, runs through the bill; 20 per cent. increase in domestic or letter mail and no additional force to meet the people's just claim and demands for an efficient service; plenty of postage-stamps for letters, but no men to expeditiously handle them when they reach the mails. The real work of the service is done by postmasters, postal-car clerks, post-office clerks, letter-carriers, messengers, and the railroads. The great business interests of the country are to be jeopardized that a little political capital can be gained. If the issue was made before the people upon this measure alone I am sure your condemnation would be, as it deserves to be, speedy and complete.

I invite your attention, Mr. Chairman, to the first section of the bill, line 20, office of First Assistant Postmaster-General. "For compensation to postmasters, $10,500,000." This is the first deliberate *perversion* of the law. If I did not regard the word "deception" unparliamentary I would use it. The summary of the bill shows an apparent reduction of $5,000,000 from the estimates of the Department; certainly a *specious* showing and but a seeming reduction; the statute pays the 48,000 postmasters their compensation, notwithstanding your appropriations; you know it; and no one is more familiar with it than the gentlemen presenting the bill, Mr. TOWNSHEND, of Illinois, and Mr. HOLMAN, of Indiana. The Postmaster-General submits his estimate for compensation for postmasters, $12,250,000, and your bill gives $10,500,000; $1,750,000 less than the estimate.

But the law compensates the postmasters, whether you appropriate in this bill or bring it in as a deficiency during the next session of Congress and after the Presidential contest. Why did you make it $10,500,000? I assert for no other reason than to seemingly reduce the estimates and thereby attempt to deceive the people with alleged reductions. It is easy to understand the Postmaster-General's estimate. He knows what the service cost last year, estimates its cost this year on an average annual increase of work, and reaches an intelligent conclusion. The appropriation for the present current year is $9,250,000, and the deficiency will amount to $2,000,000 or more. After going into every detail in connection with the annual growth of service, the large percentage of increase in view of reduced postage, and the readjustment and increase of postmasters' salaries under the act of March 3, 1883, the Postmaster-General submits:

> I judge that the total amount required for compensation of postmasters for the fiscal year ending June 30, 1885, will be about $12,216,358.12.

I do not think the gentleman ever carefully read this report. The increase of postmasters' salaries of the fourth class under the act of 1883 has been to some extent the cause of the large deficiency for the present year. The gentleman in charge of the bill in the debate yesterday used this language, speaking of the bill for postmasters' salaries:

> A much larger sum was estimated for, but if you will examine the report of the First Assistant Postmaster-General you will find the only sum positively known to be necessary as definitely ascertained for the purpose of paying postmasters' salaries will amount to $10,641,358. We have in this bill given the Department $10,500,000. The remainder estimated by the Department to make up the enormous sum of $12,250,000 is based upon mere conjecture of percentages of increase. We have given about what it is definitely ascertained will be required to pay salaries.

The gentleman's statement leaves the impression upon the House that he has correctly quoted from the report of the First Assistant Postmaster-General, and that in the allowances by the bill the amount asked for has been virtually conceded. Permit me to read in addition to the gentleman's reading just what has been said:

> After a consideration of all the circumstances of the case, I am of the opinion that the amount paid for the quarter ended March 31, 1883 ($2,660,239.53), is the best present basis for an estimate, which, multiplied by four, would give $10,641,358.12 for the fiscal year 1884-'85, exclusive of the annual increase in this item.

Observe the language: "Exclusive of the annual increase in this item." Those are the words the gentleman from Illinois failed to quote, and in order to complete the sense of the proposition the First Assistant Postmaster-General continues:

> Placing this natural increase at $750,000 for the present fiscal year and at $825,000 for the next year (which periods will include two readjustments of salaries at first, second, and third class offices), I judge that the total amount required for compensation to postmasters for the fiscal year ending June 30, 1885, would be about $12,216,358.12.

The garbled presentation of the report whereby an insufficient appropriation is claimed as officially correct is in keeping with the gentleman's whole argument on the bill and its paragraphs. We can conclude that but one intention runs through the bill, not to appropriate in accordance with intelligent estimates, but to present a seeming curtailment of expenditure of the people's money in order that it may be used for political purposes and political ends.

The law will give postmasters their compensation. Perhaps the gentleman is not familiar with the statute. Let me state it to him. By the act of March 3, 1813, the compensation of postmasters at all offices is easily determined, and once determined can not be changed unless readjusted under the law and at a specified date. At Presidential offices it consists of fixed rates of allowance on gross receipts; at all other offices it is fixed upon the basis of all the box-rents and certain rates of commission on the cancellation of stamps. Section 3861 of the Revised Statutes allows postmasters to deduct their compensation out of the receipts of their offices, turning into the Treasury only their net revenue. It will therefore be seen that the amount of the compensation due postmasters in any given time and the actual expenditure for compensation are entirely beyond the control of the Department; so that, whatever amount may be appropriated by Congress for this purpose, the fact remains that under existing laws the expenditure is not thereby restricted. To put it differently, the pay of postmasters is limited, not by appropriation bills but by a fixed law, and to the extent of their legal compensation the gross revenues of the postal service is not only appropriated but hypothecated to their payment. It follows, therefore, if not a dollar is appropriated in the annual appropriation bill, postmasters will receive their salaries all the same. There is nothing effected in the interest of economy, therefore, by appropriating $10,500,000 to pay postmasters while we place $50,000,000 in their hands out of which to pay themselves to the full extent of their legal dues. Therefore I conclude the amount appropriated in the bill is insufficient, and it has been fixed at $10,500,000 to seem to meet the requirements of the service, but actually to reduce the amount estimated by an intelligent Postmaster-General in order that the claim of reduced expenditures may form a part of political capital to be used in the near future—five millions of alleged saving in this bill. I have already accounted for $1,750,000.

The second paragraph in the section under debate would reduce the compensation of the postmasters of the nine largest offices in a sum total of $17,000. It reads: "And no salary of any postmaster under the act entitled 'An act to adjust the salaries of postmasters, approved March 3, 1883,' shall exceed the sum of $4,000 per annum." This proposed reduction strikes at New York, Philadelphia, Chicago, Boston, Saint Louis, Baltimore, Cincinnati, San Francisco, and Washington. The reduction in this respect is the only exception the gentleman takes to the legislation of the last Congress readjusting the compensation of 48,-

000 postmasters. I take a special interest in any legislation covering this subject, for I presented the bill to the House and explained its provisions. I have before me the record exhibiting the debate and the vote. It reads:

The House again divided—

Understand this was early in the morning of March 3, just at the close of the Forty-seventh Congress—

and there were—ayes 152, noes 21. The yeas and nays were not ordered; there being—ayes 13, noes 103.

Practically there was a unanimous vote of the House in favor of the bill, which in addition to other wise legislation gave about 10 per cent. increase to 46,000 fourth-class postmasters. In general, the first, second, and third class offices remained at about the same compensation, with the exception of the eight largest offices, New York having been adjusted under earlier legislation. The gentleman from Illinois does not so much as honor the House with a reason for this proposed change of law. Good reasons were presented when the legislation was enacted, and it should stand until better arguments are submitted warranting a change. Gentlemen who are familiar with the responsibilities of the great city offices recognize the necessity of fair compensation for the character of service rendered. Under the gentleman's change of law the reductions I read would follow:

Post-office.	Salary.	Reduced under bill.
Baltimore, Md	$5,000	$1,000
Boston, Mass	6,000	2,000
Chicago, Ill	6,000	2,000
Cincinnati, Ohio	6,000	2,000
New York, N. Y	8,000	4,000
Philadelphia, Pa	6,000	2,000
Saint Louis, Mo	6,000	2,000
San Francisco, Cal	5,000	1,000
Washington, D. C	5,000	1,000

At these nine great offices the Government requires bonds from the postmasters varying from $500,000 to $200,000. The number of subordinate force runs from 1,400 to 400. The money custody in every office exceeds a million of dollars annually, and in the larger number from three to ten millions. While you appropriate by the first section of this bill $10,500,000 for the postmasters' compensation, you would by the provision the gentleman introduces reduce the salaries of the nine postmasters now receiving $53,000 to $36,000 per annum, a reduction of $17,000, when the volume of work done at these offices aggregates 27.3 per cent. of the whole postal business. Ten million five hundred thousand dollars for postmasters' salaries for the whole service, $53,000 for the nine offices that perform over 27 per cent. of the whole business, and you would reduce this amount $17,000. I do not think you can do it if equity, justice, and common fairness prevail. I have not mentioned the obligation and responsibility of the money-order business, which must be added to the general post-office work done. Remember, the postmaster receives no additional allowance or perquisite for this labor. In New York he handles millions upon millions of money, and in other cities it reaches vast amounts. I will read for the information of the House some official data, which at my request the Department has furnished:

POST-OFFICE DEPARTMENT,
OFFICE OF THE FIRST ASSISTANT POSTMASTER-GENERAL,
SALARY AND ALLOWANCE DIVISION,
Washington, D. C., March 7, 1884.

SIR: In response to your verbal request, I have the honor to herewith inclose a list of post-offices whereat the salaries of the postmasters as fixed to take effect from October 1, 1883, are upward of $4,000. Also, as to the salary of the postmaster at New York, N. Y., which was fixed by law at $6,000 from July 1, 1864 (13 Statutes at Large), and was increased to $8,000 a year from July 1, 1875, in the appropriation act making appropriation for compensation of postmasters. (See section 1, 18 Statutes at Large, page 340.)

Very respectfully,

FRANK HATTON,
First Assistant Postmaster-General.

Hon. H. H. BINGHAM,
House of Representatives, Washington, D. C.

Statement showing the gross receipts at nine of the larger cities for the fiscal year ended June 30, 1883, and the percentage of receipts compared with the total postal revenue.

Office.	Salary.	Postal revenue for year ended June 30, 1883.	Total postal revenue for year ended June 30, 1883.	Percentage of total revenue.
New York, N. Y	$8,000	$4,413,821 57	$45,097,073 24	9.7+
Chicago, Ill	6,000	1,949,180 33		4.3+

Pittsburgh, Pa	3,800
Providence, R. I	3,500
Rochester, N. Y	3,600
Saint Paul, Minn	3,500

Certainly the House, in view of the statements I have read, can not consent to any reduction in the compensation of the nine great post-offices of the country—rather a large salary than a smaller, if estimated upon a purely business basis. Remember at the close of the last Congress both sides of the House voted for the bill readjusting the compensation of postmasters. Every test thus far applied to that legislation marks it as wise and equitable. Give it a complete and full trial, and after that, if the Treasury can not stand the strain of $53,000 for postmasters' salaries in the offices where 27 per cent. of the entire work of the service is done, then I can find no warrant for a condemnation of the policy that runs through every section of this bill.

Let us examine the next paragraph in this bill generously appropriating for the wants of the people in this growing service. In the debate in the Forty-seventh Congress on the reduction of postage from 3 cents to 2 cents per half ounce I used this language:

Following the example of the oldest and best established governments of the world, a monopoly under the Constitution has been delegated to the Government in the carriage of letters; and the wisdom of that action has gone unquestioned by the people even to this day. Competition by private carriers is however allowed for all other classes of matter permitted to go into the mails. So strictly has the Government maintained the monopoly, although by act of Congress letters may be carried outside of the mails, yet they must be inclosed in a Government-stamped envelope. The Government thus exacts its legal revenue, even when not performing any service in connection with letters.

A Government monopoly in the carriage of letters. Certainly if the people have any claim for consideration under this monopoly it is that the service should be as efficient and as nearly perfect as private enterprise and competition would make it. The cost of the service, which should be at all times properly guarded, is but secondary; efficiency and completeness in administration are the right of the people. The saving of a few thousand dollars in this or that special item may result in the loss of many thousands to the country. The penny-wise-and-pound-foolish policy marks the record of the Democratic party in recent years, and it has brought popular condemnation. We want at this time an enlargement of post-office facilities, not a curtailment. The bill gives $4,775,000 for clerk-hire for the next fiscal year. This is the same amount that is allowed for the present year. The Postmaster-General submits:

The appropriation for the present fiscal year is $4,775,000, or $75,000 less than the amount estimated for by the Department. It is $308,002.59 more than the expenditures for the item for the past fiscal year. The expenditures for the last year exceeded those for the year 1881-'82 in the sum of $458,682.81, or 11.73 per cent.

The number of allowances made for clerk-hire during the past fiscal year was 2,758, an increase of 478, or 20.9 per cent., as compared with the previous year. The increase of the past year over that of 1880-'81 was 1,422, or 106.4 per cent. The number of applications for clerical assistance declined during the year, mainly on account of an insufficient appropriation, was 2,604.

During the year the requests for allowances for clerk-hire were so numerous, and many of them so urgent and important, that it became necessary to make reductions in the amounts allowed at 195 different offices in order to obtain a fund out of which these meritorious applications could be granted. The necessity for such reductions, I regret to say, is becoming too frequent, and is always attended with much embarrassment to the Department and apparent injustice to the postmasters whose allowances are decreased. The appropriations for clerks in post-offices have been altogether too small for some years past, and not at all in proportion to the increase in postal business. One consequence of this illib-

erality on the part of Congress is that, as near as can be estimated, $140,000 is now annually paid by postmasters out of their own purses for clerical assistance, for which no return is expected. It is believed that about one-half of this amount is expended by postmasters at first and second class offices. It is certainly injustice on the part of the Government to make it necessary for deserving officials to bear a part of the expense of the postal service when the means are at command to relieve them.

The number of separating offices, principally of the fourth class, or offices at which postmasters are allowed clerk-hire on account of "separating" mails for other offices, is now 1,732, and could with propriety and benefit be largely increased if the appropriations for clerks in post-offices would admit of it.

In view of the increase of postal business as indicated in the foregoing table, and other information above given relative to this item, I am of the opinion that not less than $4,900,000, or an increase of $125,000, or 2.6 per cent., over the appropriation for the present fiscal year, will be required for this service for the fiscal year ending June 30, 1885.

If the gentleman in charge of the bill had but taken the trouble to read this section of the Postmaster-General's report, I am sure he would have given the small additional allowance asked for. I am constrained to state that even the Postmaster-General has erred on the side of meager appropriations in this special item. I do not consider it sufficient, and I am of opinion the Department will find itself much hampered before the close of the next fiscal year, even if the full amount asked for is appropriated. I repeat, $4,775,000 for clerk-hire is the same as the allowance for the fiscal year. Two-cent postage will increase your letter mail this year 20 per cent. Post-office clerks handle the entire letter mail, and yet for the service next year, with its added increase of this year's work, you do not give an additional dollar. Clerk-hire, under the statute, goes to the first and second class offices and separating offices of the third and fourth class.

This appropriation, therefore, is expended at 587 first and second-class offices where the gross receipts reach $27,310,657, about 60 per cent. of the entire revenue, and at 1,732 separating offices, where the revenues are great also, very great. As an illustration let me submit: In New York the allowance for clerk-hire reaches $802,935; Chicago, $354,806; and in my own city of Philadelphia it reaches $240,000. You say in this appropriation to these great business centers, where there has been added this year 20 per cent. to the letter mail, and the increase for next year may be greater, that, granted this vast increase of work, not an additional dollar shall be added to the appropriation to efficiently handle the work. Not another separating office can be added to the list; the amount allowed for this year must answer for next. Is that a fair business way of meeting the demands of the people, when you claim under the Constitution a monopoly of the letter mail? Would private enterprise thus administer this business in the year that marks the greatest percentage of increase in the history of the service? I think not. It is well to bear in mind, in addition to a recognition of this great growth, there is the same duty imposed upon Government as upon individuals—a recognition of faithful service by advancement and increased compensation. That is the life and the spirit of all enterprise; it is the discipline of service; it is the safety-valve of society. The reward of merit, if assured, brings with it fidelity, honesty, and contentment. Men are made better because they are assured promotion for faithful service. This bill will say to tens of thousands of subordinate force, no single man in the great Government service shall receive promotion during the next fiscal year, but he shall be punished by added and increased work. Cheap postage for the people and harder work for the faithful men whose years of service in any other occupation would have brought advancement and increased comfort. Gentlemen may say the clerks receive large salaries; they can be reduced. Permit me to read to you the average annual compensation of these men:

Statement showing the average compensation of clerks in the post-offices at New York, Philadelphia, Chicago, Boston, Washington, Baltimore, and Cincinnati.

New York, N. Y	$939
Philadelphia, Pa	767
Chicago, Ill	907
Boston, Mass	859
Washington, D. C	801
Baltimore, Md	913
Cincinnati, Ohio	896

Why does the gentleman so restrict the service in the year of its magnificent growth? Not a cent for increase of work; not a cent for promotion for faithful service; not a cent for extension to separating offices; and yet the gentleman points to his bill as a liberal measure. I assert that his bill is political, pure and simple, and where the necessities of the service require men he refuses because it is a Presidential year; but where the service demands wrapping-paper, stamps, mail-bags, and articles of furniture, the estimates of the Postmaster-General are acceded to, and then the gentleman claims he has generously appropriated for an efficient administration of the service. Let the party responsible for this legislation understand that the American people are intelligent and honest and will discern easily your motives and your purposes.

I will read the next section of this wonderfully and fearfully made bill:

For payment to letter-carriers and the incidental expenses of the free-delivery system, $3,600,000; $45,000 of which may be used, in the discretion of the Postmaster-General, for the establishment, under existing law, of the free-delivery system in cities where it is not now established.

The gentleman does not honor this paragraph with a passing word or notice. Those of us who reside in great cities know something of the character, efficiency, and usefulness of this branch of the service. It is an absolute necessity to output the vast and accumulating mails in the great offices; without it all would be confusion; one day's delay would bring general and widespread business injury. The many trains, carrying their tons of mail, deposit them hourly in the large offices. Once there they must be handled and delivered, for others quickly follow, and business is wholly dependent upon this established system. In New York city office alone the carrier force last year handled 258,000,000 pieces; 700,000 pieces every day. Philadelphia handled 160,000,000; almost half a million each day. Therefore, as the service grows the free delivery of necessity feels it at once. I shall not enter into details in considering this paragraph. The gentleman from Michigan has amply and intelligently covered the subject. The friends of free delivery had hoped, after the years of struggle and conflict before Congress, it had at last been established upon a basis fixed, permanent, with a subordinate force reasonably paid and promotion assured.

Free delivery is established in one hundred and fifty-nine cities, that return 50 per cent. of the entire postal revenue, and the subordinate force numbers 3,888. The men enter the service after a civil-service examination, serving as substitute carriers at a compensation depending wholly upon the number of days they are employed; in other words, when a regular carrier is absent the substitute performs his work and receives his pay. Substitutes usually serve in this capacity in the large cities about one year. They are then promoted to an annual compensation of $600, and after one year's service are advanced to $800, and after another year's service are advanced to $1,000, this being the maximum allowance. In second-class cities their first regular pay is $600, and after one year's service they receive $850, this being the maximum allowance. The law fixes the grades, the promotions, and the compensation.

The gentleman's bill allows $3,600,000 for carriers, $100,000 more than the present year. Under the law it will take an increase of $225,000 more than this year's allowance to pay the force now employed and give them their promotion, which your contract under the statute promises. How this can be done I can not determine; the gentleman's arithmetic may solve the problem. You call your appropriations liberal. Yet you appropriate less than the law gives, and you have made no allowance or margin for growth or extension of service. The Postmaster-General has asked for $4,000,000 for the next fiscal year. You reduce his estimate $400,000, and do not so much as honor the intelligence of this House with any explanation. Wise legislation, indeed! I do not think you even looked at the statement, figures, and exhibit covering the subject, easily found in the Department report. The gentleman may say the service is established at many offices where it does not pay; therefore it should be curtailed. Cities and communities do not willingly give up postal facilities and conveniences, and no member in this House whose constituents enjoy them would submit to a relinquishment without protest. The gentleman is estopped, however, from presenting this argument, for his own bill allows $45,000 of the amount to be appropriated for extension of service.

Every city that has, under the law, $20,000 post-office revenue or 20,000 population is entitled to this service. It is to-day established in all the cities where it will pay at once or return net revenue, and wherever hereafter located it will at first not meet expenses; therefore the gentleman can not demand curtailment for the reason that his bill admits extension.

This service does not only do its own local business, but without charge to the Post-Office Department, it delivers all mail matter that comes into the free-delivery offices from distant points or from any post-office in the country without extra charge to the party addressed, or, as I have said, to the Post-Office Department. Its estimated revenues and its maintenance is wholly dependent upon its own home or local business. Last year it returned a net revenue of $1,021,894.01, and this year every estimate thus far obtained indicates $1,300,000 to $1,500,000 net revenue. Next year it will on the basis of natural growth leap up toward $2,000,000 clear profit.

If, therefore, no higher purpose or motive should govern the gentleman in his legislation than that of surplus revenue or gain, the appropriation should be liberal and up to the amount asked for by the Postmaster-General. Let me present it simply as a business proposition: given for the fiscal year ended June 30, 1883, an appropriation of $3,200,000, and the result gives you $1,021,894.01 net profit. Business men would say a startling result, and the work should be fostered and strengthened—not starved and destroyed. Given $3,500,000 for the present fiscal year, and the estimates are $1,300,000 to $1,500,000 net profit; and upon simply natural growth, if you give for the next fiscal year $4,000,000, the amount asked for, which will meet the requirements of the great cities and promote your subordinate force as the statute directs, you will receive a net return of $2,000,000. Does not this presentation of the case strike the gentleman as having a basis of common sense, and would not any business man so appropriate? I fear the shadow of things political in a Presidential year destroys the gentleman's judgment and vision. He sees only patronage and power in increased ap-

propriations. I see only the people—right and privilege to have a good service, when they maintain and give surplus revenue to this governmental monopoly by direct taxation, and at the same time carry in the mails $3,000,000 in postages on franked matter.

The bill is consistent only in its inconsistencies; wherever it legislates upon the vital wants and necessities of the service it but cripples and destroys. You do not give that which the law allows, therefore you give nothing for an extension of the service, and you give nothing for its growth in the one hundred and fifty-nine cities where it is now established; and yet the gentleman says his bill is generous. Comment is unnecessary.

Let me briefly consider two other items. For railway mail post-office clerks you appropriate $4,000,000; the amount asked for is $4,295,289.60, an estimate based upon natural growth and an intelligent examination of the requirements of this branch of the service. This year the appropriation amounts to $3,977,120. You allow an increase of about $23,000. Every man in this House is familiar with the railway postal service, and he knows as the railroads and new enterprises add to their vast lengths 10,000 miles additional each year the postal railway service must go with it. Upward of 4,000 men are now employed in this branch of work. Your $23,000 will not give the men now employed their increased compensation under the regulations. Does the gentleman expect this service to stand still during the next fiscal year? Does he think the present force can be worked harder? Let me tell him it is the most exacting and severe work in any branch of the Government employ. Every man averages a run of one hundred and twenty miles daily throughout the year, and it is work from the starting to the ending of the trip. No railroad in the country so works its train men. I will read a letter received from the superintendent of the service, and written at my request:

POST-OFFICE DEPARTMENT,
Washington, D. C., March 7, 1884.

SIR: Referring to our conversation, permit me to say that at the close of business, February 29, 1884, there were 4,025 railway postal clerks, the cost of the same being $4,026,141.

The mails are much lighter in summer than in winter; consequently when the appropriation becomes available (July 1) it is the practice to withhold as much of the appropriation as possible to increase the force during the winter months when the mails are very heavy, which will account for the present aggregate expenditure being greater than the appropriation ($3,977,120) for the present fiscal year. The good of the service at the present time requires three hundred and sixty-eight additional clerks, of which number one hundred and forty-three should be appointed to new lines on which there are no postal clerks. I could have given the lines in detail, but did not think you would care to be burdened with it. There is a very urgent demand for service on the new lines, but the Department is powerless to grant any relief.

Very respectfully,

W. B. THOMPSON,
General Superintendent.

Hon. H. H. BINGHAM,
House of Representatives, Washington, D. C.

Perhaps the superintendent of this service, a gentleman of long experience and tried efficiency, is mistaken in his estimate of the work and necessities of the service; therefore the amount must be reduced to meet the ideas of the gentleman presenting this bill, who I have no doubt will at some stage in the debate give us his reasons or some convincing statement justifying this reduction. The Postmaster-General tells us why he will require the full amount, and a simple examination of the proposition must force the gentleman to admit that his allowance will not carry on the service. But it will prevent any additional appointments of men during a Presidential year, and adds almost $300,000 to the great political reduction of Department estimates. The statesmanship that pervades this bill is indeed of a lofty and far-seeing character. In mail messengers the amount asked for is $1,100,000; the amount the bill appropriates is $900,000; the allowance for the present fiscal year is $850,000. Do you know what a mail messenger does? Let me tell you in the language of the regulations:

In connection with railroad and steamboat routes, mail messengers are designated to carry the mails to and from post-offices not at the termini of routes when such post-offices are more than eighty rods from the steamboat landing or railroad station.

The Postmaster-General always gives us a reason why he asks for an increased appropriation. The committee, however, are delightfully neglectful of any reason for non-compliance with intelligent demands. I read from page 123 of the Postmaster-General's report, 1883. He says:

The rapid growth of the railway service has added largely to the expense of this service, so that the average cost of new service during the last four months has been at the rate of $100,000 per annum. This rate of expenditure will make necessary a deficiency appropriation of $75,000 for the current year and an appropriation for the fiscal year ended June 30, 1885, of $1,100,000.

We have $850,000 for the current year; we are told we will be in deficiency $75,000, and that makes $925,000; and yet the gentleman, in recognition of the growth of the service, allows $25,000 less than this year, and in addition, to use his own language, speaking of the revenue for this year, he says "the receipts have been surprisingly greater than was anticipated," and he fixes the revenue at $50,000,000, while the Department estimates are $47,104,000. He gives almost $3,000,000 more of receipts, and therefore just that additional percentage of increased work over the Department estimates, and in every item for brain-force and man-power he curtails the estimate of the Department. If the Postmaster-General had thought the revenues would have been $50,000,000 instead of $47,000,000 he would have estimated accordingly; but the gentleman increases the revenue over the Department estimates and reduces the allowances for doing this increased work under the Department estimates. Wise legislation, indeed! In this item alone of mail messengers he gives $25,000 less for the next fiscal year than the amount the Postmaster-General tells us will be the cost of the service for this year.

You appropriate in this bill every dollar asked for steamboat service and railroad transportation. There you recognize the growth and the extension of the service; but when your railroads and your steamboats have carried your mails to the station or point of deposit and they must then be carried by mail-messenger service to the post-office distant more than a quarter of a mile, you immediately curtail and cut down. Your bill allows the establishment of additional post-offices without limit, but it makes no provisions for delivering the mails when the offices are distant more than eighty rods from the road. Grand and brilliant indeed is such legislation! It may be regarded as cunningly devised and considered politically safe, but the people will soon read between the lines of your proclaimed generous legislation and see its failure in results, its inadequacy and consequent business inconvenience and injury.

Not content with the annoyance and complications that will surely follow the enactment of this bill into law, your committee has determined to make a direct attack upon the great railroad corporations in order that the bill may be politically stronger, and the paragraph appropriating for inland mail transportation, while in effect allowing all the Postmaster-General asks for, reduces, inthe words of the section, "all railroad companies for the transportation of mails 5 per cent." The geptleman gives a reason for this statesmanlike procedure. He says:

In 1876 Congress reduced the basis of rating of the compensation of railroads 10 per cent. In 1878 it was still further reduced 5 per cent. This was the last reduction made for this purpose. The railroads are at present carrying passengers, express, and freights far cheaper than they were carrying them at the period of the last reduction. The cost of material, of wages, and the ordinary expense of running railroads are cheaper than they were at that period. We feel, therefore, that Congress can, without being charged with injustice to the railways, reduce this rate of compensation to the extent provided here.

The last Congress appointed a commission of experienced Post-Office officials "to investigate the railway mail service, and devise a system of gauging the rates of pay for carrying the mails." That report was sent to Congress on the 20th of December, 1883, and contains in detail a complete history of the service; an explanation of the inequalities of the law of 1873, under which the mails are now carried, and submits recommendations of change in the system radical and thorough. For more than three months that report has been before the subcommittee on appropriations in charge of this bill. I do not think they ever referred to its carefully prepared exhibit or examined the recommendations of the commission. Certainly, if they had, this horizontal-reduction paragraph would never have been presented for action. The experience in 1876 and 1878, when Congress enacted legislation of a similar character, resulted in a stoppage of the mails on the New York Central and Pennsylvania Railroad trunk lines, and the clamor, protests, and demands of the people forced Congress to establish a special mail service, whereby the great roads received virtually special allowances, in lieu of the reduction of 10 and 5 per cent., under the acts of 1876 and 1878.

You do not in this bill make any appropriation for special mail facilities. By the 5 per cent. reduction you reduce the compensation to railroads not land-grant or subsidized about $600,000 annually. I shall not discuss the question covering a reduction of transportation rates for the land-grant and subsidized roads. Gentlemen specially familiar with the subject will present it to the consideration of the committee. The horizontal-reduction clause in this bill I regard as unjust, inequitable, and unfair. The great roads that render the highest conditions of completed and perfect railroad management, equipment, and service are reduced from their already low rates under the law of 1873, and the small roads, transporting but limited weight of mails, are reduced the same percentage as the great trunk roads, while at the same time they receive four and five times greater compensation.

The gentleman says they will save to the Government $600,000 by this clause in the bill. I have no doubt of it. But it was possible for the committee to make even a greater saving, and at the same time to legislate with wisdom and justice, had the subject been intelligently investigated. The report of the commission exhibits a possible saving of $1,000,000 for the next fiscal year. The proposition is simple and susceptible of conclusive demonstration. It proposes to pay for the elements entering into an efficient railroad mail service. The roads now doing the work should receive fair compensation. If they do not do the work they certainly have no claims for exorbitant or unreasonable rates. Permit me to read the letter addressed by the acting Second Assistant Postmaster-General to the chairman of the Committee on Post-Offices and Post-Roads, a copy of which was duly mailed to the Committee on Appropriations.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. BINGHAM. I would like to have a little further time, if possible.

Mr. WHITE, of Kentucky. I ask unanimous consent that the gentleman from Pennsylvania be given fifteen minutes additional time.

The CHAIRMAN. The House has limited the general debate, and it would not be in order for the committee to extend it.

Mr. HOLMAN. I presume that the remaining time on that side of the House is at the disposal of the gentleman from Pennsylvania or his friends.

The CHAIRMAN. The gentleman from Indiana will be recognized next. The Chair desires now to state that the arrangement made by the gentlemen on the several sides of this bill as to the debate has been defeated by the action of the House.

Mr. HOLMAN. I suggest, though, that three hours were allowed for debate. Of course the gentleman of Pennsylvania represents one hour and a half of that time, and I suggest therefore that he consume such time of that hour and a half as he may think proper.

The CHAIRMAN. The Chair will not interrupt the gentleman unless some member of the committee sees fit to do so. It is not proper, however, to entertain a motion to extend the time.

Mr. SKINNER, of New York. If I can be recognized I will yield to the gentleman.

The CHAIRMAN. The gentleman from Pennsylvania can proceed unless objection is made by some member of the committee.

Mr. HOLMAN. I suppose the time can not be extended by the committee, but the gentleman can use the half hour remaining to that side of the House.

The CHAIRMAN. The Chair will understand that the time is being used by the assent of gentlemen on the other side unless objection is made.

Mr. HOLMAN. Of course the time can not be extended by the committee.

The CHAIRMAN. It can not. The Clerk informs the Chair that the additional time was granted with a view to allowing the gentleman from Illinois [Mr. TOWNSHEND] to close the debate. The gentleman is not present, the Chair perceives.

Mr. HOLMAN. This will not interfere with that arrangement.

Mr. BINGHAM. I thank the House for the courtesy.

The letter reads:

POST-OFFICE DEPARTMENT,
OFFICE OF THE SECOND ASSISTANT POSTMASTER-GENERAL,
Washington, D. C., February 14, 1884.

SIR: Concerning the report of the committee appointed to devise a more complete system of gauging the rates of pay for carrying the mails on railroad routes, submitted by the Postmaster-General to Congress in accordance with the provisions of section 3 of the act of March 3, 1883, I have been requested by Hon. J. H. JONES, of your committee, to submit some observations relative to the effect of the recommendations in said report as touching the increase or decrease of cost of mail transportation by railroad routes.

Having participated in the preparation of the scheme embodied in the recommendations of the committee I can speak with some degree of positiveness concerning it, and have to say that the rate of pay adopted as the initial basis of compensation, *i. e.*, 25 cents per mile run for cars fifty feet in length, is, in my opinion, not only a fair proposition, but is also the only just and practicable basis of payment for the peculiar service required by the Post-Office Department. Under the plan proposed compensation would be made according to the amount and character of the service rendered in each case; and the result would be to decrease the cost of transportation by railroad per annum $1,687,980. From this deduct cost of delivery of mails to offices recommended by committee, $687,980; net saving per annum, $1,000,000.

The $687,980 deducted for the above reason is a greater sum than will in my judgment be required for that purpose; but the sum is used that the estimated saving to the United States by the proposed plan may not by any possibility be overstated. This saving, I repeat, will be not less than $1,000,000 per annum on the basis of present cost: and there would be a continuous and additional saving realized as the service is developed. All of this can be accomplished in the way proposed by the committee and now fully embodied in the bill before you. The proposed law, if enacted, will result in the improvement of the service and will not injure any interest.

I have much satisfaction in being given this opportunity to define the views of this office in regard to the proposed law and its effect upon the cost of mail transportation by railroad routes.

Very respectfully,

H. D. LYMAN,
Acting Second Assistant Postmaster-General.

Hon. H. D. MONEY,
Chairman Committee on Post-Offices and Post-Roads,
House of Representatives.

The necessity for a revision of the law compensating railroads for the transportation of the mails is recognized by all. No one can dispute or does contest the proposition. It is desired by the railroads as well as by the Government. The year 1883 shows a railway postal service 110,000 miles in length at a cost of about $13,800,000. The practical objections to the present law are, in the language of the commission:

First. The great volume of postal transportation is performed in cars or apartments and accompanied by clerks. Under the law there is no discrimination between service so rendered and closed mails carried in bulk in baggage-cars. It is therefore to the interest of the railroad companies to provide the least possible space accommodation for the mails.

Second. The matter of frequency is covered by the indefinite expression "due frequency." Practically there is no discrimination, where the same weight of mail is carried, between cars or apartments, with clerks, running six, seven, twelve, or fourteen round trips per week; the less frequent securing the same rate as the most frequent.

Third. The matter of speed is disposed of in the expression "due frequency and speed." Under this law the speed with which the mails are carried, though a feature of great value to the public, has no effect on the rate of pay.

Fourth. The size of cars or apartments to be used is provided for by the following phrase:

"Sufficient and suitable room, fixtures, and furniture, in a car or apartment, properly lighted and warmed, shall be provided for route agents to accompany and distribute the mails."

All of this is insufficient and too indefinite to be continued as the expression of the requirements of the Post-Office Department with regard to the 115,000 miles of postal service.

Fifth. Specific allowance for railway post-offices is an entirely unreasonable method of compensating for the service required. There is no reason known why 15, 25, or 35 feet of interior car space used for mails and clerks should not be made the occasion of specific allowance, if 40, 50, and 60 feet cars, used in precisely the same manner, are so treated.

Sixth. The regulation continued under the present law requiring railroad companies to deliver mails into terminal offices, and also to all other offices not over eighty rods from the line of road, has become a serious hinderance to the efficiency of the postal service.

Seventh. The present method is further defective because of the great inequality existing in many cases between the weights carried and the apartments provided.

An analysis of the tables accompanying the report of the Postmaster-General, showing the daily weights on all the roads in the United States, with the size of the apartment corresponding, will reveal such incongruities as the following: On one road a daily weight of 200 pounds of mail is carried in an apartment 7 feet long; on another road the same weight is carried in an apartment 13 feet long. On one road 400 pounds of mail daily are carried in an apartment 8 feet long, while another road carries the same weight of mail in an apartment 16 feet long. On one road 700 pounds of mail are carried in an apartment 9 feet long, while on another road the same daily averge weight of mail is carried in an apartment 42 feet long. Either in the one case the space provided is too small or in the other case it is too large. In any case a system which would equalize the amount of space as related to weight would manifestly be an improvement upon the present methods.

These objectionable features the committee hope to avoid in the scheme proposed and herewith submitted.

So much for the law of 1873. Now as to the well-considered views of the commission concerning the present law. Permit me to read what they recommend:

1. That the compensation to the railroads for carrying the mails shall be determined upon the basis of the space used and the frequency and speed with which the mails are conveyed.

2. That the space factor shall be determined by the Postmaster-General, in view of the needs of the service, modified by the weight and frequency of the mails; that the speed factor shall be determined by the schedules of the various railroads, in connection with the official reports of the railway mail service.

3. That the pay for all mail transportation shall hereafter be at a fixed rate per linear foot of car per mile run. This rate to cover the entire cost of the service, furniture, and fixtures in the car, transportation of postal clerks, &c.

4. That the Postmaster-General may at any time order an increase or a reduction in the amount of space to be paid for, if, after a weighing, it be found that there has been a sufficient increase or diminution in the amount of mails transported on any railroad to require the same.

5. The closed or pouch mails, now carried in express or baggage car, without postal clerks accompanying them, requiring no space for distribution *en route*, shall be paid for on the following basis, namely: The aggregate weight of the closed or pouch mails carried on any road on all trains for twenty-four hours shall be made the basis of pay, and this aggregate weight reduced to an equivalent in linear feet of car space in the following proportions:

Two hundred pounds of mail or less shall be rated as the equivalent of 6 linear inches, to be paid for at the rate of 5 mills per linear foot per mile run.

Five hundred pounds of mail shall be rated as 1 linear foot, and for each additional 500 pounds 1 linear foot of car space shall be allowed, with the proviso that the pay for transportation of mails upon any railroad route for six round trips per week shall not be less than $35 per mile per annum.

6. That the side service be discontinued.

7. That the pay for railway post-offices, at a speed of 20 or less miles per hour between termini, be 5 mills per linear foot, inside measurement, of car space per mile run, and for each increase of speed amounting to 2 miles per hour up to and including 30 miles per hour, one-tenth of a mill; *i. e.*, 22 miles per hour, 5.1 mills; 24 miles per hour, 5.2 mills; 26 miles per hour, 5.3 mills; 28 miles per hour, 5.4 mills; 30 miles per hour, 5.5; and for each additional mile per hour, one-tenth of a mill.

And it is further recommended that in the adjustment of space by linear feet for railway post-offices a daily average of 500 pounds of mail or less shall be entitled to pay for space not to exceed 13 feet. From 500 to 1,000 pounds, space not to exceed 15 feet. From 1,000 to 2,000 pounds, space not to exceed 25 feet. From 2,000 to 4,000 pounds, space not to exceed 40 feet. And we recommend that no change in the allotment of space shall be made until the average weight reaches 6,000 pounds. For 6,000 pounds, 50 feet; for 8,000 pounds, 60 feet—the weight to be ascertained by a weighing of not less than thirty consecutive days; and no additional space shall be paid for unless it is found to be necessary.

In all railway post-offices the load should not exceed double the greatest weight specified for the respective lengths, and for any gross weight carried on two or more trains daily the space may be subdivided upon the gradients of space for lower weights, as the nature of the service may require; with the further provision that the Postmaster-General may increase the compensation upon any railroad route not to exceed 50 per cent. per annum for special mail trains performing service upon schedules fixed by him. In all these estimates the minimum car width should be fixed at 8 feet 6 inches, inside measurement.

Respectfully submitted.

RICH'D A. ELMER,
W. B. THOMPSON,
ISAAC C. SLATER,
Committee.

The committee had before them the carefully prepared and comprehensive report of the commission. They passed it by. In fact, I do not think they ever concerned themselves about the testimony and information the report contained. A million of dollars could have been saved and the service reorganized; they preferred to disorganize the service and strike at the corporations, alleging that by such legislation as a 5 per cent. horizontal reduction $600,000 would be saved to the Government. They were indifferent as to whether the reduction was just in one case and unjust in another; they saw simply the corporation head and struck at it.

We are to be congratulated, Mr. Chairman, that there are other committees in this House not wholly indifferent to the conditions of a well-organized and properly adjusted postal service, allowing equitable compensation for work done, and at the same time extending exact

justice to all interests, individual, corporate, and governmental. The gentleman who presides over the Post-Office Committee [Mr. MONEY] has had long experience as a member of this body, and I think during his ten years of service has been identified with the Committee on Post-Offices and Post-Roads; therefore he brings to the consideration of the legislation proposed in relation to this Department of the Government a wise and capable understanding, a broad and comprehensive training, and a knowledge of the wants and demands of the people. Under the gentleman's industrious and intelligent administration of his committee we have examined carefully the report of the commission, and have been enabled to submit to the House a bill reorganizing and readjusting the railway mail service, in order that speed together with space and weight may be the determining factors in fixing compensation. That bill has been reported favorably from the committee, and if passed will save to the Government more than $1,000,000 per annum, and at the same time pay the railroads that do the work fair and reasonable compensation.

The legislation contained in the bill before us retains all the objectionable features of the law of 1873, and adds to the many roads which are returning to the Government a most efficient service, a reduction of 5 per cent., when it has been well known their present compensation has not been equitable. I affirm the roads that render the Government the best service, carrying the mails on trains running thirty-five to forty miles an hour, giving every terminal facility and convenience, furnishing equipped postal cars and carrying large numbers of postal clerks, are materially affected by the horizontal-reduction clause contained in this bill, while the smaller roads that carry less than one ton per day of mail matter run at a speed of from twenty-two to twenty-seven miles an hour, furnish neither terminal facilities nor postal cars, will not be to any appreciable extent reduced in their compensation under your horizontal reduction. The reason for this is found in the law of 1873, which pays for weight carried, but as the weight carried is increased the rate allowed is greatly decreased. I will read the law:

Schedule of rates for railroad mail service under act of March 3, 1873.

[Each additional 2,000 pounds, $21.37½ additional.]

Average weight of mail, whole distance, per day.	Pay per annum per mile of route's length.	Pay, less deduction of 14.50 per cent.
1— 200 pounds daily	$50 00	$42 75
200— 500 pounds daily	75 00	64 13
500—1,000 pounds daily	100 00	85 50
1,000—1,500 pounds daily	125 00	106 88
1,500—2,000 pounds daily	150 00	128 25
2,000—3,500 pounds daily	175 00	149 63
3,500—5,000 pounds daily	200 00	171 00

For all weights up to 200 pounds, when the mail is carried six times a week, $50 per mile per annum is paid. Payment in all cases is dependent upon the provision by railroad companies of sufficient and suitable room, fixtures, furniture, &c.—*Postal Laws and Regulations*, 1879, section 629.

Permit me to read the rates received by the railroads under the law, and you will observe the small compensation paid the great roads that give your mails every advanced convenience and the large rates received by the roads carrying less than one ton per day of mail.

The great roads.

The smaller roads receive four and a half times greater pay than the trunk lines, upon which are carried the immense tonnage, with every modern facility and convenience. This horizontal reduction of 5 per cent. reduces all the roads, but, as is apparent, the great roads now carrying the mails at the lowest figures will suffer the most, while the smaller roads will not materially feel the reduction. As an illustration, the Pennsylvania Railroad and the New York Central Railroad will be each reduced about $25,000 per annum, and the roads carrying less than a ton but a few hundred dollars.

Mr. HOLMAN. Will my friend allow me to ask a question?

Mr. BINGHAM. Yes, sir.

Mr. HOLMAN. Does the gentleman from Pennsylvania mean the reduction should have been brought about by reducing the compensation of the smaller lines?

Mr. BINGHAM. I mean that reduction should be brought about by paying to the railroads exactly the value of the service they perform, and that it would have been brought about by the bill recommended from the Committee on the Post-Office and Post-Roads, whereby a million dollars would have been saved to the Government.

Mr. HOLMAN. By reducing the rate of compensation to the smaller railroads?

Mr. BINGHAM. If the smaller railroads do not do the service, then their compensation should be reduced.

Mr. HOLMAN. They are the corporations to be affected, then—the smaller roads?

Mr. BINGHAM. The gentleman cannot whistle the statement down in that way. All the corporations are to be affected. The greater corporations, the trunk lines, carry to-day the mail at a rate of 8 cents per ton per mile, whereas the smaller corporations are paid 33 and 35 cents per ton per mile. But the bill which the Committee on Appropriations had before them, reported favorably by the Committee on the Post-Office and Post-Roads, will make a reduction of a million dollars on the inland transportation; and it will be such a reduction as will be a fair adjustment and recognition of services.

Mr. HOLMAN. The gentleman refers now, I suppose, to the bill fixing the compensation on the space furnished?

Mr. BINGHAM. Space, speed, and frequency.

Mr. HOLMAN. Does the gentlman remember that in a former Congress a similar plan was attempted, resting on the theory which he now suggests, and it was afterward ascertained that instead of there being a reduction of compensation to railroad corporations there was a heavy increase?

Mr. BINGHAM. I remember, I think during the Forty-fifth Congress, there was a report of a commission, but I believe nothing was ever done with the report.

Mr. HOLMAN. The subject first came up in the Forty-fourth Congress.

Mr. BINGHAM. I regret I can not yield further, as my time has almost expired.

When interrupted by the gentleman from Indiana I was endeavoring to show the House the unequal and unjust effect of this 5 per cent. reduction clause. The only reason given for the reduction is to be found in the statement made by Mr. TOWNSHEND, of Illinois, which I quoted in the early moments of this debate. But why did the committee fix 5 per cent.? Why not 10 per cent. or 20 per cent.; or why not make all the roads the same as you fix the land-grant roads in the bill, 50 per cent.? It certainly can not surprise the gentleman that the justice of the proposed legislation is questioned. You have the power on that side of the House to carry the bill through. You might just as well have made the horizontal reduction a larger percentage, and then have gone before the people and claimed greater economy in the administration of the affairs of the Government. I shall read for the information of the House a letter received from the second vice-president of the Pennsylvania Railroad, who is not unmindful of the position your legislation would force his great company to assume.

Remember, upon you gentlemen rests the responsibility of this whole bill. When the Pennsylvania Railroad and the New York Central Railroad, two great corporations existing only within the limits of their respective States, give you notice that the present ample and complete conveniences and facilities you now enjoy will not be continued under your horizontal reduction, it is time for you to inquire what the people will say who will be directly affected by this antagonism between the Government and the great corporations. You can not say you have not been forewarned, and you will have to give a better reason for your 5 per cent. horizontal reduction than the gentleman from Illinois has submitted. The people do not care what it costs to build railroads and carry freight; they want the mails on the fastest trains, and they think the Government should pay a fair, reasonable compensation for the transportation. Permit me to read the letter of Mr. Thomson:

PENNSYLVANIA RAILROAD COMPANY,
OFFICE OF SECOND VICE-PRESIDENT,
Philadelphia, March 5, 1884.

MY DEAR SIR: Our attention has been called to House bill No. 5459, and on page 4, lines 65 to 70, inclusive, you will find that the Postmaster-General is authorized and directed to readjust the compensation paid to railways and reduce the same 5 per cent. per annum.

Your Department of the Government, more than any other, is aware of the inadequacy of the present pay, and of the extensive and valuable service that the railway companies (especially the two important trunk lines the New York Central and Pennsylvania Railroads) supply to the Government for this inadequate pay. You are also aware of the fact that within six months we have at your request placed on our lines very fast service between the Eastern and Western cities, much against our inclinations, but at your earnest solicitation. We now desire to say to you, frankly and positively, that while we have every desire to meet the wants of the Government and of your Department to the fullest extent, and while we have continued the present service in the expectation that under the bill recommended by your Department there would be a proper increase in the compensation made to us for railway service, we will be compelled, in case any reduction is made in the present pay, to make a proportionate or even greater reduction in the facilities now afforded.

Very respectfully,

FRANK THOMSON,
Second Vice-President.

General W. B. THOMPSON,
General Superintendent Railway Mail Service, Washington, D. C.

I assert, Mr. Chairman, and I believe I have made it clear as the result of my argument covering the provisions of this bill, that the legislation proposed in no wise recognizes the natural growth of the service, and therefore fails to recognize the vast increase of letter matter (the most important to the people), the result of reduced postage, an increase so marked that the exhibit of this year will show a larger percentage than any year in the history of the service. Every appropriation in the bill for man force is virtually the same as for the present fiscal year; no margin for increase, no allowance for the promotion or an advance of pay for a single subordinate in the service. In many paragraphs of the bill the appropriations do not admit of the execution of the law. Where compensation is fixed by statute, and the amount required easily determined, the bill fails, premeditatedly fails, to appropriate the necessary amount. Where increased material is asked for, an allowance is given in the bill, as also in the paragraph where appropriations must follow contract obligations. In these few items only has growth been recognized.

As a general measure, looking to the wants, conveniences, and demands of the people for a complete, well-equipped, and capable postal service, the bill fails, and it fails deliberately. The measure has but one all-controlling purpose and result—political effect. First, to reduce the appropriations estimated for by the Department, without regard to the wants of the service. Second, to attack the corporations, without examining into the value of the service they render, and thereby provoke them into an antagonism with the Government. Third, to refuse to appropriate for any of the divisions of labor in the postal service where the appointment of men can be made during a Presidential contest, civil-service law and regulation to the contrary notwithstanding. Upon you will rest the responsibility of having passed a bill for purely political results, and not an appropriation for the service of the Post-Office Department for the fiscal year ending June 30, 1885.

Pension Laws.

SPEECH
OF
HON. JOSEPH D. TAYLOR,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 11, 1884.

The House being in Committee of the Whole House on the Private Calendar, and having under consideration the bill (H. R. 6094) making appropriations for the payment of invalid and other pensions of the United States for the fiscal year ending June 30, 1885—

Mr. JOSEPH D. TAYLOR said:

Mr. CHAIRMAN: I was not aware until now that this bill was coming up for consideration at this time. It is a subject upon which I feel deeply interested, and I can not let the opportunity pass without expressing my views upon some matters connected with our present system of pension administration, and pointing out what seem to me to be some defects in our pension laws as at present constituted. I am aware that there are some gentlemen upon the floor of this House who think the Government is in the highest degree liberal toward her ex-soldiers, and I am free to admit that I believe it is the intention of the Government to be liberal, just, and generous toward these men to whom we owe so much, but it seems to me there are some essential changes that ought to be made in certain directions to accomplish this end, and some modification of existing laws which the developments of time and experience strongly suggest. If we are sincere in our professions of gratitude and good-will to the soldier, we shall be open to conviction on this subject, and ready to apply the remedy when convinced that one is needed.

The first thing to which I desire to call the attention of the House is the provision embraced in the second section, which fixes the attorney fee of the agent at $10 in all cases. This, while it was intended to be a protection to the soldier against exorbitant fees, has in reality been a great detriment to him in the prosecution of his claim, as I propose to show hereafter. To that part of the section which provides that the claim agent shall not be entitled to demand or receive any part of his fees until the claim is allowed I have no objection to make. I only object to the fixing by an inexorable law the amount of compensation which an agent shall receive in each case at $10.

It seems to me that this law is a reflection upon the competency of the soldiers of this country and upon their widows. They do not need a guardian or trustee. They are capable of managing their own business in this respect as well as in all others. Do the soldier justice, and if he does not then take care of his money he will blame himself and not the Government. And he is just as capable of making a contract with an attorney or claim agent as he is of taking care of the money he has left after the attorney fee is paid.

It has been suggested that this law has been in force too long to be changed, and that all we can now do is to so amend it as to prevent any attorney fee being paid until the pension is allowed. I do not concur in this view. In my judgment it never was a good law, and the sooner it is repealed the better. It has been a curse rather than a blessing, and should no longer disgrace our statutes or embarrass our soldiers. It has been in the interest of irresponsible and unconscionable "shysters," whose pockets have been filled, sometimes at the expense of the Government, but more frequently at the expense of the unsuspecting claimant. It was shown in investigations made last winter that it was no uncommon thing for an agent here in Washington to undertake the procurement of a pension, and secure as soon as he could the ten-dollar fee, after which he gave the claim no attention whatever, and in some mysterious way the names and addresses of those who had been fleeced out of the $10 were placed in the hands of another agent, who was very profuse in promises and who was equally vigilant until he got the second $10, when all at once his hands fell, and the poor pensioner was driven to the third and sometimes to the fourth agent before he obtained his pension or found out what the first agent should have told him, that he had no legal claim whatever for a pension. Agents of this class are just as eager to make an application for a man who has no possible chance to get a pension as they are to make an application for a meritorious claim. There are thousands of claimants who have been induced in this way to pay first one agent and then another and then another, until they have paid out $30 or $40, when they have no shadow of a claim for a pension under existing laws. They were led by these un-

scrupulous attorneys to believe they were entitled to receive a pension in order to rob them in this way. And there are thousands of claimants who are justly entitled to their pensions who have never received them because they have been in the hands of a class of men who have never properly prepared the testimony or presented the case; and these unfortunate victims wonder why their claims are so long delayed.

There are many cases in which $10 is too high a charge. This was especially true at the close of the war, and immediately after the passage of our pension laws. The labor of making an application for a pension where the soldier lost a leg, an arm, an eye, or was wounded in any way in the service, could be performed for $5, in some cases, better than it could be in other cases for $25. The same is true of a widow's claim whose husband was killed or died in the service. There are other cases where the claim is based on some injury incurred in the service or on some disease contracted in the line of duty, in which the labor may be a hundred-fold greater. The surgeons may be dead, the field officers may be dead, the surgeon in charge of the hospital may have failed to keep a proper record, as was often the case, the claimant may have been away from his regiment on special duty, and his injury or sickness known only to one or two private soldiers, whose location is unknown or who may also be among the unreturning dead. These cases, and others no less difficult, can not be prepared by any attorney for $10, and will not be.

The present law makes it criminal for an attorney to receive more than this sum, and the consequence is that thousands of meritorious claims have never been allowed and the claimants are suffering for the want of the money which the Government intends them to have. If these claims were allowed, as they should be, the claimant would receive from one to two thousand dollars, and in some cases more if entitled to arrears. But the claimant is not authorized to pay nor the attorney to receive in any case more than $10, and the result is that some unworthy agent obtains the papers, undertakes the prosecution, gets his $10, and the claim sleeps the sleep of death in some dusty pigeon-hole. Perhaps it was turned over to two or three other agents to whom were paid a like sum for no better treatment.

The effect of this law has been to keep most attorneys in ignorance of the pension laws as well as of the pension practice. For my own part I confess that I had no knowledge until I became a member of Congress of the true character and workings of our pension system. Before that I had no occasion to study the system or become acquainted with the pension laws, as I had never undertaken the prosecution of a pension claim or been in any way connected with the business. Like most attorneys, I regarded the law as unjust as well as unwise, and never undertook to procure a pension for any one. If I aided a soldier in any way, I did it gratuitously. The time of lawyers who have other business is worth more to them than such compensation as this, and the consequence is that very few attorneys of standing and character have engaged in this business. Some have done so as an accommodation, and not because they desired to do so. The passage of this law took this branch of business out of the hands of the legal profession, as a rule. And yet it properly belongs to attorneys at law, and requires as much legal skill and knowledge as the ordinary practice of the law. The man who prepares pension papers should not only understand the pension laws but he should be able to know when the evidence conforms to the law; and if the papers were prepared by competent attorneys, it would diminish the force now employed by the Government and greatly lessen the delay now made necessary by the bungling way in which the papers are usually prepared and by the frequent examinations now made necessary.

If the preparation of pension claims had been left with the members of the bar as other legal business is, the claims would have been prepared in the county where the soldier lives by responsible attorneys, and the Government would not have been imposed upon as it has been by a class of agents who will prepare false affidavits, and by deception and fraud procure the allowance of unjust claims. The Government has been robbed of millions of dollars by these irresponsible agents. If the attorneys generally in the various counties of the States did this sort of business, the pension laws and the decisions of the Commissioner of Pensions and the decisions of the Secretary of the Interior in regard to pensions would be better understood and the claimants for pensions could be correctly advised at home whether they were entitled to a pension or not. In this way a vast number of applications now on file would never have been made. Not only this, but claims now on file which can not be considered favorably because of defective preparation, through the incompetency of the agent, would have been properly prepared and allowed. I have known claims which had been on file for years and had been rejected, placed in the hands of a competent attorney who knew at a glance what the difficulty was, and who at once furnished the necessary proof, and the result was that the claim was allowed in thirty days. This is what is wanted. An attorney should know of himself before the papers are placed on file whether there is a reasonable prospect of success in the most difficult case, and in ordinary cases he should know as well as the Commissioner of Pensions does whether an applicant is entitled to a pension.

I have seen fit, Mr. Chairman, to say what I have on this subject because I have always felt that this law was an outrage and a misfortune both to the soldier and to the Government. It has resulted in the employment in many cases of men who charged and received in violation of law many times what their services were worth; it has resulted in the employment of men who defrauded the Government; it has resulted in the employment of men whose incompetency has kept worthy claimants from securing pensions to which they were justly entitled, and in the employment of agents who have induced thousands of men to apply for pensions who have no claim for a pension whatever, and have thus filled their own coffers at the expense of the men they have robbed.

There is one and only one limitation that I would favor in regard to the employment or compensation of attorneys in pension cases, and that is, I would provide in the law that the attorney fee in all cases should be subject to the approval of the Commissioner of Pensions, whose opportunity for knowing the value of such services is ample, and I would provide that a separate check in each case be drawn payable to the attorney out of the first pension money received. This would protect any one needing protection, would check unscrupulous and incompetent agents, and would encourage honorable practitioners.

Mr. Chairman, it is now nearly twenty years since the close of the war, and in my judgment it is time that the pension laws be remodeled and that radical changes be made.

In no other way can justice be done to a large number of brave and patriotic men who served their country as faithfully and as well as any of those who are now its beneficiaries. The time has come when every honorably discharged soldier who has arrived at a certain age (say 50, 55, or 60 years), who has served a given period (say one year or more), should receive a pension. A bill has already passed the House giving to all the soldiers of the Mexican war a pension of $8 per month. To this bill I gave my cordial support, and I think it was right. At the close of the Mexican war we received almost a million square miles of territory, an acquisition that has greatly enhanced our wealth and resources. Its mountains are filled with ores and its valleys are covered with cattle. It opened the golden gate to the Orient, and gave us the Pacific coast for a commercial center. We owed it to the Mexican soldier and to the Government which we represent to express our appreciation of his services by granting this small recognition and this slight remuneration for his services. Whether the Mexican war was right or wrong is not now a question.

But great as is the debt we owe to these men, we are under still greater obligations to the soldiers of the late war who threw themselves into the "imminent deadly breach" of civil conflict and interposed their own lives between their imperiled country and the deadly onslaught of those who sought its destruction. The soldier who entered the Mexican war fought a foreign foe, who was weak while our Government was strong, and the result was not uncertain. But those of us who can recall the dark days of 1861, when the first call was made for volunteers, and the truth was forced upon the nation that the long-dreaded storm-cloud of war had in reality burst upon our heads, can realize what nerve, what faith, and what unswerving patriotism it required to look through the impending darkness and see certain victory beyond. From the rescued vantage-ground of to-day we look back upon that pathway of blood and pain, and wonder that so soon the anguish of those days has faded into a memory. Then treason was abroad in the land and the very air was laden with its poison. Nearly one-half of the States of this Union had deliberately broken the bonds which bound them to the nation. Nearly one-half the seats in this House and in the Chamber at the other end of this Capitol were vacated. We were without Army or Navy, without money or credit, and we were entering upon a war the result of which was at least shrouded in uncertainty. The call was made, and from village and city, from town and hamlet, from hill-top and prairie, from every portion of the loyal North and West the tramping thousands came, eager to give themselves to the land they loved. They came not for money, not for fame, not for any consideration that the Government could offer or promise, but because they held it to be a high and sacred duty to do and die for their country. The soldier never has been and never can be paid. No compensation in money will ever remunerate him for the hardships and perils he endured during those long and bloody years of war, or bring back to him the health and strength he left in Southern swamp and battlefield. No member of this House, no sane man, could be induced to become a target for whistling bullets and screaming shells for a mere money consideration. And they do not come here asking any charity at the hands of the Government. They are before us, in their age and helplessness, in their suffering and dependence; the widows and orphans of the dead are in our midst; the grand deeds of their patriotism are a part of their country's history, and it is for us to do them simple justice.

Our soldiers were a class of men superior in character, intelligence, and position to those of any other army in the world. Influenced by a pure and lofty patriotism, they left comfortable homes and the sweet allurements of domestic enjoyments, and willingly encountered the long and wearisome march, the exposure and sickness, the malaria of the camp, the desolateness of the hospital, the danger of shot and shell, and the still more dreaded danger of long and wasting imprisonment, to rescue the nation from peril and the flag from dishonor. They asked no pledges from the Government; they were content to trust the

country for whose sake they offered their lives that all that was worthy, all that was generous, all that was befitting a nation made up of such men would be freely and gladly given.

And now, with the nation redeemed, the stain of bondage wiped out forever, and the pillars of our national liberty set upon a more solid and firm foundation than ever before, with the dark horror of war all behind us, with a reunited country entering upon a career of prosperity such as the world has not known hitherto, with an overflowing Treasury and boundless sources of prosperity, it remains for us to keep not only the letter but the spirit of our promises to the men who stood by their country's flag when it cost something and meant something to do it. It is time we should recognize our immense obligations to these men by giving to every one who did honorable service then, such a pension as would lighten the burdens of labor for his declining years. We have done this for the Mexican soldier, as I have said, and it is well. But can gentlemen show any good reason why we should not do the same thing for the soldiers in the late war? The objection has been made that there are too many of them. But they are fast passing away. The soldier of forty years is now the veteran of sixty, and in a few brief years the soldiers of the late war will be numbered with the dead. The generation which has grown to manhood since the smoke of battle ceased to darken the skies will soon take their places. I do not undertake to determine the amount of pension which should be paid in this case. Perhaps $4 a month to those who served one year, $5 a month to those who served two years, and $6 a month to those who served three years would be enough for this class.

From the close of the Mexican war to the commencement of the rebellion was only thirteen years. A young man who entered the Mexican war at 18 would now be only about 55 years of age, and from this time forward he will draw a pension. If this is right, why should not the Union soldier who is 55 years of age also receive a pension? Many soldiers of the late war are now 65 years of age, and if they are ever to receive a pension a law to this effect must soon be passed. There are thousands of these men who need this money who are not pensioners, and probably never will be unless a law of this kind is passed. I am unable to see why the men who saved the life of this Republic are not entitled to this small recognition and this small compensation. I remember very well, Mr. Chairman, the promises that were made to the soldiers when the sound of the fife and drum was heard, summoning the people to the church, to the school-house, and to the town-hall where volunteers were to be recruited. I remember how the speakers were wont to give assurances of future recognition and future compensation. We all know how often it was repeated that no country ever forgets her soldiers. These promises filled the air. Have we kept them? Have we been faithful to those pledges made to the boys who were donning the blue, and bidding farewell to friends and neighbors, and going forward to the conflict which at that time so greatly needed their services?

Anything less than a prompt and full redemption of these promises is utterly unworthy the American people. To seek to avoid the redemption of the nation's pledges to the soldiers is a form of repudiation more reprehensible than the repudiation of our bonds, for in the former case ingratitude is added to dishonesty.

It has become a proverb that republics are ungrateful; but surely this land of overflowing plenty, redeemed and saved by her own loyal sons, should prove a shining exception to this rule.

If all soldiers arriving at a certain age were paid a specific pension a large number of Government employés would no longer be needed. The work of paying them would be simple and easy. At present it is difficult, laborious, and exceedingly expensive. I have sometimes thought that on business principles alone, in view of the fact that such a large proportion is already pensioned, it would be the best solution of the difficulty to pension all at once; I mean after they have arrived at a certain age. No money could be more wisely appropriated than in remunerating the defenders of our country. It would be "bread cast upon the waters," to be gathered up many days hence. And its influence upon the future can scarcely be appreciated.

Mr. Chairman, there is still another change to which I desire to call the attention of this House, and which I most earnestly recommend, and that is this: I think we should pension every honorably discharged soldier who served a given period, say three months or longer, without reference to his age, who is physically disabled from making a living, no matter from what cause or when or where the disability was incurred, if the soldier has no other means of support. There are thousands of soldiers who served all through the war who are now suffering from various diseases contracted in the service, in whole or in part, who are unable to obtain pensions, and who have no means of support, some of whom are already in the poorhouses of the country, others are supported by the charity of their friends and neighbors; and if some such provision as this is not speedily made thousands of soldiers will be driven to the poor-house for a shelter and to the potter's field for a place of interment.

Can it be that this Government of ours, with its untold wealth and treasure, proposes to allow its soldiers to die in almshouses and fill paupers' graves? I do not know how it is with other members, but I know that I receive letters almost every day informing me that unless a pension is granted to some soldier whom the neighbors are now supporting he will be compelled to go to the poor-house and be maintained by the county in which he resides. I do not believe that that is the intention of this Government. If I thought it was I should be humiliated. It would be a national disgrace to be guilty of such ingratitude and injustice to the defenders of the country. I know, Mr. Chairman, it is not the intention of our Government to permit its soldiers to endure this obloquy or humiliation. I come to this conclusion because from the close of the war to the present time we have been building homes for the soldiers and making annual appropriations for the support of their inmates. We now have these institutions in various parts of the country, supported at a heavy expense, showing conclusively that when the soldier has no longer a home to which he can go and where he can be supported it is the intention of the Government that he shall have a place to live where he will be cared for and clothed and fed, and where he can be decently buried when he comes to pass away from the cares and scenes of this life; and yet, Mr. Chairman, I desire to say that in my judgment it is a much wiser and better policy and far more economical to pension these men and leave them at their homes than it is to support them at any national soldiers' home. I do not say how much this pension should be, but certainly not less than $8 per month.

If $12 a month were paid to every soldier who has no means of support and who by reason of infirmity is unable to support himself it would cost the Government but $144 a year, which is less than half the money we are now paying per capita to support the inmates of the National Home for Disabled Volunteer Soldiers. The Soldiers' Home of of the District of Columbia, which is under the care of the Secretary of War, has a very large tract of land connected with it and many sources of income, and yet the average cost of supporting each soldier in that institution is $271.88 a year, which also includes the cost of buildings and repairs during the year, which was but a small sum. In the National Home for Disabled Volunteer Soldiers the average cost of keeping each inmate, exclusive of clothing, is $183.11. This is shown by the last annual reports.

I appeal to this House whether it would not be better to provide pensions for the class of men who need this aid who can remain at their homes and who desire to remain at their homes, instead of sending them to a soldiers' home. By so doing we gratify their wishes and save to the Government this larger expense. Besides this, men are better cared for at their homes with their families than they can be in a soldiers' home. The influences of home can not be too highly estimated. The sacrifice the soldier makes when to escape the infirmary he goes to Dayton or to some other home for disabled volunteers is beyond calculation. Those who are familiar with soldiers' homes fully appreciate the demoralization to which the inmates are not unfrequently subjected. I notice in the last annual report of the National Soldiers' Home that while 2,252 were admitted during the year, 1,121 deserted. And I notice another point in the same report, which is that only 4,179 of the inmates were native-born, while 7,219 were of foreign birth, showing conclusively that it is more in accord with our American education and American ideas to dwell as much as possible in the home and in the family.

The old home is dear to the American heart. Though it may be lowly and humble, though it may have no architectural pretensions or artistic merit, though the roof may be moss-grown and the doorway crumbling, every foot of the grassy door-yard is consecrated ground, every branch of the overshadowing trees is replete with tender memories, every room in the old house is full of hallowed associations, and as the infirmities of age or the helplessness of disease steal over the shattered frame, all these attachments grow stronger, until it seems like tearing soul and body asunder to leave all these things behind and go away among strangers. The author of America's sweetest song never touched a truer chord than when he sang

Be it ever so humble, there's no place like home.

I have not a word to say against soldiers' homes. I think they are grand monuments of our national greatness and of our commendable generosity and liberality, and I would not withhold a single dollar from them or fail to provide for a single soldier who desires to enter them, but I regard it as a wiser as well as a more economical plan to provide pensions for men who are dependent upon the Government for support, and permit them to remain at their homes near where they have lived and where they expect to die, where the associations of earlier days and the kindness of friends and neighbors will gladden and brighten their departing years.

If, Mr. Chairman, it was wise to build national soldiers' homes—and I think it was—I insist that we should take another step and provide for those who have equal claims upon the Government who desire to remain at their own homes in preference to going into these soldiers' homes when it can be done at one-third the cost to the Government. In all these changes I would make no difference between the private soldier and the officer. The only difference should be based on length of service and extent of disability. It is the necessity of these changes I desire now to impress upon this House, and not the details of the measure.

Mr. Chairman, the impossibility of doing justice to the soldier and

to those who are entitled to pensions and who greatly need them is a strong argument in favor of the revision of our pension laws. We have too much machinery. The present system is cumbersome and unwieldy. The Commissioner of Pensions is able and efficient. No man could do more than he is doing in the same situation, and against his administration I make no complaint whatever. I say the same in regard to the medical referee. But what can one man, two men, or a hundred men do under our present laws with half a million difficult questions staring them in the face awaiting decision? The fact is that most of the work must necessarily be done by others, and where so many are employed the work is too often intrusted to incompetent persons. The result is that a pension is allowed by one examiner that would be disallowed by another; that the affidavits which one examiner would hold to be sufficient would be held to be insufficient by another; that evidence deemed necessary by one examiner is deemed unnecessary by another; that additional proof would be required by one examiner which would not be required by another; and in this way, as a necessary and unavoidable result, pensions are granted by one examiner which would be refused by another. Delays and irregularities are inevitable. And in my judgment there are 100,000 persons who are as much entitled to pensions as a like number who are now receiving pensions. Soldiers who are suffering from disease which they can not trace by affirmative proof to the service, who are unable to show their condition at the time they enlisted and each and every year thereafter, who can not prove the existence of the disease at the time of their discharge and the nonexistence of it when they enlisted, who can not prove the time when or the place where the disability was incurred, who are unable to meet the demand of our present statutes, are denied pensions. Women and children, dependent mothers and sisters, whose husbands, sons, and brothers are sleeping in some quiet cemetery are refused pensions because they can not furnish the same proof. The rule of law is too harsh. Twenty years after the close of the war such proof in many cases is impossible.

Mr. Chairman, every soldier who was in the Army, who was at the front, who made long and weary marches, who was exposed to a burning sun in summer and to the chilling storms of winter, who slept on the cold, icy ground who went to bed supperless and shivering, who shared the sorrows of the wounded and dying, who endured the anxieties of years of absence from home and family, who daily stood at the gate of death and braved the horrors of war, suffered tortures for which human flesh is too weak and human nature too infirm. The life of the soldier and the hardships and exposures to which he was subjected shortened his days. His head is whiter, his brow is more deeply furrowed, his step is less firm, and he is in most cases ten years older in appearance and in the decay of bodily strength than he would have been had he never entered the service. Men who supposed for ten years after the war that they were well and strong have since found out as age grew upon them and as disease developed itself that their constitutions were broken and their health was permanently impaired. They are confirmed invalids, unduly gray and prematurely old, but they are not entitled under the law to a pension. They know and their neighbors know that they are now suffering from disease which could only have had its origin in the hardships and exposure of the service, but they can not come within the rules of evidence required at the Pension Office. It is impossible to say when and where this mysterious human framework got its permanent injury. You know that the disease and suffering exist, but you can not explain it. You see it in the pale face, in the sunken eye, in the emaciated form, in the feeble, tottering step, in the sad and silent look, but that goes for nothing in the Pension Office unless you can connect it by positive proof with the service.

Shall these 100,000 beneficiaries to whom the Government is indebted be longer turned away by existing laws and by our refusal to do them justice? The letters which come from the homes and friends of many who are now and have been for years applicants for pensions ought to touch a heart of stone. Mothers who go half clad plead for their children. Fathers who are helpless point to the uncomplaining wife. Neighbors plead the cause of the orphan children. In yonder cottage, where carpet never covers the floor, where the money-drawer is empty, where the fuel is well-nigh exhausted, where the common luxuries of life are unknown, and where the barest necessities of life only are attainable, these claimants have their home; and from these places come letters which plead in piteous words for help. One letter says that a certain man who has been an applicant for a pension ten years is almost blind. Another says that a certain applicant for a pension is helpless and infirm. Another writes about one who is confined to his bed and has been for years. Another is supported by his neighbors. Another is palsied and bedridden. Another is struggling hard to escape the poor-house. All of them have families, are extremely poor, and are applicants for pensions. Some have given up all hope of Government aid and have made up their minds that they will spend the remainder of their lives among the town poor. Others, brave and true as any soldier who ever trod the earth or breathed the air of heaven, have turned away from the Pension Department to bear the ills of poverty and disappointment the remainder of their days as best they can. I insist that this shall not be; that no soldier who stood by his country's flag shall die in a pauper's stall or be fed from a pauper's table; that no American soldier shall be forgotten while we have an overflowing Treasury and inexhaustible sources of wealth. If we suffer these things to exist, if we turn away from the pleadings of these men and allow them to die in want and negligence, then is our boasted laudation of patriotism but the emptiest of empty sentiment.

It is but the veriest mockery to gather about the graves of our fallen soldiers in the spring-time and deck the sod with flowers and pronounce eulogies over their lifeless remains while we deny through a technicality to their helpless widows and children the pittance of support which would lift from their lives the burden of grinding poverty. It is well that we recall the deeds of the heroic dead, it is highly fitting that we bear to their silent resting-places the tribute of wreath and chaplet, and that as we scatter fragrant flowers over their lowly beds we wreathe their memory with the poesy of our rhetoric and warm our pulses with the remembrance of their sacred devotion. But far more important is it that we should do justice to those who are still fighting the battle for existence, often with shattered health and broken constitutions, and with the shadow of the coming end constantly falling upon their pathway. Far more important is it that we recognize the dead soldier's claim upon the country he died to save in prompt and efficient aid rendered to the helpless ones he left behind, and whom we have fondly designated as the "wards of the nation." But small comfort must it be, and but little calculated to inspire a like devotion to American institutions, for the orphan boy to mingle each springtide with the groups of citizens who go to deck his father's grave with flowers and listen to the glowing words of admiration and praise for those who like him died that the nation might live, while he remembers that the same nation which accepted the costly sacrifice allowed his mother to toil night and day to provide the commonest comforts of life for herself and her children, and refused even a crumb from the rich table of its abundance because some thread in the chain of evidence was wanting and was impossible to obtain. As that boy recalls the bare home, the daily struggle with want, the hand-to-hand fight with bitter poverty, the years of suspense, the "hope deferred which maketh the heart sick," and looks around upon the comfortable and luxurious homes of the men who staid at home from the war, is it to be expected that he will be greatly impressed with the value the nation places upon the loyalty and consecration of her patriotic defenders? Is it to be expected that he will grow up filled with an intense devotion to that country whose injustice he has such bitter reasons to remember? No, sir. Human nature is human nature the world over, and if we would have this nation peopled with a patriotic, loyal, and happy people we must do justice to both the living and the dead.

There is another neglect to which I wish to call the attention of this House by way of a reminder. I wish to say that the bounties should long since have been equalized. I introduced a bill to equalize the bounties at the opening of this Congress; others did the same; and still no bill to this end has been reported to this House. You give millions of acres of land to railroad corporations, to agricultural colleges, and to other objects of a kindred nature, but no single land-warrant has been given to a soldier since the war. Why is this? What better object could you select than to give one hundred and sixty acres of land absolutely and unconditionally to every Union soldier?

I repeat it, Mr. Chairman, we are not doing our duty to the soldier. Instances multiply in which the complicated net-work of legal evidence required, but unobtainable, prevents deserving claimants from receiving the pensions to which they are honorably entitled.

I know a lady of culture and character. Her father once occupied a seat on the floor of this Chamber. Her husband and her brothers stood by the Government and bore an active part in the suppression of the rebellion. Her husband entered the Army as a private and came out at the close of the war at the head of his regiment. He never knew what it was to hesitate or falter in the thickest of the fight or in the hardest of the march. He was supposed to be dead in one of the hardest fought battles of the war and was left in the hands of the enemy. This news was sent home to his father and mother and to his wife and children. His funeral was held in the home of his boyhood and his obituary was published in all the papers. He did not die as was supposed, but came home later to rejoice in the victories of a triumphant army, carrying by his side the dangling sword and rusty scabbard which he had never hishonored, followed by the brave boys that loved him as a brother. His health was wrecked and his constitution was broken, but he would not complain. His friends could read his doom in his sunken eye and see it in his faltering step. I was with him at school and knew him from boyhood. Among all the young men in the neighborhood or among all the scholars at school no one was more vigorous or active. When he came home he would not apply for a pension. He did not go into the Army for money; that he could make at home. He went into the Army at the first bugle-call because he was full of patriotism, and he never laid down the armor till the last battle was fought and the last victory won. At no time would he consent to apply for a pension, though he went gradually down from the time he came out of the Army. He had a mistaken pride which restrained him. Besides, he felt that he did not need a pension, that he was comfortably well provided for in life, with ability to accumulate all the money he needed. He died, and the settlement of his estate

showed that he had not left a dollar, and his wife and his three lovely children were penniless. The friends of the widow insisted that she should then apply for a pension. She did so some time during the term of my late predecessor in Congress, but up to this hour she has received no pension, and is now and has been during all these years supporting her children with the work of her hands. Again and again I have called up this claim and ascertained its condition, again and again I went to the Commissioner and urged its speedy consideration, and am frank to say now that I have never been able to comprehend the difficulties which have been in the way of its allowance. I could cite many such cases, and my heart has been touched a hundred times at the piteous appeals which came from neighbors and friends in behalf of those who have claims upon the Government and yet have been unable to secure recognition. Hundreds of men who were brave and true soldiers are to-day objects of charity. Shall we suffer this injustice and wrong to continue?

One of the principal difficulties in procuring a pension under existing laws is the necessity of showing that the claimant in each case was sound in body or free from the disease in question when he entered the service. This I regard as an unjust and unreasonable requirement. No such law should ever have been in existence. Before a soldier entered the Army he presented himself for examination; he did not undertake to say, nor did he in all cases know, whether or not he was fit for the service. He did not undertake to decide whether he was capable of rendering such service as the Government required. This was a question for the Government to determine, and for this purpose, in all cases, a surgeon was designated to make the examination. All the soldier could do was to present himself and submit to any examination the Government saw proper to make; and we all know very well the manner in which these examinations were made. The soldier was stripped, in part at least, and examined from head to foot, and was admitted to the service or rejected on the judgment of the examining surgeon appointed for that purpose. If a man entered the Army who was unfit for the hardships of the service, was it his fault? If he was patriotic enough to do what he could, if he was willing to follow his country's flag and imperil his life at the call of his country, was that not enough? And if he was improperly admitted to the service it should certainly not be charged against him.

It is the law, and has been for a thousand years, in all civilized countries that every officer is presumed to do his duty, and that the principal is in all cases bound by the acts of his agent within the scope of his employment. In this case every man who entered the Army was examined by a surgeon, was found to be capable of rendering service and becoming a soldier. This being the case, he should be presumed to have been sound and in good health when he entered the service. More than this: as the examining-surgeon was the agent of and, for that purpose represented the Government, his examination should be conclusive in the absence of proof to the contrary, and the Government should be bound by it. This rule of law is recognized by all the courts of this country in all the ordinary transactions of life. Why should it be denied to the soldier, to his widow, or to his orphans? The man who was troubled with lung disease when he entered the service and was examined and passed is now to be denied a pension, or if he be dead, his wife and children are debarred from receiving a pension because it is said he was not in perfect health at the time he entered the service. Hundreds and hundreds of dollars are expended in sending agents out over the country hunting up testimony, going from house to house for the purpose of showing that a man had this or that trouble prior to the time he entered the service. And yet he entered the service, he endured the toilsome march, he went through the thickest of the fight, exposed himself to disease and death in his country's defense, and still no pension is granted because the officer making the examination is held not to have done his duty. If there was a wrong in this examination, who did it? Who is responsible for it? The surgeon who was supposed to know the qualifications of the soldier, or the man who was not supposed to know? Whether he was capable of rendering service or not was the question the surgeon was to decide. This man had been accustomed to hard and laborious work at home, he had supported his wife and family, and he conceived it to be his duty to leave his home, his wife and children, that he might aid as best he could in the suppression of the rebellion. He went forward and did his duty faithfully and well. Shall he be punished now, after he has rendered the service, or his needy family suffer because the officer was derelict? If he had this disease at the time he entered the Army, was it not aggravated? Did not the exposure to which he was subjected hasten it? And is it not likely he would be living to-day had not the exposures and the hardships of the war hastened the ravages of his disease? Be that as it may, the Government had an examination made, and by that examination it should be bound, and all this testimony in regard to the soldier's physical condition when he entered the service should be dispensed with. If the law was changed in this respect nearly one-half the expense of the Pension Department would be saved. Delay, vexation, and hardships upon those entitled to pensions would be obviated.

In hundreds of cases the Commissioner of Pensions writes the applicant, whose claim has been on file one, two, three, sometimes five and sometimes ten years, that his claim is awaiting proof of prior soundness; that he must show that he did not have this disease at the time of his entering the service—requiring negative proof, and in many cases proof which it is impossible to furnish.

I recall to mind a letter which recently passed through my hands to a claimant residing in my district. This letter stated it would be necessary for him to furnish proof of prior soundness, and that he must forward the affidavit of his former family physician to that effect; that this was necessary, and without it or its equivalent his claim could not be allowed. The man wrote me that this was impossible; that he was but a boy when he entered the Army; "that he had had no former family physician, and that he had never been treated by a doctor in his life, so far as he could remember, until since the close of the war."

This is only one case, but it is precisely like thousands of others.

In a letter dated February 9, 1884, the Commissioner of Pensions wrote to another claimant these words:

> In order to secure consideration of the claim it will be necessary for you to procure medical evidence showing your soundness and freedom from disabilities for which you claim a pension prior to your enlistment or before the date of your capture by the confederates, as well as medical evidence showing the existence of alleged disabilities at the time of your return from prison or at the date of your discharge. It will be necessary also for you to submit the best obtainable testimony, either of a commissioned officer or credible comrades or enlisted men who had personal knowledge of the incurrence of the disability stated in the service, which testimony should show as nearly as possible the time when, the place where, and the circumstances under which the disabilities were contracted.

This could not be furnished and the claim was rejected. Such is the character of the proof required. The pensioner is asked to prove a fact which was established by an examination at the time that the soldier entered the service and was then made a matter of record and ought to be conclusive. And yet the soldier is required to show that the certificate of the surgeon, then made by a man who was representing the Government and who was at the time acting for the Government, was true; and he is required to do this by extraneous evidence more than twenty years after the time of the examination, when in many instances the proof is absolutely impossible. By requiring such proof as this the Government presumes the certificate of its own agent false. And yet this is the law, and because claimants can not furnish this evidence they are refused pensions. I undertake to say, Mr. Chairman, that such a law is a disgrace to this Government and should be immediately blotted from our statutes, and I trust that this session will not come to a close until this law is changed.

There should of course be one exception to this rule and that is this: Where it is shown that a certain disability existed when the claimant entered the service he should not afterward be pensioned for this disability. For example, if he had lost two fingers before he entered the service he should not be pensioned after the war for the loss of two fingers, his condition being the same in that particular when he leaves the service as when he entered it.

The law, as stated in the letter from which I have just quoted, requires the soldier to prove his soundness when he entered the service and that the disease existed at the time he quit the service, or that he was sound when he was captured by the confederates and unsound at the time of his release, and all this must be established by "medical testimony." Not only this, but he must show "as nearly as possible the time when and the place where and the circumstances under which the disabilities were contracted."

These proofs are in many cases utterly impossible. The soldier has no authority to compel any witness to give his affidavit. Some men will recollect what others will forget. Some men are willing to swear to almost any affidavit you write, while others are as unwilling to swear to an affidavit they believe to be true. Some memories are easily refreshed, while others will not listen to an explanation. These witnesses have no interest in the matter and do not care to make oath to facts which have somewhat faded from their memory. They are engrossed in business, they live long distances from the claimant who seeks their affidavit, they saw so much and came through so much during the war that the war itself begins to seem like a dream. They saw thousands of men in the hospital, in the camp, on the battlefield, on the march, both dead and alive, and how can they now distinguish one from another and state facts in detail in regard to any one? In most cases it is impossible.

I desire that the law shall be so modified that prior soundness shall in all cases be presumed, and that the disease from which the soldier is now suffering shall be presumed to have been contracted in the service. Do not require the claimant to prove where he contracted the disease, whether in the service or out of it; do not require him to trace his disease to the cold ground upon which he slept, to the deep stream through which he waded, to the bloody battle in which he fought, or to the long years of absence and anxiety during which he suffered. This in many cases is impossible. Circumstances forbid it. Time and change have rendered it impracticable. If the Government can show the contrary let it be done, but in all cases give to the soldier and to his widow and to his orphans the benefit of the doubt. If the soldier rendered a certain amount of service, say three, six, or nine months, and was honorably discharged, and is suffering from any disability in a pensionable degree, let the proof of these facts place his name at once on the pension-roll and cease further higgling unless some other satisfactory explanation of the disability is given.

There are some changes in the medical department which I think

ought to be made. In a work so vast as that of the Pension Department perfection is impossible. Where 1,500 men and women are daily employed mistakes and errors are unavoidable. But I think the organization of examining boards was a mistake. The Pension Commissioner congratulates the country on the selection of three able surgeons at every point where examinations are made. I am satisfied that in most cases these boards are composed of the most eminent men in the profession in the vicinity where they are located. The liberal fee of $2 is paid for examinations; and yet it is not always the case that these examinations are made by three surgeons, and are often too carelessly considered. In a recent case a pensioner, whom I know very well, was receiving $2 per month, when he was ordered before another board for re-examination, and the board that examined him the last time gave him a rating which entitled him to $6 per month. These instances are by no means uncommon. Too often these examinations are made in too great haste; twenty or thirty men are examined in twenty or thirty minutes. Too often the examination is made by only one surgeon, and that the youngest member of the board, who has more time than the others, who can only find time to sign the reports and draw their compensation. There are honorable exceptions to this I have no doubt, but we all know how boards do business. The committees of this House divide their work between subcommittees, who again subdivide, until finally one man does one thing. Would it not be better to have an examination made by one surgeon at a time and let the examination be repeated as often as is desired? But there should be no opportunity for the surgeons making examinations to confer with each other. Three separate examinations made by three surgeons who have no opportunity of collusion would certainly be more reliable than one examination supposed to be made by three surgeons. Medical examinations made by these boards are often so unsatisfactory and so conflicting that the pensioner is subjected to frequent examinations.

And while I am on this subject I want to suggest that in my judgment some of the surgeons in the Pension Department are entirely too learned for such mortals as we are. For instance, one man who claims that he was injured by the explosion of a shell has been for a long time an applicant for a pension. I called up the claim and asked for it an early consideration. Soon thereafter a letter came informing the claimant that his proof showed satisfactorily that he was thrown into the air by the explosion of the shell, but that it does not satisfactorily show that the injury of which he complains is necessarily the result of his being blown up or of his falling down—that something other than the fall might have caused the injury. In other words, the learned examiners were satisfied that he was thrown up into the air, but they were not positively sure just how he came down. Perhaps this is right; it is no doubt learned; but to me it seems that any man who has been blown into the air by the explosion of a shell and has an injury of any kind from which he suffers ought to have a pension.

In another case the claimant was a good soldier, served all through the war, was wounded in a hard-fought battle, and since the war has drawn a small pension. The wound has grown worse during recent years, has been inflamed and troublesome, and he has been a great sufferer. He is no longer able to work, and the wound threatens his life. He has no means of support and is dependent on his friends. He applied for an increase of pension, and at the request of his friends I called up his claim. An investigation was made, and on an examination, with all the affidavits before them, the medical board in Washington decided and said in some very learned way which I can not now repeat that the man's wound was in a very bad condition, almost approaching gangrene (as I understood it), but that the condition of the wound was not the necessary result of the wound itself; that another disease had set in and was developing itself in the place where the wound was. After seeing this statement I called upon the Commissioner and said to him that this seemed to me to be a very fine-spun and ridiculous distinction. He said he could not set aside what his surgeons did; that they were the highest authority on these questions. At my request, however, he ordered the man to be re-examined, but I have never learned the result. Though a good soldier, though entirely helpless, suffering continually, though without any means to support himself or his family, he has never been able to obtain a pension of more than $2 per month. This is what I would term "strict construction," and I regret to find it employed in the decision of questions like these where a poor soldier is one party and a great Government the other.

There is another matter to which I wish to call attention. It is the wrong and injustice which are done to dependent mothers. Though the soldier was the only son and was killed in battle or died in prison or hospital, the mother can not obtain a pension unless she first prove that she had received actual support in the past or written promises of support in the future. The pension laws demand the mother to go to the trunk where the relics of her dead son are kept and gather from his papers evidence that her son was kind and affectionate and would certainly have supported her.

A letter in my possession to a dependent mother from the Pension Department says: "All letters written by or for the soldier in which he refers to you should be filed. Evidence is also required showing to what extent and in what manner the soldier aided you in your support, or acknowledged his obligation to do so, during the three years next prior to his death." These things should be presumed in favor of any soldier. Similar obstructions are in the way of claims by other classes of dependent relatives and ought to be removed.

Our system of pensioning soldiers in my judgment is radically wrong in other respects. Why should the affidavit of an officer be equal to the affidavits of two enlisted men? This is a foreign idea, and is copied from the laws of foreign countries, and is wholly foreign to our American ideas. The affidavit of a private soldier is just as worthy of credit and ought to have as much weight as the affidavit of an officer. In a pension case it is often worth more, as an officer who had a large command could not possibly remember details. This unjust law should be at once repealed, and all soldiers should be made equal before the pension laws as well as before other laws. The law of arrears is also unjust and unfair. If a soldier applied for a pension the day before July 1, 1880, and it is allowed, he will be allowed arrears back to the date of his discharge. If he applies the day after, he will get no arrears. Is this just? Again: if he is allowed a pension at $2 per month when he should have been allowed a pension of $6 a month, as he afterward shows by a rehearing and a re-examination, his arrears, if he is entitled to receive them, go back at $2 a month instead of $6. Because he was wronged once by the board of examiners the Government wrongs him again.

I have said that our volunteer soldiers were a superior class of men. No one will deny that they are at least the equals in all that goes to make up manhood to those of our regular Army. And yet in the matter of pensioning two officers of the same rank, wounded in the same way, in the same battle, and on the same day, one in the regular and the other in the volunteer army, there is a discrimination in favor of the regular Army officer, which is unjust, unrepublican, and inexcusable. Take, for instance, two captains who each lose a leg in the same battle, the one a regular, the other a volunteer. To the regular officer you give over $1,800 a year, and to the volunteer officer you give but $300 a year; less than one-sixth of the amount you give to the former. Is there any right or justice in this? The man who receives most receives none too much. I am not claiming there should be any reduction in the pay of the regular Army officers, but I claim that for a great and wealthy government like ours to fix the pay of her volunteer officers at a sum so much less is niggardly and humiliating. If we were a poor nation, struggling under burdens of debt which we could not liquidate, and without sources of wealth at our command, I would not urge this liberality. The claimants themselves would not ask it. But there is no plea of economy that will justify a government like this in withholding a just and liberal pension to her defenders, and especially to those of them who are crippled and suffering. Among the pearls of wisdom in the Book of Books is the following, which political economists would do well to remember:

> There is that scattereth, and yet increaseth; and there is that withholdeth more than is meet, but it tendeth to poverty.

One of the chief difficulties in the administration of the Pension Department is the unfortunate way in which its duties are discharged, and in some cases the incompetency of the persons to whom are intrusted important and difficult duties for the discharge of which they have had no special training. The questions involved in adjusting and allowing pensions are largely judicial and require men thoroughly fitted and qualified to weigh the evidence and apply the law to it. Medical examinations are made, and the written reports sent in by the surgeons who make them are often conclusive and control entirely the decision made here, when they are not correct, as subsequent examinations sometimes show.

Mr. MATSON. What would the gentleman suggest in the place of the medical examinations?

Mr. JOSEPH D. TAYLOR. I would divide the States into pension districts as they are now divided into Congressional districts, and in each district I would appoint a district commissioner, who should be equal in qualifications to a common-pleas judge, who should reside in the district as United States judges do, who should hear pension cases in open court as other cases are heard and as other public business is transacted. The witnesses should come before him and be publicly examined. In cases of medical examinations the surgeon should come in and testify in regard to the claimant as he would in any ordinary case. In this way witnesses would be examined in the locality where they are known and where their truthfulness is properly considered. The district commissioner should have the authority to compel the attendance of witnesses, to take or to authorize the taking of depositions in certain cases, and to fully investigate the merits of every case. This would be more satisfactory than our present system of *ex parte* testimony, where it depends on the mere pleasure of the witness whether he will give or refuse his affidavit. And we would then have more faith in what was sworn to, as we would not then have a doubt as to whether the affidavit was read to the affiant. The district commissioner would know in time and become acquainted with the standing of witnesses and the real merits of each pensioner. If it is objected that the commissioner would favor his district, this objection would be removed by the fact that his acts would in all cases be subject to the approval of the Pension Commissioner, who could at any time order a review of the acts of the district commissioner. There is no more reason why a man should be sent from New York or Pennsylvania to Ohio to examine claimants

than there is in sending a man from one of those States to hold the office of district judge, district attorney, or district marshal. Did it ever occur to any one that these officers favored their own locality as against the United States?

In this way each pension case could be heard on its merits and receive proper consideration. That is impossible now. Each claim for a pension that presents any difficulty is of itself a distinct case, as much so as a case in court, as much so as the cases now pending in the court in this Capitol. This being true, how can the Commissioner of Pensions hear all the applications which are made? How can he hear and determine 300,000 or 400,000 cases? More cases than half the judges in the country hear; certainly more than any one man or any one hundred men could hear. The work is too great, and it is utterly impossible for the Commissioner of Pensions to give any consideration to the great bulk of claims before him. There are about 325,000 pensioners at present and about 250,000 pending applications, all of which demand more or less consideration.

The appointment of special examiners to go to the home of the claimant and talk with the witness face to face is a great improvement over the old way of sending a man secretly around to see what he could smell out in a clandestine way. But there are not one-half enough of these examiners, and the Pension Commissioner is asking for more, and I do not see why a bill is not reported at once by the proper committee to furnish them.

I have personal knowledge of claimants who were notified a year ago that they would be visited by a special examiner who have not yet been examined. They were then informed that their papers were placed in the hands of a Mr. Winthrop, who was ordered to give notice of the time of his coming, and who would go to their homes and examine the witnesses and furnish an opportunity for the claimant to be present and cross-examine them if he so desired. Mr. Winthrop wrote the claimants that he would be there perhaps in July, about six months after they received the first notice, but he never appeared. On inquiry I found that these cases were referred to another special examiner, whose headquarters were in Columbus, a Mr. Durnan. He was written to and promised to go, but never went. One poor fellow, who looked for the special examiner more than a year ago in accordance with the notice he received, has recently died; another has been a helpless invalid, unable to feed himself, for more than eight months.

Does this not show the imperative necessity of increasing the number of special examiners? And I submit whether the compensation of these men should not be so increased as to command the services of men eminently qualified to fill the position? This would be a present practicable improvement.

It is objected that we are not able to pension all the soldiers who arrive at a particular age, nor able to give pensions to all the soldiers who have no means of support and who have some physicial disability which prevents them from making a living who have served a certain time in the Army. This is a mistake. Men who think this never studied finance. Those who take this view are ignorant of the laws of trade. Writers on political economy and the most eminent statesmen that the world has ever produced teach the importance of equalizing wealth. This is a problem of great difficulty. The natural and ordinary course of trade is to carry wealth to the great money centers, such as Washington, Baltimore, Philadelphia, Boston, New York; to make the rich richer, if not to make the poor poorer. Money flows to these places as naturally as water flows from the mountains to the sea. Men of large wealth have large incomes, and in spite of trade or commerce money will accumulate money. The effect of too much accumulation, of too much money in the hands of the few, of an unequal distribution of capital, in time destroys trade, disintegrates business, and brings on a panic or hard times or a great stringency in the money market. The difficulty is getting the money back to the rural districts, into the hands of the many, into the pockets of the poor; and this is as necessary as it is to get the water that flows to the sea back to the mountains or as necessary as it is to send the blood from the heart back to the extremities. This is the test of statesmanship, the key to successful business management, and the road to permanent prosperity.

It is said that we can not avoid seasons of hard times, that they must come every ten or twenty years, and in the past this has been true. And yet I am inclined to think that they ought to be avoided, and that they can be avoided in the way I suggest, by sending money back to the sources from whence it comes, back to the pockets of the poor. Restore the equilibrium in money matters as you are compelled to do in other matters, and you will avoid the unhealthy and unnatural accumulation of it in great money centers. This can be done in no better way than in increasing the pensions of the soldiers, in paying money to the soldiers who are poor, who have no means of support, who would use it to buy a small home, food and clothing, and all the necessaries of life. A thousand dollars sent into a township to a soldier enriches to this extent the whole township and benefits the whole county. The recipient pays his debts, buys corn, wheat, and potatoes from the farmer, meat from the butcher, sugar from the grocer, and in this and in other ways puts his money in circulation, and it passes from hand to hand until a thousand persons have shared its benefits. The Government is none the poorer, the people who constitute the country are none the poorer by paying pensions to soldiers. Under any law, the bulk of the money goes to the poorer classes and to the poorer communities, and hence it is a benefit to the country and adds to its permanent growth and prosperity. Government taxes are lifted from the people almost as gently as the dews are lifted by the morning sun, and yet they aggregate a vast sum of money and can be made to accomplish immense good if properly appropriated. And there is no object to which we can apply the immense sum which now fills to overflowing the Treasury where it will do greater good both to the recipient and to the Government.

The gentleman from Tennessee [Mr. YOUNG] showed in his recent speech made upon the floor of this House that France was never so great nor so prosperous as when the Champs Elysées and the boulevards of Paris were being constructed, and when the erection of public buildings and the making of public roads was distributing the funds of the government through the hands of the common people and so out through all the avenues of trade. Parisians have been noted at times for their riotous turbulence and discontent. Napoleon III gave the poorer classes employment, recognized their claims upon the government, and thus gained their adhesion to it, while they were elevated in their own self-respect and their families were prevented from becoming dependent upon the government. Such, Mr. Chairman, would be the effect in this country should a portion of the money now in our Treasury be distributed, in the form of pensions, to the men who served in the war, all of whom are richly entitled to this recognition, and very many of whom sadly need the aid. In honoring our nation's defenders we should honor ourselves, fulfill the promises made to the living and the dead, vindicate our claim to the justice and gratitude we have so loudly professed, and give a new impetus to that material prosperity of which we are justly proud.

The Bonded Extension Bill.

SPEECH

OF

HON. FRANCIS B. BREWER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 27, 1884.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 5265) to extend the time for the payment of the tax on distilled spirits now in warehouse—

Mr. BREWER, of New York, said:

Mr. CHAIRMAN: The discussion of the "whisky bill," as it is rightly called, has consumed so much time in the House that all are impatient for a vote. I will confine myself to a few words and a short time. In the few remarks I make I wish to emphasize my dissent to any action which may be taken to encourage class legislation or foster the manufacture and traffic in distilled spirits, either on the floor of Congress or by State legislation. It is a business that should take care of itself and not ask assistance from legislation of any kind.

We have before us a bill to extend the time for the payment of taxes on distilled spirits which are now in bond. Sir, the very wording of the bill makes it obnoxious to the policy of our Government, obnoxious to the just claims of other citizens who may ask for financial aid in times of embarrassment, obnoxious to the moral sentiment of almost every well-regulated community. The good sense of the people, outside of those who manufacture, deal in, or who habitually use this article, is opposed to extending governmental aid to any particular class of trade, but especially to a business which floats upon its dark waters such widespread misfortune, sorrow, and distress.

What! Our Government loan money to carry on the manufacture of distilled spirits, and to bolster up the whisky ring! Who would wish to put forth such a sentiment? Who would wish to advocate it? Could he expect any intelligent community would indorse his action? Could he expect his constituents would approve it? Could he expect the members of this House would seriously entertain the thought of passing such a bill? Why, gentlemen, it would be the most obnoxious species of class legislation. I do not think the Government of the United States is quite prepared to go into the liquor business at present.

Mr. Chairman, whatever moral bearings the question under consideration may have, and however much good might result from a discussion of the subject from a temperance standpoint in other places and under different surroundings, I am satisfied the floor of this House is not the place for that discussion, or the members of Congress the ones to be benefited or influenced by the arguments which would naturally occur to any one who would welcome the day when the making and vending of intoxicating liquors should be obsolete and unknown. The dawn of such a day would be like the incoming of the millennium.

When I take into consideration the vast amount of this liquid poison

which is stored in distilleries and Government stores and warehouses, and the unceasing labor of thousands of men and the investment of millions of dollars which are employed in the conduct of this nefarious business so that the supply may be kept good, I can not shut out from my mind the baneful results, the ever-increasing tide of woes which must follow in the wake of this traffic in intoxicating drinks; and still these men, these makers and venders, "have the cheek" to ask that the members of this House, who are supposed to be honest and honorable men, to assist them in the prosecution of this wicked traffic.

Sir, I do not believe that votes enough can be obtained on the floor of this House to carry through a measure fraught with so much misfortune to our nation generally, bringing crime, pauperism, and distress to individuals, families, and neighborhoods, and which levies upon our people an annual tax of over $500,000,000. Can there be any excuse for passing this bill? It is said the distillers pay $50,000,000 into the Treasury annually and the dealers as much more; there is left $400,000,000 yet to be paid by direct tax on the people.

We are told, Mr. Chairman, if we refuse to extend the time for these men to pay the tax now due on their bonded liquors, and which it is the obvious duty of the United States to collect, we shall cripple this great industry which pays its millions into the Treasury annually. If this is a fact, sir, and if by the enforcement of this tax we can thereby prevent or in any manner limit the manufacture of spirituous liquors, let us by all means do it; and peradventure we may cut off in some slight degree this prolific source of crime, wretchedness, and disease.

here is now in store liable to tax about 70,000,000 gallons of distilled spirits, on which is due the United States about $66,000,000. The friends of this bill ask the Government to extend the time of payment of this tax, and for this forbearance they generously propose to pay to the Government 4½ per cent. interest annually. It is now carried by bankers, capitalists, and other moneyed institutions. We are told if we do not give the sought-for relief that widespread ruin and disaster must come not only on the distillers, but bring financial embarrassment to the individuals and institutions which have thus far supplied their wants and now refuse to extend their lines of discount. Now, I submit, is this a good argument to put forth when they ask for a Government loan? for it is nothing but a loan. Should the Government be asked to take a risk for two years at 4½ per cent. which banks and bankers refuse at from 6 to 10 per cent.? What security can these men give the United States which they can not give the banks? And if the business men who control our money in commercial circles will not take this risk, shall we assume it? I trust not, sir. The fact is, the shrewd, sharp business men of our nation are weakening on whisky and are quite solicitous to stand from under, and are strenuously assisting the ring to transfer these obligations from their own shoulders to the Treasury of the nation. I have too much confidence in the members of Congress to anticipate such a result.

Let us see how this vast accumulation of bonded spirits occurred. The law requires that all distilled liquors or spirits shall pay a tax of 90 cents per gallon. As raw spirits are not marketable or ready for consumption, and as it grows better and increases in value with age, it may remain in bonded warehouses for three years, and then the tax must be paid, or whenever it is withdrawn for consumption then also the tax must be paid. In March, 1878, the manufacturers found themselves with over 50,000,000 gallons on hand, and asked an extension of time in which to pay the tax. One year was given. Did they diminish the amount? No. That year they increased the amount to 71,000,000 gallons. In 1879 another appeal was made to Congress, and a three years' extension was given. Did these men learn wisdom by experience and the forbearance of the Government? Far from it. The next year the surplus rose to 90,000,000 gallons, and the next year to 100,000,000 gallons, and the next year to 117,000,000; then as the tax-paying time drew near it fell off to 105,000,000, and to 74,000,000 during the last year. Now, shall we give them another extension and encourage the further increased production, or shall we say, "Pay your taxes, as other honest and prudent business men do?" Then we shall see a diminished output of whisky till the supply and consumption come nearer together. This will be the result: the Government will receive the $66,000,000 which is its just due; the manufacture of distilled spirits will be diminished; the distiller will keep his business within proper bounds, be able to pay his taxes when due, and not call upon the Government to do what it has no constitutional right to do. So palpable a violation of the spirit as well as the letter of the Constitution would most assuredly call down upon us the just indignation of all right-minded and intelligent citizens, and it would be well to remember if we extend the aid now asked for we are indirectly aiding and abetting the manufacturing and vending of that article which never fails to leave its baneful influences upon the mental, moral, and physical condition of every one who is in any way connected with its traffic or use. Therefore I say this Congress has no right in any manner to encourage these men who come asking our interposition in their behalf. Other business men pay their taxes. Why should these escape the burdens they have imposed upon themselves and now ask us to adopt a policy at variance with the sentiment of the people and with the spirit of the Constitution and laws of the land?

Does the Constitution confer upon the Government the right to loan money? It gives it the power to coin money, to borrow money, but nowhere the right to loan money; and this is a loan virtually. If you extend the time of paying this amount of money into the Treasury and accept 4½ per cent. interest, you loan the funds of the United States and accept interest for the forbearance. If we should establish a precedent of this kind, what infinite trouble would it give us at every successive Congress? Every crippled business man would be knocking at the doors of the Treasury for aid to tide over his financial embarrassments. We should very soon have no need for a Treasurer or a Treasury; in fact, we should have no Government at all.

In making this effort to obtain this loan from the national Treasury to aid the whisky ring, gentlemen overlook that great factor, the people, who have strong convictions on these subjects, which they are free to express at home, and expect through their Representatives to express upon the floor of this House. There is a moral sentiment abroad which we can not afford to ignore or disregard. Certain gentlemen deprecate agitation on this subject, and would prefer to put this bill upon its passage without discussion. No doubt, sir, the vote will be a very close one; but every hour spent in debating the question will in my opinion give us a correspondingly larger majority against the contemplated wrong. It is well for our constituents to know whether we are willing to stem this current of wrong-doing, or, once we have become members of Congress, we cease to be the representatives of the people. How can we do more to promote the public good and to increase the public welfare of every class of citizens, excepting those engaged in this nefarious business of making or vending intoxicating liquors, than by compelling the prompt and punctual payment of the taxes due on bonded spirits and by refusing to commit the present Congress by our words or our votes to so vicious, so unjust, and so unstatesmanlike a measure, and so at variance with the moral sentiment of the people, as the passage of the bill under consideration?

Retirement and Recoinage of the Trade-Dollar.

SPEECH

OF

HON. DANIEL ERMENTROUT,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, March 31, 1884,

On the bill (H. R. 4976) for the retirement and recoinage of the trade-dollar.

Mr. ERMENTROUT said:

Mr. SPEAKER: It has been long ago manifest that no man questions either the right or duty of the Government to save from loss the holders of the trade-dollar, the coin upon which it impressed its seal, to which it thereby gave credit and circulation, but which has now become dishonored. The chief stumbling-block in the way of the passage of this bill seems to be the fourth section. That section directs that the trade-dollar when redeemed shall be treated as silver bullion and shall be deducted from the amount of bullion required to be purchased and coined under act of February 28, 1878; and this, as the minority report puts it, "because the effect will be to greatly depress the value and price of silver bullion." The report then argues as though this were a bill for discontinuing the coinage of the present silver dollar. That, sir, is not the issue in this bill. If the continued coinage of the Bland dollar depends upon so slight a foundation as this, the period for that operation will be short indeed. The facts involved in the proposition before us do not warrant any such conclusion. It is therefore not worth while to fritter away the time of the House with the wider and broader issue growing out of either the discontinuance or suspension of the silver coinage.

It occurs to me, however, to suggest that the law of 1878 was not passed to raise or maintain the price of silver bullion. If that was the spirit and intent of that legislation it proceeded upon a vicious principle, namely, upon the idea of a personal benefit to a particular interest. This I should regret to admit. The better view to take is that it was designed in obedience to the popular demand to restore that ancient currency of the country, which in great measure had previously to that time disappeared, to give us a currency which, by its intrinsic value, to some extent at least, should create confidence. No doubt the knowledge that we were great producers of this precious metal, which in all ages and all countries had been a medium of exchange, operated to the passage of the measure. There was at that time a great demand for a currency of this character, for it was comparatively scarce. It must be presumed that when the National Congress framed the silver act it had in view these circumstances, and particularly the extent of the demand for this coinage and what would supply it.

The result of the legislative thought was a direction to the Secretary of the Treasury to purchase from time to time silver bullion at the market price, not less than two million dollars' worth per month nor

more than four million dollars' worth per month, and cause the same to be coined monthly as fast as so purchased into such dollars. It has never been found necessary or prudent by the Government to exercise the power thus conferred to its full extent. Under it up to November 1, 1883, were coined $156,720,949, an average of about $2,300,000 monthly, $1,700,000 less monthly than the law now authorizes. Is there any one who will say that the coinage has not met the demand? Let him go to the vaults of the Treasury and he will find them open readily to his demand and every other demand that may be made, and leave remaining inexhaustible and almost countless millions more. Is there any one who will deny that abundant power under the law is lodged in the Government to meet any possible future demand? He would be rash indeed.

Now, sir, it is apparent that no legislation enlarging the minimum of coinage of the standard dollar is called for by any demand by the business or the people of the country. On the contrary, the Secretary of the Treasury, a large and influential portion of the public press, chambers of commerce, and various large business centers are condemning what has been denominated "an aimless purchase of silver bullion, at the rate of over $24,000,000 each year, as a needless use of public money and of the taxing power to supply it, incurring a needless loss of the interest on the sum thus expended and the expense of manipulation." They are demanding a discontinuance or temporary suspension of further immediate coinage of the standard dollars. My colleague from Pennsylvania [Mr. SMITH] has even proposed an amendment doing away with the coinage of the standard dollar.

It is not necessary for me to express any opinion on this interesting question now. I believe that the proposition should first be submitted to a committee, that it is of sufficient importance to be considered separately, and at least should not be allowed to embarrass the passage of this bill. The question we have to deal with is whether we will by striking out the fourth section of this bill compel the Government to coin more silver dollars than are being coined now, when it has that power already; whether we shall enlarge a compulsory minimum of coinage, created when not a single Bland dollar was in existence and the demand necessarily greater, at a time when we have millions of them and a supply lying in the Treasury in excess of the demand. That is all there is in it. Logic and common sense seem to oppose the proposition. Now, I am by no means satisfied that the amount of trade-dollars that will be redeemed under this act will operate to depress the price of silver bullion; but should it do so, it would seem to be an act of retributive justice, and therefore call for no sympathetic tears. Who struck the first blow? On the 22d day of July, 1876, Congress passed a joint resolution (No. 17, Forty-fourth Congress), section 2 of which provides "that the trade-dollar shall not be hereafter a legal tender." Sections 3 and 4 authorized the Treasurer to issue $50,000,000 subsidiary silver coin and buy the silver bullion for the same? This legislation was certainly not urged by the friends of the trade-dollar nor by the foes of silver bullion. Time at last sets all things even. The Nemesis of the trade-dollar, that beautiful lady, emblematic of liberty, holding the olive-branch of peace in her hand, resting on the immutable foundation represented by the inscribed motto "In God we trust," emblazoned on this abused coin, comes back to avenge herself upon the absurd cheat which substituted a dollar of 412½ grains for one of 420.

Both the gentleman from Pennsylvania [Mr. SMITH] and the gentleman from Texas [Mr. MILLS] propose that all future silver coinage shall be fractional.

In view of the fact that $28,000,000 of this coinage now in possession of the Government may be made available for the use of the people, no pressing necessity seems to exist for such legislation. At any rate the consideration and adoption of any such amendment can only hamper and delay the passage of the bill, and might ultimately prove fatal.

It was urged on a former occasion that no such bill as this ought to pass, because the Government would lose $300,000 on every $2,000,000 coined, because the Government makes $2,300,000 out of every $2,000,000 worth of bullion coined. If the Government buys the trade-dollar for a Bland dollar it will receive 7½ grains more silver than it gives. This excess will nearly if not fully pay the cost of manipulation and yield a profit to the Government. But the Government must sooner or later take back the coin it issues at the same nominal value at which it was issued. So that it is as long as it is broad, and on the whole transaction the Government is even. Should, however, the statement of loss be correct, better the Government lose than the people. If there is any argument in the proposition to create money at a profit, let me suggest that under the recent legal-tender decision of the Supreme Court we can make money at a much greater profit by running the Government presses and printing greenbacks. The minority report assumes that under this bill $10,000,000 of trade-dollars will be redeemed, with the possibility of $20,000,000. The greater the amount of trade-dollars held by the people the greater the iniquity of delaying the day of redemption. I suggest, however, that the figure in the report exceeds any amount I have seen anywhere stated as being held in the United States or likely to find their way here. The Secretary of the Treasury in his last annual report has the following, which should be authoritative:

It is possible to make an estimate of the amount that would come to the Treasury for redemption if authority were given therefor. The whole issue of the coin has been $35,960,446. Some of that has disappeared in manufactured articles; it was estimated from $1,000,000 to $2,600,000. It is calculated that five-sixths went abroad in the beginning, and it is believed that but a small part of that came back, and that there is now held by our people from $5,000,000 to $8,000,000. Of that which remained abroad there is good authority for saying that much of it found its way from China to India and into the melting-pot at the mint in Calcutta, and has been there cast into the coin of that country. The overweight of the trade-dollar by the side of the Spanish and Mexican dollar, with which it was concurrent in China, brought much of it to the crucible there. It is understood in business circles that in China silver coin is used by weight and not by count, saving a few ports where Mexican dollars and a few other coins are taken by tael. It is the practice of Chinese bankers, so it is reported, to stamp with their own mark the coin that they take and pay out. The coin thus defaced soon comes to the state and repute of bullion, and the presumption is that our trade-dollars have many of them been so treated and so suffered. Bear in mind, too, that from time to time for some years past until a comparatively late date there has been inducement to reship this coin from China hither, because it has been in free circulation in most parts of the land, and for most of the time at a par with gold and silver money. There is reason to believe, then, that besides the sum of it in the hands of our own people an embarrassing amount will not come upon us from abroad.

I introduce here another statement, taken from a pamphlet on this subject, which seems to be approximately correct:

Trade-dollars coined, in round numbers		$36,000,000
The Director of the United States Mint, in his official report to Congress in 1879, pages 130, 131, estimates the amount of trade-dollars exported up to November 1, 1879, as being		25,089,817
In a like report for 1878, page 12, the same officer estimates the number of trade-dollars taken on their person by Chinamen returning home at		5,000,000
The export of trade-dollars was mostly from the port of San Francisco, and the amount exported from November 1, 1879, to September, 1883, as shown by custom-house returns, was but		123,926
Being a total of		30,273,743
There is no reason for expecting any notable return of trade-dollars to this country previous to 1876 or 1877, but it is estimated that during the years 1878 and 1879 the amount imported was	$1,200,000	
And since July 1, 1880, the custom-house returns show imports of	992,959	
		2,192,959
Showing the net amount disposed of in China, &c., of		28,020,784
We think it safe to estimate the amount of trade-dollars taken off by other channels, lost, mutilated, melted up, and used for manufacturing purposes during the ten years of their circulation, off our figures, at		779,216
Making a total of		28,800,000
And we have a balance of		7,200,000

Seven million two hundred thousand dollars, then, might be accepted as the maximum in the hands of mechanics, laboring people, and business men in the country, all trusting to Congress for relief; and who will doubt for a moment the result? For it involves neither charity nor sacrifice, but is simply an act of justice.

Business men, well informed on the subject, confirm the above estimate as to the amount of trade-dollars shipped to and the quantity returned from abroad. It is the custom in China to melt up into ingots and the "sycee" form all their imports of silver as soon as landed, and the fact that the commercial price of trade-dollars in New York was for two years previous to June, 1883, quoted at 99 cents and over, and that none were imported during that period, should be considered conclusive evidence that there are but few, if any, to be obtained in China.

Seven million two hundred thousand dollars seems to me to be an insignificant part of the silver bullion product of this country alone. Mr. Burchard, in his report to the Forty-seventh Congress, states the silver bullion product of 1882 at $46,800,000. I am informed from the same office that the production for 1883 will exceed this amount. In other words, less than one-sixth of the annual product of the country will be displaced by the operation of the fourth section. It is a bagatelle, and gives emphasis to the remark heretofore made that if the price of silver bullion depends upon the displacement, it rests upon a frail foundation indeed. It is an argument not entitled to much weight in this connection. But the minority report sets up another obstacle to the passage, not of the fourth section, but of the whole bill. That is the allegation that the trade-dollars are mainly held by speculators. The figures show that this is not so. I am informed authoritatively that less than 5 per cent. of the trade-dollars now held were taken at less than par. My own information, so far as the community I represent is concerned, is to that effect. For a considerable period after the stampede of July this coin was taken by our banks and business men at par. There are hundreds of these dollars hoarded up by that large class of people who put their trust in no man or institution as the guardian of their savings, and in no money but silver and gold.

It is further charged that much of this money has been recently bought at a discount by foreign brokers to sell at par abroad to foreign emigrants. I believe this to be a canard; but if true, it constitutes another powerful argument why this bill should pass, and pass speedily.

There is nothing in the argument that an increase of the purchase and coinage of silver will give a basis for an increase of silver certificates to take the place of retiring bank circulation. The power to enlarge that basis I have shown already exists. Out of an increase coinage of silver dollars in 1883, $28,291,069, after $4,136,321 have gone into the circulation, the increase of silver certificates amounted to only $19,713,931. In the opinion of the Treasury, "any demand likely to arise for silver dollars or for silver certificates based upon them may be readily met

without further coinage of the dollars or preparation of the certificates for issue." I believe these views to be correct. Entertaining the opinion I have expressed, I think it would be unwise to strike out the fourth section and that we should pass the bill as it stands.

Still if the House should think that the fourth section would operate injuriously upon an interest they wish to protect without enlarging the minimum coinage of the silver dollar as fixed by act of 1878, a proviso inserted at the end of section 4, restricting the amount of standard dollars to be coined out of the trade-dollars redeemed to 1,000,000 per month would not in my judgment be objectionable.

The Bonded Extension Bill.

SPEECH

OF

HON. BURR W. JONES,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 27, 1884.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 5265) to extend the time for the payment of the tax on distilled spirits now in warehouse—

Mr. JONES said:

Mr. CHAIRMAN: The whole question involved in this discussion is this: Have the distillers presented to us sufficient reasons why we should extend for two years the time for the payment of their tax upon distilled spirits? I agree with the gentleman from Pennsylvania [Mr. RANDALL] that this is the most important bill which we have yet had before us for consideration. It involves not only the extension of a tax upon 70,000,000 gallons of whisky, but it bears in many ways upon our entire revenue system. It is a question of such importance touching our revenue policy as to merit careful attention. I am entirely content to view it as a practical business matter, leaving to others those questions of sentiment and morals which are more inviting to many because they afford a better field for the triumphs of oratory.

This is not the first time that the distillers have come to Congress asking special legislation of this character.

Prior to 1878 the law had required distillers to pay the tax within one year after placing the product in the Government warehouses; in other words, the manufacturer was allowed one year in which to sell his product before the payment of any tax was required. This had been the law for ten years. In 1878 the distillers came to Congress alleging that they were in distress. They had produced more than they could sell. They had large quantities of whisky in the warehouses and could not raise the money necessary to pay the tax. They begged Congress to give them relief. Congress yielded and by legislative act gave them such an extension of time that thereafter they were to have three years instead of one. Did the distillers learn wisdom in their advancing years from the follies of their youth? Not at all. They at once entered into an extravagance and prodigality in the manufacture of whisky entirely unparalleled in the history of this country.

The gentleman from Kentucky [Mr. WILLIS] tells us that the amount manufactured in 1878 was, in round numbers, 56,000,000 gallons; in 1879, 71,000,000 gallons; in 1880, 90,000,000; in 1881, 117,000,000 gallons. The normal production is about 71,000,000 gallons per year.

These figures are an argument which needs little elaboration. They show that by the legislation of 1878 every distillery was stimulated into unnatural activity. Every distiller argued that his whisky would grow valuable as it gained the smack of age. Of course he took advantage of the extension. He postponed the payment of his tax as long as possible. He steadily manufactured his whisky and as steadily marked up the price as it grew venerable with age. Mark the result. In 1878 the distillers had about 14,000,000 gallons of whisky in the bonded warehouses; in 1882 the amount had swelled to 80,000,000 gallons. Again they were without purchasers. The fierce fever of excitement and speculation had passed away; the relapse had come.

We are now asked to extend the period to five years, in effect to give another lease of life to speculation and overproduction. Is this the province of Congress? We of course regret the distress and embarrassment which the distillers have by their own folly brought about them, but is it our duty to indulge in this kind of special legislation whenever the agents of any industry paint its embarrassment in glowing colors? If so, we may bid a long good-by to general legislation, for there are other industries all about us equally worthy and far more needy. The manufacturers of distilled spirits, like other business men, should regulate their business to the laws of the land. They must recognize, too, that great law of supply and demand which stands unchangeable and the same while statutes come and go.

Brewers, wholesale and retail liquor dealers, tobacco dealers, pay their taxes to the General Government. So far as I know, they pay them promptly and without complaint. They are not accustomed to besiege every Congress for exemption from the burdens of taxation. I do not feel disposed to single out the distillers as the one class who are not expected to pay their taxes promptly and according to existing laws. If there is any one doctrine thoroughly embedded in the minds of the American people, it is that their taxes must be paid and paid promptly; that the payment of taxes is just as inevitable as storm and sunshine and death. And it is a wholesome doctrine, one upon which depends the very administration of government.

In my judgment, the sooner the distillers recognize that their taxes must also be paid, and paid within the time prescribed by law, the sooner they will place their business on a safe basis. They have relied altogether too much and too often upon Congressional aid. Any temporary relief which we can give the distillers would only aggravate the speculation and overproduction which are the fruitful causes of all their ills. There lie upon our desks copies of telegrams from about seventy banks urging our compliance with this demand. It undoubtedly means that the banks in some sections are interested in the passage of this bill. They have given credit to the distillers, and are to some extent perhaps involved in the embarrassment which speculation and overproduction have caused. But I can not see that it is our duty to yield to this pressure. The bankers, like the distillers, ought to be able to protect their own interests. They know the laws of the land. No class of men on earth can so easily touch the pulse of the world's commerce. No men are less excusable if they defy the great laws of trade, to which all successful business men must yield obedience. If they, too, have caught the fever of speculation, if to make large profits they have ventured upon large risks, they may as well learn now as ever that the Government of the United States is not their partner, and is in no manner responsible for their folly.

We are assured by some of the friends of this bill that the Government would not lose a farthing of its revenue by this action. But the bill itself does not speak so emphatically upon this subject. I have serious fears that if this bill should pass there would at once begin an agitation for the repeal or reduction of the tax upon whisky. The amount of whisky in bond would begin to accumulate; the problem would be no longer how to extend but how to avoid altogether the payment of this $63,000,000. Indeed, one of the friends of this bill, who has advocated it in an able argument, has boldly said that he desired both the passage of this bill and the entire remission of the unpaid tax.

I do not regard it as my duty to aid either in giving away to the distillers or any one else any part of the revenue which has accrued to the Government; nor am I willing to give aid or countenance to any act which would disturb the permanence of the internal-revenue system.

During the past few days we have heard that system violently denounced from many quarters; but I do not believe that there is any general demand for its destruction. For more than twenty years the existing system has been in force. During those days of civil war, when the life of the nation was trembling in the balance, we could ill afford to despise the hundreds of millions of dollars which it gave to the national Treasury. Now we are at peace, it is true. We have a surplus in the Treasury, a surplus which excites into wild, sometimes grotesque, activity the desires and the imaginations of some of the gentlemen on the other side. But still we are not rich enough, with national debt and soldiers' pensions yet unpaid, to give up to the distillers any portion of this tax, or to give up the system which has produced the tax.

I know that in the early history of this Government it was considered democratic to denounce the internal-revenue system. The words "odious," "inquisitorial," "detestable," and "infernal," which are repeated day after day on this floor, have an old and familiar sound. They come to us from the days of Shay's rebellion against the whisky tax.

But we should not be governed by catch-words and phrases after their significance has passed away. In those days the manufacture of whisky and alcohol was carried on in a humble way in almost every region where corn and rye were produced. In the absence of railroads humble laborers manufactured their corn and rye into whisky and alcohol, articles less bulky and more easily transported to distant markets.

But changes in the methods of transportation and the operation of later laws have taken from the many and given into the hands of a few men the manufacture of whisky.

The distillers who are asking this legislation at our hands do not distill their whisky in the cellars and barns of the country districts as in former days. They are few in number. They belong to a rich and powerful moneyed syndicate. They are residents of the great cities. They are the allies of the money kings. They are potential on the boards of trade. They are in close alliance with the banks, as these dispatches testify. The tax on whisky can now be collected of the few manufacturers without any of that surveillance which once annoyed entire communities. I know of no public sentiment in the Northwest against the rigid enforcement of the internal-revenue system. I know of no sentiment which is at all rebellious against the collection of the tax upon distilled spirits.

I agree with others that there is a general demand for reduction of taxation. There is a widespread sentiment in the State in which I live that the onerous taxation upon the necessities of life which was created by the expenses of a great war should be reduced.

That sentiment was voiced so loudly in the autumn of 1882 that a reluctant Congress was compelled to grant at least a show of acquies-

cence. A tariff commission had been appointed. It was so constituted that a clear majority of its members were devoted to a high-tariff policy. After long investigation that commission had reported that a substantial reduction of tariff duties was demanded by the public interests.

It was their opinion that there should be a reduction of not less than 20 per cent. in the then existing rates, and they hoped that it would reach 25 per cent. Those who were responsible for the legislation which was finally enacted stated on the floors of Congress that the proposed reduction would amount to an average of 20 per cent. or more.

I now quote from the report of the Committee on Ways and Means, which has just been prepared:

Your committee find that in the first six months ending December 31, 1883, under act of March 3, 1883 (the new law), dutiable merchandise was imported into the United States valued at $235,898,109, on which duties were paid amounting to $95,514,136, being 40.91 per cent. on the value thereof. In the corresponding six months of the year 1882, under the old law, the value of dutiable imports amounted to $260,856,273, and the duty paid was $111,266,507, or 42.65 per cent. on the value. It thus appears that the average cost of importing goods valued at $100 was only $1.74 less under the new than under the old law.

This exhibit of reduction in rates made by act of March 3, 1883, amounting to 1.74 per cent. of the duty, is subject to an unimportant modification resulting from changes in value and other conditions, some of which increase and others reduce comparative ad valorem rates.

The promised reduction of more than 20 per cent. upon tariff taxation has dwindled to less than 2 per cent.!

When the bill came up for passage it was alleged by those who demanded greater reduction to be the handiwork of the Eastern manufacturers. The result would seem to prove the truth of that statement. It was undoubtedly framed in their interest and in such a manner as—

To keep the word of promise to our ear
And break it to our hope.

Ad valorem and specific duties were so intermixed and changed, the law was made so complicated that none but those trained in the art of tariff-juggling could foresee the result. After this lapse of time the results can be ascertained and they present one more triumph for those monopolies which have so long been potent in the legislation of this country. If I know anything of the sentiment of the people of the Northwest they are asking for that substantial reduction of taxation which the Tariff Commission and the last Congress promised, but which they failed to give. They are not eager to pay a tax of 49 per cent. upon their sugar, of more than 40 per cent upon their woolen clothing, of 40 per cent. upon their cotton goods. They are uneasy under these burdens which rest upon almost every necessity of life.

We all know that the heaviest burden of this taxation rests upon the agricultural classes of the West and Northwest. It largely increases the cost of almost every article they buy. Its tendency is to close the foreign markets of the world to the articles they would sell. If they complain they are told in substance that this system of taxation gives aid and comfort to the infant industries of Pennsylvania and Massachusetts, and that in good time the taxation will be reduced. But they do not forget that those same "infants" were vigorous and healthy when this century began, and that the older they have grown the more lustily they have demanded protection.

In 1833 the friends of the high-tariff system consented to a compromise by which tariff duties should be reduced during nine years ensuing to 20 per cent. ad valorem, and that beyond that they should not be increased. More than fifty years have passed away. Now the average tariff rates amount not to 20 per cent. but to about 40 per cent., and still every one of these "infant" industries is clamoring for more.

The gentleman from Pennsylvania [Mr. KELLEY], who is probably the most celebrated living champion of the protective policy, has told us during this discussion that we should abolish the tax upon whisky and get rid of the entire internal-revenue system, which he denounced as an "infernal" system.

Of course the grounds of opposition to the tax upon whisky are obvious. If that tax of more than $70,000,000 per year can be reduced an equal amount of the sum derived from tariff taxation can be retained. A reduction of the taxation must come from some source. If that reduction is made in the whisky tax the present high tariff duties upon the necessaries of life will remain, because the expenses of Government must be paid.

I think I know something of the popular sentiment in the great Northwest. If I am not entirely mistaken as to that sentiment, it is not at all in accord with the Pennsylvania idea, which Mr. KELLEY no doubt understands and correctly expresses. That demand is indeed for a reduction of taxation; but it begs for relief from taxation upon the necessaries, not the luxuries, of life. It asks for that substantial reduction of taxation upon the articles of every-day use in every humble home that the tariff commission and the last Congress promised and pretended to give, but which has not come. In my judgment, if you will give this substantial reduction of taxation, if you will also add to the free list generously, if you will give to our people free salt, free sugar, free coal, free lumber, there will be no wailing or gnashing of teeth because whisky pays a tax.

There is no article on earth better able to pay a tax than whisky. There is no general demand for the removal of that tax among the people whom I have the honor to represent. I am willing to stand upon the ground that this tax should be a part of the permanent revenue policy of our Government. It is no longer an experiment. We have, by frequent changes of the law, already experimented enough. We have learned with reasonable accuracy what amount of tax per gallon will produce the maximum of revenue. At the rate of 20 cents per gallon the tax amounted to less than $12,000,000 per year. It was found that the tax of $2 per gallon afforded undue temptation to fraud and dishonesty, and yielded less than $35,000,000 of revenue per year, while the present tax of 90 cents per gallon yields more than double that amount. Still other changes have been made from time to time, and the results have shown that at present we are not likely to improve our revenues or our system of taxation by adding to or diminishing the present tax on distilled spirits; that the present rate of tax yields the best revenue and in every way the best results.

If this view is correct we may as well announce by our action upon this bill that the distillers must accommodate their business to the existing laws. The expenses of Government would still go on if we should postpone for two years the payment of these taxes of more than $60,000,000. To the extent that this money should fail to come into the Treasury where it belongs as part of the legitimate income of the Government, to that same extent we would be unable to reduce taxation upon the necessaries of life.

If I believed that the refusal to pass this bill would cause the widespread bankruptcy which is predicted by its friends, I might be disposed to yield my objections. But I have no doubt but that this danger is greatly exaggerated. The same banks which have voluntarily aided by their credit this overproduction can extend their credit until the distillers shall have gradually reduced the supply of their product to the demands of trade. This is the legitimate business of the banks. It is not at all the business of the Government.

These are the considerations which have led me to oppose this bill in its various stages, and which now lead me to vote against it.

The Tariff.

"Protection" benefits the manufacturer, not the employé.

SPEECH

OF

HON. ALEXANDER M. DOCKERY,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

TUESDAY, *April* 22, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 5893) to reduce import duties and war-tariff taxes—

Mr. DOCKERY said:

Mr. CHAIRMAN: In the limited time allotted to me in this discussion I can not hope to do more than glance at the outlines of this great question, and shall not attempt to thread out or elaborate the thoughts that its consideration may suggest.

The advocates of a protective tariff on this floor are to-day insisting that the present protective tariff shall not be disturbed, nor the policy of the last twenty years reversed or modified by a reduction of war taxation. The gentlemen who make this appeal with so much of seeming earnestness, and the party that has nurtured this policy from infancy to vigorous manhood, forget that when it was adopted as a part of the revenue system of the country it was only then advocated by many of the leaders of the Republican party as a temporary measure—a measure demanded and warranted by the exigencies of a great civil strife.

Nearly twenty years have passed away since the last hostile shot was heard, and during these eventful years peace has been fully restored, armies have been disbanded, and the soldiers of both armies have become peaceful and prosperous citizens. In all sections of this country the normal conditions of peace have fully resumed their sway, the public debt has been largely decreased, and we are now collecting annually many millions of dollars in excess of the needs of the Government; and yet the Republican party is demanding that this system of war taxation shall be maintained for "protective" purposes.

Before proceeding to a further consideration of this vexing tariff problem I desire to review briefly the various systems of taxation that may be invoked in raising revenue to support the Government, and I am willing in all frankness to concede the difficulties attendant upon the settlement of this question which now challenges the thought and engages the attention of the whole people. In this vast country, with its varied industries, there are necessarily conflicting and clashing interests, and it is ofttimes a matter of extreme difficulty to harmonize and compromise these interests so as to be able by wise legislation to reach and declare the general interests of the whole people.

SYSTEMS OF TAXATION.

It is our duty to provide the revenue necessary to meet the current expenses and maturing obligations of the Government. In establishing

a revenue system, and in the arrangement of all its details, we should keep in view and strive to work out the end of all wise government, "the greatest good to the greatest number."

There are many systems of taxation which we have the power to inaugurate, and from these we should choose the best. We might maintain the Government—

First. By a direct ad valorem tax.

Second. By an income tax.

Third. By an internal-revenue system like the one now in existence.

Fourth. By a tariff of imposts.

All of these systems are in use or have been used under the Federal or State governments. Each plan has its advantages and disadvantages, its merits and its demerits. And it becomes us, as the trusted agents of this great people, to consider carefully all the pros and cons before taking action.

A direct ad valorem tax would certainly be equitable, since it compels each one to contribute according as the Lord has prospered him, and hence, as he is able, to maintain the burdens of that Government whose blessings and protection he enjoys. But the people do not like the tax-gatherers, the fixed dates for payment, and the examination of and scrutiny into their private affairs, and the legal processes to enforce payment incident to this plan.

The second is in thorough accord with the kindly spirit of our institutions, and would lay the greatest burden upon the rich and prosperous. If they should be levied only upon the income in excess of an amount necessary to keep an average family in all the comforts of life, it would keep the burdens of government off the lowly and downtrodden and suffering poor until they might gather the necessaries of life about them and gain the strength and independence necessary to enable them without too much strain and exertion to aid in bearing the general burdens. This would tend to that greatest of all conceivable blessings for our race, the equalization of wealth. It would check the tendency, which alarms the thoughtful man, of the rich growing richer and the poor poorer.

But this plan has been discarded because of the difficulties attendant upon its execution. Either the Government agent in the execution of such a plan must spy out the private affairs of every individual, or the Government must in great measure depend for this information upon the individuals taxed. The one course would lead to an invasion of the privacy dear to all freemen, and the other hold out temptation for misrepresentation, fraud, and deceit.

The third, which is now used in securing a part of our revenue, has some virtues akin to both the others, and is without some of their objectionable features. So long as it is honestly and impartially administered, and the tax is laid under this system only upon the luxuries of life, it is perhaps as unobjectionable as any plan which can be devised.

HOW THE TARIFF OPPRESSES THE FARMER.

The fourth, by which foreign manufacturers are charged for the privilege of selling their wares to our own people, makes every vender and merchant within our borders a tax-gatherer, and is certainly liable to the objection that the Government realizes a less proportion of the money which is taken from the people under it than by any other system which has ever been devised. This objection is a very grave one and interests directly every citizen, for all contribute to pay this tax, and all surely desire that their contributions shall be as small as the needs of the Government will permit. Every patriot must be willing to bear his share of the legitimate burdens of the Government, but no reasonable man is willing to give more than the uses of the Government require.

Another objection to this system is its tendency to limit the market for our agricultural produce. Of the 17,392,099 persons shown by the census of 1880 to be engaged in all occupations 7,670,493 are engaged in agriculture. The commerce between nations is, as all know, a barter. Nations buy where they sell; in other words, they exchange their surplus products of one class in order to secure such other products as they may need. They trade with that nation from which they can secure the greatest quantity of the products needed for a given amount of the products with which they are willing to part. Any tribute which this Government may exact from foreigners for trading here must tend toward decreasing the advantages and inducements of this country as a place for exchange of products, and consequently must tend toward keeping away those who have products to exchange.

Again, if in spite of the exactions of tribute they still come to trade, they must in any exchange effected here reimburse themselves for the sum paid to the Government *by adding it to the price of the product.* The surplus products of the countries with which we can trade consists chiefly of manufactured goods. Such countries need and desire to secure by this exchange of their manufactured goods corn, wheat, meat, cotton, and other products of the farm. Now it so happens that our agriculturists have an excess of these products and need the manufactured articles of Europe, such as machinery, agricultural implements, clothing, woolen, cotton and linen cloth, boots, shoes, hats, and all indoor and outdoor necessaries and conveniences. Upon this class especially, therefore, any oppressive restrictions on trade with other nations bear with twofold severity.

Than these same agriculturists we have no class more worthy or more deserving of our fostering care and protection. The pride and crowning glory of these United States is its boundless extent of fertile land stretching beneath such kindly skies that almost every product known to any clime can be successfully cultivated within our borders. That class to which we look to develop and utilize nature's gracious promises which in this wealth of land and clime she offers possesses every claim to our kindliest consideration. But it is not alone because so much of our material wealth must be developed by it that I would urge its claim. It is because an agricultural life develops the noblest and the highest type of manhood and of womanhood, the most virtuous society, the most law-abiding and law-loving citizens, the most devoted and constant and persistent maintainers and defenders of free institutions and popular government, and because a large agricultural class insures the stability and perpetuity of government. Therefore I repeat the fact that this tariff system, which not only takes from the earnings of this class a large proportion of all the revenues of Government but both limits the market and tends to decrease the exchange value of their productions, is liable to the gravest and most serious objection.

DISCRIMINATES AGAINST NECESSARIES AND FAVORS LUXURIES.

Again, Mr. Chairman, if import duties are laid upon the necessaries of life the distribution of the tax among the people is inequitable, because the burden bears most hardly upon the shoulders the least able to sustain it. The income of the poor man is all absorbed in providing for the pressing and imperative needs of himself and those dependent upon him. Consequently he is taxed to the extent of the increase in the price of the supplies purchased upon the whole of his scanty income. The income of the rich man in excess of the amount necessary to provide for the wants of himself and his family goes wholly untaxed. Thus the tariff system may become the most iniquitous species of income-tax, oppressing the poor and shielding the rich.

REASONS IN FAVOR OF A REVENUE TARIFF.

But, Mr. Chairman, the tariff system has merits as well as demerits, and if the imposts are properly adjusted, and so graduated as not to be in any sense prohibitory, the force of the objections to which I have called attention can be and are to a very great extent obviated. This system must increase the cost to the consumer of all articles upon which import duties are laid; but the Government reaps all the benefits of that increase so far as imported goods are concerned. The increased cost to the people, however, of domestic manufactures goes not to the Government but to the manufacturers in the shape of increased profits. And when the duties are so high as to prohibit entirely the importation of foreign manufactures the Government realizes no income from imposts; and domestic manufacturers, shielded from foreign competition, force the people to buy their wares at exorbitant rates. The lower the tariff duties, the more foreign goods will be imported; and therefore the less proportion of the amount which the people pay on account of the system will find its way into the pockets of private citizens. The lower the tariff duties, the less hinderance it offers to trade between this and other nations, and the less is the exchange value of our farm products impaired.

Again, if imposts are highest upon the luxuries of life and lowest upon the necessaries most of the burden is borne by the prosperous, as it ought to be, and comparatively little of it by the unfortunate and poor.

Fortunately the needs of our Government are such that we can by a moderate rate of tariff duties raise the revenue needful for an economical administration, and thus divest the system of all its most obnoxious features and lessen all its objectionable characteristics. Of a tariff system organized as I have indicated I am thoroughly in favor.

INDIRECT TAXATION.

Indirect taxation is always more agreeable than direct taxation to the people. They prefer to have the tax-gatherer disguised as a merchant or trader or shopkeeper. They had rather be forced by the biting frost or the burning sun, by the husband's pride in adorning his wife, by the father's tender solicitude for the comfort and welfare of his child, or by any of the moods of nature, the accidents of fortune, or the necessities of circumstances to pour their tribute into the nation's treasury than by the officers and agencies of human law. They are pleased, too, with the thought that they pay the tribute of their own free will, though they are in fact compelled to pay it by the stern and inexorable and certain exigences of their nature and their condition.

Therefore, Mr. Chairman, in view of all the facts and of the public will, as I understand it, I believe that such of the revenues needful for the economical administration of the Government and the discharge of its maturing obligations as can not be realized by a tax upon the luxuries of life under the internal-revenue system should be raised by the laying of import duties.

After I have thus briefly outlined my views you can well understand my position, Mr. Chairman, in regard to the propositions maintained by the champions of the manufacturing interests upon this floor.

WHAT THE TARIFF COSTS THE PEOPLE.

I, sir, am unalterably opposed to the present tariff system, by which the people pay at least $5 to the manufacturer in order to secure to the Government $1 of revenue, and yet under which the Government piles up in its coffers many millions annually more than are needed to meet all its legitimate current expenses and obligations. The monstrous evils

of the system are, it seems to me, apparent. Its costliness and its injustice are as easily demonstrated as the motives of the manufacturers are easily discerned. By the census of 1880 it appears that the population of the United States aggregated 50,155,783. Of these 17,392,099 were engaged in the various occupations and maintain the rest. After careful investigation I have reached the conclusion that the average annual expenditure on account of himself and those dependent upon him of each of such persons, for all the necessities of life upon which a tariff is levied, must be, at the lowest estimate, $300.

I am confirmed in the conclusion that this estimate is below rather than above the mark by the fact that the manufacturing products of this country in 1880 were of the value of $5,369,579,191. And it is an admitted fact that all but an insignificant per cent. of these articles found a market at home. Dividing this sum by the number of those engaged in all the occupations we find that the average outlay of each for manufactured goods, which are all dutiable, was $314.50 for domestic manufactures alone. Now we find by reference to the tables of statistics furnished by the Government that the tariff duties average 41 per cent. ad valorem under the revision of March 3, 1883, and that in spite of this enormous rate of duty considerable quantities of European goods are imported into the United States. Of course the foreign manufacturers must realize a profit, otherwise these goods would not be sent.

I quote from a distinguished author some of the leading articles imported in a recent year stating their amounts and the rate per cent. which they had to pay:

Articles imported.	Ad valorem duties paid according to sorts.	Amount.
Woolen manufactures	54, 57, 66, 70, and 77 per cent.	$24,604,000
Cotton	35, 45, 57, and 63 per cent.	15,458,000
Linen	30, 35, and 40 per cent.	14,384,000
Silk	50 and 60 per cent.	20,103,000
Iron and steel	30, 35, 45, 48, and 50 per cent.	6,554,000
Leather	20, 25, 35, and 50 per cent.	6,906,000
Earthenware and crockery	40 and 45 per cent.	3,978,000
Tin plates and ware	27 per cent.	9,874,000
Hemp and jute fabrics	40 per cent.	1,005,000
Window-glass	68 and 72 per cent.	675,000
Total		103,541,000

What do these figures mean? They mean that the prices the American people pay for their woolen cloths and stuffs are so excessive that the British woolen manufacturers can afford to pay from 54 to 77 per cent. import duties for the admission of their manufactures into the United States and still get a profit. That is to say, that, taking the average duty at 66 per cent., the people could, if they were allowed to buy where they could buy cheapest, get the same quantity and quality of woolen and worsted goods for $12 for which they now pay $20. Eight dollars out of $20 thrown away!" After a further and parallel collation the author goes on to prove that by the protective duties there is a loss upon the average annual family expenditure of 28 per cent.

THE COST DEMONSTRATED.

A letter from a friend who has recently been abroad well illustrates this subject. He is a Republican of high standing and a business man of acknowledged ability. I read the letter that it may be seen what tribute we pay to protected manufacturers:

SAINT LOUIS, MO., *January* 7, 1884.

DEAR SIR: Replying to your inquiry as to my experience relative to buying clothes in Europe and in the States, I would say that when in Glasgow, Scotland, last fall I had made to order three suits of best quality Scotch tweed, for which I paid 50 shillings a suit—say equal to $12.50 United States currency. These were made by a first-class merchant tailor and were same goods as my tailor in Saint Louis charges me $45 to $50 per suit.

Respectfully, yours,

H. G. BROOKING.

Hon. A. M. DOCKERY,
Washington, D. C.

But for the purpose of demonstrating the enormous burden which the present tariff lays upon our people we will make a calculation upon the hypothesis that the tariff increases the cost of manufactured products to the consumer 20 instead of 41 per cent. Ascertaining the value of the manufactured products sold here annually upon the basis suggested, to wit, upon the estimate that the 17,392,099 persons engaged in the various occupations spends each one annually an average of $300 for dutiable goods both domestic and foreign, the sums spent by all aggregate $5,217,629,700. Of this sum 20 per cent., or one-fifth, was added by the tariff, and equals $1,043,525,940. Now the Government only received in the year on account of all duties on imports $186,522,064.60, or less than one-fifth of the sum which the tariff cost the people.

This calculation demonstrates not only the cost of this system, but that the manufacturers of the land receive a bonus from the tariff of about $5 to every $1 which the tariff brings to the Government; for the difference between $1,043,525,940 which the tariff cost the people and $186,522,064.60 realized by the Government from it goes to the manufacturer in the way of increased profit. This vast sum of $857,003,875.40 is taken without justification or excuse from the great mass of our people and given to a favored few. There is no reason why the agriculturist of my district shall pay an enormous tribute to the manufacturers represented by any gentlemen upon this floor. It was not for this that our fathers threw off the yoke of a foreign power, that nurtured lords and princes who lived in ease and luxury at the expense of the toiling masses. No principle upon which this unjust tariff can be defended is enunciated in our charter of constitutional rights, which guarantees equality to all and oppression to none.

EQUAL TAXATION.

The burdens of government must of necessity be supported, and they should bear upon all equally. But that any class of our people should have not only to support all the burdens of government, but also lay down at least one-fifth of their hard earnings at the feet of a few fosterlings of the Government, is simply intolerable. Like the Old Man of the Sea this manufacturing interest has fastened itself about the necks of our people, and resists every effort to loosen its suffocating grasp.

But I am much mistaken, sir, if the people will bear it much longer. They have already made it drunk with the wine of submission and forbearance, and will hurl it from them in the midst of its excesses. Sir, it would seem that the proposition to make one portion of our people—and that portion the worst paid, and certainly equally deserving with any in the land—give of the fruits of their toil and sweat to fill the already plethoric coffers of the manufacturers should be absolutely without supporters or defenders now that the needs of the Government can no longer be made the excuse for it. But the affluence which the wealth accumulated under this system has brought to the manufacturers—the untitled but pampered aristocracy of this country—has afforded ample leisure for weaving ingenious pretexts for concealing from the honest toilers of the land the naked deformity of this system. I shall briefly advert to those two upon which most reliance is placed.

PROTECTION TO AMERICAN LABOR.

The first is most specious in statement and most absurd upon investigation. It is that a protective tariff is necessary to protect the dignity of American labor, and to protect it from degrading competition with the pauper labor of Europe. *Who are the laborers of this country, and how many are there?* As we have seen, the census of 1880 shows that there are 17,392,099 persons over ten years of age in the United States engaged in the various occupations. Of these 7,670,493 are engaged in agriculture, 4,074,238 are engaged in professional and personal services, 1,810,256 are engaged in trade and transportation, and 3,837,112 are engaged in manufactures and mechanical and mining industries.

Now, sir, it is manifest that the tariff only protects from competition with European labor those of the last class. The other classes must, if necessary, face as best they can, alone and unaided by statute, the pauper labor of Europe or any other countries with whom their interests may conflict.

To-day, Mr. Chairman, and for years past the agriculturists, those who labor in wind and weather beneath wintry skies and scorching suns on the farms of the West and South, have with their produce to compete in European markets with like products raised by the pauper labor of both Europe and Asia. If we had no tariff our manufacturers would still be protected by 3,000 miles of ocean which stretches between their home markets and foreign competition. Our agriculturists to-day, compelled by the tariff to pay a heavy tribute at home, are also compelled to cross this same waste of waters in order to compete with European pauper labor in its home market. The degradation incident to this system has recently had a glaring illustration.

A foreign power declined to permit the American farmer to enter its markets with his pork. And, sir, to-day the American Congress is unable to invent any measure of redress or to relieve the farmer, because its ingenuity has been racked already to invent measures for the protection and immunity of the manufacturers. I fail to see any especial glory, sir, in the dignity of American manufacturing labor if purchased by the sacrifice and degradation of four-fifths of the whole labor of the country.

STATISTICS FROM THE CENSUS SHOWING WHO ARE "PROTECTED"—MANUFACTURERS, NOT THE LABORERS.

But, sir, it is untrue that this exorbitant tariff is at all necessary to maintain at its present standard the wages of the workers in our manufactures. The facts strip from capital the hypocritical mask of sympathy for American labor. The census of 1880 shows that the capital engaged in manufacturing in the United States is $2,790,272,606; the number of all hands employed in manufacturing, 2,732,595; the total annual wages of all such laborers, $947,953,795. Dividing the total wages by the number of hands, it appears that the annual wages of each of these laborers is $347.

The value of the material used in manufactures in 1880 was $3,396,823,549; the value of the manufactured products was $5,369,579,191. To ascertain the net profit realized by the manufacturers for that year we have to deduct the cost of the labor and material used from the value of the manufactured products. This profit we thus find to be $1,024,801,847, and this sum, the net profit, equals 37 per cent. of the total capital engaged in manufactures. This exorbitant profit, and not consideration for American labor, has inspired the siren songs with which these deft choristers would lull the murmurs of discontent which threaten a storm of indignation.

You will observe, Mr. Chairman, that these same manufacturers who

prate so loudly of wages and whisper never a word of their profits starve their laborers into subjection when they murmur as to the scanty and diminishing share of the profits which are allowed to them, and import duty free pauper labor from any quarter of the globe to compete on our own soil with the protégés for whom they profess such solicitude.

But, Mr. Chairman, laying aside all theories and coming directly to the practical results of twenty-four years of "protection," the conclusion must be reached that the "lion's share" of the tribute we pay annually under this system goes to the manufacturers and not to their employés. If not, will some representative of the system explain to the country why it is that hundreds and thousands of laborers in manufactories are to-day without employment, and discontent and poverty almost everywhere characterize this class of our people. If this system is to be continued for another twenty years, and if we are warranted in judging the future by the past, we shall be compelled to announce the danger not of competition from the pauper labor of Europe, but the danger that shall come to all our interests from the aggregation of princely fortunes by these manufacturers and the other and overshadowing danger of having to deal with *pauper labor on our own soil.*

And right here I avail myself of a few paragraphs from the speech made recently by the distinguished gentleman from New York [Mr. Cox].

Where do we find American labor mostly employed now? Referring to the "occupations" tables of the last United States Census Reports, I find the total number of persons employed in what may be called the non-protected occupations given at 13,554,987, of which number about 16 per cent. (2,268,860) were persons of foreign birth.

In the protected occupations, namely, the manufacturing, mechanical, and mining industries, I find the total number of persons employed given at 3,857,112; and of these 32 per cent. (1,225,787) were of foreign birth—double the percentage of persons of foreign birth employed in the non-protected occupations.

Any person familiar with one of the conditions of labor in the protected industries during the last twenty-five years, namely, the impossibility of its migration to the great West, will, if he is candid, have to admit that if he were to classify this labor, at least 32 per cent. more of the persons employed therein would appear to be of foreign parentage. I make this reference not to disparage our citizens of foreign birth or foreign parentage, but only for the purpose of showing that protection does not protect labor, and that employers will employ the cheapest labor that the necessities of the laborers will enable them to employ.

Aside from the protected industries referred to there are no other productive occupations in this country, except the eleven classed under the head of agriculture on page 1368 of the compendium of the last census, part 2. The total number of persons therein given as employed in agriculture is 7,670,493, of which number 3,323,876 were laborers, and 4,225,945 farmers and planters. The other 120,676 were engaged in dairying, horticulture, stock-raising, and kindred pursuits. On the page referred to I find that less than 5 per cent. of these 3,323,876 laborers (161,402) were persons of foreign birth, while of the farmers and planters 14.5 per cent. (610,180) were persons of foreign birth. Do not these figures show that American labor is being driven out of manufacturing industry under a system of tariffs which the advocates of the latter would have us believe was designed mainly, if not solely, for the protection of our skilled labor? If wages in our mining and manufacturing industries were commensurate with the ideas and necessities of life, would we find, as I could easily show by the census reports, that 64 per cent. of the labor employed therein is of foreign birth or parentage, while over 95 per cent. of our hired farm service is being performed by laborers of American birth?

COMPARISON OF PROFITS OF AGRICULTURISTS AND MANUFACTURERS.

If the proposed reduction in the tariff rates should diminish the profits of the capitalists engaged in manufacturing one-half, and no one makes any claim that it will do this, their profit would still be greater than that of any other class of capitalists in this country. Let us compare their condition with the condition of the farmer, as shown by the census of 1880. We find the following state of things:

Value of farms	$10,197,096,766
Value of implements, &c	406,520,055
Value of live-stock	1,500,464,609
Total	12,104,081,430
Cost of fertilizers used	28,586,397
Value of all farm products, 1879	2,213,402,564
Value, less cost of fertilizers	2,184,816,167
Profit invested in agriculture, without payment of any wages	18 per cent.
Agricultural laborers	3,323,876

Estimating agricultural laborers' wages at 75 cents per day, the wages paid annually to them would be $747,872,100; and on that basis the profit on capital invested in agriculture would be 11 per cent. But this whole estimate omits to debit the profit with any charge on account of maintenance of any species of live-stock, and therefore shows a larger profit than the farmer can possibly average.

HOME MARKETS GIVEN BY THE TARIFF TO THE FARMER.

But the second delusion which the manufacturers have to offer the people as a reason for a continuance of enormous subsidies to them is that the agriculturists derive enormous benefits from the home market which manufacturing establishments afford to their produce. Could any pretext be more flimsy than this cry for protection to American labor?

With our rich and virgin soil, the cheapness of our lands, and superior agricultural implements the American farmer can and has competed successfully with his produce in every market of the civilized world, and but for the protective tariff system, which hinders and interrupts exchange with other nations, would never be without a profitable market for their surplus produce. The manufacturing countries of Europe would gladly exchange their manufactured goods for the wheat, corn, and meat produced upon our farms.

In spite of the high tariff the statistics show that the products of our farms are now being exchanged for the products of European manufactories. This tariff not only limits the market, but also the profit to be realized there. It prohibits the introduction here of the great bulk of the manufactured products of other countries. They are forced to look elsewhere for purchasers or for those with whom they can exchange. And in the exchange they supply their wants which our agriculturists are prepared and are anxious to supply. When in despite of the high tariff they come here to trade they must in the exchange with our agriculturists add to the price of their goods and wares the import duties which this Government exacts for the privilege of bartering here.

If, for example, they can profitably manufacture and transport here three yards of calico for the sum they would willingly pay for one pound of meat, the farmer would secure the calico for the meat. But when at our ports of entry they have to pay 40 per cent. on the cost of the calico for the privilege of bartering with our farmers, they must secure 40 per cent. more meat in the exchange to indemnify themselves for the increased outlay. The illustration is homely, but the truth it teaches is most important and far-reaching in its results, as will be seen by the statistics, which show that the commerce between the American farmer and the foreign manufacturer to-day aggregates largely over $1,000,000,000 annually. While our farmers are thus kept out of the foreign markets, or go thither hampered with the consequences of this tariff system, those certainly of the West and South derive no benefit from the boasted home market of the East. I quote from an eminent authority, Thomas G. Shearman, upon this subject, as follows:

WHAT PROTECTION DOES FOR FARMERS.

The farmers have long been treated to the most bewildering calculations for the purpose of showing that protected manufactures are their sole source of wealth. Immense pains have been taken to prove that the farmers could not live without the market afforded by protected manufactures, and a statement has been made a thousand times that a foreign market is a positive injury to the American farmer, because so long as he sent his wheat to Liverpool the Liverpool market would fix the American price. The wise scheme which has been invented for the relief of the farmer is therefore to make the number of his customers less. For is he not told that it is a positive injury to him to sell his wheat in Liverpool? If, then, Liverpool can only be prevented from buying American wheat, surely the American farmer will be made more prosperous!

These wiseacres overlook the fact that the only way in which Liverpool can be prevented from fixing the price of American wheat is by preventing Liverpool from paying the highest price in the market of the world. Now, the only reason why Liverpool fixes the price is that Liverpool is the best market, and just because it is the best market the protectionist desires to ruin it for the benefit, he pretends, of the American farmer. The best answer, however, to all the nonsense which is talked about the Liverpool market is the fact that with the increase of protection the American home market has become less and less favorable to the American farmer, and he has become constantly more dependent upon Liverpool.

FARMERS DEPEND UPON THE FOREIGN MARKET.

Mr. Nimmo, writing in the North American Review in favor of protection, let slip the fact that 95 per cent. of all the exports of breadstuffs and provisions come from the Western States, and that the Eastern manufacturing States consume nearly all their provisions, and neither export abroad nor furnish any considerable market for the Western States. The West is absolutely dependent upon itself and Europe. The Eastern market is practically of no avail to it. Yet to support this imaginary Eastern market the West has for years cheerfully borne an enormous load of taxation levied under the pretense of protecting American industry.

To further exhibit the fallacy of the boasted home market for agricultural products I submit the following statement, made by the very able chairman of the Committee on Ways and Means [Mr. MORRISON] in a recent address delivered in this Hall:

EXPORT OF AGRICUTURAL PRODUCTS DOUBLE THAT MANUFACTURERS USE.

In the lower cost of transportation on land and sea is to be found one chief agency of the wondrous development which bounty-fed manufacturers credit to protection. The system by adding to the cost of the materials for railroad construction has increased the cost of railroad transportation at least 25 per cent. In the lower cost of carrying agricultural products they have found their only sources of profits. On more than one occasion here I have exposed the fallacy of obtaining a home market for agricultural products through protection maintained by taxing agriculture. In 1880 the agricultural product was counted in the census at $2,212,540,927. Assuming that these products were used by the people equally without regard to their occupations, those engaged and employed in manufacturing, including all mechanics, also miners, consumed of the products classed as agricultural $335,000,000 worth, while for more than double as much, or $685,961,091 worth, the producers were compelled to seek a foreign market.

A SELFISH POLICY.

I do not know that I could better illustrate the utter selfishness of this policy and give the proper direction and emphasis to the word "protection" than by recalling an incident that transpired during the debate in favor of restoring the old tariff on wool. When the gentleman from Ohio [Mr. CONVERSE] was appealing so earnestly on behalf of the measure he stated the profits of the wool-growers of this country had been reduced annually more than a million of dollars by the reduction of the tax. I suggested to a protectionist friend who sat near me that he should explain to me in a few words *who paid the profits in controversy.* His reply was—jestingly of course, but really revealing the true situation—"it matters not as to that so we get them."

But here is another illustration brought forcibly to the attention of

the country by the vote had on that proposition. On this question affecting the wool-growers of the country we found the Republican representatives of the wool-manufacturing interests voting solidly against the restoration of the duty on wool.

Mr. RUSSELL. You do not mean to say that they voted solidly in that way?

Mr. DOCKERY. I will qualify the statement as to the solidity of the vote; but my recollection is that twelve Republican Representatives voted against restoring the old duty on wool. And I know I heard several Republican Representatives declare that the vote was the strongest argument made in favor of free trade on this floor, and it shook the faith of several Republican Representatives from the West, that on this question, where they wanted a little "protection" for their wool-growers, the representatives of the manufacturers in the East refused to grant them their share of the protection.

Mr. RUSSELL. They did not vote solidly, as the gentleman stated.

Mr. DOCKERY. I have qualified that statement. My recollection is that twelve Republican Representatives voted against it. Is not that correct?

Mr. RUSSELL. I have not the number.

Mr. DOCKERY. The number was sufficient to illustrate the point I am trying to make, and that is the utter selfishness of this policy. It is well known there is a difference between the wool-growers and the wool-manufacturers on this question. And why? Because the wool manufacturers do not want to give the wool-growers any part of their profits.

Mr. RUSSELL. You will find them fighting together this fall.

Mr. DOCKERY. I will ask the gentleman how many Representatives from Massachusetts voted to restore the duty?

Mr. RUSSELL. I said they did not vote solidly, as the gentleman had stated.

Mr. DOCKERY. It is true that the gentleman himself voted to restore the old tariff on wool; but it is also true that his Republican colleagues from Massachusetts, representing wool-manufacturing districts, voted solidly against the restoration of the duty. I may also state that on this question the distinguished leader of that side of the House from Maine [Mr. REED], although not paired, fails to record himself on either side of the question.

TAXATION SHOULD BE FOR PUBLIC PURPOSES.

Mr. Chairman, it has been truly said by a distinguished member of this body (Mr. CARLISLE), that "all taxation should be for public purposes." Protection taxes one business interest for the benefit of another, and is in direct contravention of that great fundamental doctrine of our Government, "Equal rights to all; exclusive privileges to none." [Applause.]

Sir, should this iniquitous system prevail in a government of the people, by the people, and for the people? The hour for honest, candid consideration has arrived. The tariff question is now the dominant one in American politics. The Republican party has arrayed itself under the banner of protection. The Democratic party still fights under the banner of tariff for revenue. While we are willing to accord to the manufacturing industries such protection as this scale of taxation incidentally gives, we are unwilling to subsidize any class, to foster any monopolies, or lay unnecessary burdens upon any department of our industries.

"FREE TRADE."

It has been charged on this floor and in the public press that the Democratic party demands free trade. Now, the gentlemen who make that charge on this floor of course can not be accredited with candor and sincerity, because they are too intelligent and know how utterly without foundation in fact is this statement. The charge is made for a purpose and for an effect. The phantom of "free trade" is invoked to affright the timid.

The Democratic party may have free-traders within its organization, but the Democratic party is not for free trade, and the gentlemen representing the Republican party in this debate can not point to a single plank in a national platform of that party that would authorize them to make such a declaration.

Mr. Chairman, "tariff for revenue" is no new doctrine of the Democratic party. More than forty years ago the Democratic party declared its position in favor of such a tariff, and on this issue it then aligned its forces to make battle for political supremacy, and amid all the changes and chances incident to political contests it has fought a good fight and kept the faith.

In the fierce contests which preceded the war it grappled, fought, and overthrew the old Whig party on this question, and I say to-day to my Republican friends that on this issue it will triumph in the near future and live to preside at the funeral obsequies of the Republican party. [Applause].

NATIONAL DEMOCRATIC TARIFF PLATFORMS.

In the Democratic platform of 1840 the tariff resolutions (numbers 4 and 5) are in these words (which have been reaffirmed, enlarged, or reannounced in every national Democratic convention since held):

4. *Resolved*, That justice and sound policy forbid the Federal Government to foster one branch of industry to the detriment of another, or to cherish the interest of one portion to the injury of another portion of our common country; that every citizen and every section of the country has the right to demand and insist upon an equality of rights and privileges.

5. *Resolved*, That it is the duty of every branch of the Government to enforce and practice the most rigid economy in conducting our public affairs, and that no more revenue ought to be raised than is required to defray the necessary expenses of the Government.

Convention of 1844, resolutions 4 and 5 reaffirmed.
Convention of 1848, resolutions 4 and 5 reaffirmed.
Convention of 1852, resolutions 4 and 5 reaffirmed.
Convention of 1856, resolutions 4 and 5 reannounced.
Convention of 1860, resolutions 4 and 5 reaffirmed.
Convention of 1868, resolutions 4 and 5 reannounced.
Convention of 1872, resolutions 4 and 5 reannounced and the whole question relegated to the Congressional districts.

Convention of 1876: In this convention this doctrine was reannounced in the following language:

We denounce the present tariff levied upon nearly 4,000 articles as a masterpiece of injustice, inequality, and false pretense. It yields a dwindling, not a yearly rising revenue. It has impoverished many industries to subsidize a few. It prohibits imports that might purchase the products of American labor. It has degraded American commerce from the first to an inferior rank on the high seas. It has cut down the sales of American manufactures at home and abroad, and depleted the returns of American agriculture, an industry followed by half our people. It costs the people five times more than it produces to the Treasury, obstructs the processes of production, and wastes the fruit of labor. It promotes fraud, fosters smuggling, enriches dishonest officials, and bankrupts honest merchants. We demand that all custom-house taxation shall be only for revenue.

Convention of 1880 declared in favor of a "tariff for revenue only."

CONCLUSION.

Mr. Chairman, the time fails me for a further discussion and presentation of this question. I trust that such a settlement may be reached as shall intensify our patriotism, enlarge our generosity, give prosperity to all our industries, and enhance the wages of the laborers of this country. Sir, I shall hail with joy the day when the honest labor of this land shall in majesty and power assert its rights in the Halls of Congress, when we shall all tread side by side in the ranks of genuine republicanism, with our eyes veering neither to aristocracy nor agrarianism.

Sir, I believe that freer trade and equal taxation will enhance rather than diminish the wages of labor, and believing thus, in common with the great body of the Democratic party and I doubt not a majority of the people of the United States, I shall give my voice and vote for this measure, which is the initiatory step in favor of such a reform as will ultimately place our system of tariff taxation upon a revenue basis.

The Democratic party now as heretofore favors a tariff for revenue; a tariff so adjusted as to distribute equally the burdens and benefits of government; a tariff national, not sectional or geographical; a tariff which, so far as may be practicable under a revenue system, shall declare before the law the equality of all the great industries of the country; a tariff which shall not enrich the few at the expense of the many; a tariff which shall not tax four-fifths of the laborers of this country for the benefit of the manufacturer; a tariff which shall not limit the market for agricultural products; a tariff which shall aid in restoring our commerce; a tariff which shall not deplete the revenues of the Government by giving immense premiums to favored industries; a tariff that shall not destroy or paralyze our manufacturing industries, but which will make them hardy, generous, and self-reliant; a tariff which will not yield 37 per cent. on the capital invested to manufacturers and only $1.16 a day to the laborer; a tariff which shall not be prohibitory, and thus "protect" against all competition the manufacturers of this country; a tariff which shall recognize the genius and prowess of American manufacturers and American laborers, and be willing to challenge competition with Europe in the open markets of the world; a tariff which shall not demand that American agriculturists compete with the poorest-paid labor of the world, and then in turn require them to pay a bounty of 41 per cent. on all they purchase; a tariff that will not under the pretense of "protecting" American labor levy an annual tribute of $800,000,000 on the consumers of this country; a tariff that will not impose the heaviest burdens upon the articles of necessity in daily use among the people; and, finally, a tariff which shall not divorce or estrange agriculture, commerce, and manufactures, but such a tariff as will bind together indissolubly in the bonds of a common interest all the great industries and all the sections of this mighty Republic. [Applause.]

APPENDIX.

Statistical summary as shown by the census of 1880.

Population of the United States		50,155,783
Engaged in agriculture	7,670,493	
Professional and personal occupations	4,074,238	
Trade and transportation	1,810,256	
Manufactures, mechanics, and mining	3,837,112	
		17,392,099
Employed in the non-protected occupations	13,554,987	
Employed in the protected occupations	3,837,112	
		17,392,099
In the non-protected occupations 16 per cent. are persons of foreign birth		2,268,860
In the protected occupations 32 per cent. are persons of foreign birth		1,225,787
Foreign immigration, mostly adults, since July 1, 1870		4,809,524

AGRICULTURAL STATISTICS.

Capital employed in agriculture		$12,104,081,430
Number of farms		4,008,907
Agricultural laborers		3,323,876
Value of farm products		$2,213,402,564
Estimated profit on capital invested, 11 per cent.		
Farmers consume of their own products	$673,372,000	
Manufacturers and mechanics	244,863,000	
Other Americans	612,156,000	
The foreign market	683,011,000	
Total consumption		$2,213,402,000
Agricultural export in 1860 was 78 per cent. of entire exports		295,000,000
Agricultural export in 1870 was 79 per cent. of entire exports		391,000,000
Agricultural export in 1880 was 83 per cent. of entire exports		685,000,000
Agricultural export in 1883 was 77 per cent. of entire exports		619,269,449

MANUFACTURING STATISTICS.

Capital employed in manufactures		$2,790,272,606
Manufacturing establishments		253,852
Value of manufactured products		$5,369,579,191
Laborers employed in manufactures		2,732,595
Gross profits after deducting wages and material		$1,024,801,847
Profit on capital invested, 37 per cent.		
Average annual compensation to labor		$347 00
Average daily wages		$1 16
Imports for the year ending June 30, 1883	$742,796,684	
Exports for the year ending June 30, 1883	804,223,632	
Total exchange		$1,547,020,316
Value corn product 1860		600,000,000
Exported that year, four-tenths of 1 per cent		2,400,000
Value corn product 1880		702,000,000
Exported that year, 7½ per cent		53,000,000
Under a revenue tariff wheat exports were only 2½ per cent.		
Home market consumed 97½ per cent.		
Under the present tariff we export of wheat 36 per cent.		
Home market only consumes 64 per cent.		
Under a protective tariff wages only receive of the value of the products 18 per cent.		
Under revenue tariff they received 20 per cent.		
Aggregate of national wealth in 1870		$26,460,000,000
Aggregate of national wealth in 1880		43,300,000,000
Under a revenue tariff the national wealth from 1850 to 1860 more than doubled.		
Average rate of duty under tariff of 1789, 8½ per cent.		
Average rate of duty under tariff of 1792, 13½ per cent.		
Average rate of duty under tariff of 1816, 30 per cent.		
Average rate of duty under tariff of 1824, 37 per cent.		
Average rate of duty under tariff of 1828, 41 per cent.		
Average rate of duty under tariff of 1832, 33 per cent.		
Average rate of duty under tariff of 1846 to 1861, 19 per cent.		
Average rate of duty under tariff of 1862, 35 per cent.		
Average rate before revision of last Congress, 43½ per cent.		
Average rate under the present tariff, 41 per cent.		
Estimated average under this bill, 33 per cent.		
Estimated annual reduction of revenue under this bill, $30,000,000.		

PUBLIC DEBT OF THE UNITED STATES APRIL 1, 1884.

Interest-bearing debt:		
Bonds at 4½ per cent., due in 1892	$250,000,000 00	
Bonds at 4 per cent., due in 1907	737,643,950 00	
Bonds at 3 per cent, subject to call	254,808,650 00	
Refunding certificates	305,400 00	
Navy pension fund	14,000,000 00	
		$1,256,758,000 00
Debt on which interest has ceased		14,043,915 26
Debt bearing no interest:		
Legal-tender notes	$346,739,541 00	
Certificates of deposit	15,475,000 00	
Gold and silver certificates	220,644,561 00	
Fractional currency	6,984,317 31	
		589,843,419 31
Interest due and unpaid		11,492,685 11
Total public debt		1,872,138,019 68
Cash in Treasury		402,875,210 59
Debt, less cash in Treasury April 1, 1884		1,469,262,809 09
Cash balance available after deducting gold and silver certificates, &c		150,919,315 93
Estimated annual surplus in excess of the expenditures of the United States		50,000,000 00

Thomas H. Herndon.

REMARKS

OF

HON. SAMUEL J. RANDALL,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, April 17, 1884,

On the life and character of the late Hon. THOMAS H. HERNDON, Representative-elect to the Forty-eighth Congress from the first district of Alabama.

Mr. RANDALL said:

Mr. SPEAKER: There are men whose lives have been so true and gentle that the exaggerated language of eulogy is rendered unnecessary and for whom the simple recital of duty bravely done and noble purposes carried out without fear or favor is their most eloquent obituary. Of such was the late THOMAS H. HERNDON, of Alabama. Of spotless personal character, with mental faculties cultured and self-poised, with courage equal to his convictions, yet in the ordinary business of this House he was modest, unassuming, and affable until principle was at stake and right was to be sustained, and then no rock was more firmly rooted. The denunciations of enemies, the seductions of interested parties, and the blandishments of power were equally unavailing to move him from the position he took after careful consideration.

He was my friend, and none had a truer one. And such friendship is a consolation beyond all power of words to depict. It is the solace and support of men who try, however feebly, to pursue the course which they believe to be just and proper. It is easy and delightful to do the wishes of those who would aggrandize their fortunes from the public treasury or to grant monopolies to those already too powerful, while on the contrary to battle in behalf of the rights of the many, which are ever absorbed by the few unless prevented by ceaseless vigilance, brings unstinted abuse and the most cruel misrepresentation, and all the more unjust because it is deliberately done. If it were not for the companionship and warm-hearted help and confidence of men from every section and of all parties, men like Mr. HERNDON, the vexations and labors of public life would be unendurable.

It is not the men who appear most conspicuously in our public proceedings who are always the best legislators. There are those who work earnestly and noiselessly, attentive and watchful, too faithful to themselves and their constituents to decide without the fullest information, and who are as steady to the principles they profess as the needle to the pole, and who moreover, on the great field-day when wrong is to be routed and right made victorious, are always to be found in the ranks ready to do and dare to the utmost. Such a legislator and such a friend was Mr. HERNDON.

I feign no stately sorrow on this occasion. I sincerely mourn for one I esteemed deeply. In coming into this Hall I miss the bright glance and hearty welcome of a true friend. There have vanished the refinement and courtesy of a genial and worthy associate. Something has dropped from the comfort of my daily life which can not easily be replaced.

Alabama has sent to Congress men of surpassing eloquence, and others who have won the highest positions on the floor of this House and in the other Chamber, but none left behind them the memory of a purer life, a sounder public record, or a sweeter character than Mr. HERNDON. Such memories are the undying glory of every commonwealth, and are a valuable incentive to honest ambition everywhere.

Territorial Judiciary.

REMARKS

OF

HON. THOS. H. BRENTS,

OF WASHINGTON TERRITORY,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 8, 1884,

On the bill (H. R. 4705) in relation to courts and judicial proceedings in the Territories.

Mr. BRENTS said:

Mr. CHAIRMAN: So much of the day set apart by the special order of the House for the consideration of Territorial legislation has already been consumed by the bill for the "Territory of Texas" that I shall not trespass more than five or ten minutes further in the discussion of a measure for the benefit of the other Territories. It is nevertheless not only a measure of very pressing necessity in order to relieve the overburdened and overworked judges, but also of vital importance in securing more adequate means and better methods in the administration of justice in those Territories.

The duties of the Territorial judges are numerous, varied, complex, and burdensome. They perform the functions of judges of the State district or State circuit courts, the State court of errors and appeals or State supreme court, and of the United States district and United States circuit courts, exercising both original and appellate jurisdiction in the trial of all causes save those falling within the jurisdiction of justices of the peace, and appellate jurisdiction for the retrial *de novo* of those. In the trial of one cause the judge presides over a nisi prius court in the exercise of common-law jurisdiction; in another he is holding a court of chancery; in the next, sitting as a court of admiralty, or as a spiritual court in the trial of a matrimonial or other ecclesiastical cause. In order to hear all these various causes in the first instance the judges must in my Territory make long, tedious, and fatiguing journeys by most inconvenient means of travel and hold terms of court for the transaction of United States business at nine different and distinct points, and for Territorial business at eighteen different points.

In these Territories everything is in a formative and unsettled state, and hence litigation is more prevalent than in older and better organ-

ized communities, and the amount of business transacted by the courts proportionately greater. In many places the various calendars are crowded with hundreds of cases. And when the dockets are cleared, and often before, the judge must attend the supreme court. Here he must not only sit in review upon the causes brought up by writ of error on appeal from the decision of his associates, which is bad enough in all conscience, but also those he has previously decided himself. This feature of our present Territorial judiciary system is, as every lawyer and, indeed, every man of observation and experience must acknowledge, essentially demoralizing and vicious in its tendencies.

Few judges, if any, however pure and honest in their intentions, can so far lay aside their settled convictions formed after mature consideration and reflection and divest themselves of that natural pride of opinion and prejudice which are almost inseparable from humanity as to be able to sit in impartial and unbiased review upon the judgments and decrees previously rendered by themselves. One-third of the court, then, has in every instance prejudged the case, comes to its consideration with the strongest possible bias and naturally feeling that the reputation of one member for both judicial ability and integrity are involved in the affirmance or reversal of the previous decision. That member is not only a biased and interested judge but necessarily a most effective advocate for the winning party in the court below, with the opportunity to make his argument in the consultation room without the chance of reply. The other judges, to whom his arguments are addressed, can scarcely forget that he must next sit with them in review of each of their decisions. What is the right of appeal to a court so constituted worth? Better deny it altogether. It can only serve the purpose of delay, with but little hope of rectifying error except the most glaring. Such a system is grossly unjust to both judges and litigants. It brings reproach on the one and disappointment and distrust to the other. It begets a want of confidence in the law's machinery for the settlement of disputes and the attainment of justice. It brings the decisions of the court into contempt and destroys the authority of the law; and this in its turn is the prolific cause of riots, lynchings, anarchy, and bloodshed. No wonder that cries loud, urgent, importunate, are coming up to Congress from all these Territories for a speedy remedy!

Mr. Chairman, the bill now under consideration, I am sorry to say, does not afford the fullest possible relief from these abuses; but it makes a long stride in the right direction. We ought to have an independent supreme court, composed of entirely different judges from those who hold our district courts. But failing to get a bill reported making provision for this, we earnestly urge the passage of this bill as the best we can now expect, preferring a half-loaf of the bread of justice rather than suffer the pangs and gnawings of mal-juridical hunger. Pass this bill giving us an additional judge and excluding each member of the supreme court from sitting in review on his own decisions; pass this bill and lighten the grievous burdens of our present judges in the Territories; shorten the distance to be traveled by our jurors, witnesses, and litigants, and give our people better and less expensive facilities for the transaction of their legal business; pass it and remove a burning reproach upon the administration of justice, and restore the waning respect of the people for the authority of law and civil government; pass it, and pass it now.

Retirement and Recoinage of the Trade-Dollar.

SPEECH

OF

HON. A. HERR SMITH,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 27, 1884.

An act to redeem the trade-dollar and to suspend the coinage of trade and standard silver dollars.

Be it enacted, &c., That until January 1, 1886, United States trade-dollars shall be received at their face value in payment of all Government dues, and shall not be again paid out or in any other manner issued; and the holder of trade-dollars, on presentation of the same at the office of the Treasurer, or Assistant Treasurer, or any mint of the United States, shall receive in exchange for the same, dollar for dollar, at his or her option, either standard silver dollars or United States fractional silver coin; and the trade-dollars so received shall, under the direction of the Secretary of the Treasury, when necessary, be coined into fractional silver coin.

SEC. 2. That all laws authorizing the coinage of trade-dollars or the purchase of silver and its coinage in silver standard dollars be, and the same are hereby, repealed.

Mr. SMITH said:

Mr. CHAIRMAN: The propriety of redeeming the trade-dollar can hardly admit of an argument. Originally intended for China, it has come back, and is now in the hands of our people, and perhaps mainly among tradesmen and laboring men. It was coined in 1873, and had the quasi-indorsement as a coin of the United States. About 7,200,000 are now in circulation. Manifestly good faith demands the redemption, and under the bill proposed this can be done without loss to the Government.

The substitute I have suggested is intended to suspend the further coinage of the standard silver dollar. This act was passed February 28, 1878, and reads as follows:

That there shall be coined, at the several mints of the United States, silver dollars of the weight of 412½ grains Troy of standard silver, as provided in the act of January 18, 1837, on which shall be the devices and superscriptions provided by said act; which coins, together with all silver dollars heretofore coined by the United States, of like weight and fineness, shall be a legal tender, at their nominal value, for all debts and dues, public and private, except where otherwise expressly stipulated in the contract. And the Secretary of the Treasury is authorized and directed to purchase, from time to time, silver bullion, at the market price thereof, not less than $2,000,000 worth per month, nor more than $4,000,000 worth per month, and cause the same to be coined monthly, as fast as so purchased, into such dollars.

If you will pardon the egotism implied in the statement, it is right to say I voted against the passage of the bill now a law. I then held, as I hold now, that the coinage of silver dollars is useless, and, because of the amount authorized to be coined, productive of positive harm. Its enactment was not then and its repeal should not be now a partisan measure. President Hayes vetoed the bill, but it became a law by a two-thirds vote over his veto.

For this financial folly it will not do to plead the precedent of our fathers. They indeed made the experiment, but the very limited amount of silver dollars coined clearly indicated their doubt as to its expediency. From 1793 to 1852, a period of fifty-nine years, there were only coined 2,506,890 silver dollars, and from 1853 to 1873, 5,538,948, making an aggregate in eighty years of but 8,045,838 silver dollars, and practically not in circulation.

For nearly a century the Government and the business community managed to move on very smoothly without the aid of the ponderous dollar. It was not needed, and therefore not coined; but subsidiary coin was demanded, and it was, wisely, in sufficient amount supplied.

Thus from 1793 to 1852 there were coined—half-dollars, $66,249,153; quarter-dollars, $3,999,040.50; dimes, $3,890,062.50; half-dimes, $1,823,-298.90; three-cent pieces, $744,927.

From 1853 to 1873 there were coined—half-dollars, $33,596,082.50; quarter-dollars, $18,002,178; dimes, $5,170,733; half-dimes, $3,083,-648; three-cent pieces, $536,923.20; and the aggregate of these coins from 1793 to 1883 was—half-dollars, $122,761,270; quarter-dollars, $38,492,086.25; dimes, $17,628,012.20; half-dimes, $4,906,946.90; five-cent pieces, $7,018,538.40; three-cent pieces, $2,172,334.17; two-cent pieces, $912,020; one-cent pieces, $6,900,328.43.

Utterly unlike our practical progenitors, who coined only such coins as were necessary, our legislation was directed in the interest of the silver kings. Hence, in 1874, under the trade-dollar act, we coined 3,588,900 trade-dollars; in 1875, 5,697,500; in 1876, 6,132,050; in 1877, 9,162,900; in 1878, 11,378,010; making an aggregate of 35,959,360 in trade-dollars.

Having sent our trade-dollars to China, silver miners must needs have a silver dollar for the American trade, and the act of February 28, 1878, aforesaid, followed as a consequence.

The mints were therefore set to work, and in 1878 we coined of standard silver dollars 8,673,500; in 1879, 27,227,500; in 1880, 27,923,750; in 1881, 27,637,955; in 1882, 27,772,075; in 1883, 28,111,119; and now, on the 1st of March, 1884, we have coined of these silver dollars 166,-125,119, of which 126,822,399 are in the Treasury, leaving outside, in banks and private hands, 39,302,720.

Under the law a portion of these silver dollars is held ostensibly for the redemption of the silver certificates, really to swell the paper circulation, as the same are receivable for customs taxes and public dues, and when received may be reissued. But conceding that the reserve is in good faith intended for what the words express, it is a needless precaution, as the credit of the nation is ample security; and if it is not, the pledged collateral is short by 15 per cent.

If, Mr. Chairman, in a fit of silverphobia, the holder of the certificates exercised his right, and with horse and cart and armed police repaired to the Treasury and got possession of his much-coveted treasure, how, I ask, would he dispose of it? He can not take it where thieves break through and steal, and bank officers would not give paper, equivalent to gold, in exchange for his depreciated dollars.

Silver is needed as subsidiary coin. Halves, quarters, dimes, nickels, and cents are wanted only for change. All these, and even gold, are coined under the direction of the Secretary of the Treasury and the Director of the Mint. Why make the silver dollar, if its coinage must be continued, an exception to this general discretionary power?

I am anxious for the repeal of the law for the reason that the silver dollar is utterly useless as a circulating medium. In vain have the United States Treasurer and assistant treasurers sought to get it into circulation. Bankers, public and private, can not without great difficulty pay it out, and then only on terms. Even the market-woman, who receives it with misgiving, makes haste to get rid of it at the earliest opportunity. Here in this House, its cashier, the Sergeant-at-Arms, when furnishing change for a five-dollar bill, must importune members to accept part of the same in silver dollars. They do not want silver dollars.

If a dollar is needed by way of subsidiary coin, we have two halves or

four quarters to make it; besides, we have the paper dollar and the gold dollar, and no one wants to be weighted down with a cumbrous coin, even though euphoniously yeleped "the dollar of the daddies." By all it is looked upon as the fifth wheel to a coach, the third sleeve to a coat, and its advocates, for superlative folly, equal the logic of the hopeful juvenile who insisted that the garret-door should have two holes, one for the cat and one for the kitten.

The silver dollar is, however, not only useless, but its continued coinage must result disastrously to the gold in the Treasury. Already the heavy shipments of gold abroad is causing serious alarm, and will necessarily tend to the hoarding of the same. As the gold is shipped, or hoarded, the silver dollar will depreciate more and more, and, like the trade-dollar, its twin-brother, will soon cease to circulate. Ultimately the coinage of the silver dollar must cease. It is simply a question of time. It is surely the part of wisdom to do voluntarily that which sooner or later must come from necessity.

The folly of investing $2,000,000 in the purchase of silver each month, only to be stacked in untold millions in Treasury vaults, has aroused the common sense of the people, and from all sections they speak as emphatically for the suspension of the coinage of the silver dollar as they do for the redemption of the trade-dollar. Both are useless; both are absolutely mischievous. No demand comes from the people for these silver dollars. My constituents have strongly and numerously petitioned for the redemption of the trade-dollar and for the suspension of the coinage of the silver dollar. They were the first to move in the right direction.

The Executive, whose duty under the Constitution compels him to recommend to Congress such measures as he may deem necessary and expedient, has spoken again and again very emphatically against the continued coinage of the silver dollar. The Secretary of the Treasury and the Director of the Mint, who have made this subject a specialty, most earnestly second the recommendation of the President. The boards of trade throughout the country are in harmony with these views. The press, ever watchful of the people's interest, has spoken on this question in no uncertain tone. Indeed, from no quarter is a single word heard in favor of the further coinage of this useless and mischievous dollar. Why, then, coin the same? No one wants it except the silver kings. It is coined for the few at the expense of the many.

If you must coin to hoard, prudence suggests that you hoard gold. It at least would be available to pay debts abroad. But why coin silver which from its legal-tender quality enables the debtor—who has received gold or its equal in value, national-bank notes—to discharge his liabilities in depreciated coin? If such an attempt were made with clipped or debased coin, the cry of shame would come from all not deaf to every principle of honor. Except where otherwise expressly stipulated in the contract, so it is nominated in the law, these silver dollars at their nominal value shall be a legal tender for all dues, public and private. Of course the Government with a full Treasury, and the millionaire with a silver mine to replenish his coffers at will, could stand this loss. Not so the masses of the people.

Of all men the laborer ought to be paid in money that possesses the most purchasing quality and is the least liable to fluctuate. Gold has this quality, but the most blatant friend of the laboring man has not urged its coinage.

Only the silver miner can utilize the Treasury Department for marketing his silver dollars. He has greatly the advantage over his brethren who mine gold, copper, or nickel. Why is this preference given to the white metal? Why are the other coins so persistently ignored? If the Government is asked to make a market for one class of miners and for a special product, in all fairness a reason should be furnished for this odious partiality.

Legislation may determine the means by which products shall be weighed or measured, but can not fix the price of such products, whether they be wheat, beef, or silver. The law in question declares the silver dollar shall contain 412½ grains of silver, but London and New York fix its value. The New York Tribune of the 15th instant makes the value of this dollar 84.87 cents, and I find that on the 25th of February, 1878, it was worth from 90 to 92 cents. The law says it shall be a legal tender for public and private debts, but this can not keep it at par, while the national-bank note, without this quality, is the equivalent of gold.

The laws of trade, like the laws of matter, are as little controlled by legislation as was the raging sea by the futile decree of King Canute. When the supply exceeds the demand the obvious remedy is to reduce the production. Instead of acting on this simple principle, the silver monopolist has by legislative enactment made the Government do for him what it does for no one else—purchase his useless and unmerchantable bullion.

But I object further, Mr. Chairman, to the continuance of this coinage act because under it double the amount of silver now coined might be bought and coined. The maximum amount under this act which can be used for the purchase of silver is $4,000,000 per month, and the minimum $2,000,000, and as the Treasury Department has only used the minimum in the past, we might have in the future 54,000,000 silver dollars coined per year instead of 27,000,000.

If this policy is not changed silver will become as cheap as it was in the days of Solomon. All King Solomon's drinking vessels—so the sacred historian writes—were of gold, and the vessels of the house of the forests of Lebanon, of pure gold; none were of silver. It was nothing accounted of in the days of Solomon. But I am further opposed to this continued coinage of the silver dollar because we can not use it to pay our liabilities abroad. Gold is the currency of the world. Without an agreement with foreign nations silver can not be used as the standard of value.

There ought to be no conflict between the friends of gold and silver. Each coin has its appropriate place. Gold, as the standard of value, is the currency of the commercial world; silver, as a subsidiary coin, is indispensable for small transactions of barter and trade.

Silver is now found in great quantities, and as it is used extensively in the arts and manufactures its value is greatly affected by the supply and demand.

The following table shows the highest and lowest values of one ounce of fine silver bullion from 1873 to 1883:

Years.	Highest.	Lowest.
1873	$1.3139	$1.2686
1874	1.3043	1.2549
1875	1.2632	1.2166
1876	1.2823	1.0248
1877	1.2769	1.1672
1878	1.2111	1.0851
1879	1.1782	1.0713
1880	1.1590	1.1316
1881	1.1590	1.1152
1882	1.1481	1.0960
1883	1.1440	1.0960

These figures prove that silver has depreciated during the past eleven years about 17 cents per ounce. From 1848 to 1873 the production of gold largely exceeded that of silver in the United States, but from 1873 to 1882 silver was in excess.

The following table exhibits the annual production of gold and silver in the United States for the decade ending December 31, 1882:

Period.	Gold.	Silver.
Six months ending June 30, 1873	$18,000,000	$18,750,000
Year ending June 30, 1874	34,490,902	37,324,594
Year ending June 30, 1875	33,467,856	31,727,560
Year ending June 30, 1876	39,929,166	38,783,016
Year ending June 30, 1877	46,897,390	39,793,573
Year ending June 30, 1878	51,206,360	45,281,385
Year ending June 30, 1879	38,899,858	40,812,132
Year ending June 30, 1880	36,000,000	39,200,000
Six months ending December 31, 1880	18,000,000	21,000,000
Year ending December 31, 1881	34,700,000	43,000,000
Year ending December 31, 1882	32,500,000	46,800,000

This production was distributed among the States and Territories for the year 1882 as follows:

States and Territories.	Gold.	Silver.
Alaska	$150,000	.....
Arizona	1,065,000	$7,500,000
California	16,800,000	845,000
Colorado	3,360,000	16,500,000
Dakota	3,300,000	175,000
Georgia	250,000	.....
Idaho	1,500,000	2,000,000
Montana	2,550,000	4,370,000
Nevada	2,000,000	6,750,000
New Mexico	150,000	1,800,000
North Carolina	190,000	25,000
Oregon	830,000	35,000
South Carolina	25,000	.....
Utah	199,000	6,800,000
Virginia	15,000	.....
Washington	120,000	.....
Wyoming	5,000	.....
Total	32,500,000	46,800,000

Under the act of February 28, 1878, an effort was made, through the Silver Commission, to adopt a common ratio between gold and silver, and an international conference was held to fix the relative value between these metals. All know the result. No satisfactory conclusion was reached. But instead of profiting by this failure to reach an agreement on so vital a financial issue, the coinage of this depreciated, and depreciating metal is continued to the manifest detriment of the Government and the entire business community.

Mr. Chairman, in conclusion, the work of Congress will only be complete when both the trade-dollar and the legal-tender standard dollar shall cease to have a legal existence. If the convenience of the business community is to be promoted, instead of silver dollars give us one and two dollar notes. These—in no irreverent sense be it spoken—will be taken and the others left.

The coinage act which resulted in the piling up, at great expense to the people, tons of silver dollars not needed, and only intended to benefit the owners of silver mines, was in its inception a gigantic financial blunder, which now not to remedy ought to be treated as an unpardonable political crime.

Contested Election—Wood vs. Peters.

SPEECH

OF

HON. SAMUEL N. WOOD,

OF KANSAS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 23, 1884.

The House having under consideration the contested-election case of Wood *vs.* Peters—

Mr. WOOD said:

Mr. SPEAKER: Before proceeding permit me to thank this House for the courtesy of allowing me to speak on this occasion. I come here not to speak for myself, but to vindicate the sovereign rights of the great State of Kansas.

This is no ordinary contest for a seat on this floor. There is no personal feeling in the matter. Judge Peters and myself are personal friends, and I hope nothing may happen to mar that friendship. He says in his answer to my notice of contest that 5,000 voters who voted for him also voted for me. I think he might have said 8,000.

Had I succeeded in this contest I should almost have regretted it on his account. This, then, is no personal contest. It involves vastly more than the usual allegations of fraud, of violence, of intimidation, and of illegal ballots which have formed the staple of argument in the majority of cases decided by this body during the past twenty years. No considerations of party advantage claim any share of your attention in the case now at issue. On the contrary, this House is called upon to deal with questions of constitutional and statute law that go to the very foundation of our system of government.

These questions involve the relations of the States to the National Government, and they call for the judgment of this House on those great principles of local self-government and home rule which, in the language of the Republican platform adopted at Chicago in 1860, are "essential to that balance of power on which the perfection and endurance of our political fabric depends." In deliberating on these great questions the best judgment of the best minds in this honorable body is invoked, and every member who casts his final vote in this case will be expected to record his deliberate judgment in favor of that division of powers between State and Federal authority as taught by Jefferson and the framers of the Constitution, or in favor of that revamped Federalism which confounds all distinctions between national and State control in local affairs and seeks to build up on the ruins of the States a consolidated despotism.

You are to decide between Jefferson and Hamilton. If Jefferson was right, then I am right. If Hamilton was right, then I am wrong. When you vote it is not whether Judge Peters or myself shall hold a seat on this floor, but it is the principles of Jefferson and Hamilton that are on trial in this House. The question goes beyond this and involves the electoral count of 1877. If I am wrong in this case, the Democrats in this House and the Senate were wrong then and the Republicans were right. In that case we should hear no more of "the great fraud," but devoutly get on our knees and beg forgiveness of our Republican friends for the past seven years' abuse of the Republican party.

Section 13, article 3, of the constitution of Kansas is in these words:

The justices of the supreme court and judges of the district courts shall at stated times receive for their services such compensation as may be provided by law, which shall not be increased during their respective terms of office; provided such compensation shall not be less than $1,500 to each justice or judge each year; and such justice or judge shall receive no fees or perquisites, nor hold any office of trust or profit under the authority of the State or the United States during the term of office for which said justices or judges shall be elected, nor practice law in any of the courts of the State during their continuance in office.

The contestee in this case was elected judge of the ninth judicial district of the State of Kansas in November, 1879. His term of office did not begin until the 7th day of January, 1880. It was for the period of four years, or until January 12, 1884. The decision of our supreme court declares that the inhibition to hold this or any other office attaches to the person, and continues during the whole term or period of time for which he was elected. This constitution Judge Peters had sworn to support and obey. He accepted the judgeship with full knowledge of this prohibitory clause in our constitution, and he voluntarily took the oath as judge of the ninth judicial district knowing what the decision of our supreme court was touching his ineligibility to any other office. When he took that oath he was bound, not only by the constitution of Kansas but by that decision of our supreme court, not to offer himself as a candidate for any other office "under the authority of the State or of the United States."

The fact that the contestee was a judge on the bench at the time of the election was a matter of public record well known to all the voters in Kansas. The voters had like knowledge of this prohibitory clause in our constitution, of the decision of our supreme court construing the same, and of the fact that Congress had become a party to that limitation upon the qualification of candidates and that restriction upon the voters. These were matters of public record of which every voter in Kansas was legally bound to take notice.

There is no dispute about the facts in this case. The questions in controversy are purely questions of law, and I now invite the attention of every member of this body while I discuss them.

The majority report admits, as does the gentleman from Pennsylvania [Mr. ELLIOTT], that contestee falls within the inhibitions of our constitution, and says if a State possesses the power to add to the qualifications prescribed by the Constitution of the United States for Representatives in Congress, then he was ineligible at the time he was voted for, and is not entitled to a seat in this House. That question, then, needs no further argument.

The majority report claims, on the other hand, that this provision of our constitution is in conflict with the Constitution of the United States. If this were true, I should concede that the Constitution of the United States was of paramount authority and must prevail. But I fail to find any such conflict. The two constitutions are perfectly consistent with each other. They are in perfect harmony. Such was the judgment of the two Houses of Congress when Kansas was admitted into the Union. The Constitution of the United States says:

No person shall be a Representative who shall not have attained the age of 25 years, and been seven years a citizen of the United States, and who shall not when elected be an inhabitant of the State in which he shall be chosen.

This is not a grant of power. It does not attempt to prescribe the qualifications of members of Congress. These provisions are negative and limitations on the States. They must not send members to represent them on this floor who are not 25 years of age, who are not inhabitants of the State in which they are chosen, and who have not been citizens of the United States seven years. If the opposite had been intended the clause would have read: "Any person may be a Representative," &c.

The majority report, however, says, as does the gentleman from Pennsylvania [Mr. ELLIOTT]:

The Constitution, by prescribing certain qualifications, enumerated in the section just quoted, according to a well-known settled rule of construction, excludes all others.

If this doctrine is true, neither Congress nor a State Legislature could require more. If the maxim of Lord Coke of "*expressio unius est exclusio alterius*" applies to this provision of our Constitution, it has been violated a hundred times since the war. In fact if true States could not be divided into districts, and no restrictions as to sex, the crime of felony, or disloyalty, could be fixed either by Congress or the States. Who knows but that Mrs. Stanton and Susan B. Anthony may yet have seats on this floor. They have been citizens of the United States seven years, are actual inhabitants of New York, and Susan is certainly 25 years of age; both in fact possess all the qualifications known to the Constitution. What is the meaning of this rule of construction that we are told settles this whole case?

This maxim has only reference to inferences of fact to be drawn from written documents or parol declarations; it only means if you expressly name some out of certain requisites the inference is stronger that those omitted are intended to be excluded than if none had been mentioned. (Alderson B. Spilsburg *vs.* Burdett, 9 A. & E., 953.)

The ninth and tenth amendments to the Constitution preclude any such construction. Articles 9 and 10 of the Constitution read as follows:

ARTICLE 9.

The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

ARTICLE 10.

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people.

We said in the Constitution that a member of Congress must be 25 years old, an inhabitant of the State, and a citizen of the United States for seven years. That is all we delegated to Congress. Congress has a right to require that of us, but the power to append other qualifications was reserved to the State or the people.

The majority report of the gentleman from Pennsylvania [Mr. ELLIOTT] says:

Congress is the creature of the Constitution of the United States.

How the bones of Jefferson must have rattled in the grave on hearing this declaration from Democrats. Chief-Justice Chase, in rendering the decision of the Supreme Court in the case of Lane County *vs.* Oregon, said:

Both the States and the United States existed before the Constitution.

How, then, can Congress be a creature of the Constitution? Every State had Representatives in Congress long before the adoption of the

Constitution. In the case of Houston *vs.* Moore the Supreme Court said:

> The powers granted to Congress are not exclusive of similar powers in the States, unless where the Constitution has expressly in terms given an exclusive power to Congress, or the exercise of a like power is prohibited to the States, or there is a direct repugnancy or incompatibility in the exercise of it by the States.

The provisions of the Constitution as to the qualification of members of Congress is not exclusive, does not pretend to be, and is not repugnant to the exercise by the States of any power not inconsistent with the Constitution.

The framers of the Constitution did not imagine that they were fixing the qualifications of members of Congress. This is evident from the very language of the Constitution itself. The Federal Convention was not delegating rights or powers to the States, as the majority report seems to assume, or to the people; it was the States in convention delegating powers to the General Government, and imposing certain restrictions upon the States, restrictions upon the powers already possessed by the States. And it should not be forgotten that the States surrendered no right not expressly named, and they gave us no power not specifically delegated in the Constitution of the United States. Among the powers possessed by the States before the Federal Constitution was formed was that of prescribing the qualifications of their agents or representatives in Congress. The right to fix other qualifications, in addition to those enumerated in the Constitution, was retained by the States along with that mass of powers not specifically delegated.

The Constitution says that a Representative must be an inhabitant of his State, but it does not require that he shall be a voter, or an inhabitant for even one week or any specified time. Will it be pretended that the States or the people who were to be represented did not intend to require more than this? If so, then this whole House might be composed of persons who were not even voters nor a part of the body-politic.

Cushing, in his work on Parliamentary Law, page 24, says:

> It may also be laid down as a general principle, founded in the nature of representative government, which supposes the electors, except in particular instances, to elect from among themselves, that no person can be elected to any office who is not himself possessed of the requisite qualification for an elector; and, consequently, that whatever other and different qualifications or disqualifications may be specified, every person who is voted for as a member of a legislative assembly must, at all events, possess the qualifications and be free from the disqualifications which attach to the character of an elector.

And again he says:

> Judges were also by the common political law of England ineligible to seats in Parliament.

This was the political law of this country at the time of the adoption of the Federal Constitution. Is it possible that the framers of that instrument intended to abrogate this common political law? If so, they would have declared their purpose in express terms.

The Constitution provides that the States shall appoint Presidential electors, "but no Senator, or Representative, or person holding an office of trust or profit under the United States shall be appointed an elector." Does that fix the qualifications of electors, and can the States add nothing more? Senator Mitchell so argued before the Electoral Commission. If this be true, then foreigners, non-residents, minors, persons convicted of crimes, &c., may be appointed Presidential electors. Most of the States, if not all of them, have fixed other qualifications as to age, residence, &c. Maryland required, at one time, that six should be residents of the Western and four of the Eastern Shore. Other States were divided into districts, and electors were required to live in their districts. If States can add to these negative inhibitions as to the qualifications of Presidential electors, they certainly can do the same as to members of Congress.

I am aware that Judge Story and the Federalists claimed that the Constitution was the act of the whole people, that it came from them and not from the States. Yet they are compelled to admit that the delegates to the Federal Convention were sent by the States, and that the Constitution was not adopted by the people at any national election, or, in fact, by any election, but by conventions in each of the original States. In the case of Martin *vs.* Hunter the opinion of the court was delivered by Justice Story. In that decision the court said:

> The Constitution was not, therefore, necessarily carved out of existing State sovereignties already existing in State institutions, for the power of the States depend upon their own constitutions, and the people of every State had the right to modify or restrain them, according to their own views of policy or principle. On the other hand it is perfectly clear that the sovereign power vested in State governments by their respective constitutions remains unaltered and unimpaired, except so far as they were granted to the Government of the United States.

In the case of Chisholm, ex., *vs.* Georgia (2 Dallas, 435), Iredell, Justice, in delivering the opinion of the court, said:

> Every State in the Union, in every instance where its sovereignty has not been delegated to the United States, I consider to be as completely sovereign as the United States are in respect to the powers surrendered.

Chief-Justice Marshall, in Gibbons *vs.* Ogden (9 Wheaton, 204), speaking for the court, said:

> In our complex system, presenting the rare and difficult scheme of one General Government whose action extends over the whole, but which possesses only certain enumerated powers, and of numerous State governments which retain and exercise all powers not delegated to the Union, contests respecting power must arise.

In McCulloch *vs.* Maryland (4 Wheaton, 405), the court, speaking again through Chief-Justice Marshall, said:

> This Government is acknowledged by all to be one of enumerated powers. The principle that it can exercise only the powers granted to it would seem too apparent to have required to be enforced by all those arguments which its enlightened friends, while it was depending before the people, found it necessary to urge. The principle is now universally admitted.

The same doctrine was enunciated in the case of Collector *vs.* Day, (11 Wallace, 124), in an elaborate opinion by Mr. Justice Nelson. Mr. Justice Swayne (in Dodge *vs.* Woolsey, 18 Howard, 349) supports the same doctrine.

McLean, Justice, in delivering the judgment of the court in United States *vs.* Bailey (1 McLean's C. C., 239), said:

> That the Federal Government is one of limited powers is a principle so obvious as not to admit of controversy.

I might continue these quotations *ad infinitum*, but I forbear. These thirteen Colonies united in the Declaration of Independence. They declared that "these Colonies are and of right ought to be free and independent States." When peace was declared Great Britain acknowledged, by name, the independence of each of the thirteen Colonies.

WHAT IS SOVEREIGNTY?

In the case of Collector *vs.* Day (11 Wallace, 124) the Supreme Court, by Justice Nelson, said:

> This opinion is predicated upon a principle which is believed to be undeniable, that the several States which compose this Union * * * became entitled, from the time they declared themselves independent, to all the rights and powers of sovereign States.

What are the powers of sovereign States? The Supreme Court answered this question in the case of Lessee of Livingston *vs.* Moore *et al.* (7 Peters, 546), through Mr. Justice Johnson:

> The power existing in every body-politic is an absolute despotism. In constituting a government the body-politic distributes that power as it pleases and imposes what checks it pleases upon its public functionaries.

Would it be doubted, under this decision, that a sovereign State has the power to say that its judges shall keep out of politics, and that they shall not be eligible to political offices "during the term for which they were elected judges?"

The Supreme Court, in the case of Ohio Life Insurance and Trust Company *vs.* Debolt (16 Howard, 428), speaking through Chief-Justice Taney, said:

> It is equally clear upon the same principle that the people of a State may, by the form of government they adopt, confer on their public servants and representatives all the powers and rights of sovereignty which they themselves possess, or may restrict them within such limits as may be deemed best and safest for the public interest.

Then certainly the State of Kansas, to protect the purity of its judiciary and the administration of its laws, may lay this restriction on its judges, and forbid them to hold political offices during the term for which they are elected judges. In Collector *vs.* Day (11 Wallace, 124), the court held that one of the reserved rights of the States was "the establishment of the judicial department and the appointment of officers to administer the laws."

> We have said—
>
> The opinion continues—
>
> that one of the reserved powers was that to establish a judicial department; it would have been more accurate, and in accordance with the existing state of things at the time, to have said the power to maintain a judicial department. All of the thirteen States were in the possession of this power and had exercised it at the adoption of the Constitution; and it is not pretended that any grant of it to the General Government is found in that instrument. It is therefore one of the sovereign powers vested in the States by their constitutions, which remained unaltered and unimpaired, and in respect to which the State is as independent of the General as that Government is of the States.

Mr. Justice Barbour, in delivering the opinion of the court in the case of the City of New York *vs.* Miln (2 Peters, 139), said:

> That a State has the same undeniable and unlimited jurisdiction over persons and things within its territorial limits as any foreign nation, when that jurisdiction is not surrendered or restrained by the Constitution of the United States.

In the case of Craig *et al.* *vs.* The State of Missouri (4 Peters, 464), Justice McLean, speaking for the court, said:

> It would be as gross usurpation on the part of the Federal Government to interfere with State rights, by an exercise of power not delegated, as it would be for a State to interpose its authority against a law of the Union.

I admit that this House can nullify the constitution and laws of Kansas enacted to protect its judiciary, but if you do it by permitting Judge Peters to retain his seat you do it in the face of this decision, which declares that such an act would be "a gross usurpation" of power that was never delegated to the General Government.

The Supreme Court of the United States, in an opinion delivered by Chief-Justice Chase (Lane County *vs.* Oregon, 7 Wallace, 76), goes squarely against Judge Story's argument in his Commentaries. The court says that "both the States and the United States existed before the Constitution." This was reiterated and approved by the Supreme Court in Collector *vs.* Day in an elaborate opinion by Nelson, J., who quoted from the decision of Chase, C. J., in Lane County *vs.* Oregon, and gave to that decision his unqualified sanction.

If the States and the United States existed before the Constitution, then representation, as stated by Judge Story, is not, as I have said, a creature of the Constitution, but existed prior to its adoption, and the article I have quoted is an inhibition on the States and not a grant of

power. We then had, it seems, thirteen independent sovereignties, limited only in their sovereignty by the Articles of Confederation. In article 2 it was expressly stipulated that—

> Each State retains its sovereignty, freedom, and independence, and every power, jurisdiction, and right which is not by this confederation expressly delegated to the United States in Congress assembled.

It was also expressly provided in the Articles of Confederation that—

> No State shall be represented in Congress by less than two nor more than seven members; and no person shall be capable of being a Delegate for more than three years in any term of six years; nor shall any person, being a Delegate, be capable of holding any office under the United States for which he, or another for his benefit, receives any salary, fees, or emoluments of any kind.

Will any intelligent man contend that this section just quoted prescribed the qualifications of members of Congress? The States retained the absolute power to determine who should represent them. It was these same sovereign States, jealous of their rights, that met in Philadelphia in 1787 "to form a more perfect Union, establish justice," &c. It was these independent, sovereign States which met to delegate a portion of their sovereign power to a general government as a recompense for the protection it would afford to each of them. It will not do to say that States are subdivisions of the nation as counties are subdivisions of the States, with certain functions of local self-government delegated to them by the States. It is folly to talk about a "paternal government," the nation being the parent and the States the children; for the history of the origin and formation of the Federal Government shows that the States are older than the Union—that they gave to the General Government form and vitality, and all the life it has. All power proceeded from them, and all that was not delegated was reserved to the States or to the people. When I listen to some of the latter-day argments in favor of a "paternal government" I am not surprised that a distinguished citizen of Maine should propose by a system of national taxation to raise enormous surplus revenues to be given away by this royal "parent" to pay State and county taxes. Kansas, when admitted into the Union, reserved the right in her constitution, as other States have done, to preserve the purity of her judiciary and the integrity of her State organization.

The right to say that a judge on the bench shall not be elected to Congress nor occupy a seat on this floor certainly never was delegated to the United States and it was not forbidden to our State. Most of the States have provisions similar to ours in their constitutions, making judges on the bench ineligible to seats in this body. This proceeds from no whimsical desire to superadd qualifications to those prerequisites enumerated in the Federal Constitution, but emanates from motives of sound policy. It is done to protect the internal policy of the States. In our State the intention was to preserve the purity of our judiciary by keeping the judges out of politics. Congress will certainly not deny us this right to promote an impartial and pure administration of the law in Kansas by a constitutional provision so salutary and harmless as the one in question. It works great and manifest good to the citizens and can work no injury to the judges, who take upon themselves the duties and responsibilities of the judicial office with full knowledge of the restrictions imposed by our State constitution.

It is not pretended that a good judge will not make a good Congressman, but it goes without saying that a good judge should neither allow himself to be voted for nor to take an office which he is forbidden to hold by an express provision of the State constitution which he has sworn to support. It is certainly not a hardship to refuse a seat on this floor to a Kansas judge who has sworn not to assume or claim it. But this inhibition rests not alone upon those holding judgeships in Kansas; it rests with equal force upon the voters of the State. I maintain that the constitution of our State not only forbids a judge on the bench to offer himself as a candidate for Congress, but that the same provision forbids a voter to cast his ballot for a person thus disqualified. The forbidding clause would be vain and nugatory if it did not restrain with equal force both the candidate and the electors. It is equally binding upon both.

It will be conceded that under our constitution a judge can not be elected to a seat in our State Legislature; that all votes cast for him would be void. Voters can not violate their own constitution; therefore they are inhibited from casting their ballots for judges to be elected members of our State Legislature. The constitution imposes a disqualification in this instance upon the electors. They are powerless, under this restraining clause, to elect a judge to the State Legislature. A like disqualification is imposed on the voters in the case of a candidate for Congress. In section 2, article 1, of the Constitution of the United States it is provided that—

> The electors in each State shall have the qualifications requisite for electors of the most numerous branch of the State Legislature.

It would seem clear, then, that if we can legally disqualify or inhibit voters from electing judges to the State Legislature (and nobody pretends that we can not) we may in like manner disqualify and inhibit them from electing judges to Congress. A member of Congress is no less a State officer than is a member of a State Legislature. There is no such thing known to our political system as a national election.

Senator Wallace, of Pennsylvania, in the Forty-sixth Congress, in an argument covering this whole question of suffrage, among other things said:

> The depository of absolute sovereignty and power is in the people, the people of the States, qualified by State constitutions and State laws; and all authority of every kind comes from them by representation, and this vital principle of democracy permeates every part of the Government. National power over the voter as such, or national elections as such, are new forms of old Federal theories. * * * This subject is rightly and absolutely controlled by State laws and State constitutions. There are no national voters. Voters who vote for national representatives are qualified by State constitutions and State laws.

The venerable Senator ANTHONY, of Rhode Island, quoted this approvingly in a speech delivered in the United States Senate in February, 1881, in defense of the Constitution and laws qualifying suffrage and representation in his State. Such high authority as the distinguished Senator from Rhode Island, it seems to me, ought to have great weight with gentlemen of the minority on this floor.

The Supreme Court has decided in the case of Miner *vs.* Happersett (21 Wallace, 165), Waite, Chief-Justice, that—

> The United States has no voters in the States of its own creation. The election officers of the United States are all elected directly or indirectly by State voters.

In the third Congress (1793) the seat of John Patton, from the State of Delaware, was contested by Mr. Lattimer. Delaware was entitled to one member. In 1790 her Legislature passed a law providing that—

> Every person coming to vote for a Representative for the said State in the Congress of the United States shall deliver in writing on one ticket or paper the names of two persons, inhabitants of the State, one of whom shall not be an inhabitant of the same county with himself, &c.

Now, I presume it will not be disputed that if a State law can forbid the voter to cast his ballot for a candidate for Congress who is not a freeholder and a resident of the district twelve months, as in Virginia, or for a candidate who is an inhabitant of the same county with himself, as in Delaware, then a State Legislature or a constitutional convention may say that a person coming to vote shall not cast his ballot for a judge on the bench whose term will not expire until after the assembling of the next Congress. This question was settled in the affirmative by the men of the Revolution in 1793, the men who framed and ratified the Federal Constitution.

In the Patton case it was in evidence that in New Castle County votes were given for Henry Lattimer and Solomon Maxwell. These votes were rejected because both candidates were residents of that county, the names both appearing on the same ballot. In Kent County 4 votes, containing the names of H. Lattimer and George Truitt, both inhabitants of New Castle County, were rejected.

In Sussex County 68 ballots, containing the name of John Patton only, were received and counted. Patton's total vote as returned 2,273, Lattimer's 2,243. The committee deducted the 68 votes cast for Patton in Sussex and reduced his vote to 2,205. They then added to Lattimer's vote the 4 rejected ballots cast in Kent and deducted the 9 in Sussex as illegal, leaving Lattimer 2,238 votes, or a majority of 33. This decision of the House, awarding the seat to Lattimer, settled two important questions: first, that a State in its constitution or by statute law may declare that a particular class of persons shall not be voted for as Representatives in Congress; and, second, that a candidate with a minority vote may be elected.

Virginia said that unless a person was a freeholder and a resident for twelve months in the district he should not be voted for. Kansas in her constitution declares that a judge on the bench shall not be voted for. What difference in principle is there between the qualifying clause in our Constitution and those in the constitutions and laws of Delaware and Virginia? The provision in our Constitution is not only a notice to the judge that he must not be a candidate, but is a notice and a mandate to the voters that they must not vote for a judge to represent them in Congress.

In the convention that framed the Federal Constitution no one pretended that the States had not the power to fix the qualifications of members of Congress as well as the qualifications of voters. I challenge the production of a single remark by any delegate in that body claiming that the convention ought to fix and enumerate the qualifications requisite for a member of Congress. The argument was "that all power was lodged with the States and the people, and that the States should concede to the General Government only the limited right to impose negative restrictions, leaving the States free to qualify suffrage and eligibility to suit themselves, subject to the limited powers granted to the General Government."

Immediately after the Declaration of Independence in 1776 the majority of the States adopted constitutions—all, I believe, excepting Connecticut and Rhode Island. In nearly all of these early constitutions, adopted before the United States Constitution, we find provisions fixing the qualifications of members of Congress, which were limited only by the Articles of Confederation. This was the attitude of the General Government and the States when the latter met in convention in 1787 to "propose amendments to the Constitution." These facts must be kept steadily in view in examining the proceedings of that convention.

When this question was up in the Federal Convention there was but little conflict of opinion among the delegates. Gouverneur Morris op-

posed any limitation upon the States in fixing the qualifications of those who were to represent them in Congress. Mr. Gorham was for leaving the whole question with the State Legislatures. Mr. Dickinson, one of the ablest men in that convention, said:

I am against any recital of qualifications in the Constitution. It is impossible to make a complete one, and a partial one would, by implication, tie up the hands of the Legislature from supplying omissions.

Mr. Madison opposed the proposition, and moved to strike out the words "landed." This was carried by a vote of 10 to 1. The words "qualification of property and citizenship" were stricken out by a vote of 8 States against 3.

Mr. Ellsworth advocated striking out all the disqualifying words, believing, as he stated, "that such matters should be left to the wisdom of the State Legislatures and the virtue of the citizens."

Mr. Wilson, of Pennsylvania, insisted that "the electors should govern themselves, and that it was unnecessary and improper that the Federal Constitution should chain them down." It was finally agreed, as a compromise, that the States should grant to the General Government the right to fix negative qualifications as to age, citizenship, and inhabitancy, and that the right to superadd other negative or affirmative qualifications, such as the States might deem necessary for the protection of their internal policy, should be left to the States and to the people. It seems to me that no candid man can read the debates in the Federal Convention and come to any other conclusion.

In the case of Stuart *vs.* Laird (1 Cranch, 299), the Supreme Court of the United States said:

A contemporary exposition of the Constitution, practiced under and acquiesced in for a period of years, fixes its construction.

Let us apply this rule, and then see what was the construction put upon this provision of the Constitution by those who participated in its formation and those who adopted it. I call attention here to extracts from the constitutions and laws of the original thirteen States, and also from the constitutions of the new States, and make them a part of my argument.

CONNECTICUT.

This State was first divided into Congressional districts in 1835. In that act it was provided that Representatives must reside in the districts represented; qualifications in other respects governed by the Federal Constitution.

DELAWARE.

Article 3, section 8, of the constitution of 1792 declares that—

No member of Congress, nor any person holding or exercising any office under the United States, shall at the same time hold or exercise the office of judge, &c.

Article 2, section 12, of the State constitution provides that—

No member of Congress, nor any person holding any office under this State or the United States, * * * shall, during their continuance in Congress or in office, be a senator or representative.

The same is in the constitution of 1831. In the latter, article 5, section 2, it is provided in respect to judges:

But they shall hold no other office of profit, &c.

The Legislature of Delaware in 1778 and also in 1790 declared—

That every person coming to vote for a Representative, agreeably to the directions of this act, shall deliver in writing on one ticket or piece of paper the names of two persons, inhabitants of this State, one of whom at least shall not be an inhabitant of the same county with himself, to be voted for as Representative.

GEORGIA.

Constitution of 1789, article 2, section 5:

The governor shall, at stated times, receive for his services a compensation which shall neither be increased nor diminished during the period for which he shall be elected. Neither shall he receive during that period any other emolument from the United States or any of them or any foreign power.

In 1798 it was provided as follows (article 1, section 2):

No person holding a military commission or other appointment, having any emolument or compensation annexed thereto, under this State or the United States, * * * shall have a seat in either house of the General Assembly; * * * nor shall any member, after having taken his seat, be eligible to any of the aforesaid offices or appointments during the time for which he shall have been elected.

By act of the Legislature, February 11, 1799, Georgia declared—

No person shall be a Representative in Congress who shall not have been an inhabitant of the State three years next preceding his election, and paid his tax regularly during that time; nor shall he hold any office of profit under this State or the United States during the time for which he may be elected a Representative.

Section 2 of the same law provided that the governor shall not issue a certificate until satisfactory proof is given by the member-elect of residence and payment of tax:

SEC. 46. No person shall be eligible to represent any of said Congressional districts who does not at the time of his election reside within said district.

The Revised Code of Georgia of 1867, section 1328, declares that—

Besides the qualifications required by the constitution, a residence of one year next preceding the day of election in the district where the candidate offers himself is necessary to make him eligible to election.

This seems still to be the law in Georgia.

MARYLAND.

In 1776, in her bill of rights, Maryland declared as follows:

The independency and uprightness of judges are essential to the impartial administration of justice; * * * wherefore no chancellor or judge ought to hold any other office, civil or military, or receive fees or perquisites of any kind.

SEC. 32. No person ought to hold at the same time more than one office of profit from this State or the United States without the approbation of this State.

(Readopted in 1851, 1864, and 1867.)

Constitution of 1776, section 27:

The Delegates to Congress from this State shall be chosen annually, and no person shall be capable of being a Delegate to Congress more than three in any term of six years, and no person who holds an office in the gift of Congress shall be eligible to sit in Congress, but if appointed to any such office his seat shall be thereby vacated.

In the constitution of 1792 was this provision, namely:

That no member of Congress or person holding any office of trust or profit under the United States shall be capable of holding a seat in the General Assembly or of being an elector of the Senate.

Article 33 of the constitution of 1864 contains the following:

No judge shall hold any other office, civil or military, or political trust or employment of any kind whatsoever, under the constitution or laws of this State, or of the United States, or any of them.

In 1788 the Legislature of Maryland passed an act providing—

That every person coming to vote for Representative for the State in Congress * * * shall have a right to vote for six persons, one of whom shall be a resident of each of said districts; and the candidate in each district having the greatest number of votes of all the candidates residing in that district shall be declared to be elected for that district.

It was provided by an act of the Legislature in 1790 that—

Every person entitled and offering to vote for Representative in Congress shall have the right to vote for one person, being a resident of his district at the time of the election, and having resided therein twelve calendar months immediately before, and otherwise qualified according to the Constitution of the United States.

When Maryland was divided into eight districts, with nine members, in 1802, the act provided that—

The fifth district shall elect two members, one of whom shall be a resident of Baltimore city and the other of Baltimore county.

(This law is in the revision of 1819.)

The code of 1860, section 74, contains the following:

One of the United States Senators shall be always an inhabitant of the Eastern and the other of the Western Shore.

MASSACHUSETTS.

Constitution of 1780, article 2, chapter 6:

No governor, lieutenant-governor, or judge of the supreme court shall hold any other office or place except such as by the constitution they are entitled to hold; nor shall they hold any other place or office from any other State or government or power whatever.

This provision is still in the constitution of Massachusetts.

In 1788 the Legislature of Massachusetts passed a law dividing the State into Congressional districts. This law provided that—

One Representative, being an inhabitant of the district for which he shall be elected, shall be chosen in the manner hereinafter described.

This was the law of 1790, and also of 1794.

In 1802 the State was divided into seventeen districts, and the same law provided for a member in each district, "being an inhabitant of the district for which he shall be elected."

This feature has been enacted in every apportionment in Massachusetts since that date, making residence in the district an additional qualification for a Representative in Congress. For Presidential electors the voters in Massachusetts are required by law to vote for one in each Congressional district on a general ticket.

A statute of Massachusetts makes bribery, embezzlement, conviction of felony or other infamous crime a disqualification for holding an office under the State. This undoubtedly applies to members of Congress and Presidential electors.

This is substantially the law in every State in the Union. Under the Constitution of the United States persons guilty of bribery, embezzlement, or who have been convicted of felony or other infamous crime would be eligible to seats in Congress if the States had not interposed disqualifying provisions; and Congress would be powerless to exclude them if the States had not thus declared them ineligible.

NEW HAMPSHIRE.

Bill of rights, part 2, section 92:

No governor or judge of the supreme court shall hold any office or place under the authority of this State except such as, by this constitution, they are admitted to hold; nor shall they hold any place or office from any other State, government, or power whatever.

NEW JERSEY.

Constitution of 1776, section 20:

None of the judges of the supreme court, or other courts, shall be eligible to a seat in the General Assembly.

The constitution of 1844, article 5, section 8, provides that—

No member of Congress, or person holding office under the United States or this State, shall exercise the office of governor.

The latter clause was amended by the constitution of 1875, article 7, section 2, to read as follows:

Nor shall he be elected to any office under the government of this State, or the United States, during the term for which he shall have been elected.

When New Jersey first divided the State into five Congressional districts it was provided in section 4 of the act that there should be elected for the State "one person in each of the said districts to be a member of the House of Representatives, who shall be a citizen of the United

States, of the age of twenty-five years or upward, and an inhabitant of the district in which he shall be elected, and who shall have been a citizen of the United States seven years next preceding said election."

NEW YORK.

Constitution of 1777, section 25:

The chancellor and judges of the supreme court shall not, at the same time, hold any other office except that of Delegate to the general Congress upon special occasions.

Article 1, section 2, of the constitution of 1821 provides that—

No person, being a member of Congress, or holding any judicial office under the United States, shall hold a seat in the Legislature.

Section 10 is in these words:

No member of the Legislature shall receive any civil appointment from the governor and senate, or from the Legislature, during the term for which he shall have been elected.

Readopted in 1846.

Article 6, section 8, of the constitution of 1821 contains the following in reference to judges:

They shall not hold any other office of public trust. All votes for them for any other office * * * given by the Legislature or the people shall be void.

The constitution of 1869 declares that—

The judges of the court of appeals and the justices of the supreme court shall not hold any other office or public trust. All votes for any of them for any other than a judicial office, given by the Legislature or the people, shall be void.

NORTH CAROLINA.

The declaration of rights, part 4, provides:

The legislative, executive, and supreme judicial powers of government ought to be forever separate and distinct from each other.

The constitution of 1776, part 35, provides:

No person in this State shall hold more than one lucrative office at any one time.

Not amended until 1835.

Article 6, section 1, of the constitution of 1868 required a residence of twelve months for a voter, and section 4 provided that only qualified voters shall be eligible to office. By section 2, article 14, persons fighting a duel are declared to be ineligible to any office. This was substantially readopted in the constitution of 1878.

An act of the Legislature of North Carolina in 1792 contains the following:

And whereas it is necessary to keep separate and distinct the offices of the Federal Government from those of the State government:

Be it further enacted, That no citizen of this State shall hold, at one and the same time, any office of trust, profit, or emolument under the authority of the United States, and any office or authority, either civil or military, under the authority of this State.

Senators and Representatives in Congress are considered as coming within the purview of this law.

In 1802 the State was divided into twelve districts, and the act declared that—

The person elected in each district shall be a resident or an inhabitant of that district for which he is elected during the space or term of one year before and at the time of his election.

PENNSYLVANIA.

The constitution of 1790, article 1, section 18, provides:

No Representative shall, during the time for which he shall have been elected to any office in this State, and no member of Congress or other person holding any office under the United States, or this State, shall be a member of either house during his continuance in Congress or in office.

Article 5, section 1, referring to judges (re-enacted in 1838), provides:

But they shall receive no fees or perquisites of office, nor hold any other office of profit under this Commonwealth.

This was amended in 1850 to read as follows:

Nor hold any other office of profit under this Commonwealth, or under the Government of the United States or any other State of the Union.

The new constitution of 1873 contains these words:

Nor hold any other office of profit under the United States, this State, or any other State.

RHODE ISLAND.

This State adopted her first constitution in 1842. Article 2, section 1, requires as a qualification for suffrage one year's residence and real estate of the value of $134 above all incumbrances.

Article 9, section 1, provides that—

No person shall be eligible to any civil office * * * unless he be a qualified elector for such office.

SOUTH CAROLINA.

The constitution of 1778, article 8, provides:

No person in this State shall hold the office of governor thereof, or lieutenant-governor, and any other office or commission, civil or military, * * * either in this or any other State, or under the authority of the Continental Congress, at one and the same time.

Article 1, section 21, of the constitution of 1790 declares that—

No person shall be eligible to a seat in the Legislature whilst he holds any office of profit or trust under this State, the United States, or either of them.

Article 3, section 1, provides:

The judges shall hold their commissions during good behavior, * * * nor hold any office of trust or profit in this State, the United States, or any of them.

In 1865 this clause was amended to read:

Nor hold any other office of profit or trust under this State, the United States of America, or any other power.

Readopted in 1868.

VIRGINIA.

The constitution of 1830, article 2, provides:

The legislative, executive, and judiciary shall be separate and distinct, nor shall any person exercise the power of more than one of them at the same time.

Article 5, section 1, provides:

The judges of the supreme court of appeals and of the superior courts shall hold their offices during good behavior, * * * and shall, at the same time, hold no other office, appointment, or public trust.

The constitution of 1850, article 1, section 15, provides that—

No judge during his term of service shall hold any other office, appointment, or public trust, and the acceptance thereof shall vacate his judicial office; nor shall he, during such term or within one year thereafter, be eligible to any political office.

(Readopted in 1864.)

Article 6, section 24, of the constitution of 1870 provides that—

Judges of the supreme court of appeals and judges of the circuit courts shall not hold any other office or public trust during their continuance in office.

The Legislature of Virginia, composed of the same men who ratified the Federal Constitution, passed a law dividing the State into ten districts, declaring that—

The persons qualified by law to vote for members of the house of delegates in each county composing a district shall assemble at their respective county Court-Houses on the second day of February next, and then and there vote for some discreet and proper person, being a freeholder, and who shall have been a *bona fide* resident for twelve months within said district, as a member to the House of Representatives for the United States.

The same provision is in the act of December 26, 1799, making a new apportionment of nineteen members.

The following are the provisions in the constitutions of the other States respecting qualifications of members of Congress, &c.:

ALABAMA.

The constitution of 1819, article 5, section 2, provides:

Judges of the supreme and circuit courts and courts of chancery shall, at stated times, receive for their services a compensation which shall be fixed by law, and which shall not be diminished during their continuance in office, but they shall receive no fees or perquisites of office, nor hold any other office of profit or trust under this State, the United States, or any other power.

The constitution of 1850, article 5, section 10, provided that—

The judges of the supreme court, circuit courts, and courts of chancery shall, at stated times, receive for their services a compensation which shall be fixed by law, and which shall not be diminished during their continuance in office, but they shall receive no fees or perquisites of office, nor hold any office of profit or trust under this State, the United States, or any other power.

This was amended in 1867 to read:

Nor hold any office (except judicial offices) of profit or trust under this State or the United States during the term for which they have been elected, nor under any other power, during their continuance in office.

The same provision is in the constitution of 1875.

ARKANSAS.

Constitution of 1836, article 5, section 5, under the head of "Executive," provides as follows:

He shall, at stated times, receive a compensation for his services which shall not be increased or diminished during the term for which he shall have been elected; nor shall he receive within that period any other emolument from the United States, or any of them, or from any other power.

Same in constitution of 1864.

In article 6, section 8, of the constitution of 1836 is the following in relation to judges of the supreme and circuit courts (retained in constitution of 1861):

Nor hold any other office of trust or profit under this State or the United States.

The constitution of 1868 has the following:

The officers of the executive department and judges of the supreme court shall not be eligible, during the period for which they may be elected or appointed to their respective offices, to any position within the gift of the qualified electors or of the General Assembly of the State.

The constitution of 1874 declares, in reference to supreme court judges:

Nor hold any other office of trust or profit under this State or the United States.

CALIFORNIA.

The constitution of 1849, article 6, section 16, provides:

The justices of the supreme court and district judges shall be ineligible to any other office during the term for which they shall have been elected.

In 1862 this was amended to read as follows:

The justices of the supreme court and district judges and county judges shall be ineligible to any other office during the term for which they shall have been elected.

COLORADO.

The constitution of 1876, article 5, section 8, provides:

No Senator or Representative shall, during the time for which he shall have been elected, be appointed to any civil office under this State; and no member of Congress or other person holding any office, excepting attorney at law, notary public, or in the militia under the United States or this State, shall be a member of either house during his continuance in office.

It is provided, also, in this constitution that no person shall hold any office who is not a qualified voter.

FLORIDA.

Article 5, section 5, 1838:

But the judges shall receive no fees or perquisites of office, nor hold any other office of profit or trust under this State, the United States, or any other power.

In the constitution of 1865 are these words:

Nor hold any other office of profit or trust under this State, the United States, or any other power.

The constitution of 1868, article 17, section 23, provides that—

The governor, or any other State officer, is hereby prohibited from giving certificates of election, or other credentials, to any person as having been elected to the House of Representatives of the United States Congress or the United States Senate, who has not been two years a citizen of the State, and nine years a citizen of the United States, and a resident voter.

ILLINOIS.

Article 2, section 25, 1818:

No judge of any court of law or equity, * * * member of either House of Congress, * * * shall have a seat in the General Assembly.

Constitution of 1848, article 6, section 7:

No person shall be elected or appointed to any office in this State, civil or military, * * * who shall not have resided in this State one year next before his election or appointment.

Section 10 provides that—

The judges of the supreme and circuit courts shall not be eligible to any other office of public trust or profit in this State, or the United States, during the term for which they are elected, nor for one year thereafter. All votes for either of them for any elective office * * * given by the General Assembly or the people shall be void.

INDIANA.

Article 7, section 15, 1857:

No person elected to any judicial office shall, during the term for which he shall be elected, be eligible to any office of trust or profit under the State, other than a judicial office.

IOWA.

Article 5, section 3, 1846:

The judges of the supreme court shall be ineligible to any other office in the State during the term for which they shall have been elected.

Under the constitution of the same date the district judges were declared to be "ineligible to any other office except that of supreme judge during the term for which they shall have been elected." And in the constitution of 1851 it is provided that—

The judges of the supreme court shall be ineligible to any other office during the term for which they shall have been elected.

KANSAS.

Topeka constitution of 1855, in reference to judges:

Nor hold any other office of profit or trust under the State, other than a judicial office.

The Lecompton constitution of 1857 contained the following on the same subject:

Nor hold any other office of profit or trust under this State, the United States, or either of the other States, or any power during their continuance in office.

In the Leavenworth constitution of 1858 is this provision:

Nor hold any office of profit or trust under the State, other than a judicial office.

The Wyandotte constitution of 1859, under which Kansas was admitted into the Union, provides as follows in reference to judges:

Nor hold any other office of profit or trust under the authority of the State or the United States during the term of office for which such justices and judges shall be elected.

KENTUCKY.

Article 1, 1792:

No member of Congress or other person holding any office of profit or trust under the United States or this Commonwealth * * * shall be a member of the House during his continuance to act as a member of Congress or in such office.

In the constitution of 1850, article 8, section 25, is the following:

No member of Congress or person holding or exercising any office of trust or profit under the United States, or either of them, or under any foreign power, shall be eligible as a member of the General Assembly of this Commonwealth, or hold or exercise any office of trust or profit under the same.

LOUISIANA.

Article 6, section 14, 1812:

No member of Congress or person holding or exercising any office of profit or trust under the United States, or either of them, or under any foreign power, shall be eligible as a member of the General Assembly of this State, or hold or exercise any office of trust or profit under the same.

Readopted in the constitutions of 1845, 1852, and 1864.

Article 39, title 3, of the constitution of 1852 provides:

No member of Congress or person holding any office under the United States shall be eligible to the office of governor or lieutenant-governor.

Readopted in 1864 and 1868.

The constitution of 1868 declares that—

No person shall hold or exercise, at the same time, more than one office of trust or profit, &c.

MAINE.

Article 4, part 3, section 11, 1820:

No member of Congress, or person holding any office under the United States, or office of profit under this State, shall have a seat in either house during his being such member of Congress or his continuance in such office.

Article 5, section 5:

No person holding any office or place under the United States, this State, or any other power, shall exercise the office of governor.

Article 6, section 6:

The justices of the supreme judicial court shall not hold any office under the United States, nor any State, nor any other office under this State, except that of justice of the peace.

MICHIGAN.

Article 6, section 2, 1833 (referring to judges):

But they shall receive no fees * * * nor hold any office of profit or trust under the authority of this State or the United States.

The constitution of 1850, article 4, section 18, provides as follows:

No person elected a member of the Legislature shall receive any civil appointment within this State, or to the Senate of the United States, from the governor, the governor and senate, from the Legislature, or any State authority during the term for which he is elected or appointed, and all votes given for any person so elected or appointed shall be void.

Article 6, section 10:

But no judge of the supreme court or circuit court shall exercise any other power or appointment to public office.

MINNESOTA.

Article 6, section 11, 1857:

The justices of the supreme court and the district courts shall hold no office under the United States, nor any other office under this State, and all votes for either of them for any elective office under this constitution, except a judicial office, given by the Legislature or the people, during their continuance in office, shall be void.

MISSISSIPPI.

Article 6, section 15, 1817:

No member of Congress, nor any person holding any office of profit or trust under the United States, or either of them, * * * or under any foreign power, shall hold or exercise any office of profit or trust under this State.

Readopted in 1832 and 1868.

MISSOURI.

Article 3, section 11, 1820:

No judge of any court of law or equity, * * * member of Congress, or other person holding any lucrative office under the United States or this State, * * * shall be eligible to either house of the General Assembly.

The constitution of 1822, article 1, section 4, declares that—

No person holding an office of profit under the United States and commissioned by the President shall during his continuance in such office be eligible, appointed, hold, or exercise any office of profit under this State.

By the constitution of 1865, article 4, section 11, it is provided that—

No member of Congress, or person holding any lucrative office under the United States, * * * shall be eligible to either house of the General Assembly.

Readopted in 1875.

Article 8, section 12, of the constitution of 1875 says:

No person shall be elected or appointed to any office in this State, civil or military, who is not a citizen of the United States and who shall not have resided in this State one year next preceding his election or appointment.

NEBRASKA.

Article 2, section 14, 1866–'67:

No person, being a member of Congress, or holding any military or civil office under the United States, shall be eligible to a seat in the Legislature.

Article 3, section 6, of the same constitution declares that—

No person holding office under authority of the United States * * * shall be eligible to have a seat in the Legislature.

Section 13 provides that—

No person elected to the Legislature shall receive any civil appointment within this State from the governor and senate during the term for which he has been elected.

NEVADA.

Article 4, section 9, 1864:

No person holding any lucrative office under the Government of the United States, or any other power, shall be eligible to any civil office of profit under this State.

Article 6, section 11:

Justices of the supreme court, and the district judges, shall be ineligible to any office, other than a judicial office, during the term for which they shall have been elected; and all elections or appointments of any such judges, by the people, the Legislature, or otherwise, during said period, shall be void.

OHIO.

Article 3, section 8, 1802, concerning the judges:

But they shall receive no fees or perquisites of office, nor hold any other office of profit or trust under the authority of this State or the United States.

The constitution of 1851 contains the following:

Nor hold any other office of profit or trust under the authority of this State or the United States. All votes for either of them for any elective office, except a judicial office, under the authority of this State, given by the General Assembly or the people, shall be void.

OREGON.

Article 2, section 9, 1857:

Every person who shall give or accept a challenge to fight a duel, or shall knowingly carry to another person such challenge, or who shall agree to go out of the State to fight a duel, shall be ineligible to any office of trust or profit.

Section 10:

No person holding a lucrative office or appointment under the United States or this State shall be eligible to a seat in the General Assembly; nor shall any person hold more than one lucrative office at the same time, except as in this constitution expressly provided.

Article 7, section 21:

Every judge of the supreme court, before entering upon the duties of his office, shall take and subscribe, and transmit to the secretary of state, the following oath:

"I, ——— ———, do solemnly swear * * * that I will not accept any other office, except judicial offices, during the term for which I have been elected."

TEXAS.

Article 7, section 13, 1845:

No member of Congress, nor person holding or exercising any office of profit or trust under the United States, or either of them, or under any foreign power, shall be eligible as a member of the Legislature, or hold or exercise any office of profit or trust under this State.

SEC. 26. No person shall hold or exercise at the same time more than one civil office of emolument.

Readopted in 1870.

TENNESSEE.

Article 5, section 3, 1796:

The judges of the supreme court shall at stated times receive a compensation for their services, to be ascertained by law, but shall not be allowed any fees or perquisites of office, nor shall they hold any other office of trust or profit under this State or the United States.

This was readopted in the constitution of 1834 and also 1870.

VERMONT.

Chapter 2, section 27, 1786:

No person who holds any office in the gift of Congress shall, during the time of his holding such office, be elected to represent this State in Congress.

The constitution of 1793, article 2, section 26, provides that—

No person in this State shall be capable of holding or exercising more than one of the following offices at the same time, namely: Governor, lieutenant-governor, judges of the supreme court; * * * nor shall any person holding any office of profit or trust under the authority of Congress be eligible to any appointment in the Legislature or of holding any executive or judicial office under this State.

WEST VIRGINIA.

Article 6, section 12, 1861–'63:

No judge, during his term of office, shall hold any other office, appointment, or public trust, under this or any other government; and the acceptance thereof shall vacate his judicial office; nor shall he, during his continuance therein, be eligible to any political office.

WISCONSIN.

Article 13, section 3, 1848:

No member of Congress, nor any person holding any office of profit or trust under the United States, * * * or under any foreign power, and no person convicted of any infamous crime in any court within the United States, and no person being a defaulter to the United States or to this State, or to any county or town therein, or to any State or Territory within the United States, shall be eligible to any office of trust, profit, or honor in this State.

It will be seen that Connecticut required members of Congress to be residents of their districts. Georgia required a residence in the State of three years, the payment of a tax during the whole of that period, and an actual residence in the district. Maryland required not only a residence within the district at the time of election but for one year previous thereto, and she makes her judges ineligible to any other office, under the State or the United States. Massachusetts, by act of her Legislature, first divided the State into districts in 1788, and required each member to be a resident of his district. In her bill of rights Massachusetts declared that—

The people of this Commonwealth have the sole and exclusive right of governing themselves as a free, sovereign, and independent State, and now, and forever hereafter, shall exercise and enjoy every power, jurisdiction, and right, which is not, or may not hereafter be, by them delegated to the United States in Congress assembled.

I quote this from Massachusetts, because if I should quote it from the constitution of Virginia gentlemen on the other side would meet it with the well-worn sneer that from just such doctrines of State sovereignty sprang our late rebellion.

New Hampshire inhibited her governors and judges from holding "any other office under the authority of any other State, government, or power." New Jersey prohibited her governor from being elected to any office under the State or the United States "during the term for which he shall have been elected." She also required members of Congress to be residents of their districts. New York prohibited her judges from holding any other office or public trust. North Carolina required a residence of one year in the district. Pennsylvania said that her judges should not hold any other office of profit under the Government of the United States or any other State. Rhode Island declared that no person should be eligible to any office for which he was not a qualified voter. South Carolina said that her judges should not hold any office of trust or profit in that State, the United States, or any of them. Virginia declared that her judges should not, during their term of office, or for one year thereafter, be eligible to any political office. She also required that a person to be eligible to a seat in Congress should be a freeholder, and that he should have resided one year in the district before his election.

It will be seen that these old patriots, the men who made the Federal Constitution, never dreamed that the States could not superadd any qualifications they deemed proper, not inconsistent with those enumerated in the Constitution of the United States. The new States adopted similar provisions.

Alabama declared that her judges should not hold "any other office of profit or trust under this State, the United States, or any other power." Under the constitution of 1867 this was amended to read "during the term for which they shall have been elected." California made her judges ineligible to any other office during their whole term. Florida required that a member of Congress should have resided in his district two years next before his election in order to be eligible; also that he should have been nine years a citizen of the United States and a resident voter. Oregon requires her judges to swear that they will not accept any other office during the term for which they have been elected.

Suppose a judge in Oregon, who had sworn that he would not accept any other office during the term he was elected judge, should come here seeking admission into this House with perjury on his lips, would he be admitted? Did not Judge Peters, when he swore to support the constitution of Kansas, swear that he would not hold any other office during the term for which he was elected judge, and does he not come here with that oath on his lips?

Hon. Albert Griffin, a prominent Republican of our State, in a speech made at Abilene in February this year, in discussing this oath to support the constitution, said:

PERJURED OFFICERS.

The oath taken by Kansas officials reads:

"I do solemnly swear that I will support the Constitution of the United States and the constitution of the State of Kansas, and faithfully discharge the duties of ——. So help me God."

This oath is not a meaningless form. It imposes on those who subscribe to it positive duties, that can not be shirked without dishonor. It is forced on no one. It is always voluntarily taken. Indeed, the privilege of doing so is eagerly sought, and there is no conceivable plea upon which those who violate it can be justified. To "support" the constitution does not mean merely that one will not personally trample it under foot. It requires an active effort to sustain and enforce the instrument itself and all laws passed for that purpose. The duty rests imperatively upon each and every man who takes this oath to do all he can to encourage and compel obedience to each and all of the requirements of the constitution, without mental reservation, and without regard to his own opinion as to their policy or justice; and if he is unwilling, or can not conscientiously do this, he must not swear that he will.

FIRST CONTESTED ELECTION.

The first contested-election case tried in this House was that of Ramsey *vs.* Smith, in the First Congress, in 1789. The contest was made on the charge, made by Ramsey, that Smith was ineligible. James Madison, who was a member of the First Congress, in discussing the question, said:

I take it to be a clear point that we are to be guided in our decision by the law and constitution of South Carolina so far as they can guide us. * * * So far as we can judge by the laws of South Carolina, and the practice and decisions of that State, the principles I have adduced are supported.

In this same Congress, fresh from the convention that framed the Constitution, Mr. Livermore, of New Hampshire, said:

I call upon gentlemen to recollect the circumstances of Mr. Smith's election in South Carolina, and answer me. Was not the case decided by State laws? Were not his qualifications as a member determined by the laws of South Carolina? It was not supposed by the people of South Carolina that the House would question a right derived by their Representative from their authority.

And no one in that First Congress questioned the proposition. I challenge the closest examination of the record. This first precedent is on my side.

In Tucker's Blackstone, volume 1, appendix, pages 141, 142, 144, 170, 187, 197, 198, that eminent commentator says:

The Constitution of the United States of America, then, is an original, written, federal, and social compact, freely, voluntarily, and solemnly entered into by the several States of North America, and ratified by the people thereof respectively; whereby the several States and the people thereof, respectively, have bound themselves to each other and to the Federal Government of the United States; and by which the Federal Government is bound to the several States and to every citizen of the United States.

* * * * * * *

The Union is in fact as well as in theory an association of States, or a confederacy. The State governments not only retain every power, jurisdiction, and right not delegated to the United States by the Constitution nor prohibited by it to the States, but they are constituent and necessary parts of the Federal Government, and without their agency in their politic character there could be neither a Senate nor President of the United States.

* * * * * * *

Lastly, it is a compact by which the Federal Government is bound to the several States and to every citizen of the United States.

* * * * * * *

Although the Federal Government can in no possible view be considered as a party to a compact made anterior to its existence, and by which it was in fact created, yet as the creature of that compact it must be bound by it to its creators, the several States in the Union, and the citizens thereof.

* * * * * * *

The Federal Government, then, appears to be the organ through which the united republics communicate with foreign nations and with each other. Its engagements, its authority are theirs, modified and united. Its sovereignty is an emanation from theirs, not a flame by which they have been consumed nor a vortex in which they are swallowed up.

* * * * * * *

The members of the Legislature ought certainly to have no privilege but what is demonstrably essential to the freedom and welfare of their constituents. "The State is not made to dignify its officers, but the officers to serve the State."

* * * * * * *

The qualifications of the members of these bodies, respectively, are: that both Senators and Representatives should have been citizens of the United States, the former nine and the latter seven years, and be citizens also of that State for which they shall be chosen at the time of their election; to which the law of this State adds that "a Representative shall be a freeholder and resident of the district for which he is chosen;" a wise provision, and perfectly consonant with the principles of representation, &c.

Judge Tucker has been called the Blackstone of America. He was a member of the Virginia Legislature, and voted for the law superadding these qualifications.

Henry St. George Tucker, his son, was a child of the Revolution. He was but five days old when the British landed at Hood's, on the James River, and marched to Bland's Ordinary on their way to Petersburg. The Tucker family escaped capture by a hasty flight to Wintopoke. This son of Judge Tucker afterward became an eminent jurist, ranking with the men most distinguished for ability and learning in that day. His associates, like those of John Randolph, his half-brother, were the men of the Revolution, the men who had framed the Federal Constitution. He was made president of the University of Virginia, founded by Thomas Jefferson. He had imbibed the political maxims of the fathers of the Republic, and was as well if not better qualified, as regards talent and profound learning in the law, than was the distinguished Federalist Judge Story.

While president of the University of Virginia Henry Saint George Tucker delivered a course of lectures on the Constitution, in which he took issue with Judge Story on questions touching the sources of political power under our system of Federal and State authority. In these lectures he uses the following language, to which I invite careful attention:

In the history of the two great parties which have divided the people of the United States ever since the adoption of the present Constitution, a constant struggle is observable in relation to the character of the Government. The Federal party (so called by a strange perversion of the use of the term) have always been inclined to represent the United States as constituting one people, instead of a confederacy of States; while their opponents (formerly called Anti-Federalists, but more recently known as the Democratic or Republican party) have ever strenuously contended that the Constitution was a compact or the result of a compact between the States, who retain their sovereignty and all the rights of sovereignty which they have not expressly transferred to the Federal Government.

* * * * * * *

It was confederate as far as it was a government at all. The delegates were appointed by the States, not by the people; sometimes, indeed, by conventions, but they were conventions which as much represented the States as the Legislatures could do. Moreover, in the deliberations of Congress they voted by States, the smallest having equal weight with the largest; a test of confederate character which has been universally admitted. * * * It was assembled upon recommendation merely, which no State was bound to obey.

The Confederation was adopted by all the States except Maryland and Delaware. Justly, then, has it been admitted by Judge Story that the union of the States anterior to that time "grew out of the exigencies of the times, and from its nature and objects might be deemed temporary, extending only to the maintenance of the common liberties and independence of the States and to terminate with the return of peace with Great Britain and the accomplishment of the ends of the Revolutionary contest." It was under this ephemeral government—this government of sufferance; this government the creature of their own will, and capable of being dissolved at any moment by their own breath—that the States are said to have been at the time of the separation. With what propriety could it be said by Judge Story that they "were under the dominion of a superior, controlling, national government?" * * *

Now it happens that Hancock, Adams, and Gerry, from Massachusetts; Ellery, from Rhode Island; Sherman, Huntington, and Wolcott, from Connecticut; Lewis, from New York; Witherspoon, from New Jersey; Robert Morris, from Pennsylvania; Thomas McKean, from Delaware; Carroll, from Maryland; the two Lees, from Virginia; Penn, from North Carolina; and Heyward, from South Carolina, who signed the Declaration of Independence, were signers of the Confederation, in which the sovereignty of each was declared to be retained; and we have already seen the opinion of Judge Chase, another signer of the Declaration, of his views of the same interesting matter. I feel myself, therefore, justified in repelling the position that "the separate independence and individual sovereignty of the several States were never thought of by the patriot signers of the Declaration of Independence."

Each State prescribes the qualifications of its own voters, the Constitution only providing that they shall have the qualifications which such States may have prescribed for the voters for the most numerous branch of its own Legislature. And as the right to vote is prescribed by the State, the duty of doing so can not be enforced except by the authority of the State. No one can be elected to represent any State except a citizen thereof. Vacancies in the representation of any State are to be filled under writs of election issued by the executive of such State. In all this there is not one feature of nationality. The whole arrangement has reference to the States as such, and is carried into effect solely by their authority.

The Federal Government has no agency in the choice of representatives except only that it may prescribe the times, places, and manner of holding elections. It can neither prescribe the qualifications of electors nor impose any penalty upon them for refusing to elect.

The States alone can do these things; and, of course, the very existence of the House of Representatives depends, as much as does that of the Senate, upon the action of the States. A State may withdraw its Representatives altogether, and Congress has no power to prevent it nor to supply the vacancies thus created. If the House of Represenatives were national in any practical sense of the term, the "nation" would have authority to provide for the appointment of its members, to prescribe the qualifications of voters, and to enforce the performance of that duty. All these things the State Legislatures can do within their respective States. * * * But it is difficult to imagine a national legislature which does not exist under the authority of the nation, and over the appointment of which the nation as such can exert no effective control.

Henry St. George Tucker was the father of Hon. JOHN RANDOLPH TUCKER, a distinguished member of this House.

Judge Story was committed to the doctrines of Hamilton and the Federalists under Adams. He seems, however, to have forgotten that at the very time when the convention which framed the Constitution was in session the Congress of the United States was also in session. He seems to have overlooked the further fact that when the Constitution was agreed upon by the convention it was submitted to Congress, and by it referred to the several States for their action. He was like the great philosopher Sir Isaac Newton, who, in building a house, cut the usual cat-hole in the door and near it a smaller one for the kitten. He was astonished afterward to see the kitten enter at the cat-hole. Judge Story seems to have had a similar awakening, for he afterward admits that there was a wide difference of opinion among eminent statesmen upon this question. I quote his own words:

There is great room, therefore, for diversities of judgment and opinions upon a subject so comprehensive and various in its elements.

The majority report, as does the gentleman from Pennsylvania [Mr. ELLIOTT], quotes Story and Kent, both Federalists, but seem to repudiate Jefferson, Madison, Randolph, the Tuckers, and the men who framed the Constitution. I now assert that there can not be found a decision of the Supreme Court sustaining Story's theory of the Constitution and Government. It is true that in Martin *vs.* Hunter's Lessee (1 Wheaton, 334), the opinion of the court being delivered by Justice Story, it was said:

The vital importance of all the cases enumerated in the first class to the national sovereignty might warrant such a distinction. In the first place, as to cases arising under the Constitution, laws, and treaties of the United States. Here the State courts could not ordinarily possess direct jurisdiction. The jurisdiction over such cases could not exist in the State courts previous to the adoption of the Constitution, and it could not afterward be directly conferred on them, for the Constitution expresaly requires the judicial power to be vested in courts ordained and established by the United States.

The admiralty and maritime jurisdiction is of the same exclusive cognizance, and it can only be in those cases where, previous to the Constitution, State tribunals possessed jurisdiction independent of national authority that they could now constitutionally exercise a concurrent jurisdiction.

* * * * * * *

If State tribunals might exercise concurrent jurisdiction over all or some of the other classes of cases in the Constitution without control, then the appellate jurisdiction of the United States might, as to such cases, have no real existence contrary to the manifest intent of the Constitution. Under such circumstances, to give effect to the judicial power, it must be construed to be exclusive; and this not only when the *casus fœderis* should arise directly, but when it should arise incidentally in cases pending in the State courts. This construction would abridge the jurisdiction of such court far more than has ever been contemplated in any act of Congress.

Yet in Claflin *vs.* Houseman (3 Otto, 140), Judge Bradley, delivering the opinion of the court, said:

It is indeed intimated by Mr. Justice Story, *obiter dictum*, in delivering the opinion of the court in Martin *vs.* Hunter's Lessee, (1 Wheaton, 334–337), that the State courts could not take direct cognizance of cases arising under the Constitution, laws, and treaties of the United States, as no such jurisdiction existed before the Constitution was adopted. This is true as to jurisdiction depending on United States authority; but the same jurisdiction existed (at least to a certain extent) under the authority of the States. Inventors had grants of exclusive right to their inventions before the Constitution was adopted, and State courts had jurisdiction thereof. The change of authority creating the right did not change the nature of the right itself. The assertion, therefore, that no such jurisdiction previously existed must be taken with important limitations, and did not have much influence with the court when a proper case arose for its adjudication.

BARNEY VS. M'CREARY—THE PRECEDENTS.

So much for Judge Story.

The case of Barney *vs.* McCreary came up in this House in October, 1807. The Legislature of Maryland, in 1790, had passed a law requiring that a member of Congress should be a resident of the district in which he was chosen at the time of his election and for twelve months immediately before. In November, 1802, a law was enacted making the city of Baltimore and Baltimore County the fifth district, entitled to two Representatives, one of whom "shall be a resident of Baltimore city, and the other of Baltimore County." These laws were not questioned until 1807. It was disputed whether McCreary, who had the highest number of votes, was or was not a resident of the city; and, also, whether the act of the Legislature requiring a qualification of residence was valid or invalid.

The Committee on Elections reported in favor of McCreary on the 9th of November, 1807, without deciding the first question, on the ground that the act of the Legislature was void. The Federalists generally took that position in the House, while the Republicans or Democrats maintained that this power was one of the reserved rights of the States. There was an elaborate discussion of this question, ten members speaking in favor of the report and eighteen against it. I can not give even a brief synopsis of all these speeches. I quote verbatim from the Annals of that Congress the action of the House in the case.

Mr. Sawyer, fresh from the Revolution, said:

By this article it appeared that the general qualifications specified are that a person, to become eligible to a seat in this House, must have arrived at the age of twenty-five years, have been seven years a citizen of the United States, and a resident of the State for which he was to be elected; leaving, as might be naturally supposed, to the States respectively the addition of such other particular qualifications as they might think proper to impose, not incompatible with those fundamental ones laid down in that article.

John Randolph of Roanoke said—

That House had never been called upon to make a more important decision than the one now proposed. * * * It was one of those questions which in his mind had been so long unalterably fixed that he could not refrain from the endeavor to warn the committee of the dangerous ground which they were invited to tread. In undertaking to decide upon the validity of the law of a State they touched upon a subject which should never be approached but under the most imperious necessity and where no shadow of doubt could hang upon their decision. * * * What were they required to do? To declare the law of Maryland, long reverenced and obeyed, under which successive elections had been held and never before questioned; to pronounce this law to be a dead letter, entitled to no respect, even from her own citizens, and to absolve them from all obedience to it? Was it matter of surprise that the members of the House were startled at an innovation so daring and so dangerous.

He had laid down as a principle not to be questioned that Congress should never undertake to pronounce upon State regulations but in cases too clear to admit of contest and when the decision could not be evaded without manifest detriment to the public good. If he were called upon to establish a criterion, an infallible touchstone of the soundness of political principles, it should be made to consist of so much as a sacred regard for the rights of the States. * * * He viewed the proposed measure but as the commencement of a series, as the entering-wedge. If they began with declaring one law of one State unconstitutional, where were they to stop? They might, they would go on (it was a natural tendency of power never to be satiated as long as there was any thing left to devour) until the State governments, stripped of all authority, rendered contemptible in the eyes of the people for their imbecility and odious for their expense, mere skeletons of governments, the shadows of their former greatness, should be forever abolished and a great consolidated empire established upon its ruins.

He looked forward to such an event as the death-warrant of the existing Constitution and of the people's liberties. If they wished to preserve the Constitution they must learn to respect the rights of the States, and not bring the whole artillery of the Federal Government to bear upon them. In such a contest the States must fail, and when they did fall there was an end of all republican government in this country.

The second paragraph of the second article of the Constitution had, to his extreme surprise, been construed by the Committee of Elections as restricting the States from annexing qualifications to a seat in the House of Representatives. He could not view it in that light. Mark the distinction between the first and second paragraphs. The first is affirmative and positive. "They shall have the

qualifications necessary to the electors of the most numerous branch of the State Legislature." The second is merely negative. "No person shall be a Representative who shall not have attained the age of 25 years," &c. No man could be a member without these requisites; but it did not follow that he who had them was entitled to set at nought such other requisites as the several States might think proper to demand.

If the Constitution had meant, as now contended, to have settled the qualifications of members, its words would naturally have run thus: "Every person who has attained to the age of 25 years, and been seven years a citizen of the United States, and who shall when elected be an inhabitant of the State from which he shall be chosen, shall be eligible to a seat in the House of Representatives." But so far from fixing the qualifications of members of that House, the Constitution merely enumerated a few disqualifications within which the States were left to act. It said to the States: "You have been in the habit of electing young men hardly of age; you shall send us none but such as are five-and-twenty. Some of you have elected persons just naturalized; you shall not elect any to this House who have not been seven years citizens of the United States. Sometimes mere sojourners and transient persons have been clothed with legislative authority; you shall elect none whom your laws do not consider as inhabitants." Thus guarding against too great laxity in the State regulations by general and negative provisions, leaving them, however, within the limits of those restrictions, to act for themselves, to consult the genius, habits, and, if you will, the prejudices of their people.

The first paragraph which he had read was positive and affirmative. By it every person having the qualifications requisite to an elector of the most numerous branch of the State Legislature was entitled to vote for members of the House of Representatives. Yet nevertheless the qualifications rested with the States. They might make it a part of the qualifications of an elector that he should reside within his district, county, or borough. Would it not be absurd to say that a man might take a seat in that House who at the time was not qualified to vote for a member of it?

The right to prescribe the qualifications of the person for Congress, having respect, however, to the Constitution for which he had contended, was so obvious and natural, that it had been adopted by the States and acted upon from the commencement of the Government, without any man dreaming of or starting an objection to it. And the uniform practice of near twenty years, and the laws of the States in which the practice originated, were to be overturned at once, with as little ceremony as they would change one of their rules. The decision will not be final. It will be but the forerunner of a long series of acts, abrogating the laws and usages of the States, endeared to the people by habit and sanctified by reason. Before you enter upon this fatal act be you well assured the right is indisputably your own, and that you are called upon to exercise it by considerations which it would be criminal to resist. Beware lest while you proudly assert your power you do not meet the reprobation of the great body of the American people.

Mr. Bibb, of Georgia, expressed surprise that the Committee of Elections—

Should have inserted such words in their report when it was known to them that there was in the Constitution a general reservation of all power not expressly delegated.

Mr. Love, of Virginia, spoke as follows:

In discussing the great constitutional question involved in the report I shall adopt the division which the subject seems naturally to require: First, whether the right to legislate on the subject contemplated by the laws of Maryland mentioned in the report does not of necessity reside in some legislative delegation; and, if so, second, where does it reside? I shall contend for the affirmative of the first proposition. The great object of government, no doubt, is to attain to that degree of political perfectibility which, without invading the natural rights of man, shall be consistent with expediency and convenience. Is the power then contended for by Maryland in the act of her Assembly consistent with expediency and no infraction of individual rights? If so, I presume it is included in the common and usual powers of legislation, and must be found to exist either in our State or General Government. The confusion that would be attended upon the mode of election and the total want of local representation are too obvious to need comment. The right to legislate at all on this subject I had not until to-day supposed would be questioned; and I confess, although now denied, I have heard no satisfactory reason offered in support of such an opinion.

Forming then, as I presume, a proper object of legislation, I will proceed to inquire where, according to the nature of our civil institutions, it must be presumed to reside. If it resides in the General Government, it must be admitted that, according to the nature of that instrument, it must be found to be perfectly delegated. An argument to prove this position I should have presumed, at this time of day, unnecessary. If there are any here who doubt this position, I would in the first place refer them to all writers on the subject of our political institutions; for all who speak on the subject admit that the powers delegated to the General Government are to be taken strictly, and that nothing is considered granted unless expressed to be so.

In the opinion I have formed on this subject I feel great confidence, from the uniformity of construction which the State Legislatures have put on their powers. In perhaps every State in the Union have laws been enacted of a similar nature to that which is now the subject of consideration. In Virginia, I acknowledge, there is such a law as the gentleman from North Carolina has mentioned. It certainly goes further in principle than the law of Maryland; yet I think it a wise one, in leaving to the people the choice of Representatives whose interests are, in some measure, assimilated to their own. Fourteen or fifteen other States, I believe, have many years ago, and some of them of a late date, perhaps coeval with the operations of the General Government, passed laws of a similar nature with that under discussion. When we find so many distinct, enlightened bodies as the State legislatures are simultaneously acting in the same manner on the same subject, without any previous concert, I confess it strangely supports me in the correctness of the opinions I have formed.

Richard M. Johnson, of Kentucky, afterward Vice-President, argued as follows:

Is it not a principle of republican government that they should have well defined the qualifications of the electors and the elected? Should any power but the people themselves have a right to alter the qualifications required by the Constitution and then in convention only? Would any power less than a convention of the State of Maryland assume the right of adding a disqualification? * * * One word on the subject of the State sovereignties and the Federal Government. There were many subjects in which they had concurrent powers. In those cases I would always decide in favor of the States.

Mr. Nelson, of Maryland, declared his firm belief that McCreary was not entitled to his seat; that the resolution as reported was insidious, though he believed it was not intended or perceived by the committee, as it went to prostrate the State of Maryland. He believed the State had the right to fix qualifications for its Representatives, and would contend for that right as long as he lived.

Mr. Love moved to strike out of the resolution the words "agreeably to the Constitution of the United States."

Mr. Goldsborough suggested the propriety of Mr. Love's withdrawing his motion and renewing it in the House, where the votes on the question could be recorded, but Mr. Love declined.

Mr. Key objected to such a motion, because the House would, by agreeing to such an amendment, express an opinion that a member could be entitled to a seat without being duly qualified, which was absurd.

Mr. Marion moved to amend the amendment by striking out other words, so that the resolution should read: "*Resolved*, That William McCreary is entitled to his seat in this House;" and thereby avoid a decision on the constitutionality of the State law.

Mr. Rhea advocated the amendment last proposed from a wish to avoid a decision on State laws.

Mr. Clopton advocated the amendment, and in the course of his remarks said he strongly supported the right of the States to annex qualifications, and pointed out the evils to be feared from a contrary decision which would be implied by the resolution as reported.

He was followed by Mr. Sloan on the same side. Messrs. Findlay and Sturgess opposed, and Messrs. Goldsborough, Campbell, and Upham supported the amendment last offered. The question being taken on the amendment, it was carried—yeas 73. The question was then put on the resolution as amended, and carried—yeas 83.

The committee then rose and reported the resolution as amended to the House. On the question of concurrence by the House with the action of the Committee of the Whole, Messrs. Kelly and Smilie opposed, and Messrs. Marion and Taylor supported, the amended resolution. The yeas and nays were then called on the amendment, and it was adopted—yeas 70, nays 38.

Mr. Howard, in giving expression to the views of the Federalists, said—

That as a member of this House he not only disclaimed all power to legislate upon the subject of the qualifications of the elected, but denied the right of Congress either to dispense with those required by the Constitution or to superadd others. He considered that the qualifications of members was a fundamental regulation fixed by the Constitution and unalterable but by a change or an amendment itself.

Mr. Johnson, it will be seen, did not differ from the Democratic side of the House, but thought it was a power which ought to be exercised by the people in forming a State constitution, as in Kansas, and not left to legislation.

The House decided, by the very emphatic vote of 70 yeas to 38 nays, that they would not invalidate the law of Maryland. It was in evidence, and so agreed, that McCreary was a resident of the city of Baltimore when elected, therefore the law of Maryland was not violated. Without this evidence McCreary would have lost the seat. This was a square stand-up fight between the Federalists on the one side and the Jeffersonian Democrats on the other. The decision of this House in that celebrated case was an emphatic decision in favor of the doctrine for which I contend.

THE PHILIP BARTON KEY CASE.

That this is true and this question considered settled by that House in favor of the State law I need only call your attention to the next case decided by that House. It was the case of Philip Barton Key. Certain citizens of the third Congressional district of Maryland petitioned Congress to vacate the seat of Mr. Key, alleging that he had not resided one year in the district, as provided by the law of Maryland of 1790. The Committee on Elections, after an investigation, reported that—

By an act of the Legislature passed the 25th of January, 1806, residence is not prescribed as a qualification of a candidate for Congress, except for the fifth district; and that by the said act to reduce into one the several acts of Assembly, respecting elections, it is enacted, "that all laws, clauses and sections of laws repugnant to or inconsistent with the provisions of this act be, and the same are hereby, repealed." From which it appears that the law of Maryland, relied on by the petitioners against the seat of Mr. Key, is not now in force. From the above statement of facts the committee are induced to submit the following resolution:

"*Resolved*, That Philip B. Key, having the greatest number of votes, and being qualified agreeably to the Constitution of the United States, is entitled to his seat in this House."

Mr. Rhea moved to strike out the words "having the greatest number of votes and being qualified agreeably to the Constitution of the United States." The question was divided, and the words "having the highest number of votes" were stricken out without a division, as that question was not in issue. The words "and being qualified agreeably to the Constitution of the United States" were stricken out by a vote of 79 to 28.

So careful were those old Republican Democrats that they should not be misunderstood and their actions construed as only insisting that a Congressman should be eligible under the Constitution, and not according to the law of the State, the resolution as it passed read:

Resolved, That Philip B. Key is entitled to his seat in this House.

It was conceded that he was duly qualified under the Constitution of the United States, and the committee found that he was qualified under the constitution and laws of Maryland. Yet it was claimed that his residence of a few weeks only in Maryland was too short and the precedent unsafe; that he ought to be at least a voter. The vote on the

resolution stood 57 to 52. If the law of Maryland of 1790, requiring a year's residence in the district, had not been repealed, Mr. Key would have lost his seat by a vote of two to one. There is no question about this.

The Tenth Congress considered the question settled and State law as well as United States law must be obeyed.

JEFFERSON'S VIEWS.

Joseph C. Cabell, of Virginia, wrote a letter to Thomas Jefferson, in 1814, indorsing the views of John Randolph, and asking Jefferson's opinion on the power of the States to annex additional qualifications for members of Congress. Jefferson replied as follows:

Had the Constitution been silent nobody can doubt but that the right to prescribe all the qualifications and disqualifications of those they would send to represent them would have belonged to the State. So, also, the Constitution might have prescribed the whole and excluded all others. It seems to have preferred the middle way. It has exercised the power in part by declaring some disqualifications, to wit, those of not being 25 years of age; of not having been a citizen seven years; and of not having been an inhabitant of the State at the time of election. But it does not declare itself that the member shall not be a lunatic, a pauper, a convict of treason, of murder, of felony, or other infamous crime, or non-resident of his district. Nor does it prohibit to the State the power of declaring these or any other disqualifications which its particular circumstances may call for; and these may be different in different States. Of course, then, by the tenth amendment, the power is reserved to the State.

If, whenever the Constitution assumes a single power out of many which belong to the same subject, we should consider it as assuming the whole, it would vest the General Government with a mass of power never contemplated. On the contrary, the assumption of particular powers seems an exclusion of all not assumed. This reasoning appears to me to be sound.

Here we find that Jefferson, after mature reflection and a careful study of the question, unhesitatingly indorses the doctrine for which I contend, that the power to superadd qualifications to those negative ones enumerated in the Federal Constitution is "a power reserved to the States."

A distinguished Republican, who afterward occupied the Presidential chair, once made the following startling statement on this floor:

I believe that the fame of Jefferson is waning, and that the fame of Hamilton is waxing; and that we are gravitating toward a stronger government. I am glad that we are.

If a man can hold a seat on this floor in open violation of the constitution of Kansas, of which State he is a citizen, and which constitution was solemnly sanctioned by both Houses of Congress in the act admitting our State into the Union, then indeed it does seem that we have "gravitated" very near to that consolidated empire of which Hamilton dreamed and for which he plotted. Is it not time that the centralizing ideas of Hamilton should wane a little and that we should go back to the pure democracy of Jefferson?

In support of the great principle for which I contend I have cited the opinions of Randolph, Sawyer, Bibb, Johnson, Troup, Love, Nelson, Clopton, Macon, Marion, Taylor, and Barker—all members of the Tenth Congress, and all Democrats of the old school. I have cited, also, the opinion of Thomas Jefferson, our first Democratic President and the father of the Democratic party. These men were nearly all actors in the great struggle that secured the freedom and independence of the Colonies. They and their associates were the men who framed the Federal Constitution, and they were its first interpreters. Their judgment on a great question like the one now at issue outweighs the partisan opinion of a thousand Storys or Kents. Among those who were committed to the opposite doctrine in that Tenth Congress were L. W. Sturgiss, Josiah Quincy, and Mr. Howard, all Federalists, and elected as such.

Will this House adopt the theory of the Federalists, under the lead of Hamilton and Adams, or of the Democrats of that day, under the lead of Jefferson? This is, after all, the question to be decided in this case.

But I am told the Trumbull case is against me. A brief examination of this case will show that the opposite is true. Lyman Trumbull was elected a member of this House November 7, 1854. Before his term commenced he was elected, February 8, 1855, by the Illinois Legislature to the United States Senate as an anti-Nebraska Democrat. The Democrats of the Illinois Legislature protested against Trumbull's admission as a Senator. This protest was signed by 13 senators and 29 representatives, and referred to the Judiciary Committee, in the Thirty-fourth Congress, first session, December 3, 1855. It was presented by Mr. Cass, and is as follows:

To the honorable the Senate of the United States:

The undersigned senators and representatives of the people of the State of Illinois, and the Legislature thereof, respectfully represent that at a meeting of both houses of said Legislature, convened on the 8th day of February, 1855, for the purpose of electing a Senator for said State to the Senate of the United States for six years from the 4th day of March, 1855, 51 votes were cast for Lyman Trumbull, 47 votes for Joel A. Matteson, and 1 vote for Archibald Williams, and that 1 member of said Legislature was absent. They further represent that the constitution of the State of Illinois contains the following provision in the tenth section of the fourth article thereof:

"The judges of the supreme and circuit courts shall not be eligible to any other office or public trust of profit in this State or the United States during the term for which they were elected, nor for one year thereafter. All votes for either of them for any elective office, except that of judge of the supreme or circuit court given by the General Assembly shall be void."

They further represent that the said Lyman Trumbull was on the 7th day of June, 1852, elected judge of the supreme court of Illinois and was duly commissioned as such for the term of nine years from the 24th day of June, 1852; that he took upon himself the oath of said office, and entered upon the discharge of the duties of the same; that his said term of office for which he was elected is unexpired, and will not expire until the 27th day of June, 1861; and that in and by virtue of the said provision of the constitution of the said State of Illinois the votes cast by the members of the General Assembly for said Trumbull for Senator for said State as aforesaid are null and void; and said Trumbull is not legally elected to the Senate of the United States, and is not entitled to a seat in said Senate; and against said pretended election the undersigned, in behalf of themselves and their constituents, do hereby protest.

UNITED STATES OF AMERICA,
State of Illinois:

I, Alexander Starne, secretary of state for the State of Illinois, do hereby certify that Lyman Trumbull was, on the 7th day of June, 1852, elected judge of the supreme court of the State of Illinois, and was duly commisioned as such for the term of nine years from the 24th day of June, 1852; that he took upon himself the oath of office, and entered upon the discharge of the duties of the same. That said term of office for which he was elected is unexpired, and will not expire until the 27th day of June, 1861.

In testimony whereof I have hereunto set my hand and affixed the seal of said State, this 24th day of February, 1855.

ALEXANDER STARNE, *Secretary of State.*

On Monday, February 4, 1856, the President of the Senate presented a certificate from the governor of Illinois showing that Lyman Trumbull had been elected judge and was disqualified. Mr. Trumbull arose and said:

I had ceased to be a judge more than a year and a half before my election to the Senate. The governor seems to have pretermitted the rest of his statement. I resigned the office of judge, an election was held by virtue of a proclamation from the governor, who signed this paper, and a successor was chosen more than eighteen months before my election to the Senate.

This question came up again in the Senate February 20 on an inquiry of Senator Crittenden, of Kentucky, as to when the committee would probably report. A short discussion followed. Senator Toombs, of Georgia, a member of the Judiciary Committee, said:

I have been unwilling, in common with other gentlemen who are members of the committee, to come to a determination without a further investigation of the grave and important question of conflict between the Constitution of the United States and the constitution of the State. It is not confined to that State, but from a slight examination which I have given to the subject I think the constitutions of half the States in the Union have provisions in them which may be declared void, if the principal question in controversy in this case be decided in a certain way. This is, therefore, a very grave and important matter; it is one on which I am by no means satisfied.

Mr. Trumbull, in stating his side of the case, said:

The constitution of the State of Illinois declares a judge of the supreme court ineligible to other offices during the term for which he was elected. The term for which I might have held the office, it is true, had not expired. I held the office of judge altogether about five years. I was twice elected to hold it. I was elected for nine years at the second election, but under that election I did not hold the office long. I resigned and had been out of office a year and a half when I was chosen to this body. Unquestionably, therefore, the spirit of the constitution of the State of Illinois does not apply to my case, though it is possible the letter may.

Senator Toucey, of Connecticut, asked Mr. Trumbull "if there had been any decision of any court of the State of Illinois to the effect that the provision in the State constitution incapacitating judges of their higher courts from being elected to other offices for the term for which they were chosen and one year thereafter is void, as coming in collision with the Constitution of the United States?" Mr. Trumbull replied that there had been no judicial decision, but he supposed it was competent for the Legislature to pass upon the subject.

Mr. Douglas said the question had never been raised in the courts of Illinois; that "the meeting of the present Congress was the first time when it was possible to raise it;" and he added:

I desire to say that this is an open question; that no decision has ever been given on it by the people of Illinois, by any tribunal in Illinois, or by any tribunal anywhere which could possibly have a right to express an opinion on the subject.

Hon. George E. Pugh, Senator from Ohio, one of the ablest lawyers who ever held a seat in the United States Senate, followed, and, in discussing the provisions in the United States Constitution, said:

I agree that no State can dispense with or subtract from the requisites prescribed in the Federal Constitution, but I can see no pretense for asserting that the States may not superadd any qualification which is consistent with those requisites. A Senator is an officer of the General Government; he is also an officer of his own State. * * * While the Federal Constitution might prescribe certain requisites therefor to secure the interests of the Federal Government, the rights of the citizens of all the States and the welfare of the whole Union; while it might be well to do this, and bind each State to an observance of such requisites, no reason can be assigned why the people of a State might not prescribe other qualifications in addition for the purpose of protecting their separate interests, rights, and welfare.

I agree, of course, that such additional requisites must not only be consistent with those specified in the Constitution of the United States, but with the whole spirit and tenor of that instrument. No mischief can result to the Union or to any State from this course of decision, and it leaves to the States that degree of independence, that reservation of powers, which the tenth amendment to the Constitution so plainly indicates.

* * * * * * *

That the regulations of each State would be applied by the Senate to every case of a contested election I have not a doubt, whether such regulation be expressed in a constitution, an act of the Legislature, joint rule, or consent for the occasion, or even a prevalent usage.

Mr. Pugh, in the same speech from which I have quoted, said:

While I agree that the Senate is an exclusive judge of the election returns of its own members, by the express terms of the Federal Constitution, I understand the rule to be well established and universally applicable that the courts of each State are the most authoritative expositors of their own constitution and laws.

Senator Pugh then laid down two propositions which I think can not be successfully controverted:

First. There is no conflict between the Constitution of the United States and the constitution of the State of Illinois. They are perfectly consistent. Now,

so far as my learning extends, there is no principle more firmly established in the law of England and America than this: that whenever two enactments can stand together, whether they be called constitutions, statutes, or by what name soever, they shall stand together and both shall be obeyed.

I would suggest here that there is no conflict between the Constitution of the United States and that of the State of Kansas, as there is no provision in the United States Constitution requiring that a member of Congress be taken from the bench. A member of Congress comes as an agent of the people.

I submit—

Said Senator Pugh—

that the Constitution of the United States never designed to exalt the agent above the principal, the creature above the creator, the minister above the sovereign, as this proposition assumes.

Mr. Pugh wound up his ablè argument by declaring:

If Mr. Trumbull be permitted to occupy his seat after the evidence we have heard it would be an occurrence unprecedented, as I believe, in the history of representative governments; it would exhibit the anomalous spectacle of a gentleman representing the State of Illinois by our sanction when the electors of that State have said in their fundamental law that he should not represent them; it would be a gross affront to one of the sovereign constituents of the Union; it would strike down at one blow the constitutions of twelve or sixteen States; it would be another stride, longer than any stride yet taken, toward that consolidation of powers in the Federal Government which has already grown to an inordinate degree, and from which more than from any other cause a deadly peril threatens us.

Senator Adams, of Mississippi, said:

If a question arises as to the eligibility of a member, under any qualification prescribed by the Constitution of the United States, I judge of that myself as a member of this body; but if the question of eligibility arises from the construction of the constitution or laws of a particular State, I take it for granted that the construction which the State places on it is correct, and I act upon it, without regard to the question whether I would as a member of the State Legislature have decided in the same way or not. * * * I therefore look upon it as a settled question that the action of the Legislature of a State is binding upon this body so far as their State constitution and laws are concerned; and that we will take it for granted, and not inquire whether they have decided right or wrong according to our notions.

Senator John P. Hale held the same view. In the course of his remarks he used this language:

I believe that, whatever the constitution of Illinois may mean, the Legislature of Illinois is the ultimate and final tribunal to settle it. They have settled it; and as they have settled it their action is conclusive, and I place myself on this ground.

Mr. Trumbull again said:

The clause in dispute in the constitution of the State of Illinois is a peculiar one; it embraces only ten or a dozen lines. I apprehend that, on a close examination of it—I doubt whether the constitution of Illinois intended to apply at all to any officer except an officer of the State. The language is:

"The judges of the supreme and circuit courts shall not be eligible to any office of public trust or profit in this State, or in the United States, during the term for which they are elected, nor for one year thereafter. 'In this State or the United States' is the language. What officers? Officers of the State of Illinois, in the State, or the United States."

It seems plain that Trumbull and his friends were not claiming the right to nullify the constitution of Illinois; but the whole effort was directed to showing that they were not violating said constitution.

Senator Crittenden, of Kentucky, who had the matter in charge, made an elaborate speech in favor of Trumbull. After quoting the provisions of the constitution of the State of Illinois, he said:

What was the intention of the framers of this provision? It was to preserve the independence of their judiciary, and to prevent the possibility of one of the judges of the State using the influence of that office to obtain another. That is the reason and the sole reason for this prohibition; and, to accomplish this object, the constitution of Illinois provides, not only for ineligibility during the term of nine years, but one year thereafter, lest he should, by anticipated contrivance, intrigues, and influence, provide for another office by the use of the influence which his present office affords. One year after the expiration of his office was supposed to be sufficient for that purpose. Here is a case where the office of this gentleman has been determined eighteen months before he was elected a member of this body. * * * If it apply to him from the moment of resignation, it could, by analogy, apply only for the term he actually served and one year thereafter. That would be preserving the analogy exactly. * * * It is perfectly clear to my mind, then, Mr. President, though perhaps I should not speak so strongly before this honorable body, it is quite clear and my mind is quite satisfied that this case does not come within the meaning and the purview of the constitution of the State of Illinois.

The Senators in that celebrated case did not wish to violate the constitution of Illinois; and many of them seem to have held the opinion that, as no court in that State had decided that the inhibition attached to the person, and continued for one year after the term of office had expired by law, the rule of exclusion did not apply.

Senator Trumbull in that case nowhere claimed the right to nullify the constitution of Illinois. His friends did not claim that right. When they voted they did not consider that they were violating the spirit at least of the constitution. They did not claim the right to nullify one-half of the constitutions of the Union. It is true that George E. Pugh, with the leading Democrats in the Senate, considered it a violation of the letter of the constitution of Illinois. It is true that the governor of Illinois, with every Democrat in both branches of the Legislature, protested against the violation of the letter of their constitution. But, as the spirit was not violated, the Senate, under that clause empowering Congress to judge of the qualifications of its own members, allowed Trumbull to retain his seat. But I affirm that no one who reads that debate carefully will insist for a moment that Trumbull would have retained his seat in violation of the spirit and letter of the constitution of Illinois.

In the Senate that admitted Trumbull were sixty-two members. Of these thirty-four were Democrats; the balance were Whigs and Republicans. Thirty-five Senators voted to seat Trumbull. Of these less than one-half were Democrats, and twenty-four were Whigs and Republicans. Of the Senators who voted to seat Trumbull only six claimed that they had the right to invalidate the constitution of Illinois. Twelve Senators who spoke on the subject claimed that it was not a violation of that constitution. Eight Democrats claimed that it did violate the letter of the constitution of that State, and voted against his admission. A majority of the Democrats voted "no" or did not vote. So much for that precedent.

But the reasoning in the Trumbull case does not meet the law of my case. The constitution of Kansas is explicit; both its letter and spirit have been violated. Our supreme court has decided that the inhibition attaches to the person and extends through the whole term for which he was elected.

Judge Trumbull had resigned his seat on the bench eighteen months before he offered himself as a candidate for Congress and twenty-one months before his election to the United States Senate. He had not violated the constitution of his State by dragging the judicial ermine into the mire of party politics and making his judgeship a stepping-stone from which to mount to a seat in Congress. He had observed the spirit of the constitution of Illinois by surrendering to the people the trust they had bestowed; and he had done that so long before he offered himself as a candidate for political office, that no one could charge him with using the great power and influence of his judgeship for electioneering purposes. Such was the judgment of learned lawyers in the Senate who awarded him a seat in that body.

The case of Turner *vs.* Marshall, in the Thirty-fourth Congress, was decided on substantially the same ground. Turner and Marshall were opposing candidates for Congress in November, 1854. Marshall received 8,497 votes and Turner 2,912. Marshall had been a judge of the circuit court of Illinois, elected June 10, 1851, and commissioned for four years. He resigned that office August 10, 1854, before he became a candidate for Congress, and sixteen months before the meeting of the Thirty-fourth Congress. This House followed the precedent adopted by the Senate in the Trumbull case, and decided that the spirit of the constitution of Illinois had not been violated, as Marshall had resigned his judgeship sixteen months before presenting himself to take the oath of office as a member of the Thirty-fourth Congress. His term of office as judge would have expired twelve months before the meeting of that Congress. The House in 1856 contained, as I recollect, one hundred and seventeen Republicans and only seventy-nine Democrats, the balance Whigs and Know-Nothings.

Both the Senate and the House, in these two cases, acted on the theory that there was an implied construction put upon the constitution of Illinois when the Legislature elected Trumbull United States Senator. I admit that there were men in both Houses of Congress who clung to the logic of the old Federalists, and insisted that the States had no voice in the matter of fixing qualifications of members of Congress; but this only shows that Federalism was not yet dead, and that the leopard had not yet changed its spots.

THE DEMOCRATS OF ILLINOIS.

The Democrats of Illinois, headed by such men as Governor Palmer and Judge Trumbull, occupy no doubtful position on this question. In the last session of the Illinois Legislature, on January 10, 1883, in the house of representatives, the following proceedings took place:

Mr. Herrington offered the following resolution:

Whereas it will be the duty of the members of the Thirty-third General Assembly, now in session, to elect a Senator in the Congress of the United States, to serve for a term of six years, beginning on the 4th day of March, 1883; and

Whereas section 5 of article 5 of the constitution of the State of Illinois, which the members of this house have sworn to support, provides that "neither the governor, lieutenant-governor, auditor of public accounts, secretary of state, superintendent of public instruction, nor attorney-general shall be eligible to any other office during the term for which he shall have been elected:" Therefore,

Resolved, That it is the sense of this house that none of the officers of the State mentioned in the aforesaid article of the constitution should be voted for by the members of this house for the office of United States Senator, but should serve out the full terms of the offices to which they were elected by the people of the State.

Resolved, That it is the sense of this house that a proper construction of said section 5 of article 5 of the constitution is that the framers thereof intended to prohibit the bartering of the official patronage of the State by any of such officers to aid them in securing votes or influence in securing any other official position.

Mr. Fuller moved to make the foregoing resolution a special order for to-morrow morning, immediately after the reading of the journal.

Thereupon Mr. Littler moved to commit said resolution to the committee on judiciary. Pending discussion, Mr. Hoffman moved the previous question. The point of order raised by Mr. Herrington that, this being a subsidiary question, the previous question does not lie was overruled by the speaker. And the question being "Shall the main question be now put?" and the yeas and nays being demanded, resulted as follows—yeas 77, nays 66. And the motion prevailed.

The question now being on the motion to commit to the committee on judiciary, the roll of members being called, it was decided in the negative by the following vote—yeas 37, nays 104. The question now recurring on the motion of Mr. Fuller, to make the consideration of said resolution a special order for to-morrow morning immediately after the reading of the journal, and the roll of members being called, it was decided in the affirmative by the following vote—yeas 97, nays 46.

THURSDAY, *January* 11, 1883—9 o'clock a. m.

The time having arrived, the hour fixed for the consideration of the resolu

tion offered by Mr. Herrington relating to section 5 of article 5 of the constitution of Illinois, the same was taken up. Pending the consideration, Mr. Quinn offered the following amendment to said resolution, and moved its adoption:

"*And be it further resolved*, That a proper observance of section 5, article 5, of the constitution forbids that any person who has at any time in the past been elected to the United States Senate in violation thereof should now be voted for by members of this house for the office of United States Senator; and that the principle enunciated in the second resolution forbids that any person holding any State or Federal office, executive or legislative, which gives him control of any official patronage in the State which has been or can be used to aid him in securing votes should be voted for by members of this house for United States Senator."

Negatived by a vote of yeas 21, nays 119.

Mr. Thomas offered the following as a substitute for the resolution, and moved its adoption:

"*Resolved*, That it is the opinion of this house that section 5 of article 5 of the constitution does not prohibit the Legislature electing either of the State officers named therein to the Senate of the United States."

And the substitute was lost.

The question again recurring on the original resolution, pending the consideration of the same Mr. Pearson, of Madison, moved that the House do now adjourn.

The yeas and nays being demanded, it was decided in the negative by the following vote: Yeas 55, nays 88.

Another resolution was offered as a substitute and voted down, when the proceeding closed as follows:

The question again recurring on the resolution of Mr. Herrington, and the yeas and nays being demanded, it was decided in the affirmative by the following vote: Yeas 80, nays 65.

Those voting in the affirmative are Messrs. Abrahams, Baker, Bez, Billings, Brink, Caldwell, Canning, Carlin, Clark, Cleary, Clinton, Cox, Crafts, Crandall, Cronkrite, Day, Downing, Duffy, Dugan, Felker, Fellows, Fuller, Gallop, Greer, Gregg, Haines, Hay, Herrington, Hiatt, Higgins, Jennings, Kimbrough, Kinman, Klupp, Lawrence, Linegar, McNally, Messick, Mette, Moore, Morrison, Murray of Sangamon, Murray of Scott, Newton, O'Connell, O'Shea, Parish, Pearson of McDonough, Pratt, Purnell, Richardson, Ricks, Rogers, Rook, Roundtree, Rowland, Sexton, Seyster, Sheridan, Starkel, Stevens of Hancock, Stevens of Montgomery, Sullivan of Cook, Sullivan of Saint Clair, Symonds, Taylor of Cook, Taylor of Kankakee, Templeton, Updyke, Utiger, Varnell, Vaughey, Walsh, Welch of Kendall, Welch of Bureau, West, Wiley, Willoughby, Wood of Cook, Yancy—80,

Those voting in the negative are Messrs. Adams, Ansley, Bethea, Black Boardman, Boyer, Brown, Calhoun of De Witt, Calhoun of Vermillion, Cleaveland, Coates, Collier, Cook, Cowperthwaite, Crews, Crocker, Curtis, De Bord, Emerson, Erwin, Ewing, Fairbanks, Funk, Goodspeed, Hammond, Harper, Hawker, Hawks, Hester, Hoffman, Honey, Hoskinson, Johnson, Jones, Kennedy, Lackie, Littler, McCartney, McFie, Manahan, Mathews, Mitchell, Nichols, Nowers, Parker, Pearson of Madison, Pedersen, Quinn, Ray, Roane, Scurlock, Stimming, Struckman, Studer, Sumner, Sundelius, Thomas Thompson of Peoria, Thornton, Tryon, Walker, Wendell, Wood of De Kalb, Worthington, Mr. Speaker—65.

It will be observed that not only all the Democrats in the Illinois house but many Republicans committed themselves to the doctrine for which I contend.

Now mark how totally different is the ground upon which Judge Peters stands from that occupied by both Trumbull and Marshall. If either of these gentlemen had been on the bench at the time of his election, I repeat the question, can any reasonable man believe, after examining the debates in those cases, that either would have been awarded a seat in the Senate or House? Judge Peters was on the bench when he offered himself as a candidate for Congress; he was on the bench when the election was held; he was on the bench when he received his certificate of election; and he continued on the bench for some time afterward, holding two commissions for totally different offices at one and the same time, in open violation of the constitution of Kansas and in derogation of an explicit and positive ruling of the supreme court of our State. He drew pay as a member of this House ten months before his term as judge expired. His term of office as judge had not expired when he took the oath as a member of this body.

In the Marshall case the report of the Committee of Elections did not accompany the resolution, was not made for twelve months after, and formed no part of the final decision of the House, and was never adopted by the House, the committee's statement to the contrary notwithstanding. Mr. Harris, a Democrat from Illinois, gave to the subject and the principle involved a critical and profound examination, and stated the true democratic theory of government. In the course of his speech Mr. Harris said:

If the members of this House decide that the sitting members are entitled to their seats they strike down by that decision not only the constitution of the State of Illinois but the constitutions of one-half of the States of the Union.

I admit that if the constitution of the State of Illinois conflicts with that of the United States, the latter is paramount and the former will have to give way; but I contend that there is no conflict between the two, and that by deciding against the rights of Messrs. Trumbull and Marshall (whom I shall call the sitting members) both constitutions may stand and be in full force without any jar or discord.

If both seats are declared vacant, whether the contestants are admitted or not, no violence will be done to the Constitution of the United States; but by admitting their rights to the seats and excluding the contestants the constitution of Illinois is trampled under foot by this House.

* * * But it will be at once perceived that the provision of the Federal Constitution just cited does not impose any limitation or restrictions upon the States to add other qualifications if they choose. If it had been so intended how easy it would have been, how natural it would have been, for the framers of that instrument who desired that there should be no doubt or ambiguity as to its import to have said, "Any person may be a Representative," &c.

These great provisions are declared by Mr. Jefferson to be the corner-stones of the Constitution; but instead of making them the head of the corner, they are too often rejected by the builders as unworthy of notice. When, therefore, the Constitution declares a man must be twenty-five years of age, must be an inhabitant of the State from which he comes, and must have been for seven years a citizen of the United States, it must be taken in connection with the declaration that the enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people; and before we strike down with the arm of Federal power the rights of a State and the constitution of a State we must find the power to do it in the Constitution itself or find that State constitution in clear repugnance to that of the United States.

Now, I ask if there is any power delegated here that should prohibit the States from adding qualifications to their Representatives. If not, then the obvious and necessary construction that must be placed upon these provisions must be that the States have the right to impose any additional qualifications or restrictions which they in their wisdom should think proper, provided always that such restrictions do not come in conflict with the Constitution of the United States. * * *

I maintain that the States have a right to adopt these limitations, and I dare any gentleman, learned or unlearned, to point to the provision of the Constitution which prohibits a State from making them. It can not be found in the Constitution. It is an assumption of power, and one which every day's experience teaches us that it is time to curb.

Power begets power. Possession of power stimulates a desire to increase it. First the judiciary strikes down a State, then the Senate strikes down a State; and now the House of Representatives has, for the first time in our history, an opportunity to do the same thing. * * * It is very kind of the gentlemen thus to take care of the States and prevent them from doing anything frivolous and foolish. It is extremely kind of them to suppose that the States require their guardianship in this matter. True, the people of the States were themselves able to frame the Constitution of the United States; they had originally that capacity, but having framed it and organized the two Houses of Congress, they are no longer capable of determining who are proper persons to represent them here. Congress, as a legislative body, must take them under its guardianship. It must determine whether the wishes of people are sensible and right or whether they are frivolous and foolish. * * * I confess, sir, that when the question was first presented to my mind I came to the conclusion that the provision in the constitution of the State of Illinois was in conflict with the Constitution of the United States, and was of course worth nothing; but upon examination of the question the conclusion was irresistibly forced upon me there was no conflict—that both constitutions are in entire harmony. The Constitution of the United States provides certain qualifications, but it does not prohibit the State from adding others thereto, provided they do not conflict with those enumerated in that instrument.

Senator Stewart, of Michigan, in the Trumbull case, used this forcible language:

It is important to consider in connection with this subject the fact that there is no necessity incumbent upon an individual to receive and hold a judicial office to which this disability is attached. To every citizen of a State is left the decision of the question whether or not he will accept the office of judge under the constitution of his State. If he does accept it, he voluntarily assumes to himself the disability following upon the honors and responsibilities conferred. I have said, and I beg Senators to bear in mind, that this disability has been deliberately fixed by the various constitutions of those States of the Union in which it is contained as a matter of stern necessity, in the opinion of those who formed those constitutions.

This is precisely the case now at issue. Judge Peters voluntarily took upon himself the duties and responsibilities of a judgeship in Kansas with this disability attached.

I appreciate that this House is invested with authority to judge of the election and qualifications of its own members; and I know, also, that when it sits in this quasi-judicial capacity it is governed by the laws of the country, State as well as national. It possesses no arbitrary power, and it was not the habit of this body in the earlier and better days of the Republic to exercise any such power. I am aware that the Republican majority on this floor in times past have occasionally adopted the questionable policy of voting Democrats out and Republican contestants in. But I am not here to ask Democrats to emulate so narrow a policy. It matters not whether Judge Peters or myself holds the seat on this floor; men are nothing, the principle involved everything.

A question similar to the one under discussion came up in the Forty-second Congress, in the case of Bowen *vs.* De Large, from South Carolina. The committee found that De Large had less than a majority of the votes cast at the election, and that he was not entitled to his seat. Also that Bowen was ineligible under the constitution of South Carolina. In their report the committee say:

It further appeared that on the 19th day of October, 1870, on the same day when he claims to have been elected to this House, the contestant was chosen a member of the house of representatives of the State of South Carolina for the period of two years; and on the 1st day of November, 1872, he took the oath of office, and took his seat as a member of said house. It further appeared that in the fall of 1872 the said Bowen was elected sheriff of Charleston, S. C., for the term of four years, and on the 10th of November, 1872, took the oath of office and entered upon the duties of the same, which office he now holds. These offices are, in their nature, incompatible with the office of member of this House, and are expressly declared to be so by the constitution of South Carolina. Some of the committee are of opinion that the acceptance of these offices by Mr. Bowen disqualified him from the prosecution of a claim to a seat in this House, and from taking a seat therein, if he shall be found to have been duly elected.

This report was written by Hon. GEORGE F. HOAR, and was signed by Representatives McCrary, HOAR, Merrick, Hazleton, Arthur, and Rice.

The provision in the constitution of South Carolina to which the committee referred is as follows:

No person shall be eligible to a seat in the General Assembly while he holds any office of trust or profit under the State, the United States of America, or any of them, or under any other power.

Mr. Bowen made an able argument to show that the object of this provision of the constitution was not to fix the qualifications of members of Congress, but local officers of their own State government.

Hon. GEORGE F. HOAR, an eminent lawyer of the Old Bay State, now a Senator in Congress, and chairman of the Senate Committee on Elections, in closing the debate, said:

When the whole case was in, it further appeared that within about two months of the present time the contestant accepted the office of sheriff of Charleston, and took the oath to perform its duties—an office which is also incompatible, by the express terms of the constitution of South Carolina, with a seat in this House, and which is to continue for four years, or thereabout, from the time he took it.

It is difficult to see how any man who has sworn that for four years he will exercise the incompatible duties of sheriff of Charleston can consistently present himself and ask to be sworn to exercise at the same time the duties of a member of this House, the assumption of both offices requiring an oath to support the two constitutions which make those duties incompatible.

Mr. Butler inquired:

What have we to do with the constitution of South Carolina?

Mr. HOAR said:

I understand that we have a good deal to do with a prohibition in a State constitution, which a member is sworn to support and which disqualifies him to hold office.

The report was adopted January 24, 1873, without a division.

It is to be regretted that this eminent constitutional lawyer is not now a member of this House. I should like to hear his voice ring out in this Hall in support of the principle for which I contend. I should like to see the righteous scorn with which he would denounce the attempt of a member to hold a seat here in violation of an express provision of the State constitution which he had sworn to support, and in the face of a decision of the supreme court of that State. I can imagine how his classic brow would flame with virtuous indignation when he would exclaim, as he did in the Bowen-De Large case:

It is difficult to see how any man who has sworn that for four years he will exercise the incompatible duties of judge of the ninth judicial district of Kansas can conscientiously present himself and ask to be sworn to exercise at the same time the duties of a member of this House, the assumption of both offices requiring an oath to support the two constitutions which make these duties not only incompatible, but absolutely prohibit them.

If some gentleman on the Republican side should ask, "What have we to do with the constitution of Kansas?" I should expect to hear his eloquent reply:

I understand, sir, that we have a good deal to do with a prohibition in a State constitution which a member has sworn to support, and which disqualifies him to hold office here.

The majority of the committee say, as does the gentleman from Pennsylvania [Mr. ELLIOTT]:

The States have no power to superadd other qualifications, for the reason that such powers can not, in the nature of things, be found among the reserved rights of the States, and no such power is delegated to them by the Constitution.

Shades of Jefferson! As I have shown, the powers delegated to the General Government were enumerated; those not enumerated were reserved to the States or the people. Who ever before heard of States in convention delegating powers to themselves? These States were reserving powers not delegated. If there be a future life, and those who have passed over are conscious of what is transpiring here, I can imagine how Alexander Hamilton must have chuckled over this report. I can also imagine the feelings of Jefferson when he saw all of his cherished theories of government repudiated by his professed friends.

When the Constitution of the United States was formed the right of each State to be represented in Congress existed under the Confederation, and was reserved with certain limitations. It would be nonsense to say that the Constitution of the United States delegates to the State the right to send Representatives to Congress. It was sovereign States, which had just secured their independence, that met in convention for the purpose of forming "a more perfect Union."

Section 3, article 14, of the amendments to the Constitution of the United States provides, and I call the attention of the gentleman from Pennsylvania to this—

No person shall be a Senator or Representative in Congress, or elector of President and Vice-President, or hold any office, civil or military, under the United States, or under any State, who, having previously taken an oath, as a member of Congress, or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial officer of any State, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof.

Suppose that was the only provision of the Constitution on the subject of the qualification of members of Congress or officers of a State, would it be claimed for a moment that no others could be added? Would any one pretend that this fixed the qualifications of members of Congress or of State Legislatures? If so, it would not be competent for Congress or the States to require more, as it would fix those of members of State Legislatures, as well as judicial and other officers of the States. It must have been the intention to allow the States to superadd any qualifications they saw proper to impose that did not conflict with this inhibition. Now, read these two provisions together:

No person shall be a Representative who shall not have attained the age of twenty-five years, and been seven years a citizen of the United States, and who shall not, when elected, be an inhabitant of that State in which he shall be chosen.

And—

No person shall be * * * a Representative in Congress * * * or hold any office, civil or military, * * * under any State, who, having previously taken an oath, &c.

It will be seen that the same principle is involved in the one case as in the other; and if it fixes the qualifications of members of Congress, it fixes those of State Legislatures; and if the States can not superadd in the one case, they cannot in the other. The Constitution is the supreme law of the land.

Mr. Speaker, there must be a power somewhere to add other disqualifications or to prescribe needed qualifications; and the only question would be, where is this power lodged? As it was not delegated to the General Government, it was, of course, reserved to the States. That Congress possessed the power to prescribe other qualifications or disqualifications was never dreamed of in the early history of our Government.

The ninth amendment to the Constitution of the United States is in these words:

The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

It seems to me that the power on the part of Congress to prescribe any additional disqualifications for members of Congress is prohibited by the ninth amendment, and that such power was retained by the States or the people. All that Congress can insist upon is in the Constitution. Other restrictions are among the reserved rights of the States. No one ever questioned the right of a State to apportion itself into districts and to require that the member should reside in his district. Of course, if a State can do this, it can fix other qualifications or disqualifications, as the Federal Constitution only provides for inhabitants.

It is our State that is being stricken down to-day; it is the young State of Kansas that lies bleeding at your feet, begging you to respect her constitution. To-morrow it will be yours. This imperial car of Juggernaut will roll on until State lines are obliterated and we have one grand, centralized, consolidated empire. If the report of the majority of the Committee on Elections is sustained, you nullify the constitutions and laws of over thirty States. In this case you take a longer stride toward centralization than the Republican party has done since the war.

Democrats, I ask you if you can afford to do this? Republicans, can even you afford to be placed in this position? Democrats, if we are to go back on the principles advocated by Jefferson, the father of Democracy, if we are to go back on State rights as advocated by the fathers, if we are to spell nation with a big N, why go to Chicago a month after the Republicans? Why not go at the same time, camp on the same ground, and be as one of them?

I think it was in 1842 that Congress passed the first law requiring the States to be divided into districts. That law provided that where a State is entitled to more than one Reprepresentative, the number to which each State shall be entitled under this apportionment shall be elected by districts, composed of contiguous territory, equal in number to the number of Representatives to which said State may be entitled, no one district electing more than one Representative.

The Legislatures of four States repudiated this law, declaring that Congress could not determine the qualifications of a member of Congress. Four States totally disregarded the law and elected on a general ticket. These cases were referred to the Committee on Elections, of which Stephen A. Douglas was a member. It raised the question of State rights. Douglas recommended the passage of the following resolutions:

Resolved, That the second section of "An act for the apportionment of Representatives among the several States according to the Sixth Census," approved June 25, 1842, is not a law made in pursuance of the Constitution of the United States, and valid, operative, and binding upon the States.

Resolved, That all the members of this House (excepting the two contested cases from Virginia, upon which no opinion is hereby expressed) have been elected in conformity with the Constitution and laws, and are entitled to their seats in this House.

The House, by a vote of 128 to 57, decided in favor of admitting the members and against the right of Congress to dictate to the States how they shall elect their members.

The late Speaker of this House seems to have recognized this doctrine in the Skinner case in the present Congress. Mr. SKINNER was commissioned as a Representative from the State of North Carolina. He was commissioned by the governor, as all State officers should be, and not by the President, as all Federal officers must be. Mr. KEIFER, in the preamble to his resolution, recognized SKINNER as representing a district, and not the whole State; and yet the ex-Speaker says:

To admit him to the seat would leave the said county of Bertie without any district representation in this Congress, and the said county of Carteret would be doubly represented.

This whole district system comes from the States, under the reserved power of the States, and was practiced over fifty years before the pretense was set up that Congress had anything to say about it.

Suppose the Legislature of Kansas had been in session when the vacancy occurred in the old second district of that State by the death of Mr. Haskell. That district no longer exists, a new apportionment having been made. Suppose the Legislature had declared the vacancy to exist in the sixth district, where Mr. Haskell lived, and had provided for filling that vacancy from the sixth district. Would any one have disputed the right of our Legislature to do this? This House has knowledge of the vacancy, and if a man comes here duly commissioned by the governor of Kansas I apprehend he would get his seat. Suppose, on the other hand, that the governor had issued his proclamation to fill the vacancy by an election in the sixth district; that a member had been elected in that district and duly certified or commissioned by the State. Would any one question the legality of such election?

Presidential electors are apportioned among the States precisely as are members of Congress. One is nominated for each district, but elected on a general ticket. Would any one question the right of a State to

apportion them and elect by districts as we do members of Congress? This was originally the practice in some of the States. I believe this doctrine had the sanction at least of the last national Republican convention.

The constitution of the State of Kansas says the contestee is not eligible. The supreme court of the State of Kansas has passed upon this very question. In the famous case of the State on the relation of J. H. Watson *vs.* N. Cobb (2 Kansas, 33), the court said:

It is clear that it is not the intention of this provision to prescribe rules by which the existence of a vacancy in any of the judicial offices named is to be ascertained. Even after a removal from or a resignation of office the justices and judges are still plainly and unequivocally bound by the constitutional inhibition until the expiration of the office. The object sought to be accomplished by this provision is that our high judicial officers may be removed as far as possible from the temptation to use the power and influence of their positions and authority for their own advancement; to prevent their minds from being distracted from their legitimate duties by ambitious hopes and struggles for preferment; to raise them above those political and partisan contests so unbecoming the desired purity, impartialty, and calmness of judicial character.

Its effect is to prevent the acceptance of any other office by a judge or justice the term of whose judicial office has not yet expired, and to render such acceptance void.

The ineligibility of the justices and judges attaches to them as individuals, and not merely in office, and extends not only while they hold office but during the term for which they are elected; nor is the principle changed when the office emanates from another authority; the constitutional inhibition remains the same. It is still the law, which governs the courts of this State, an unchanging and unbending rule, from which there is no escape. It is true that as a government the State of Kansas has no control over the eligibility or qualification of the United States.

It will be seen that according to this ruling of our supreme court, which interprets the clause of our State constitution now in dispute, Judge Peters was not eligible to a seat on this floor when he was voted for, was not eligible when he took the oath as a member, and that his retaining a seat in this body would be in direct conflict with our State constitution. This the majority report admits, as does the gentleman from Pennsylvania. The ineligibility of our judges attaches to them as "individuals," and not merely as officers; and that disqualification continues, says our supreme court, "during the whole term for which they are elected." This construction of our constitution, according to all precedents, must have a binding force and influence in controlling the action of this House. If the Constitution of the United States fixes the qualifications of members of Congress in the article referred to, and the maxim of "*Expressio unius est exclusio alterius*" is to control, it would not be competent for the people in State convention, the Legislature, or Congress to fix any additional qualifications.

If that doctrine be correct, then the man who gets the most votes must have the seat. The rule would not work much harm to me, as the official returns show that I had 25,000 more votes than the Democratic ticket; that I had 5,000 more than the Democrats and Nationals combined; I had more votes than Governor Glick, our present governor; I had over 10,000 more votes than St. John, the Republican candidate; 61,000 more votes in the State than FUNSTON, who has just been sworn as a member. In the old second district FUNSTON only beats my vote, in 1882 369 votes. I had 42,000 more votes in the State than ANDERSON, 51,000 more than RYAN, and 61,000 more than Haskell. If the voting had been limited to districts, without reference to residence, I would be elected, as I had 148 more votes in the second district than the late Mr. Haskell.

If the Federal Constitution fixes all the qualifications of a member of Congress, how could you exclude a man who had been convicted of bribery under a law like that of 1790, which declared that "a person convicted of bribery shall be forever disqualified to hold any office of honor or trust under the United States?" Would gentlemen dodge this proposition by claiming that a member of Congress is a State officer? They are driven to this dilemma, or they must admit that men may be disqualified by the States acting outside of the negative restrictions imposed by the Federal Constitution. I grant that it is not in the power of the States or of Congress to add to or subtract from any affirmative and express provision of the Federal Constitution. No such affirmative grant of power to fix the qualifications of members of Congress is found in any part of the Constitution of the United States. Acting strictly within the letter as well as the spirit of the Federal Constitution, Kansas fixed in her constitution a disability by declaring that a person holding the office of judge in our State should not be eligible to a seat in this body. This was deemed necessary by the framers of our constitution and by the people when they adopted it to protect the purity of our judiciary.

If we concede that Congress, and not the States, has this power to superadd qualifications, and this is the position in which this majority report places this committee and the House, then clearly Judge Peters must be denied a seat on this floor, for the reason that both Houses of Congress by an act that is irrevocable approved and sanctioned that provision of our State constitution which makes him ineligible. The disqualifying words in that section of our constitution are affirmative and explicit—

Not hold any other office of profit or trust under the authority of the State or the United States during the term of office for which said justices or judges shall be elected.

This very clause was in our constitution when it was adopted by the people of Kansas July 29, 1859, it was there when Congress passed the act of January 29, 1861, admitting our State into the Union, and was a part of the compact between that State and the General Government. It is inviolable, irrevocable. If Congress had the right to sanction a State constitution containing a restrictive clause like that and did sanction it, then Congress is bound to maintain the integrity of that State constitution, and this House is bound to maintain it when its violation is attempted on this floor.

Men have knocked at these doors asking admission in this body, and this House has said: "We can go beyond the limits prescribed in the Constitution and refuse them seats, although they possess every requisite named in that instrument." But a judge, who has sworn to support the constitution of his State and the United States, comes here to claim a seat in violation of the constitution of his State, and we are told by the same men and the same party, that the qualifications of members are fixed in the Constitution of the United States, and that we can not add to or subtract from them. Is this sound logic or good law?

Let me call your attention to another fact. The Constitution of the United States contains the following provisions:

The Senators and Representatives before mentioned, and the members of the several State Legislatures, and all executive and judicial officers, both of the United States and the States, shall be bound by oath or affirmation to support this Constitution.

Apply the doctrine of *expressio unius est exclusio alterius* to this provision, and tell me where a State obtains the right to say that a member of a State Legislature shall take an oath to support the State constitution. Was this not one of the rights reserved to the States and to the people? It is a right which the States possessed before the Federal compact was formed.

THE TEST-OATH.

I am now led to inquire, and I hope some gentleman on the other side will inform me, where Congress gets the power to prescribe an additional oath as a condition of membership here—an oath requiring special qualifications unknown to the Federal Constitution? On the 2d day of July, 1862, when almost unanimously Republican, Congress passed the following test-oath law:

Be it enacted, &c., That hereafter every person elected or appointed to any office of honor or profit under the Government of the United States, either in the civil, military, or naval department of the public service, excepting the President of the United States, shall, before entering upon the duties of such office, and before being entitled to any of the salary or other emoluments thereof, take and subscribe the following oath or affirmation: "I, A B, do solemnly swear that I have never voluntarily borne arms against the United States since I have been a citizen thereof; that I have voluntarily given no aid, countenance, counsel, or encouragement to persons engaged in armed hostility thereto; that I have neither sought nor accepted, nor attempted to exercise the functions of any office whatever, under any authority or pretended authority in hostility to the United States; that I have not yielded a voluntary support to any pretended government, authority, power, or constitution within the United States hostile or inimical thereto; and I do further swear that to the best of my knowledge and ability I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion, and that I will well and faithfully discharge the duties of the office on which I am about to enter: so help me God;" which said oath, so taken and signed, shall be preserved among the files of the court, House of Congress, or department to which the said office may appertain; and any person who shall falsely take the said oath shall be guilty of perjury, and, on conviction, in addition to the penalties now prescribed for that offense, shall be deprived of his office, and rendered incapable forever after of holding any office or place under the United States.

This House construed that law as being applicable to members of Congress. After its passage members were required to take that oath before they could occupy seats on this floor. What becomes of the doctrine of *expressio unius est exclusio alterius* when applied to the Federal Constitution in connection with this law? Here are a dozen disqualifications wholly unknown to the Constitution, and here is an oath wholly outside of and not authorized by that instrument, which members were required to take. Under this law seats were refused to scores of men who possessed all the qualifications known to the Constitution, and who were ready to take the oath which it prescribes. This constitutional oath has never been changed.

The case of John Young Brown, in the Fortieth Congress, is in point. Brown had received 8,922 votes. Smith, the contestant, had 2,816 votes; a clear majority for Brown of 6,106. Brown was qualified under the Constitution of the United States, and was ready to take the constitutional oath and also the test-oath. No one doubted this. As the minority of the committee expressed it—

At the time of the election Mr. Brown possessed every qualification for a Representative in Congress which is expressly prescribed in the Constitution of the United States.

But the majority of the committee and the House declared him ineligible under this act of 1862. The vote stood 108 to 43, thus deciding that all the qualifications requisite for a member are not to be found in the Constitution, and that Congress may superadd others.

This House, on the 22d of March, 1864, passed the following resolution:

That in all contested-election cases referred to the Committee of Elections, in which it may be alleged by a party to the case, or a member of the House, that either claimant is unable to take the oath prescribed in the act approved July 2, 1862, entitled "An act to prescribe an oath of office, and for other purposes," it shall be the duty of the committee to ascertain whether such disability exists; and if such disability shall be found to exist, the committee shall report to the House, and shall not further consider the claim of the person so disqualified without the further order of the House; and no compensation will be allowed by the

House to any claimant who shall have been ineligible to the office of Representative in Congress at the time of the election, and whose disability shall not have been removed by act of Congress.

Here it was made the duty of the committee to ascertain, not whether a man was qualified under the Constitution of the United States, but whether he was eligible under this act of Congress. It strikes me that the Republicans who passed this law and this resolution and insisted upon their application to members of Congress are estopped from saying that all the qualifications and disqualifications are fixed in the Constitution.

Republicans in this House dare not say that Congress can not add to the negative qualifications in the Constitution for members of this House, for in that case they would be admitting that this House for twenty-two years has been organized and controlled by an unconstitutional law. If Congress can add to the constitutional inhibitions or qualifications, then Congress did add to these inhibitions when Kansas was admitted into the Union with this provision in her constitution prohibiting judges on the bench being elected to seats in this body. The convention that framed the constitution of Kansas was almost unanimously Republican; the people who adopted it were three-fourths Republican. Congress when Kansas was admitted was also largely Republican; in fact, Kansas was the first-born of the Republican party. Yet we have the strange spectacle of the Republicans in this House voting to nullify a constitution they made, and agreed to by the unanimous Republican vote in this House in 1861. Will political wonders never cease?

This majority report places the Committee on Elections in the same position.

The constitutional convention of Illinois in 1862 apportioned that State for members of Congress. The convention divided the State into fourteen districts. Jameson, in his work entitled "Jameson on Constitutional Conventions," doubts the power to do this, but admits that it is customary for States when they form their first constitutions to make provision for the election of member of Congress, and says:

Congress having the power to make or alter, doubtless might ratify such regulations however made; or if a State, actual or inchoate, were in such a condition that it had no lawful Legislature, Congress might itself, for the sake of convenience, establish them by its direct action. This it does in substance by anticipation in those cases which it accepts, and admits into the Union Territories presenting themselves with constitutions containing the apportionments referred to.

In the act of Congress admitting Kansas into the Union I find the following:

Until the next general apportionment of Representatives the State of Kansas shall be entitled to one Representative in the House of Representatives of the United States.

That is, Kansas should be entitled to one Representative, who must be eligible under the disqualifying clause in her State constitution. In other words, she must not elect one of her judges, as it had just been agreed in the compact between the State of Kansas and the General Government that a judge in that State should not be eligible to a seat on this floor. Let gentlemen apply here the maxim of *expressio unius est exclusio alterius*. Let them answer me whether this disqualifying clause in our constitution was not made an act of Congress in that act of admission. If the contestee is permitted to hold a seat here, you violate not only the constitution of Kansas, but this act of Congress and the compact solemnly entered into between us and the General Government.

This is the old question over again—a contest between those who agree with Hamilton, that the States should surrender all muniments of sovereignty to an all-absorbing central authority, and those who believe with Jefferson that the States are sovereign within their respective spheres, limited only in their rights of local self-government by express grants of power in the Federal Constitution. This issue was intensified and clearly defined during the administration of John Adams. The Republicans or Democrats, when they held their Congressional caucus which nominated Thomas Jefferson in 1800, passed the following resolution:

3. Preservation to the States of the powers not yielded by them to the Union, and to the Legislature of the Union its constitutional share of its division of powers; and resistance, therefore, to existing movements for transferring all the powers of the States to the General Government, and all of those of that Government to the executive branch.

I had supposed when the war was over, slavery abolished, and the black man on a political equality with the white man, that we could go back to first principles, and parties would divide upon old issues. On those old issues I am a Democrat; but if the majority report of the Committee on Elections is adopted, and the Democratic party goes back on "State rights," I confess I do not know what issue is left. The last Democratic President was elected in 1856, a distinguished son of Pennsylvania. I read this morning the platform upon which he was elected. The slavery question aside, I doubt if the Democratic convention to meet in Chicago next July would dare to adopt the same platform with even my distinguished friend from Pennsylvania as our candidate. If you adopt this majority report, how will this resolution adopted in 1856 read in the next national convention:

Resolved, That the Federal Government is one of limited powers, derived solely from the Constitution, and the grant of powers shown therein should be strictly construed by all the departments of the Government, and that it is inexpedient and dangerous to exercise doubtful constitutional powers.

The Democrats had passed this same resolution in 1840, 1844, 1848, and 1852. Dare they pass it in 1884? I assert that they dare not adopt the platform of 1856 in 1884. The Whig convention in 1852 resolved—

That the Government of the United States is of a limited character, and it is confined to the exercise of powers expressly granted by the Constitution and such as may be necessary and proper for carrying the granted powers into full execution; and that powers not granted or necessarily implied are reserved to the States respectively and to the people.

The American convention of 1856 declared in favor of "the unqualified recognition and maintenance of the reserved rights of the several States."

REPUBLICANS DARE NOT ADOPT THE PLATFORM OF 1860.

Yes, Republicans, at Chicago in June you will not nominate Arthur, Blaine, LOGAN, EDMUNDS, or a Sherman. You will nominate Robert T. Lincoln; not on account of his ability or anything he has done, but simply because he is the son of one of the most distinguished men this country has ever produced. But, I repeat, with Robert T. Lincoln as a candidate, you will not dare to adopt the platform upon which his father was nominated and elected in 1860.

The national Republican convention of 1860, which nominated Lincoln, made this declaration:

That the maintenance inviolate of the rights of the States, and especially the right of each State to order and control its own domestic institutions according to its own judgment exclusively, is essential to that balance of power on which the perfection and endurance of our political fabric depends.

President Lincoln made this resolution a part of his inaugural address without any mental reservation, and upon it we fought the war of the rebellion.

Egypt had a pharaoh who did not know Joseph, and we have a Republican party to-day that does not know Lincoln, or in fact any of its old leaders, such as Chase, Sumner, Trumbull, Doolittle, Spalding, and hundreds whom I might name. Indeed, the convention at Chicago in June next will not dare to adopt the platform upon which Lincoln was nominated and elected in 1860.

I quote the above resolutions because they show the Jeffersonian idea of government.

The Republican party, when it organized in 1856, took the name of Jeffersonian Republicans, to show to the world their devotion to his theories of government. All parties were committed to the doctrine of State rights, as these resolutions show, from 1800 until the centralizing tendencies of government became dominant with the ruling party during the late war. Yet we have in this House a Committee on Elections, appointed by a Democratic Speaker, who seem to repudiate or have forgotton the principles of Jefferson, Madison, Randolph, the Tuckers, in fact, of all the fathers and old Democratic leaders.

CIVIL AND RELIGIOUS LIBERTY.

I am not unmindful of the fact that these great principles of civil liberty were first formulated by the great minds of the Mother of States. The proposition for the first Continental Congress came from Virginial the Declaration of Independence emanated from Virginia; the Federa; Constitution and our "more perfect Union" were the inspiration of Virginia, and the Old Dominion was above all other States the cradle of American Liberty.

This question of eligibility was fully discussed before the Electoral Commission in 1877.

The Constitution of the United States, article 2, section 1, provides—

Each State shall appoint, in such manner as the Legislature thereof may direct, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress: but no Senator or Representative, or person holding an office of trust or profit under the United States, shall be appointed an elector.

It seems that the same principle governs here as in the election of a member of Congress, and that the States may add other qualifications and disqualifications. When the electoral vote of Louisiana was called, objection was made by ELI SAULSBURY, J. E. McDonald, John W. Stevenson, Louis V. Bogy, David Dudley Field, G. A. Jenks, R. L. GIBSON, J. R. TUCKER, W. M. Levy, E. JOHN ELLIS, and W. R. MORRISON to counting the vote of William Pitt Kellogg, because, among other things, by the constitution of Louisiana he was not entitled to hold both offices (that of governor and of Presidential elector), but was disqualified therefrom. The same Senators and Members objected to the votes cast by W. P. Kellogg, J. H. Burch, Peter Joseph, L. A. Sheldon, Morris Marks, A. B. Levisee, O. H. Brewster, and Oscar Joffrion, for the following reasons:

Fourth. The votes cast in the electoral college of said State by Oscar Joffrion, W. P. Kellogg, J. H. Burch, and Morris Marks are not electoral votes, for that the said Oscar Joffrion, W. P. Kellogg, J. H. Burch, and Morris Marks, are and were ineligible by the laws of Louisiana, and are and were disqualified, for by the constitution of Louisiana (section 117) it is provided that "No person shall hold or exercise at the same time more than one office of trust or profit, except that of justice of the peace and notary public;" whereas on and prior to the 7th day of November, 1876, and until after the 6th day of December, 1876, W. P. Kellogg was acting *de facto* governor of said State; Oscar Joffrion was supervisor of registration for the parish of Pointe Coupée, in said State; Morris Marks was a district attorney for one of the districts of said State, and candidate for district judge, and was elected at said election; and J. H. Burch was a member of the senate of said State, also a member of the board of control of the State penitentiary, and administrator of the deaf and dumb asylum, both salaried offices, and treasurer of the school board of East Baton Rouge.

Fifth. In addition thereto, Oscar Joffrion was specially disqualified by the thirteenth section of the act of the Legislature of said State dated 24th day of July,

1874, which provides that no supervisor of registration shall be eligible for any office at any election where said supervisor officiates, and the said Oscar Joffrion, at the election held on the 7th day of November, 1876, did act and officiate as supervisor of registration for the parish of Pointe Coupée, in said State.

Senator Matt. H. Carpenter, an eminent lawyer and a Republican, in an argument before the Electoral Commission, said:

Another of the Hayes electors was William Pitt Kellogg, governor of the State, both on election day and on the 6th day of December, when he sat in the electoral college and cast a vote for Hayes; and three others, both on election day and when they voted in the electoral college, were holding salaried offices under the State government. The constitution of Louisiana (article 147) declares: "No person shall at the same time hold more than one office, except that of justice of the peace and notary public." Therefore, if electors are to be considered as Federal officers, two of the Hayes electors in this college were constitutionally incapable of being electors, and if they are State officers, then four others are constitutionally incapable of being electors.

Mr. Carpenter again said:

When the Constitution provides that each State shall appoint electors, it means of course that it shall appoint them according to its own constitution and laws; and what its laws may be must be determined by its own constitution.

And after quoting the provision of the Federal Constitution relating to the appointment of electors, he continued:

This provision, applied to the case in hand, is this: "The State of Louisiana shall appoint electors." * * * This does not fix the qualifications of electors, but it is an inhibition upon the State in the exercise of its power to appoint.

Hon. Lyman Trumbull, in his argument, said:

They (the States) can determine certainly whom they will appoint, and may put inhibitions on the appointment of particular persons.

The learned Judge Campbell, formerly of the Supreme Court of the United States, in the same discussion used the following language:

The question is presented whether they could, as a part of that power, designate the class of persons from whom the electors should not be made. In the exercise of that power they have specifically said that a person who is concerned with the registration, who has the appointment of a commissioner of election of a parish, who is the returning officer of that parish, shall not be a competent person to be elected.

* * * * * * *

But I say that the term "manner" of election does include sufficient authority to determine who shall and who shall not be elected. They may say that an infant shall not be elected; they may say that an alien shall not be elected; they may say that a person convicted of felony shall not be elected.

* * * * * * *

Therefore we think if the commission were to reject all these electors for the reasons set forth it would be a vindication of the will of the people as manifested in their organic law and in their statutes.

Hon. Henry L. Pierce, formerly a prominent Republican member of this House from Massachusetts, while discussing the same subject on this floor, said that he regretted to differ with his political friends, and added:

The most careful conservator of State rights would never have objected to an examination by Congress, or by any other national authority, so far as to ascertain whether electors who sent their votes here to be counted had been chosen and were qualified in the manner prescribed by the constitution and laws of their States and of the United States. * * *

In the case now under consideration an offer of evidence was made * * * that certain of the electors certified to have been chosen were disqualified, both under the provisions of the State constitution and the Federal Constitution. If these are not matters which the representatives of all the people authorized by the Constitution to count the votes and declare the result can inquire into, then this Government stands on a very insecure foundation.

It seems that Mr. Pierce was not willing to go as far in favor of State rights as the majority of his party associates. They had gone beyond anything ever dreamed of even by Calhoun, and absolutely refused to go behind returns to inquire whether the disputed votes were genuine or fraudulent.

The Electoral Commission, by the usual vote of 8 to 7, refused to hear evidence to prove the ineligibility of electors on account of holding other offices of trust or profit under the State or the United States. Commissioner Field then offered the following resolution:

That in the opinion of the commission evidence is admissible upon the several matters which counsel for the objectors to certificates Nos. 1 and 3 offered to prove.

Rejected: Yeas 7, nays 8. The majority of the commission, that is, the usual 8, made this ruling. They said:

The commission, by a majority of votes, is also of opinion that it is not competent to prove that any of said persons so appointed electors as aforesaid held an office of trust or profit under the United States at the time when they were appointed, or that they were ineligible under the laws of the State, or any other matter offered to be proved *aliunde* the said certificates or papers.

This was saying in effect: "We are ministerial officers and can only count the votes returned; we can not go behind the returns and investigate the question of eligibility. That must be settled by the States, and not by Congress or this commission."

They said that the States must provide the court to determine whether electors were eligible or not. This House can, however, go behind the returns and see whether a man claiming a seat here is eligible or not under State or United States laws.

Representative GIBSON, of Louisiana, submitted an objection to the decision and report of the Electoral Commission in the form of a protest. This protest covered all the facts in the Louisiana case, including the ineligibility of the electors named under State laws, and was signed by 24 Senators and 150 Representatives. The decision of the commission was sustained in the Senate by a vote of 41 yeas to 28 nays.

In the House, February 20, 1877, Representative GIBSON offered the following:

Ordered, That the votes, purporting to be electoral votes for President and Vice-President, which were given by William Pitt Kellogg, J. Henri Burch, Peter Joseph, L. A. Sheldon, Morris Marks, Aaron B. Levisee, O. H. Brewster, and Oscar Joffrion, claiming to be electors for the State of Louisiana, be not counted.

The House adopted this resolution by 173 yeas to 99 nays.

This question came up again in the House on the 3d day of March, 1877, when Hon. J. Proctor Knott, from the Committee on Elections, introduced a preamble and resolution declaring that Samuel J. Tilden had received 196 electoral votes, and was duly elected President of the United States. This was adopted by a large majority.

Is it not strange that some Democrat, or even Republican, in that Congress did not get up during that controversy in the Senate or House and exclaim, as does this Committee on Elections or the gentleman from Pennsylvania [Mr. ELLIOTT], "The Constitution, by prescribing certain qualifications enumerated in the section quoted, according to a well-known settled rule of construction, excluded all others?" Not one even had the courage to say with the majority of this committee, "The electoral college is a creature of the Constitution and not a power delegated to the General Government by the States." No one was bold enough, as does in effect the majority report in this case, to say: "The States have no power to superadd other qualifications for Presidential electors, for the reason that such powers can not in the nature of things be found among the reserved rights of the States and no such power is delegated to them by the Constitution."

Such doctrines from a Democrat at that time would have been hooted out of this House. Can Democrats afford to go back on the position they took in the electoral count? I know Republicans would like to see it done. But if we are to nominate the "old ticket," or any other ticket, or for that matter raise the cry of "reform" and the "great fraud," can we afford to go back on that record? To do so is to stultify our party and means defeat next fall. Will we do it?

Representative GIBSON submitted the following objections to the decision of the Electoral Commission in the Louisiana case, which were read by the Clerk of the House, namely:

The following objections are interposed by the undersigned Senators and Representatives to the decision made by the commission constituted by the act entitled 'An act to provide for and regulate the counting of votes for President and Vice-President and the decision of questions arising thereon, for the term commencing March 4, A. D. 1877,' as to the true and lawful electoral vote of the State of Louisiana, for the following reasons, namely:

First. That the said commission, as guides to their action, adopted and rejected resolutions, as follows:

Mr. Commissioner HOAR submitted the following:

"*Ordered*, That the evidence offered be not received."

* * * * * * *

Mr. Commissioner BAYARD offered the following as a substitute:

"*Resolved*, That no person holding an office of trust or profit under the United States is eligible to be appointed an elector, and that this commission will receive evidence tending to prove such ineligibility as offered by counsel for objectors to certificates 1 and 3."

The question being on the adoption of the substitute, it was decided in the negative—yeas 7, nays 8.

Mr. Commissioner Field offered the following as a substitute:

"*Resolved*, That in the opinion of the commission evidence is admissible upon the several matters which counsel for the objectors to certificates Nos. 1 and 3 offered to prove."

The question being on the adoption of the substitute, it was decided in the negative—yeas 7, nays 8.

* * * * * * *

The question then recurred on the adoption of the order submitted by Mr. Commissioner HOAR, in the following words:

"*Ordered*, That the evidence offered be not received."

The question being on the adoption of the order, it was determined in the affirmative—yeas 8, nays 7.

* * * * * * *

Second. For that the said commission refused to receive evidence offered, as in the annexed paper stated, or any part of said evidence, and decided that the votes mentioned in certificates numbered 1 and 3 shall be counted for Hayes and Wheeler, said evidence to the contrary notwithstanding.

Senators.—W. H. Barnum, Connecticut; Charles W. Jones, Florida; Francis Kernan, New York; Frank Hereford, West Virginia; Henry Cooper, Tennessee; Lewis V. Bogy, Missouri; W. W. Eaton, Connecticut; S. B. Maxey, Texas; T. F. Randolph, New Jersey; R. E. Withers, Virginia; J. E. Bailey, Tennessee; H. G. Davis, West Virginia; George R. Dennis, Maryland; G. Goldthwaite, Alabama; A. S. Merrimon, North Carolina; T. M. Norwood, Georgia; T. C. McCreery, Kentucky; and Joseph E. McDonald, Indiana—18.

Representatives—Lucien L. Ainsworth, John D.C. Atkins, John C. Bagby, Henry B. Banning, George M. Beebe, Richard P. Bland, James H. Blount, Andrew R. Boone, Taul Bradford, John M. Bright, John Young Brown, Aylett H. Buckner, George C. Cabell, John H. Caldwell, William P. Caldwell, Milton A. Candler, George W. Cate, Bernard G. Caulfield, Chester W. Chapin, John B. Clarke, John B. Clark, jr., Hiester Clymer, Alexander G. Cochrane, Francis D. Collins, Philip Cook, Jacob P. Cowan, Samuel S. Cox, David B. Culberson, Joseph J. Davis, Rezin A. De Bolt, George G. Dibrell, Milton S. Durham, John R. Eden, Albert A. Egbert, E. John Ellis, Charles J. Faulkner, William H. Felton, David Dudley Field, Jesse J. Finley, William H. Forney, Benjamin J. Franklin, Benoni S. Fuller, Lucien C. Gause, Randall L. Gibson, John M. Glover, John Goode, John R. Goodin, Thomas M. Gunter, Andrew H. Hamilton, Robert Hamilton, Augustus A. Hardenburgh, Henry R. Harris, John T. Harris, Carter H. Harrison, Julian Hartridge, William Hartzell, Robert A. Hatcher, Eli J. Henkle, Abram S. Hewitt, Goldsmith W. Hewitt, Benjamin H. Hill, William S. Holman, Charles E. Hooker, James H. Hopkins, John F. House, Andrew Humphreys, Frank H. Hurd, George A. Jenks, Frank Jones, Thomas L. Jones, Edward C. Kehr, J. Proctor Knott, L. Q. C. Lamar, Franklin Landers, George M. Landers, Lafayette Lane, William M. Levy, Burwell R. Lewis, John K. Luttrell, William P. Lynde, L. A. Mackey, Levi Maish, William McFarland, John A. McMahon, Henry B. Metcalfe, Charles W. Milliken, Roger Q. Mills, Hernando D. Money, Charles H. Morgan, William R. Morrison, William Mutchler, Lawrence T. Neal, Jeptha D. New, John F. Phillips, Early F. Poppleton, Joseph Powell, Samuel J. Randall, David Rea, John H. Reagan, John Reilly, James B. Reilly, Americus V. Rice, Haywood Y. Riddle, John Robbins, William M. Robbins, Miles Ross, John S. Savage, Milton Sayler, Alfred M. Scales, John G. Schumaker, James Sheackley, Otho R. Singleton, William F. Slemons, Milton I. Southard, William A. J. Sparks, William M. Springer, William H. Stanton, William S. Stenger, Adlai E. Stevenson, William H. Stone, Thomas Swann, John K. Tarbox, Frederick H. Teese, William Terry, Charles P. Thompson, Philip F. Thomas, J. W. Throckmorton, John R. Tucker, Jacob Turney, John L. Vance, Robert B. Vance, Alfred M. Waddell,

Ansel T. Walling, Elijah Ward, Levi Warner, William W. Warren, Henry Watterson, Erastus Wells, Wash. C. Whitthorne, Peter D. Wigginton, Alpheus S. Williams, James Williams, Jere N. Williams, Benjamin A. Willis, William W. Wilshire, Benjamin Wilson, Fernando Wood, Jesse J. Yeates, and Casey Young—149.

The "annexed paper" referred to in the foregoing is as follows:

We offer to prove that William P. Kellogg, who certifies as governor of the State of Louisiana to the appointment of electors of that State, which certificate is now before this commission, is the same William P. Kellogg who, by said certificate, was certified to have been appointed one of said electors. In other words, that Kellogg certified his own appointment as such elector.

That the said Kellogg was governor *de facto* of said State during all the months of November and December, A. D. 1876.

Constitution of Louisiana, article 117: "No person shall hold or exercise at the same time more than one office of trust or profit, except that of justice of the peace or notary public."

Then follows the specifications as to offices held by Oscar Joffrion, A. B. Levisee, O. H. Brewster, Morris Marks, and J. Henri Burch, as specified in the original objection to the certificate, which I need not repeat here. (See proceedings of Electoral Commission and of the two Houses of Congress, 1877, page 426 to 458, inclusive.)

In the House of Representatives, February 20, 1877, Mr. GIBSON, of Louisiana, submitted the following resolution; which, after debate, was agreed to by a vote of yeas 173, nays 99:

That the votes purporting to be electoral votes for President and Vice-President which were given by William P. Kellogg, J. Henri Burch, Peter Joseph, Lionel A. Sheldon, Morris Marks, Aaron B. Levisee, Orlando H. Brewster, and Oscar Joffrion, claiming to be electors for the State of Louisiana, be not counted.

* * * * * * *

Yeas—Abbott, Ainsworth, Anderson, Ashe, Atkins, Bagby, John H. Bagley, Banning, Beebe, Bell, Blackburn, Bland, Bliss, Blount, Boone, Bradford, Bright, John Young Brown, Buckner, Samuel D. Burchard, Cabell, John H. Caldwell, W. P. Caldwell, Campbell, Candler, Carr, Cate, Chapin, John B. Clark of Kentucky, John B. Williams, Willis, Wilshire, Benjamin Wilson, Fernando Wood, Yates, and Young—173.

The House of Representatives, March 3, 1877, adopted the following preamble and resolution, offered by Hon. J. Proctor Knott, of Kentucky, by a vote of 136 yeas to 80 nays:

And whereas the pretended votes given by F. C. Humphreys, Charles H. Pearce, William H. Holden, L. W. Long, William Pitt Kellogg, J. H. Burch, Peter Joseph, L. A. Sheldon, Morris Marks, Aaron B. Levisee, O. H. Brewster, and Oscar Joffrion were cast without any authority of law, and by persons who had not been appointed electors:

Now, therefore, in view of the foregoing facts, the truth of which is attested by an overwhelming array of sworn testimony, as well as the intelligence of the American people,

"*Be it resolved by the House of Representatives of the United States*, That it is the duty of the House to declare, and this House does hereby solemnly declare, that Samuel J. Tilden, of the State of New York, received 196 electoral votes for the office of President of the United States, all of which votes were cast and lists thereof signed, certified, and transmitted to the seat of Government, directed to the President of the Senate, in conformity with the Constitution and laws of the United States, by electors legally eligible and qualified as such electors, each of whom had been duly appointed and elected in a manner directed by the Legislature of the State in and for which he cast his vote as aforesaid; and that said Samuel J. Tilden, having thus received the vote of a majority of the electors appointed as aforesaid, he was thereby duly elected President of the United States of America for the term of four years, commencing on the 4th day of March, A. D. 1877; and this House further declares that Thomas A. Hendricks, having received the same number of electoral votes for the office of Vice-President of the United States that were cast for Samuel J. Tilden for President as aforesaid, the said votes having been cast for him by the same persons who voted for the said Tilden for President as aforesaid, and at the same time and in the same manner, it is the opinion of this House that the said Thomas A. Hendricks, of the State of Indiana, was duly elected Vice-President of the United States for the term of four years, commencing on the 4th day of March, A. D. 1877.

Those voting in the affirmative were:

Messrs. Abbott, Ainsworth, Ashe, Atkins, Bagby, John H. Bagley, Banning, Beebe, Blackburn, Bland, Bliss, Blount, Boone, Bradford, Bright, John Young Brown, Samuel D. Burchard, Cabell, John H. Caldwell, William P. Caldwell, Carr, Caulfield, John B. Clark of Missouri, John B. Clark of Kentucky, Clymer, Cochrane, Collins, Cook, Cowan, Culberson, Davis, De Bolt, Dibrell, Douglass, Durham, Ellis, Faulkner, Field, Finley, Forney, Franklin, Fuller, Gause, Gibson, Glover, Goode, A. H. Hamilton, Robert Hamilton, Hardenburg, Henry R. Harris, John T. Harris, Hartridge, Hartzell, Hatcher, Henkle, Abram S. Hewitt, Hooker, Hopkins, House, Humphreys, Hunton, Hurd, Jenks, T. L. Smith, Southard, Sparks, Spriggs, Stanton, Stenger, Stone, Swann, Tarbox, Teese, Terry, Tucker, Thomas, Thompson, Throckmorton, Turner, J. L. Vance, P. B. Vance, Waddell, Walling, Walsh, Ward, Warner, Erastus Wells, Whitthorn, Wigginton, Wike, James Williams, J. W. Williams, Willis, Wilshire, Benjamin Wilson, and Yates—136.—*Congressional Record*, volume 5, part 3, page 2226.

Thus I have shown that 24 Senators and 173 Representatives were committed to the principle for which I contend in the case now under debate. It would be strange if this House should now recede from the position it so deliberately took and so firmly held in 1877 on this same question of eligibility.

IS A MEMBER OF CONGRESS AN OFFICER OF THE STATE OR OF THE UNITED STATES?

Is a member of Congress an officer of the State or of the United States? I maintain that he is an officer or agent of the State. Members of Congress are elected by the people of the States, under laws passed by the States. They are commissioned by the States, and they come here and take the oath of office and occupy seats on this floor in virtue of such commissions.

Article 2, section 3, of the Constitution provides that the President "shall commission all officers of the United States." This was never construed to mean members of Congress. They never were commissioned by the President. In fact the Constitution keeps up the distinction between members of Congress and officers of the United States in all its provisions. Section 4, article 2, provides—

That all civil officers of the United States shall be removed from office on impeachment.

Members of Congress are not impeachable, and are not, therefore, civil officers of the United States.

In article 1, section 6, the Constitution provides that "no person holding any office under the United States shall be a member of either House during his continuance in office," still keeping up the distinction between "officers" and "members."

This distinction further appears in article 6, which declares that—

The Senators and Representatives before mentioned, and the members of the several State Legislatures, and all executive and judicial officers, both of the United States and of the several States, shall be bound by oath or affirmation to support this Constitution.

The framers of the Constitution were careful to nowhere call members of Congress "United States officers," because they were regarded as "State officers."

Attorney-General Brewster, in an elaborate opinion, dated July 21, 1882, says:

A member of Congress is not an officer of the United States in the constitutional meaning of the term. In the case of Blount, on an impeachment before the Senate in 1799, the question arose whether a Senator was a civil officer of the United States within the purview of the Constitution, and the Senate decided that he was not. This question arose under the fourth section of the second article of the Constitution. "Other clauses of the Constitution," observes Judge Story in section 733 of his work on the Constitution, "would seem to favor the same result, particularly the clause respecting the appointment of officers of the United States by the Executive, who is to commission all the officers of the United States;" and the sixth section of the first article, which declares that "no person holding any office under the United States shall be a member of either House during his continuance in office; and the first section of the second article, which declares that no Senator or Representative, or person holding an office of trust or profit under the United States, shall be appointed an elector." To these clauses may be added that in section 3 of the fourth article, which provides that no person shall be a Senator, &c., who having previously taken an oath as a member of Congress or as an officer of the United States, &c. These clauses show a marked discrimination between members of Congress and officers, the latter term in the sense in which it is there used not including legislators.

It will be remembered that Congress passed a law in 1876 prohibiting political assessments by officers of the United States against employés of the Government. The Republican Congressional committee, composed of Senators and Members of this House, sent out the usual circular, demanding contributions. Hon. George William Curtis, as president of a civil-service reform club in New York, published a circular, saying that "the members of this committee are officers of the United States Government," and warning the employés that it was a crime under the law of 1876 to contribute money to them. Hon. Jay A. Hubbell, a member of this House and chairman of that committee, speaking for himself and his associates, published an indignant rejoinder, in which he said, "We are *not* officers of the United States;" and he proposed to submit the question to the Attorney-General. It was submitted to the Attorney-General, who afterward gave the elaborate opinion from which I have quoted, holding that Senators and Members are not officers of the United States. The Republican Senators and Representatives took the same view, and the result was that the last Congress amended the law so as to read:

No Senator, Representative, or Territorial Delegate, * * * or Senator, Representative, or Territorial Delegate-elect, or any officer of the United States, &c.

Carefully making the distinction between members of Congress and officers of the United States. Thus both Houses of Congress, by the passage of that law, decided that Members and Senators are not officers of the United States.

Hon. SAMUEL J. RANDALL, in this House, December 5, 1881, said:

But there was no right established as against the right of a member to be sworn in as all other members are sworn in who bear a certificate from the governor of a State, a Congressman being a State officer, and the governor's certificate being authority as his commission here both according to the Constitution and the law thereunder.

McCrary, in his work on Elections, says:

The qualifications of Federal officers are fixed by the Federal Constitution or Federal law; and the qualifications for State officers are fixed by State constitutions or State laws. It is not competent for any State to add to or in any manner change the qualifications for Federal officers as prescribed by the Constitution or laws of the United States. Nor can the United States add to or alter the qualifications for a State officer as fixed by State regulations.

In the light of the authorities and facts I have cited it is clear that

a member of Congress is an officer of the State. The people of the State, as I have said, elect him; the State provides all the machinery for his election; the governor of the State commissions him; and he comes here as the Representative of the people of the State—a State officer. This would seem to be conclusive, because, as McCrary says, being an officer of the State, the State can fix his qualifications and disqualifications, so that they do not conflict with the Constitution of the United States.

This question was very fully considered and discussed before the Electoral Commission in 1877. It was, as I recollect, conceded that a Presidential elector is a State officer, and the Republicans took the ground that, being a State officer, when the State certified to his election we could not "go behind the returns." If an elector is a State officer, there can be no question about a member of Congress.

The distinguished gentleman from Virginia [Hon. JOHN RANDOLPH TUCKER], in his argument before the Electoral Commission, said:

> Now I apprehend that the thing just comes down to this: That whether this be a Federal or State office (and I believe it to be a State office), the elector must be appointed by the State.

Hon. JOHN A. KASSON, in the same discussion, took even stronger ground when he exclaimed:

> Shall we now go on and complete the absorption of this most absolute, independent, and unquestioned right of the States to appoint their electors in their own way?

The late distinguished jurist Hon. Jeremiah S. Black, in discussing the same question, said—

> I do believe firmly in the sovereign power of the State to appoint any peron elector that she pleases, if she does it in the manner prescribed by the Legislature.

Mr. Stoughton said:

> I think he who would venture to go behind the expressed will of the State, as to the method in which the electors should be appointed, would find himself engaged in an effort to invade its sovereignty and interfere with the supremacy of a State.

Attorney-General Evarts conceded the whole question to the States when he said:

> There is, as we suppose, no safe rule except to say that this injunction laid on the States, that they shall not appoint the excluded persons, does not execute itself. * * * Those qualifications are nothing but appointment by the State; and with that the act of Congress and the Federal Constitution, with due reference to State authority, do not interfere.

Mr. Merrick quoted the Constitution, and argued as follows:

> You will see from the phraseology of the article that it is a limitation upon the power of appointment, rather than a specification of any disability in the appointee. A State has the power to appoint whom it pleases, with certain limitations.

Judge Miller, one of the commissioners, said:

> Are not both (electors and members of Congress) State officers in one sense at least—both elected by the power of the State? There are those who claim that they are Federal officers, and perform only Federal functions; yet when the election of President is thrown into this House, they at once lose their Federal character, and vote by States, "Each State having one vote." This is the highest function of sovereignty that this House can perform.

It is fashionable among some politicians to denominate ours a "complex system of government;" to me there is nothing complex about it. We have, in reality, but one government, that of the States. It is these same States now in session in this Hall to consider questions that affect all the States; they are here in their collective capacity, they are at home in their individual capacity. We have no "nation" in contradistinction to the government of the States. This is a federation of the States, hence we call it "a Federal Government;" it is a union of the States for certain purposes, hence we call them in this capacity "the United States.

The Government of the Union being a federation of the States with certain specified powers delegated by the States in the Federal Constitution, it requires no history to show that the Government of the United States is not one of original sovereignty, but of delegated or enumerated powers. If the Federal Convention of 1787 had been a convention of the people, in their sovereign capacity, ours would have been a Constitution limiting legislation, and Congress would have had all powers not prohibited; but being a Government of delegated powers, all powers not delegated are prohibited; and the States still possess all rights not delegated by or prohibited to them.

The Constitution speaks for itself. Those who wrote it were scholars, who knew the exact meaning of every word and phrase employed in it. They were careful even in the matter of punctuation. Mark this phraseology:

> Congress shall have power to lay and collect taxes, duties, imposts and excises; * * * to borrow money; * * * to regulate commerce; * * * to coin money; * * * to establish post-offices and post-roads, &c. No State shall enter into any treaty, alliance, or confederation; * * * no State shall, without the consent of Congress, lay any impost duties, &c.

It will be seen that powers were delegated to Congress and prohibited to the States. Had powers been delegated to the States and prohibited to Congress it would have changed the whole character of the instrument.

Again: "The House of Representatives shall be composed of members chosen," &c.; "representatives and direct taxes shall be apportioned," &c.; "the House of Representatives shall choose their Speaker," &c. All these are mandatory. "No person shall be a Representative," &c. Here is a limitation upon the States. Without it everybody would have been eligible, man or woman, bond or free. It was agreed that Congress might insist that the member should be twenty-five years of age, a citizen seven years, and an inhabitant of the State. This was no delegation of power, nor does it pretend to be. It was, and is, a limitation upon the powers of the States. It was so understood by the States in the Federal Convention, and in their subsequent ratification of the Constitution, as I have clearly shown.

THE RELATION OF THE STATES TO THE UNITED STATES GOVERNMENT.

Without the States the Government of the United States would cease to exist. It received from them as sovereign and independent Commonwealths all the vitality and power it has, and without them it would die. Suppose the States should fail or refuse to elect members of this House. Then this House would cease to exist. Suppose that a majority of the States should fail or refuse to elect Senators. Then that House would be helpless. Suppose that the States should fail or refuse to appoint Presidential electors. In that case we should have no President. New York did in 1789 refuse to appoint Presidential electors. Suppose five other States had followed her example; that would have ended the Federal Government. This, it is true, would have been revolutionary, but where would have been the remedy? Here is found the reason perhaps why members of the State Legislatures are sworn to support the Constitution of the United States.

There is, as I have said, but one system of government.

The Whig national convention in 1852, that nominated General Scott for President, passed this resolution:

> *Resolved*, The Federal and State governments are parts of one system, alike necessary for the common prosperity, peace, and security, and ought to be regarded alike with a cordial, habitual, and immovable attachment. Respect for the authority of each and acquiescence in the just constitutional measures of each are duties required by the plainest considerations of national, State, and individual welfare.

In Texas *vs.* White (7 Wallace, 717), Chief-Justice Chase, in delivering the opinion of the court, said:

> And we have already had occasion to remark at this term that the people of each State composed a State, having its own government, and endowed with all the functions essential to separate and independent existence; and that without the States in union there could be no such political body as the United States. Not only, therefore, can there be no loss of separate and independent autonomy to the States through their union under the Constitution, but it may not be unreasonably said that the preservation of the States and the maintenance of their governments are as much within the design and care of the Constitution as the preservation of the Union and the maintenance of the National Government. The Constitution in all its provisions looks to an indestructible Union of indestructible States.

I believe with the Supreme Court that each State owes obedience to the Constitution and Government of the United States; but I insist, as does the court, that every citizen, every member of this House, should in like manner obey the constitution and laws of each and every State in the Union. This obligation is mutual and reciprocal on the part of the States and the General Government, because they are mutually dependent on each other. The State governments and the Federal Government, as the court truly says, are only parts of one general system or federation.

THE FATHERS.

President John Adams, in his inaugural address, urged a "respectful attention to the constitutions of the individual States and a constant caution and delicacy toward the State governments," and "an equal and impartial regard to the rights, interest, honor, and happiness of all the States in the Union."

Thomas Jefferson recommended "the support of the State governments in all their rights as the most competent administrators for our domestic concerns and the surest bulwarks against anti-republican tendencies; the preservation of the General Government in its whole constitutional vigor as the sheet-anchor of our peace at home and safety abroad."

Madison argued that it was essential "to hold the union of the States as the basis of their peace and happiness; to support the Constitution, which is the cement of the Union, as well in its limitations as in its authorities; to respect the rights and authorities reserved to the States and the people as equally incorporated with and essential to the success of the general system." What could be plainer?

This House has no right to violate, much less to set at defiance, the constitution or laws of a State, one of the component parts of this body; to do so is revolutionary. If this House sets the example of striking down the constitution and laws of a sovereign State, it will be simply "sowing the wind" of disrespect for State constitutions and State laws and the national Constitution and national laws. We have the right to that obedience and respect to the constitution and laws of our States which you exact of us to the Constitution and laws of the United States. This has been the Democratic doctrine since the days of Jefferson. And shall it now be repudiated, for the first time, in the house of its friends? This House is the only power which can now decide so as to enforce obedience to our State constitution. Continue the sitting member, and you nullify and strike down the constitution of a sovereign State. When you thus injure and enfeeble a State government you strike a blow at republican institutions and the sovereignty of the States. Continue the sitting member in his seat, and you say a judge may, with impunity, violate the constitution he has sworn to support.

Continue the sitting member, and you trail the judicial ermine in the dust. Continue the contestee in his seat, and the moment a judge is elected and sworn he will begin to intrigue for a seat in Congress, using all the power and machinery of his office to that end. Every decision will be political, not judicial. He will willingly league himself with every attorney in the district who has aspirations to take his place on the bench, and our courts will become places of political debauchery, instead of temples for the administration of unbribed and unpurchased law.

Judges thus freed from the restraints imposed by the constitution and laws of the State will join in the business of setting up delegations, and every lawyer in the circuit who wants to get rid of him will unite with the people who are tired of his administration in forwarding his scheme for promotion to a seat in Congress.

Such will be the natural result if this House decides to ignore our State constitution and the law or compact under which Kansas was admitted into the sisterhood of States. In old Bible times judges came before kings, and it might be well for this House to stop and inquire why kings came at all? Moses's father-in-law advised him to "select from the people able men, such as fear God, men of truth, hating covetousness," for judges of the people. Kansas, in her constitution, attempted to provide the same class of men for her judges, and by this provision in our constitution keep them in the ways of the fathers. But the majority report in this case nullifies our constitution and trails the judicial ermine in the dirty pool of party politics. It will be recollected that Samuel, the great judge and prophet of Israel, when he got old, made his sons judges over Israel, but "his sons walked not in his ways, but turned aside after lucre, and took bribes, and perverted judgment." Kansas judges, with the majority report of the Committee on Elections, seem also to have forsaken the fathers and their precepts, and are following in the footsteps of the sons. Now, will the House, like the elders in Israel, strike down our local State governments and clamor for a king, so as to be like other nations round about. If this House adopts the majority report and thus strikes down over thirty State constitutions, it will be almost the last act in favor of one grand, overshadowing, centralized, consolidated government. Yet I pray that our fate as a nation may not be that of Israel.

CAN A MINORITY CANDIDATE BE SEATED?

As Judge Peters was ineligible on election day, ineligible when he received his certificate of election, ineligible when the term of the present Congress commenced, and ineligible when he took the oath in this House, by an express provision in the constitution of our State which he and all the voters of our State were bound to notice and duly respect and as the evidence shows they did know, and as all votes cast for him were null and void, it follows that the contestant, who received the next highest vote, and who was then and is now duly qualified under the Constitution of the United States and the constitution and laws of the State of Kansas, was elected and is entitled to the seat.

I am aware that the majority for contestee seems large, but if the whole vote were reduced to that of an average Congressional district the margin would be very small. It will be seen that if the contestant is not admitted 83,364 voters in Kansas who voted for an eligible candidate as against an ineligible one will be without representation on this floor, while the 99,866 who voted for the contestee with due notice of his ineligibility voted at the same time for three other candidates whose eligibility is not disputed, and if Judge Peters is unseated they will still have three Representatives in this Congress. Under the old apportionment the State of Kansas had but three members and was divided into three districts, but under the new Congressional apportionment she gained four additional members, who were elected by the State at large.

It is a part of the unwritten history of our State that Governor St. John had decided to call a special session of the Legislature to apportion the State into seven districts, and that the proclamation was actually signed. But when it was represented to him that this would give the opposition at least three of the seven members he decided not to call the Legislature together. Thus it happened that three members were elected from the three old districts and four from the State at large. The facts show, therefore, that the situation in Kansas is about this:

Whole Republican vote in the State, in round numbers	100,000
The opposition vote about	84,000

This would entitle the Democrats, in any fair division of the State, to three members at least. These 100,000 Republican voters now have six members on this floor without counting the contestee. Can there be any injustice in giving the other 84,000 voters one Representative?

But what is the law and what are the precedents upon which we must rely in deciding whether or not I am entitled to a seat on this floor? The Constitution says that "each House shall be the judge of the elections, returns, and qualification of its own members." This provision invests the House with powers of a judicial nature, and in the exercise of those powers it will be governed of course by well-settled rules of law and the decisions of courts of competent jurisdiction. Even the large discretionary power so often exercised by this House is qualified and restrained by positive law and the authority of the courts.

In a case like the one under debate I understand the rule to be this: If I vote in good faith for a disqualified candidate, believing him to be eligible, having no notice of his disqualification, which in its nature is such that the law does not require me to take notice of it or presume that I have such notice, then my vote is not absolutely void, but only voidable. Where a candidate thus disqualified has a majority of votes there is no election. If, however, I vote for a man, knowing him to be ineligible, or where the law will not excuse my ignorance of that fact, then it is the same as if I had not voted at all or had voted for a dead man. All votes cast for a candidate thus disqualified are thrown away; and the minority candidate next highest on the list, if qualified, is elected. This was the decision of this House in 1873 refusing to count the votes cast for Horace Greeley after his death. You said he was not *in esse*.

I have examined the principal cases cited in McCrary on Elections, and I find that in all of those cases the electors had no knowledge of the disqualifications of the candidate voted for. In the case cited in the Dawes report, in the second session of the Fortieth Congress, it is expressly stated that this point was not involved, because it did not appear that the electors had such notice.

In the North Carolina case of Abbott *vs.* Vance, the House had given VANCE 64 votes, Abbott 32, scattering 10. In the Senate, VANCE had 32, Abbott 11, scattering 5. VANCE was declared elected, but was ineligible, unless Congress would remove his political disabilities under the fourteenth amendment to the Constitution. Abbott was refused his seat.

The majority report was signed by O. P. Morton, JOHN A. LOGAN, A. G. Thurman, and Joshua Hill. The committee reasoned that "if the votes for VANCE were not counted there was no quorum voting." The committee, however, said:

> It has been suggested that there is a distinction in respect to the operation of the rule insisted on by the memorialist between a popular election, under our liberal system of suffrage, for a member of the House of Representatives, by ballot, and an election of a Senator by a *viva voce* vote of the members of the Legislature.
>
> Your committee are inclined to think this is correct, but that the distinction bears against the claim of the memorialist instead of in favor of it.
>
> The number of persons entitled to vote at a popular election is not fixed and definite, and hence it is impossible to have a quorum, or anything answering thereto. There is no power to compel attendance. This is, and necessarily must be wholly voluntary. Therefore it is necessary that those attending should have the right to elect where the election is free, and the electors are not prevented from attending by force, intimidation, or fraud.
>
> If a candidate receiving the majority is disqualified, and the votes cast for him are nullities, as claimed by the memorialist, the remaining votes are as effective to elect as if every voter of the district had been present; and if those who voted for the candidate receiving the majority had not been present at all, the election nevertheless would have been valid.
>
> But the rule is wholly different in legislative bodies. The number is fixed and definite. A quorum can be and is required to act, and the presence of a less number is not effective. Had but the thirty-two who voted for Abbott been present in the House at the time the vote was cast we do not suppose any one would contend that he had even a shadow to base his claim upon, yet this number would be sufficient to elect in a district of a thousand voters if no others voted.

Mr. VANCE was disqualified, as I have said, under the fourteenth amendment, yet, as the committee remarked, to throw out the 95 votes for VANCE as void no quorum had voted, and consequently there was no election. The committee say "there was no evidence that the people had any notice of VANCE'S want of eligibility."

The committee also cites the fact that "Congress might remove the disabilities of VANCE and thus make him eligible, and the votes for him not void but simply voidable."

The committee say:

> It is difficult to conceive how the Constitution could grant authority to Congress to remove disabilities under which an individual is laboring, and allow him to take his seat as a member, and yet at the same time embrace the idea that such an election was wholly void, and votes cast for him nullities.

I admit that when electors vote for a disqualified candidate in ignorance of his disqualifications the election is void, and must be remanded to the elective body; "but where the candidate is disqualified by a provision of the organic law or a public record no notice is required, and voters are presumed to know of his disqualifications."

In the election of a United States Senator it requires a majority to elect, and of course a minority candidate could not be elected.

Heywood on County Elections (535) says:

> It must be remembered, however, that in case a candidate laboring under disabilities should be returned the election will be avoided on petition; and that if, before the election comes on or a majority has polled, sufficient notice has been publicly given of his disability, the unsuccessful candidate next to him on the poll must ultimately be the sitting member. * * * When the disability of a candidate is notorious, it should seem that it is not necessary to give notice to the electors.

Male on Elections (336) says:

> If the election is made of a person or persons ineligible, such election is void either *in toto* or of one only, according as the ineligibility applies to all or one only, where that ineligibility is clear and pointed out to the electors at the poll. It has been held that the votes given to such ineligible candidate, after notice, are thrown away, and a competitor, though chosen by a smaller number of electors, has in such cases been held duly elected.
>
> But such ineligibility ought to be clear, and grounded upon some known and settled rule of law. The same doctrine holds at law in the election to offices in which, after notice of the ineligibility of any particular candidate, the votes given to him are held to be thrown away.

Grant on Corporations (109) says:

> When the ineligibility of a candidate arises from holding or having held a

public office, the people within the jurisdiction of such office are held in law to know and are chargeable with notice of such ineligibility.

And on page 208 he says:

A disqualification, patent or notorious, at once causes the votes given for the candidate laboring under it to be thrown away.

In confirmation of this rule we have a decision that to vote knowingly for a disqualified candidate is equivalent to not voting at all. In the case of Taylor *vs.* Mayor of Bath—

All the judges held that the verdict was right. They held that as fourteen electors who voted for Briggs had notice that he was not qualified, their votes were thrown away; that when electors vote for a person not qualified it is the same thing as if they had given no votes at all, in which case it was not disputed that silence was a constructive consent.

In Queen *vs.* Coaks, 1855 (28 Eng. L. and E., 307), Lord C. J. Campbell said:

Now, it is the law—both the common law and the parliamentary law, and it seems to me common sense—that if an elector will vote for a man who he knows is ineligible it is as if he did not vote at all, or voted for a non-existent person; as it has been said, as if he gave his vote to the man in the moon.

The English authorities seem to be all one way, and it is unnecessary to quote further from them.

Cushing, in his Parliamentary Law, lays down this proposition:

SEC. 175. If an election is made of a person who is ineligible, that is, incapable of being elected, the election of such person is absolutely void, even though he is voted for at the same time with others who are eligible and who are accordingly elected, and this is equally true whether the disability is known to the electors or not, whether a majority of all the votes or a plurality only is necessary to the election, and whether the votes are given orally or by ballot.

SEC. 176. The principle above applies equally where the constitution or law points out, among other eligible persons, the particular candidates to be voted for; in which case votes given for other persons are void. Thus the constitutions of Maine and Massachusetts, providing that, in case of a failure to elect senators at the general election, the deficiency shall be supplied on the day of the meeting of the Legislature by such senators as shall be elected and the members of the other branch from among the persons voted for and not elected as senators. All votes given on such occasions for any other than the candidate designated by law, though otherwise eligible, are thrown away.

Angell and Ames on Corporations (p. 98, n. 3) say:

If the assembly be duly convened, and the majority vote for an unqualified person, after notice that he is not qualified, their votes are thrown away, and the person having the next majority, and not appearing to be disqualified, is duly elected.

This subject has been discussed at different times in the Legislature of Massachusetts, and it has been uniformly decided that votes given for candidates constitutionally ineligible should be regarded the same as blank votes. In 1843 an effort was made to change this parliamentary rule, and a majority of the committee submitted a report, accompanied by a resolution, to the effect that it "was not in accordance with the constitution and laws for the two branches of the Legislature to reject, in making up the count, the ballots cast for ineligible candidates." A minority of the committee submitted an adverse report, saying:

The fact that the votes given for ineligible candidates, when the two houses have met in convention for the purpose of filling vacancies in certain offices, have been rejected from the count, is of long standing; and that no evil has resulted from such practice is, of itself, a sufficient reason why a different rule should not be established. It is time enough to provide a remedy when an evil is found to exist and not in anticipation of an evil. This, it is believed, is a safe course in all cases. * * * The practice of rejecting blank pieces of paper, although they may have the form and shape of the actual votes which are cast, is believed to be uniform everywhere. The reason for the rejection of such paper is that it is not a voice given and numbered; that no one is designated who can be elected.

It is, however, no less an expression of dissatisfaction to the candidate voted for by other persons, on one side or the other, than it would be if it bore the name of an imaginary being or a person ineligible. In both cases it is not a vote, and should not so be treated. So far as precedents can be found, the practice of rejecting from the count the votes cast for an ineligible candidate is not peculiar to the convention of the two houses in the Massachusetts Legislature. It has obtained more or less in the House of Representatives of the United States, and in the house of commons of Great Britain. * * * Inasmuch as the custom has obtained, for aught that appears, from time immemorial, to reject such votes, the undersigned take leave to submit that the proposed resolution of the majority of the committee is uncalled for, and that no further action be had on such order.

The house laid the resolution of the majority on the table, thus in effect adopting the report of the minority. (Cushing's Reports of Contested Elections in Massachusetts, page 499.)

The subject was again discussed, and the decision reaffirmed, that votes cast for ineligible candidates should be thrown away. In 1849 Mr. Slade was returned as the duly elected representative of the town of Somerset, and his seat was contested for the reason, among others, that a ballot for Nathaniel Morton, of Taunton, for member of Congress, was thrown out by the judges of election.

The committee, in their report declaring Mr. Slade lawfully entitled, discussed this question as follows:

The policy of the law requires that such a construction should be put upon all proceedings at elections as to make such proceedings valid, rather than nugatory. An election is always attended with trouble, inconvenience, and expense, and should not be set aside for light or frivolous causes. If votes cast by mistake for persons not eligible are to be counted, then the intention and will of the voter is defeated; if, on the other hand, such votes are willfully put into the ballot-box, the person who thus indicates so clearly his disregard of the value of the elective franchise, that it is only a deserved punishment for his delinquency to deprive his vote of all weight and influence at such election. By so doing a voter is not deprived of any legitimate exercise of his right, because he can always manifest his opposition to any one candidate by voting for some other. (Rex *vs.* Monday, Cowper. Lord Mansfield said the only way of voting against one was to vote for another.)

Finally, it seems to the committee that there is no reason why a person who votes for an ineligible candidate should not be put on a footing with one who does not vote at all, as in both cases the parties show a disposition to prevent an election, and both of them show an unwillingness to perform their duty, by aiding to promote those elections which are absolutely essential to the existence of the government. For if every voter refrained wholly from voting, or voted for an ineligible candidate, the result would be the same—no choice; and although it is true that no penalty is attached by law to a neglect of this obligation of voting, yet the obligation is not the less plain for that, and the committee believe it to be a duty too important to be neglected, and too sacred to be trifled with, by voting for fictitious persons or ineligible candidates. * * * The voter who puts into the ballot-box a blank piece of paper as clearly indicates his opposition to all the candidates as he who puts in a vote for an ineligible candidate; and there seems to be no reason why the opinion of the one should not be entitled to consideration as well as that of the other.—(Report agreed to April 10, 1849. (See Cushing's Reports of Contested-Election Cases in Massachusetts, 576).

In Indiana the same doctrine has been established by three decisions of the supreme court: In the cases of Gulick *vs.* New (14 Ind., 927), Carson *vs.* McPhetridge (15 Ind., 327), and Price *vs.* Governor Baker (41 Ind., 572). In the former case the court says:

It being conceded that the votes cast for Wallace were powerless and fruitless in effecting the main end arrived at—that is, in electing him—we are still asked to decide that they were so far effective as to prevent the election of any other person; that they were, so far as affirmative results were involved, thrown away, but that negatively they were operative. We are reminded that, in our form of government, a majority should rule, and that if the course indicated is not followed a majority of the voters may be disfranchised, their voice disregarded, and their rights trampled under foot, and the choice of a minority listened to. True, by the constitution and laws of this State the voice of a majority controls our election; but that voice must be constitutionally expressed.

Even a majority should not nullify a provision of the constitution, or be permitted at will to disregard the law. In this is the strength and beauty of our institutions. Suppose a majority should persist in voting for a man totally ineligible to take the office of sheriff, what would be the result? As he could not hold the office, either the one capable of holding, receiving the next highest vote, would, as contended by the appellant, be entitled to the office, or there would be a vacancy, as insisted by the appellee. Suppose the proceedings should result in creating a vacancy, then it would remain, greatly to the detriment of public and private interests, or it would, under the statute, have to be filled by the action and choice of perhaps two men, which might be, possibly, in direct conflict with the choice of that majority in every respect. Then, while it is true that the votes of a majority should rule, the tenable ground appears to be that if the majority should vote for one wholly incapable of taking the office, having notice of such incapacity, or should perversely refuse or negligently fail to express their choice, those, although a minority, who should legitimately choose one eligible to the position should be heeded. Suppose that eight years ago, at the first election under our new constitution, when nearly all the offices in the State were to be filled, a majority of the voters in the State and in the several districts and counties had voted for persons wholly ineligible to fill the several offices, would these offices have thereby remained vacant? Could that majority, by persevering in that course, have continued the anarchy which might have resulted from such action? Or, rather, is it not the true theory that those who act in accordance with the constitution and the law should control even a majority who may fail so to act? Whether the same reasoning should hold good where the ineligibility should arise out of some cause other than a constitutional prohibition is a question we are not now called upon to decide.

The majority of the court held that the voter must take notice of the disqualification of the candidate, and that votes cast for a candidate in fact disqualified must be thrown away, whether the voters knew of the disqualification or not. Judge Perkins dissented upon this point, but affirmed the general doctrine as follows:

1. Where, at an election, there are opposing candidates for an office, and the candidate receiving the highest number of votes is ineligible, but from a fact or cause which the voters did not and were not bound to know the result is a failure and gives no candidate a right to the office, and should be followed by another election.

Probably examples, under this proposition of cases where the voters might not have knowledge, namely: infancy of candidate, non-residency, want of naturalization, not of male sex, not of requisite degree of white blood, not in existence. This last was the fact in the case cited from 38 Maine, app. There a portion of the people by mistake voted for a person not in being. The case of State *vs.* Swearinger (12 Georgia, 23) was a case of non-residency.

2. Where the voters at the election do know, or are legally bound to know, so that in law they are held to know of the ineligibility of a candidate, the election does not result in a failure, but in such case the eligible candidate receiving the highest number of votes is legally elected and entitled to the office.

Against this proposition we have not found a single authority. Those relied on as such by the court below were the cases in 38 Maine and 12 Georgia, *supra*, and the State *vs.* Giles (1 Chand., Wis., 112).

Of the case in Maine we have said enough above.

Of the cases in Georgia and Wisconsin, it may be remarked that neither of them involved the point now under consideration, and what is said upon it is mere *dicta*, and neither of the cases cites a single authority.

The point involved in the Georgia case was whether a certain corporate town in that State could elect to office in it a person not residing within the corporate limits, and it was held that it could. This closed the case.

The point involved in the Wisconsin case was this: The constitution, article 6, section 4 provided that sheriffs should be ineligible for two years next succeeding the termination of their offices. A sheriff, in office at the time the constitution was adopted, was elected his own successor under the constitution; and it was held that he was legally elected, and that the disability imposed by the constitution related only to elections and terms held under the constitution. The decision of this point disposed of the case; and what is said beyond it, as in the Georgia case, if not improperly, but still is very loosely and carelessly said, and is not binding as authority.

Judge Cushing, in his American work on the Law of Legislative Assemblies, at pages 66, 67, lays down the same doctrine as deducible from the decided cases:

Where the same ineligibility of a candidate arises from his holding or having held a public office, the people within the jurisdiction of such office are held in law to know—are chargeable with notice—of such ineligibility; the votes given for such candidate are of no effect, and his highest eligible competitor is elected. (Grant on Corporation, *supra*, p. 107; Biddle *vs.* Willard, 10 Ind., 62, on p. 68.)

Such, also, was the ruling of the circuit court of Illinois in the case of Stewart *vs.* Hayes. (Chicago Legal News, 117.)

In the case of Hutcheson *vs.* Tilden and Bordley (4 Harris and McHenry, 277) Chief-Justice Samuel Chase decided that—

All votes given for a candidate not having such qualifications are to be thrown away and rejected as having no force or operation in law. The plaintiff can only

be entitled to such votes as were given after he received the necessary qualifications. Judgment for defendants.

The report says that the plaintiff had received the necessary qualifications about 12 o'clock on the third day of the election; and from the state of the polls it appeared that, if he had received all the votes taken after that time, he could not be elected. The judgment was for the next highest eligible candidate. This decision, I take it, is the law of Maryland to-day.

In the constitution of Maryland, adopted in 1865, is the following provision:

If any person has given any aid, comfort, countenance, or support to those engaged in armed hostility to the United States, or has, by any open deed or word, declared his adhesion to the cause of the enemies of the United States, or his desire for the triumph of said enemies of the United States, he is disqualified from holding any office of honor, profit, or trust under the laws of this State.

In 1865 Hon. HART B. HOLTON, now a member of this House, contested the seat of Hon. Littleton Maclin as senator from Howard County and claimed the same for himself. The committee on elections reported that although Maclin had received the highest number of votes, nevertheless, being disqualified under the constitution just quoted, he was not entitled to the seat; and "that HART B. HOLTON, having received the highest number of votes cast for any duly qualified candidate for senator from Howard County, is elected and entitled to a seat in this body." On February 14, 1865, this report was adopted; Maclin was unseated and HOLTON inducted into the office.

In 1866, before the house of delegates, George E. Gambrill prosecuted a contest against Sprigg Harwood for the office of clerk of the circuit court for Anne Arundel County, on the ground of constitutional ineligibility, caused by an increase in the profits of this clerkship while Harwood was a senator from Anne Arundel County in 1865. The committee on elections reported that Harwood was ineligible, and "that it must be presumed to have been known to every voter;" and that Gambrill, the minority candidate, was entitled to the office. The house of delegates sustained this report, ousted Harwood, voted down a resolution declaring the office vacant, and inducted Gambrill into the office.

This same rule obtains in the State of Maine, where it was first decided in 1831. The governor and council asked the judges this question:

Can ballots having the names of persons on them who do not possess the constitutional qualifications of a representative be counted as votes under the fifth section of the fourth article, part 1, of the constitution of Maine, so as to prevent a majority of the votes given for eligible persons constituting a choice?

The judges answered in the negative.

The ruling in the case of Speer *vs.* (Robinson 29 Maine, 531) is to the same effect; and the Legislature of Maine, in 1871, enacted this principle into a law, as follows:

And in all returns of elections the whole number of ballots given in shall be distinctly stated; but blank pieces of paper, and votes for persons not eligible to office, shall not be counted as ballots.

The same rule, I have shown, prevails in Massachusetts. New York, by the unanimous decision of her court of appeals, in the case of The People, *ex rel.* Furman, *vs.* Clute (50 N. Y., 451), sustained the same principle. The court say:

A minority of the whole body of qualified electors may elect to an office where the majority decline to vote, or where they vote for one who is ineligible to the office, knowing of the disqualification.

In the case of Price *vs.* Governor Baker the syllabus is as follows:

Where the majority of the ballots at an election are given to a candidate who is not eligible to the office, the ballots so cast are not to be counted for any purpose. They can not elect the ineligible candidate, or defeat the election of the opposing candidate by showing that he did not receive a majority of the votes cast at such election. It follows that the eligible candidate will receive an office, although less than a majority of the votes are cast for him

THE ELECTORAL COMMISSION.

In the proceedings of the Electoral Commission in 1877 I find the same principle insisted upon. In objection No. 2, in the Oregon case, it is stated that J. W. Watts, one of the candidates for Presidential elector in said State, "was ineligible, and that E. A. Cronin, the next highest eligible candidate, was duly appointed."

This was signed by James K. Kelly, United States Senator from Oregon; Henry Cooper, United States Senator from Tennessee; Louis V. Bogy, United States Senator from Missouri; Joseph E. McDonald, United States Senator from Indiana; John W. Stevenson, United States Senator from Kentucky; David D. Field, Representative from New York; J. RANDOLPH TUCKER, Representative from Virginia; Lafayette Lane, Representative from Oregon; G. A. Jenks, Representative from Pennsylvania; Anson T. Walling, Representative from Ohio; Hiester Clymer, Representative from Pennsylvania; P. D. Wigginton, Representative from California; E. F. Poppleton, J. L. Vance, FRANK H. HURD, Representatives from Ohio, and J. K. Luttrell, Representative from California.

When the commission, by the usual vote of 8 to 7, decided to count the vote of Watts, the following proceedings took place:

The PRESIDING OFFICER. Are there objections to the decision of the commission?

Mr. Senator KELLY. I have the honor to file certain objections to this decision, signed by Senators and Representatives.

The PRESIDING OFFICER. The Senator from Oregon having submitted an objection to this decision, it will be read by the Clerk of the House.

The Clerk of the House read as follows:

"The undersigned, Senators and Members of the House of Representatives of the United States, object to the decision of the joint commission directing the counting of the vote of John W. Watts, an alleged elector for the State of Oregon, as given for Rutherford B. Hayes for President of the United States, and for William A. Wheeler, of New York, for Vice-President, and rejecting the vote of E. A. Cronin, as cast for Samuel J. Tilden, of New York, for President, and Thomas A. Hendricks, of Indiana, for Vice-President, on the following grounds:

"1. John W. Watts was not elected a Presidential elector for Oregon.

"2. He (J. W. Watts) was not legally appointed a Presidential elector.

"3. He (Watts) was disqualified to receive any appointment as Presidential elector or to vote as such, in that he held an office of trust and profit under the United States.

"4. E. A. Cronin was elected a Presidential elector for the State of Oregon, and in accordance with law as such cast a legal vote as an elector for Samuel J. Tilden for President and Thomas A. Hendricks for Vice-President, and the vote so cast should be counted.

"JAMES K. KELLY,
"WM. PINKNEY WHYTE,
"HENRY COOPER,
"J. E. McDONALD,
"T. M. NORWOOD,
"FRANK HEREFORD,
"*Senators.*

"LAFAYETTE LANE,
"E. F. POPPLETON,
"G. A. JENKS,
"JOHN L. VANCE, of Ohio,
"J. W. THROCKMORTON,
"SCOTT WIKE,
"P. D. WIGGINTON,
"*Representatives.*"

Representative Lane moved in the House that the vote purporting to be an electoral vote for President and Vice-President, and which was given by one J. W. Watts, claiming to be an elector of the State of Oregon, be not counted. This passed the House yeas 151, nays 108. This House must go squarely back on the position taken by that House and by seven of the fifteen members of the Electoral Commission, or I must be awarded the seat.

This question came before the Forty-first Congress in the case of Hoge *vs.* Reed. The record showed that Reed had 11,774 votes and Hoge 8,766. Reed was declared ineligible under the fourteenth amendment to the Constitution and the seat was given to Hoge.

In the case of Wallace *vs.* Simpson, in the same Congress, it appeared that Simpson had received 14,098 votes and Wallace 9,807. Simpson was found ineligible under the fourteenth amendment, and Wallace was awarded the seat by a two-thirds vote of the House. The committee in their report said:

When one of two candidates is ineligible, the votes given for him are of no effect, and the other candidate is elected.

After quoting various authorities in support of this principle they continue—

So, if they cast their votes for an ineligible candidate, they must be regarded as votes for a person not *in esse*, and the voting is a mere nullity. * * * We think this, as an abstract question of law, is abundantly sustained by reason as well as authority. As a question of public policy we have no doubt of its entire propriety. While we do not dispute the powers and rights of majorities in this country, we hold that those powers, in order to be available, must be exercised in good faith and in accordance with the Constitution and laws of the country. When voters undertake to become revolutionary by casting their votes for a candidate well known to them to be ineligible, it is such willful misconduct as should forfeit their right in the premises. They should not be allowed to profit by their own wrong to the injury of an honest, law-abiding minority. * * *

It is conceded that in cases heretofore decided by the House the doctrine here maintained has not prevailed; but it is confidently believed that in none of them has the notoriety of ineligibility been raised, considered, or decided.

All the cases heretofore decided lacked this important element or ingredient. This is the first occasion on which that fact is made a part of the case.

The minority report, signed by S. J. RANDALL and Albert G. Burr, said:

Now, if this House is ready to adopt the theory that the disqualification of Simpson elects Wallace by a minority vote, so let it be.

Mr. RANDALL, in a speech, insisted that Congress should have removed the disabilities of both Reed and Simpson and thus made them eligible.

The law, as laid down by the majority of the Committee on Elections in the cases of Hoge and Simpson, applies with more force to the case now before the House than to those cases, for the reason that Congress might, as RANDALL said, have removed the disabilities of both Hoge and Simpson; might have admitted them to seats on the removal of such disabilities; and that the voters in casting their ballots were justified in believing that such action would be taken by Congress, and the candidates for whom they had voted be thus made eligible. But it is impossible for Congress or for this House to remove the disability of the contestee in this case, for the reason that his disability is imposed by a clause in the constitution of Kansas which was assented to by both Houses of Congress, and is a part of the compact between the United States and Kansas when that State was admitted into the Union.

THE JOHN YOUNG BROWN CASE.

The case of Smith *vs.* John Young Brown, decided in the Fortieth Congress, has been referred to as establishing the opposite doctrine. But Brown was not constitutionally ineligible; he was only declared to be ineligible under the act of Congress of 1862. There was no evidence that the voters of his district had any knowledge of his supposed ineligibility. Indeed, Mr. Kerr and Mr. Chandler, in their minority report, say:

At the time of the election Mr. Brown possessed every qualification for a Rep-

resentative in Congress which is expressly prescribed in the Constitution of the United States. No law of Congress or of the Commonwealth of Kentucky declared him ineligible or incompetent to be voted for and elected to that office.

He possessed no personal or physical disqualification patent to the electors of his district which could amount to legal notice to them that he could in no event be admitted to a seat in Congress. The votes cast for him, therefore, can upon no principle of law or justice be rejected or treated as blanks or nullities; and therefore the seat can not be awarded to Mr. Smith, even if withheld from Mr. Brown.

Mr. Brown's vote was 8,922, and Smith's only 2,816; yet 30 members of that House voted to seat Smith and only one 108 voted the other way, the rest being absent or not voting. The case we are now considering is entirely different. The contestee, Judge Peters, was ineligible under a provision of the State constitution, put there by the people of Kansas to preserve the purity of their judiciary. Being a part of the State constitution, every voter was bound to take notice of it. The Supreme Court has construed that disqualifying clause in a published opinion, which declared that "this ineligibility attached to the person of the judge and continued throughout the entire term or period of time for which he had been elected." The fact that the contestee was a judge on the bench when he was voted for and that he was disqualified were matters of public record well known to all the voters in the State. But to avoid dispute it is in evidence in this case that they did have actual knowledge of these facts.

THE RULE IN KANSAS.

The Legislature of Kansas at its last session passed a law which forbids the canvassing or counting of votes given for an ineligible candidate. That law is mandatory and is in these words:

All ballots or votes cast at any election for any person holding the office of judge of the district court or of justice of the supreme court, except for a judicial office, shall be deemed and held void, and shall not be counted by the judges or clerks of any election nor by any canvassing board, nor shall any record of the same be made by any canvassing board, nor any certificate of election be issued thereon.

That law should have the force and effect of an instruction to this House to treat all votes cast for the contestee as mere nullities, and to award the seat to the next highest eligible candidate. This has been the uniform practice in Kansas. When the candidate receiving the highest number of votes has been found ineligible, the next highest eligible candidate has always been awarded the seat or the office. The case of Joel Moody *vs.* Jonathan Foster, decided by the Kansas house of representatives in 1865, is a case in point. Jonathan Foster and Joel Moody were both candidates for the Legislature from Woodson County at the election in November, 1864. Foster had the largest number of votes, and Moody contested his election on the ground of eligibility. Mr. Foster at the time of the election held the office of postmaster at the little country town of Belmont. Section 4, article 2, of our constitution provides: "No member of Congress or officer of the United States should be eligible to a seat in the Legislature."

At the election Moody had received but 45 votes. It seems that after the election Foster resigned and had his daughter appointed in order to qualify himself. Moody, in his notice of contest-suit to Foster, said:

You were not eligible to the said office at the time of your election, being as you then were and still are a postmaster at Belmont, Kans., under the laws of the United States.

The Committee on Elections reported unanimously in favor of seating Moody in place of Foster. The report of the committee was adopted by a vote of 59 to 11.

In the house, and voting for the resolution, were some of the ablest men in the Republican and Democratic parties, among whom were Jacob Stotler, speaker, and now editor of the Emporia News; J. F. Broadhead, a prominent attorney of Linn County; O. M. Browne; Charles S. Glick, a prominent lawyer of Wyandotte; G. W. Glick, now governor of Kansas; Cyrus Leland, of Troy; Ed. Russell, now of Lawrence, and others that I might name. This case will serve to show the rule as it prevails in Kansas in contests of this character.

THE ELECTORAL COMMISSION AGAIN.

The question of notice to voters that a candidate is ineligible was discussed by Representative George A. Jenks, of Pennsylvania, a lawyer of great ability and learning, before the Electoral Commission in 1877. In contrasting the theory of the British Government with our own, Mr. Jenks said:

Here, when we appoint an agent ourselves, either directly or indirectly, can any man say in law, "I did not know who he was?" So, in consequence of the construction of our Government in opposition to that of the British Government, constructive notice exists to every individual of every officer in the United States, and the doctrine of constructive notice, that the principal knows who his agents are, would bring this within the doctrine of the judicial decisions that no one disputes, either English or American, that where the provision is that a man shall not be voted for, a vote for him, so far as the power of being elected is concerned, does not have that power. So Watts was not elected, even if he received a majority of the votes.

Mr. Commissioner THURMAN. Your proposition is that where the man can not be voted for, then knowledge on the part of the voter is of no consequence.

Mr. JENKS. It is of no consequence at all. The English authorities do not pretend to allege that it was necessary that the voter should know that he was voting for a disqualified candidate. The only question was whether the result was to elect the next highest where this knowledge did not exist. In any event the man was not elected who received the highest number of votes, but the question was whether the other was elected; but I say under the theory of our Government that the people are the principals and the officers are the agents; there is notice *per se* to every principal of every agent he has got, constructively, and we know who our agents are.

Hon. E. JOHN ELLIS, of Louisiana, now a member of this House, in discussing this question before the Electoral Commission, formulated a truism when he declared that—

It is a principle of law familiar and known to every neophyte in the profession that whatever is done in opposition to the declared will of the people, through their constitution, is an absolute nullity.

OTHER AUTHORITIES.

But we are told that the case of the State *vs.* Anderson (1 Coxe's New Jersey Reports, 318) is opposed to the doctrine for which we contend. How baseless that claim is will appear on a very slight examination. Under a law of New Jersey a man who had been elected sheriff of a county was ineligible. The case came before the court after he had been acting for some months under color of an election. The case was heard, not on a quo warranto, which would try the right of the relator to the office, but on a writ of error or certiorari. The court held that they had a discretion to say whether they would or would not oust the man and leave the office vacant. They were not called upon to decide whether another man was entitled to the office or not. So the case went off on the idea that in certiorari it was competent for the court to exercise a discretionary power and say that the office should not be vacated. It does not appear in the opinion that another man claimed the office or that any one else had been voted for.

In the case of the State *vs.* Giles (1 Chandler, Wisconsin, 112) two questions were raised: First, whether the man who had the majority vote was eligible or not; and, second, if not eligible, whether the man who received the next highest vote was elected and entitled to the office. The court held that the majority candidate was eligible. The case of course went off on the first question. It was not necessary to pass upon the second, but the court added:

It is proper to say that we are all of the opinion that the mere ineligibility of the candidate does not, as the law now is, render void the votes cast for him, and elect the minority candidate.

That is sound law, and it is not in conflict with the current of authorities, which fix this as the governing rule in such cases, that mere ineligibility without notice to the voters does not vitiate the ballots cast, but where that ineligibility is patent to the voter, or is of such a character that they are bound in law to take notice of it, and the presumption is that they have either actual or constructive notice of the fact, then all votes cast for the candidate thus disqualified are nullities, and the next highest eligible candidate is elected.

The case of the State *vs.* Smith (14 Wisconsin) is in harmony with this doctrine. There it was held that mere ineligibility did not nullify the votes cast—that is, ineligibility that was not patent to the electors, or where there was no presumption of law that they had such notice, either actual or constructive.

In the Maine cases there is no pretense that the electors knew that they were voting for persons not in existence.

In Sanders *vs.* Haynes (13 California, 145) the court decided that the man who held the certificate and who had the most votes was eligible. That, of course, ended the case. The minority man had no rights. It is true, however, that the court approved and quoted the Wisconsin case, that "the mere ineligibility of the man" does not give the office to the minority candidate. Nobody claims that it does. In this, as in the Wisconsin case, when the majority candidate was found to be eligible, there was nothing else to decide.

The Pennsylvania case of The Commonwealth *vs.* Cluly (56 Pennsylvania, 270) is much quoted and confidently relied upon by the other side. In that case Mr. Justice Strong, in delivering the opinion of the court, made the astonishing declaration that he was not aware of any judicial decision on the subject. The truth is that this question of knowledge on the part of the voters of the incumbent's ineligibility was not raised in the pleadings in that case, much less argued or proved. Judge Strong, however, in that opinion, says:

A man who votes for a person with knowledge that the person is incompetent to hold the office and that his vote therefore can not be effective, that it will be thrown away, may very properly be considered as intending to vote a blank or throw away his vote. But the present relator suggests no such case. He does not even aver that if the votes given for Cluly were thrown out he received a majority, though doubtless such was the truth. He has, therefore, exhibited no such interest as entitles him to be heard.

It is clear that this question of knowledge was not raised or judicially considered in that case; but the reasoning in that opinion is in perfect harmony with the authorities I have marshaled in support of the principle for which I contend.

In the case of Maloney *vs.* Whitman *et al.* (10 California, 38) the court held that Mandeville was not ineligible. Field, C. J., said:

As we hold that Mandeville was not ineligible, we refrain from the expression of an opinion whether, if he were ineligible, the votes given for him should be thrown out as so many blanks and Whitman declared elected, as contended by counsel.

In this case it was not shown that Mandeville was ineligible, much less that ineligibility was known to the voters.

In the case of The State *vs.* Swearingen (12 Georgia, 23) the majority candidate was found eligible. The point made against him was that he was not a corporator and resident within the city of Oglethorpe, as clerk and treasurer of which he claimed to have been elected. Lumpkin, J., said that the objection was not well taken. Of course in this

case the question of knowledge on the part of the voters was not in the pleadings or the proof.

The State *ex rel.* Kempf *vs.* Boal (46 Missouri, 528) was a case where both candidates were found ineligible. The court said:

As to the votes cast for the defendant, they were nugatory. It was as though no such votes had been cast at the election.

The ruling of the court in The State *vs.* Vail (53 Missouri, 97), as stated in the syllabus, was this:

The candidate who at an election receives the greatest number of votes, except the successful candidate, is not entitled to the office, when the successful candidate is ineligible owing to personal disqualifications and such as were not patent to the voters.

Of course if the ineligibility had been patent to the voters, that is, known to them, the opposite would have been the ruling.

Judge Napton, in an elaborate opinion, quotes the Indiana case of Gulick *vs.* New, and says:

But in the case in Indiana it is considered that where the candidate receiving the highest number of votes is ineligible by reason of a cause which the voters were not bound to know, such as nonage, want of naturalization, &c., the result is a failure to elect. * * * If a disqualified candidate receives a thousand votes and his competitor only a hundred, to pronounce the latter elected is not in accordance with any ascertained will of the electors, unless it may be inferred that the votes for the disqualified candidate were cast with a knowledge of his inability to take the office; an inference which could not be drawn where the disqualifications are such as are enumerated in the pleadings in this case (not a citizen five years, not a qualified voter, nonage, and disloyalty). It is unnecessary to determine whether it would be the rule in any case of disqualification, whether patent or latent.

The case of The People *ex rel.* Crawford *vs.* Moliter (23 Michigan, 341) was virtually decided on the pleadings, and was not a question of eligibility at all.

In Fish *vs.* Collins (21 Louisiana Annual, 284), Ludeling, chief-justice, said:

The plaintiff does not allege that he received a larger number of votes cast at the election than either of his competitors; but, on the contrary, he admits that the defendant received a greater number of votes than he did.

It is unnecessary in this case to express any opinion as to whether the votes cast for a person who is notoriously known to be ineligible should be rejected or not, as no such allegations are made in this petition.

In the case of The State *vs.* Gastinel (18 Louisiana Annual, 517) it appeared that Gastinel was disqualified by nonage, but there was no allegation that this was known to the voters. The court said: "What might have been his rights had he contested the election of defendant in accordance with law, we are not called on to say."

In the Rhode Island case the court said:

The question submitted to us does not allege or imply that the electors, knowing the disqualifications, voted for the ineligible candidate in willful defiance of the law.

THERE IS NOT A CASE AGAINST THE DOCTRINE.

In not one of these cases is there any ruling against the doctrine I am contending for. On the contrary, the reasoning in each and all of these cases is not only in harmony with that doctrine but actually supports and strengthens it. I challenge the production of a single case decided in any of our courts where the majority candidate was notoriously ineligible, or where that ineligibility was such that the voters were bound to take notice of it, that the next highest eligible candidate did not get the office. It has been the rule in the legislative cases as well. This was true of the Abbott (North Carolina) case and the case of John Young Brown. I have not been able to find an exception in the whole range of our legislative cases.

When Gallatin was elected to the United States Senate by the Pennsylvania Legislature in 1793 it was not known to the members of that body that he had been a citizen less than nine years. The same was true of the Legislature of Illinois when Shields was elected. So of Massachusetts when Baily was elected; they supposed him a citizen of Massachusetts. There does not seem to be any conflict of opinion where the ineligibility of the candidate is notorious or where the law requires the electors to take notice of it.

But suppose there had been some conflict between the decisions of courts in different States or between different State Legislatures on this question, there still remains a safe rule for the guidance of this House in deciding the case now in dispute. The Supreme Court of the United States in Christy *vs.* Pridgeon (4 Wallace, 196) held that the interpretation of a State law "placed upon it by the highest court of that State must, according to the established principles of this court, be accepted as the true interpretation;" and that such interpretation "becomes a part of the law of that State as much so as if incorporated into the body of it by the Legislature."

THE RULE IN KANSAS SHOULD PREVAIL.

So this House in the matter now in controversy must be guided by the interpretation put upon the constitution and laws of Kansas by the supreme court of that State. What is that interpretation? The supreme court of Kansas has decided in the opinion already quoted that a judge on the bench in that State is not only ineligible to a seat in Congress, but that such ineligibility continues throughout the entire term for which he was elected to such judgeship. There can be no question about the fact that Judge Peters was thus disqualified not only on election day but on the day he was sworn into office here. The committee admits this.

The uniform and unvarying rule in the Kansas Legislature has been that where the majority candidate was found ineligible the next highest eligible candidate was declared elected and entitled to the seat. The Legislature of Kansas has passed a law declaring that votes cast for a judge for a political office shall not be counted or canvassed, but treated as nullities. We thus have a legislative as well as judicial construction of the constitution of Kansas, which, according to all precedents, should determine our action in this case.

This House can not afford to violate the constitution of a sovereign State—I put this question squarely to both sides of the House—nor can we afford to assist the followers or adherents of any man or party to trample under foot the fundamental law of a State. The people of Kansas in their organic laws declared that their courts should administer justice pure and simple. They declared that no man who puts on the judicial ermine shall prostitute the tremendous power and influence of his office, to the scandal of the court and the prejudice of suitors, by using them to promote his own schemes of political ambition. They decreed that their judiciary should be kept forever free from the influences of party politics. They put that into their fundamental law. You found it there when we came here asking admission into the sisterhood of States. You assented to it then, and you are bound to maintain it now.

Permit me again, in conclusion, to thank the members of this House for their courtesy in extending my time. Let the result be what it may, I have no complaints to make against the uniform courtesy of the Committee on Elections and of the House; of Republicans as well as Democrats.

The Bonded Extension Bill.

SPEECH

OF

HON. NELSON DINGLEY, JR.,

OF MAINE,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 25, 1884.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 5265) to extend the time for the payment of the tax on distilled spirits now in warehouse—

Mr. DINGLEY said:

Mr. CHAIRMAN: I have listened attentively to the arguments which have been presented for the passage of the bill to extend the time for payment of the tax on whisky held in bond. They seem to crystallize around two points first presented by the chairman of the Committee on Ways and Means [Mr. MORRISON], who reported the bill.

The first argument is that it would be a discrimination against the distillers and holders of whisky and a departure from the privilege accorded to goods placed in bond by importers if we should refuse to give the former the two years additional time proposed by this bill for the payment of the tax imposed upon whisky in bonded warehouses, thus increasing the bonded period to five years.

I have watched very closely, Mr. Chairman, for the citation of any statute which would authorize the assumption that imported merchandise may be held in bond for five years, or even until the same may enter into consumption before the payment of duties. Is it true that under the laws as they exist to-day an importer may hold his goods in bond for an indefinite period, or until they shall be wanted for consumption, without the payment of duty upon them? Has any one quoted the statute which sustains such an assertion? In section 2970 of the Revised Statutes it is provided that—

Any merchandise deposited in bond in any public or private bonded warehouse may be withdrawn for consumption within one year from the date of original importation on payment of the duties and charges to which it may be subject by law at the time of such withdrawal; and after the expiration of one year from the date of original importation, and until the expiration of three years from such date, any merchandise in bond may be withdrawn for consumption on payment of the duties assessed on the original entry and charges, and an additional duty of 10 per cent. of the amount of such duties and charges.

In other words, Mr. Chairman, any merchant who may import into this country any article of merchandise and place the same in bond must at the end of one year pay not only the import duty but also an additional duty of 10 per cent. for the privilege of holding such merchandise in bond for a single day and not exceeding two years longer. But how is it at the end of the three years thus provided as the conditional bonded period for merchandise? Allow me to read from section 2971 of the Revised Statutes:

Any goods remaining in public store or bonded warehouse beyond three years shall be regarded as abandoned to the Government, and sold under such regulations as the Secretary of the Treasury may prescribe, and the proceeds paid into the Treasury.

Where, then, is the authority for the assertion, so frequently made here, that a person who imports merchandise may put the same in bond for an indefinite period on the payment at the end of one year of 10 per cent. additional duty? On the contrary, at the end of the three years of the bonded period, unless the imported merchandise shall be

taken from the bonded warehouse, the Government seizes it and confiscates it to its own use.

Now, Mr. Chairman, I have to say that the bonded period of three years for whisky, as at present allowed by law, is the utmost limit that is given to any imported merchandise that is brought into this country; and, therefore, the assertion that to refuse to pass this bill is to discriminate against the holders of whisky has no foundation in law or fact. As the laws exist to-day, the owners of whisky which has been placed in bonded warehouses have the same right as to the time they may hold it in bond as do the owners of other merchandise, and the whisky men have this privilege, too, without the payment of the 10 per cent. duty required of others.

But, Mr. Chairman, there is a privilege given to holders of whisky under the practical workings of the law which importers of merchandise can not avail themselves of. At the end of one year nearly all imported merchandise is removed from the bonded warehouses and pays the duty to which it is subject. Ordinary merchandise depreciates in value from month to month in storage, and therefore the conditions which surround it practically demand that it shall be withdrawn from the bonded warehouse before the expiration of one year. But how is it in the case of whisky? It is a fact which must be taken account of in this discussion that whisky increases in value every year it remains in the bonded warehouse, certainly up to the period of five years, which renders it for the interest of the owner to hold it there as long as the law allows. So the conditions surrounding the article of whisky are very different from those which surround other merchandise.

Therefore, Mr. Chairman, the argument which has been made in this debate from the beginning, that to refuse to pass this bill would be a discrimination against the holders of whisky, has no foundation in fact. On the contrary, to pass this bill would give them a discrimination and a favor which we grant to no merchandise that is imported into this country.

Secondly, it is argued, Mr. Chairman, that, inasmuch as the Government has no present need for the tax except to pay its debts, and speculators in whisky have accumulated a surplus of 70,000,000 gallons, if Congress should allow an extension of time for payment of the tax on the same for two years on the payment of 4½ per cent. per annum interest, the Government would suffer nothing and the holders of whisky be saved from severe financial distress.

It is useless to deny the fact that the proposition involved in this extension (so called) is practically to lend the holders of whisky $63,000,000, the amount of the tax on the whisky which will accumulate in the next year or two, and to lend that immense sum of money at the rate of 4½ per cent. per annum.

It may be said that this is simply an extension of a tax to be paid; but when the time arrives that the law has said this tax shall be paid, then that money belongs to the Government as truly as though it had been paid into the Treasury. And any proposition to extend the time of payment of that tax is practically a proposition to lend the holders of whisky $63,000,000 at 4½ per cent. per annum. I object to that proposition. First, because it is not the business of this Government to lend money to any one. The Government is not a bank or a banker. It is the business of the Government to collect its revenues, and to use those revenues in paying current expenses and the public debt. If it be appropriate for the Government to loan any part of its revenue instead of paying its debts, and loan it, too, on a long term at the low rate of 4½ per cent., then I insist that whisky speculators should not be the one class selected out for such favors. We have manufacturers all over this country who are holding large accumulated stocks of goods with great difficulty. They would rejoice to have the Government loan them money to carry their stocks at 4½ per cent. We have farmers whose farms are under mortgage to secure loans at 6, 8, and perhaps 10 per cent. Why should they be excluded from the privilege of borrowing the Government money at 4½ per cent., when it is proposed to have whisky speculators enjoy this unexampled favor of the Government. No, Mr. Chairman, I can not vote to grant such a special privilege to any one, much less to whisky speculators. Second, I can not vote to extend the period for paying the whisky tax from the three years now allowed by law to five years, because I believe that if this should be done we should eventually lose all or a large part of the $63,000,000 tax on whisky now in bond. Every one knows that movements are already inaugurated to reduce the tax on whisky to 50 cents, if not to abolish it altogether; and it is more than probable that the reduction proposed will be secured by the whisky-men within two years, or before the proposed extended bonded period, if granted, should expire. If this reduction of tax should be made, is there any one here who believes that the whisky ring would not be before Congress immediately after to ask, yes, demand, the proportional reduction of their postponed tax, which would involve a reduction of $36,000,000?

No one who has witnessed the power which the liquor interest exercises in the country and in Congress can doubt that they would obtain this demand. A power which in 1878 so promptly secured an extension of time of from one to three years in which to pay their taxes; which boasts that it has in the past year controlled elections in many States, and which has induced Congress at this session to give priority to a bill for its relief over all public business, surely will escape the payment of a large part of the whisky tax affected by this bill if it can only secure the passage of the pending measure of extension.

The CHAIRMAN. The gentleman's time has expired.

Mr. DINGLEY. I ask the privilege of extending my remarks in print, and especially to make some observations on the speech which my friend from New York [Mr. COX] was permitted to print in the course of the debate on this bill, on the subject of the tariff.

The CHAIRMAN. The Chair hears no objection, and the gentleman has that privilege.

Bureau of Labor Statistics.

SPEECH

OF

HON. WILLIAM H. F. FIEDLER,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 19, 1884,

On the bill (H. R. 1340) to establish and maintain a bureau of labor statistics.

Mr. FIEDLER said:

Mr. CHAIRMAN: While it is an easy matter to charge a man with demagogism when he raises his voice in the behalf and for the advancement of the rights of labor, still I believe that we are a great deal nearer to our calling if we give some attention to this worthy subject. Look at the records of the various legislative bodies throughout the land and you will discover a mass of legislation, but very little in the interest and for the benefit of labor. You have no right to find fault with the workingman because he doubts your genuine zeal for his welfare, while you are seeking his vote, for experience teaches him that in many instances the ballots of the successful candidate had scarcely been counted before his memory failed him, and he neglected to carry out the pledges which were advanced during the campaign to seduce the man of toil to elevate him into office!

There are men in this House to-day who are taxing their brains how to accomplish the defeat of this bill under the plea of economy, and yet should they again appear before the people as candidates for their support, will prove to be the greatest demagogues on the stump on the question of labor. Away with such hypocrisy! Let us act like honorable men; and if our convictions are such that we fear to give too much power to the laboring man, let us have the manhood to so proclaim it while seeking their suffrages!

What is there in this bill that should create any opposition? Absolutely nothing. Why hesitate to carry out the wishes of the people? Are we not their servants, and is it not our duty to give them what they ask for, providing the demand is reasonable? The wage-workers ask us to help them by proper legislation to solve the problem of existing antagonism between capital and labor. Why not grant so reasonable a proposition? Surely you do not fear that the gathering of labor statistics can result in a loss to the nation? The laborer asks for light. Why should he grope in the dark? If through hardships and oppression he is goaded into strikes and rioting we condemn him, and the authorities in hot haste order out the military to subdue him. He now appears as a peaceful citizen and asks this small boon. It can not be possible that the opponents of the bill are sincere. I feel almost certain that when the vote is taken all prejudice will disappear and the measure will receive the hearty and unanimous support of the members of this House.

Let us forget our differences and unite in enacting legislation that will secure information which will eventually result beneficially both to the employer as well as to the employé. Some years ago a similar bill was introduced in the New Jersey Legislature. It met with objection from different quarters and for various reasons, but the friends of the measure succeeded finally in having the bill passed, and a bureau of statistics of labor and industries was established. It proved to be of great value to the State, for through its agency facts were ascertained showing a condition of affairs that was detrimental alike to the people as well as the manufacturing industries. Attention being drawn to the evils, they were speedily remedied by legislation.

It was ascertained by information gained from this bureau that thousands of little children had been employed from ten to fourteen hours a day in the mills and factories of the State. A law was enacted prohibiting the employment of children under a certain age and an inspector appointed who enforced its provisions. The unfair competition of contract convict labor was also brought to the knowledge of the people through this bureau. Years were consumed in properly legislating for relief on this question, and now it is unlawful to contract out the labor of any prisoner in any of the penal institutions of the State.

The method of taxation was also examined, and it was shown clearly that railroad and other corporations were not paying a fair proportion of the tax. This information roused the people, and compelled its representatives, in the last session of the Legislature, to pass laws that would bring these parties to terms, and hereafter they will be obliged to carry an equal share of the burden of taxation.

All these advantages were to a great extent gained from information received through this labor bureau, and it is now one of the most popular departments, because it has been the means of placing the State of New Jersey in the proud position of having done more for the benefit of the laboring man than probably any other in the Union.

As there are several States that have a similar bureau, I have no doubt that they have experienced the same beneficial results. We have yet to learn of one case where a bureau of statistics of labor and industries has been once established that it has not remained a permanent institution.

It seems scarcely necessary for me to say anything in favor of the passage of this act, for its adoption is of such great importance that it should receive the support of every member who is anxious to secure information by which the conditions of labor can be improved.

We can not afford to trifle with the just demand of labor, for its friends have been ignored so long that they are becoming impatient; it is wisdom to take heed in time and give these questions, which are of such great value to them, that attention and consideration which they merit.

It has often been a wonder to me that the artisans and the laborers did not recognize their power more fully than appears to be the case, for if they once unite irrespective of former political affiliations, and would band together for their common interests, drop all bickerings and jealousies in their ranks, and present a solid front, they could elect a sufficient number of representatives to enable them to control legislation in every legislative body in the land. See to it that such a state of affairs is not forced upon you owing to your neglect in properly providing such laws as they request and to which the whole people have a just claim.

Mr. Chairman, I hope that this bill will pass.

Bureau of Labor Statistics.

SPEECH

OF

HON. RICHARD WARNER,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 19, 1884,

On the bill (H. R. 1340) to establish and maintain a bureau of labor statistics.

Mr. WARNER, of Tennessee, said:

Mr. CHAIRMAN: First I will consider—

THE DEPARTMENTS OF GOVERNMENT.

Our General Government is divided into three departments, to wit, the legislative, executive, and judicial, each being supreme in its own sphere. These departments rest upon the Constitution as their great center and source of life, revolving upon their own axes, acting upon and checking each other. When either attempts to go beyond its constitutional limit it is by the others checked; hence is called a government of checks and balances.

The Constitution is the sun and center of our governmental system, and holds each department to it as they move in their spheres of business, while each keeps the others from flying off in their revolutions, somewhat similar to our solar system. It appears the framers intended to frame the Government as near after the manner of God's government as in the power of man to do. Take the sun as the center of the solar system, with the planets revolving around her, her power of attraction prevents them from flying off in a tangent as they revolve around her, while the motion of the planets prevents them from falling to the sun.

The province of the legislative department is to make laws for the whole nation in accordance with its constitutional limits, and this is its sole province. This department holds in its hands the purse of the nation as the emblem of its power and guardian of national finances. This is one of the leading attributes of all nations. The executive department has the exclusive executive power, and holds in its hands the sword as an emblem of power, another leading attribute of all nations. Yet the sword is a dead letter without money to back it. The judicial department is the exclusive adjudicating power, and holds in its hands the scales of justice to mete out to all men exact justice under the law, the other leading attribute of nations. The above are the three leading attributes of all nations, and in all republics each is placed in a separate department.

THE LEGISLATIVE DEPARTMENT.

This department is divided into two branches, the Senate, and the House of Representatives, each State, regardless of its population, being entitled to two Senators only, elected by the Legislatures thereof for a period of six years. This is the Federal part of our Congress and represents the States as in a sovereign, organized, and governmental capacity. The House of Representatives is elected by the people; hence is styled the national or people's department. They are apportioned among the States respectively according to their population, excluding Indians only not taxed, an amendment to the Constitution since the late war having obliterated the three-fifths clause. The number that composed the First Congress was fixed by the Constitution, which was sixty-five in the House and twenty-six in the Senate. At this time our population was about 3,500,000. The first census was to be taken three years after the adoption of the Constitution, and forever thereafter every ten years.

The number fixed as a basis for each Representative before the census of 1790, was 30,000. In 1790 the population was about 4,000,000; in 1800, about 5,000,000; in 1810, over 7,000,000; in 1820, over 9,000,000; in 1830, about 12,000,000; in 1840, over 17,000,000; in 1850, over 28,000,000; in 1860, over 31,000,000; in 1870, over 38,000,000; in 1880, over 50,000,000. I have only adopted round numbers in the above, as an accurate calculation is not required in the argument I am making.

The following is the ratio and number of Representatives each decade, including the first apportionment:

Year.	Ratio.	Representatives.
1792	33,900	106
1802	33,900	141
1811	35,000	181
1822	40,000	210
1832	47,700	240
1842	70,680	240
1853	93,420	233
1862	127,000	241
1872	131,425	292
1882	151,912	325

The ratio above may not be strictly accurate as to number, but it is very nearly so. Here the wisdom of the framers of our Constitution is plainly presented, and their intention of a strict economical government clearly shows they well knew that oppressive taxes were destructive of liberty and the downfall of all republics, hence they judiciously vested the power in Congress every decade to increase the ratio and prevent Congress from swelling to such a size as would grind the people into powder to support them. Suppose the ratio had been unalterably fixed at 30,000, now we would have in the House over 1,734 members, at present rates costing the Government over $8,000,000 annually, independent of all other contingencies connected with the House and its officers.

LEGISLATION FINANCIALLY CONSIDERED.

It is seen from the Constitution that the House of Representatives was intended as the financial agent of the people. For all revenue bills have to originate in the House of Representatives. (See article 1, section 7.) This embraces the whole revenue of the United States, to be used in every form and manner allowed by the Constitution for the support and maintenance of every department of government. In England this power is placed in the House of Commons, because they are elected by the people who have the revenues to pay; hence the people can hold them to an account at the ballot-box for any unnecessary appropriations of their money. The House of Lords are not even permitted to make any amendments or alterations in revenue bills; they must pass them as they come from the House of Commons or defeat them. The king (or queen) can make no alterations; he must let them become law or veto them. The whole responsibility is thrown upon the House of Commons, the immediate representatives of the people, that the people may hold them to account for any wrong or oppressive taxes. The people should be dealt with fairly, justly, and tenderly, and it is the duty of their immediate representatives to see that this is done. Under our Constitution this power is vested in the House, modeling somewhat after the manner of the English Government; but our Senate has more power over revenue bills than the House of Lords, for they can amend them, because they represent the States, who are also interested in revenue bills to some extent.

This is a striking illustration of the intended economy of the constitutional framers. They placed the taxing power in the hands of the people's representatives, only allowing the Senate the power of amendment, and compelling the President to veto the whole bill as it passed the two Houses or sign the whole, and then, if vetoed, two-thirds of both Houses could pass it over the veto, bringing the power of taxation nearer to the people than in England. The power is placed in the House to bring it near the people that they may protect themselves against extravagance, slavery, and serfdom, and that the Government be administered in strict economy.

Another idea of the intended economy of the constitutional framers: In article 1, section 9, subsection 7, it is declared:

No money shall be drawn from the Treasury, but in consequence of appropriation made by law; and a regular statement and account of the receipts and expenditures of all public moneys shall be published from time to time.

Here wisdom is plainly painted. This clause is a prohibitory clause upon all officers of the Treasury and all Departments and officers that

pay out money except as appropriated in the appropriation bills of Congress. This is usually the last law of Congress at every session, intended to give full time, thought, and deliberation before the appropriation is made, that the finances may be guarded with a careful hand and all extravagant and unnecessary items stricken from the bill before it matures into a law. So carefully does the Constitution watch the Treasury that it instills in the mind of every member who will read and study it ideas of the strictest and most rigid economy. The thought begins with the first law of every session and keeps the idea impressed through the entire session to the last law, where it is indelibly stamped upon every member's mind. To vary from this is but a perversion of law and a forfeiture of our trust to our constituents at home. This seems to be the alpha and omega of all legislation. Not only during the sessions of Congress but after the session has closed, from time to time, the Departments have to make regular statements of the expenditures of all public money and publish them, that the people may see what is going with their toil and sweat and call their representatives to account for all extravagant and unnecessary appro priations.

OFFICIAL SALARIES.

The Constitution nowhere fixes what the salaries of officers shall be, but vests the whole power in Congress to fix all salaries of all officers in accordance with strict principles of economy; to fix their own salaries and those of all officers connected with the legislative department; to fix the salary of the President and all officers connected with the executive department; to fix the salaries of supreme judges and all salaries connected with the judicial department of the Government; in a word, all salaries, and also the power to change the salaries to suit the times, condition of the Government, and situation of the people, except the salary of the President and supreme judges, which can not be diminished during their term of office; yet they may be increased. Hence Congress is not only intrusted with the power of levying and collecting taxes, duties, imposts, and excises upon the people, but also with the power of saying how the money when collected shall be disbursed, to whom paid, and how much to each. Here tender hands should be laid upon the rights of the people and their interests guarded with the most watchful eye.

Too often it is the case members of Congress regard the affairs of the people as of less importance than their own, as is generally the case in all fiduciary capacities. Hence they are frequently heard to say, "This is a large Government, full of rich natural resources; the people have it to pay anyhow, and I can bear it," forgetting the fact that the larger the government the greater the burden to support it and the greater the field for extravagance. If a man has a debt to pay with his own money or toil he knows and feels where the money comes from to pay it, or if he has a note to give he is strictly watchful and keeps himself within the bounds of his income. But when it comes to issuing bonds, contracting debts, and levying taxes upon the people he forgets himself, and often indulges in the wildest extravagance. It is much easier to obtain the consent of a man to saddle a debt upon others than upon himself; so, also, to appropriate the moneys of others to extravagant purposes than his own. When Congress is fixing the salaries of Senators and Representatives and other officers of the Government it is fixing them for the people to pay.

It is too often forgotten by those in affluence that heavy taxes rob many poor widows and children, and leave them in a condition of starvation and want, without education. The House should always remember they are the people's trustees and to them the people must look for safety. They should at all times be true and faithful to their trust and keep the salaries at all times at par with other pursuits and the condition of the Government. To increase them above a level will make them mines to be sought for their gold. Let all things seek their level, as the water of earth and electricity of heaven. This is the nature and spirit of a true republic. It should be of all republics. They should all be based upon the principle of equality. Equality is equity.

FURTHER POWERS OF CONGRESS.

Congress is also given the power to lay and collect taxes, duties, imposts, and excises, to pay the debts, provide for the common defense and general welfare, to borrow money on the credit of the people, to coin money, regulate the value thereof, and declare what shall be a legal tender. I refer to these to show what unbounded confidence the framers of our Constitution had in the representatives of the people and how often they reminded representatives of the trust confided in them. Here plenary power is given to them over money, to fix the standard of value over the whole people without courts and without proof; also to borrow money on the faith and credit of the people, bind them in bonds to repay with interest without consulting them or obtaining their consent, except in their elections through the ballot-box. How sacred the trust; how carefully it should be guarded! These emblems of trust should be stamped indelibly upon each member's brain, travel with him from home, board with him at the hotel, sleep with him at night, meet him when he rises in the morning, go with him to the House, and haunt him while in the legislative chamber, that he may be ever reminded his master is at home; he is but a servant; let their will be done, and not his. So when he returns home, having filled his mission, he may deliver his trust to the people fully performed, unsullied, and untarnished, and they exclaim, "Well done, good and faithful servant!"

HOW SALARIES HAVE BEEN REGULATED.

In the early existence of the legal and medical profession fees were not charged; they were regarded as posts of honor, sought for the honor in them and not for money. So with legislative offices in Greece, Rome, and other nations at times. True, where this prevailed the nation had a public crib and table to feed the honored and their guests. Christ even commanded his Disciples to go out and preach to all the world without charge or pay. Yet I subscribe to the doctrine that the laborer is worthy of his hire.

Our Government has no public crib or table except as extravagantly allowed by Congress at the President's Mansion. I therefore maintain a reasonable salary should be allowed for all officers in proportion to the office filled; but this proportion should have some regard for all other pursuits in life and be proportioned in such a manner as will give equal protection to all pursuits in life, and not let some be protected at the expense of others, that the more important be neglected and the others sought for the money in them. All officers should be paid such salaries as will reasonably compensate them for their labor compared with other pursuits in life and the condition of the country. When governments are out of debt, have a healthy, full circulating medium, rich harvest, and an abundance of commerce, the salaries should be higher than when their debt is large, circulating medium small, and commerce crippled. Disproportion the salaries of officers with other pursuits in life and they will be abandoned and office sought for the money in it.

Experience and history demonstrate that when office is sought for the honor in it the governments remain pure, because impurity is dishonor and contrary to the purpose of obtaining the office. So to cast a stain upon the office would be dishonoring it instead of honoring it. On the contrary, where the office is sought for money the very purpose and object in obtaining it is corrupt; hence the officer puts the office to a corrupt purpose, and in this way the whole government becomes poisoned with villainy. This has been painted in the most glaring colors since our late war. For illustration: The President's annual salary was $25,000 from the beginning of the Government to Grant's second administration; from that time to the present it has been $50,000. Senators and Representatives only got $8 per day while Congress was actually in session up to 1856; from then to 1866, $3,000 per annum; from then to 1873, $5,000 per annum; in 1873, $7,500; and in 1874 their salary was placed back at $5,000 per annum, and stands at that now. The Chief-Justice gets $10,500; each associate justice, $10,000, which is for life or good behavior, and can not be changed during their term of office. This embraces only the heads of Departments. All other offices have been greatly increased, but none probably to so great an extent as the President's. True, the labor of Congressmen is hard and expenses high, but it can not be said they have increased as five to three since 1866, and more assuredly the President's as two to one since 1872; the proportion is too great. Talent can not be said to be superior and worth more, for the great lights, Clay, Webster, and Calhoun, only got $8 per day; and Washington, Jefferson, Jackson, Polk, and Lincoln, $25,000 per annum.

Below I attach the salaries of the members of the Legislatures of the States and Territories as far as I could ascertain, sessions, &c.

States and Territories.	Session began—	Limit of session.	Term of— Senators.	Term of— Representatives.	Salary.	Elected—
			Yrs.	*Yrs.*		
Alabama	Nov. 9, 1880	50 days	4	2	$4 per day and 10 cents mileage	Aug. 2, 1880
Arkansas	Jan. 13, 1879	60 days	4	2	$6 per day	Sept. 6, 1880
California	Dec. 1, 1879	120 days	4	2	$10 per day and $3 for 20 miles' travel	Sept. 3, 1879
Colorado	Jan. 1, 1879	40 days	4	2	$300 and mileage	Oct. 5, 1880
Connecticut	Jan. 8, 1879	None	2	1	$3 per day and mileage	Nov. 2, 1880
Delaware	Jan. 7, 1879	None	4	2	$4 per day and mileage	Nov. 2, 1880
Florida	Jan. 1, 1879	60 days	4	2	$5 per day and 10 cents mileage	Nov. 2, 1880
Georgia	Nov. 4, 1880	40 days	4	2	$5 per day	Oct. 6, 1880
Illinois	Jan. 8, 1879	None	4	2	$550	Nov. 2, 1880

Salaries of members of the Legislatures of the States and Territories.

States and Territories.	Session began—	Limit of session.	Term of— Senators.	Term of— Representatives.	Salary.	Elected—
			Yrs.	Yrs.		
Indiana	Jan. 9, 1879	60 days	4	2	$8 per day and mileage	Oct. 12, 1880
Iowa	Jan. 12, 1880	None	4	2	$150	Oct. 12, 1880
Kansas	Jan. 14, 1879	50 days	4	2	$3 per day and 10 cents mileage	Nov. 2, 1880
Kentucky	Dec. 31, 1879	60 days	4	2	$5 per day and 15 cents mileage	Aug. 4, 1879
Louisiana	Jan. 6, 1879	60 days	4	2	$500	Nov. 2, 1880
Maine	Jan. 1, 1879	None	1	1	$5 per day and $30 mileage	Sept. 8, 1879
Maryland	Jan. 5, 1880	90 days	4	2	$3 per day	Nov. 4, 1879
Massachusetts	Jan. 1, 1879	None	1	1	$8 per day and 40 cents mileage	Nov. 4, 1879
Michigan	Jan. 1, 1879	None	2	2	$3 per day and mileage	Nov. 2, 1880
Minnesota	Jan. 7, 1879	60 days	2	1	$500	Nov. 4, 1879
Mississippi	Jan. 6, 1880	None	4	2	$400	Nov. 2, 1880
Missouri	Jan. 8, 1879	70 days	4	2	$4 per day and 10 cents mileage	Nov. 2, 1880
Nebraska	Jan. 7, 1879	40 days	2	2	$5 per day and $3 for 20 miles, travel.	Nov. 2, 1880
Nevada	Jan. 6, 1879	60 days	4	2	$3 per day and $3 for 20 miles, travel.	Nov. 2, 1880
New Hampshire	June 4, 1879	None	2	2	$1,000	Nov. 4, 1879
New Jersey	Jan. 14, 1879	None	3	1	$1 per day and 8 cents mileage	Nov. 4, 1879
New York	Jan. 7, 1879	None	2	1		Nov. 4, 1879
North Carolina	Jan. 8, 1879	60 days	2	2		Nov. 2, 1880
Ohio	Jan. 7, 1879	None	2	2		Oct. 7, 1879
Oregon	Sept. 13, 1880	40 days	4	2		June 7, 1880
Pennsylvania	Jan. 7, 1879	None	4	2		Nov. 4, 1879
Rhode Island	Jan. 14, 1879	None	1	1		Apr. 2, 1879
South Carolina	Nov. 5, 1879	None	4	2	$5 per day and 10 cents mileage	Nov. 2, 1880
Tennessee	Jan. 6, 1879	75 days	2	2	$4 per day and 16 cents mileage	Nov. 2, 1880
Texas	Jan. 14, 1879	60 days	4	2	$5 per day	Nov. 2, 1880
Vermont	Oct. 6, 1880	None	2	2	$3 per day	Sept. 7, 1880
Virginia	Dec. 3, 1879	90 days	4	2	$5.40 per day	Nov. 4, 1879
West Virginia	Jan. 8, 1879	45 days	4	2	$4 per day and mileage	Oct. 12, 1880
Wisconsin	Jan. 8, 1879	None	2	1	$3.50 and 10 cents mileage	Nov. 4, 1879
Arizona	Jan. 6, 1879	40 days	2	2		Nov. 2, 1880
Dakota	Jan. 14, 1879	40 days	2	2		Nov. 2, 1880
Idaho	Jan. 12, 1880	40 days	2	2	$6 per day and mileage	Nov. 4, 1879
Montana	Jan. 14, 1879	40 days	2	2		Nov. 2, 1880
New Mexico	Jan. 5, 1880	40 days	2	2		Nov. 2, 1880
Utah	Jan. 12, 1880	40 days	2	2		Aug. 4, 1879
Washington	Oct. 6, 1879	40 days	2	2		Nov. 2, 1880
Wyoming	Nov. 4, 1879	40 days	2	2		Sept. 7, 1880

So, upon an average, the legislators receive about $4 per day while in session, while a member of Congress receives at the rate of $14 per day the year around. True, the expenses of Congressmen are heavy, but the disproportion is too great.

I here attach a list of the Governors of the States and Territories, with their names, the dates of the beginning and ending of their terms, and the salaries each received. These officers are required to be at their posts all the time, while Congress is in session only about half the time:

States and Territories.	Governors.	Term— Years.	Term— Began—	Term— Ended—	Salary.
Alabama	Rufus W. Cobb	2	Nov. 28, 1878	Nov. 27, 1880	$3,000
Arkansas	William R. Miller	2	Jan. 7, 1879	Jan. 4, 1881	3,500
California	William Irwin	4	Dec. 4, 1875	Dec. 1, 1879	7,000
Colorado	Fred W. Pitkin	2	Jan. 14, 1879	Jan. 10, 1881	3,000
Connecticut	Charles B. Andrews	2	Jan. 9, 1879	Jan. 13, 1881	2,000
Delaware	John W. Hall	4	Jan. 21, 1879	Jan. 21, 1883	2,000
Florida	George F. Drew	4	Jan. 1, 1877	Jan. 1, 1881	3,500
Georgia	Alfred H. Colquitt	4	Jan. 1, 1877	Jan. 1, 1881	4,000
Illinois	S. M. Cullom	4	Jan. 8, 1877	Jan. 10, 1881	6,000
Indiana	James D. Williams	4	Jan. 8, 1877	Jan. 13, 1881	6,000
Iowa	John H. Gear	2	Jan. 14, 1878	Jan. 11, 1880	3,000
Kansas	J. P. St. John	2	Jan. 13, 1879	Jan. 10, 1881	3,000
Kentucky	James B. McCreary	4	Aug. 31, 1875	Sept. 3, 1879	5,000
Louisiana	F. T. Nicholls	4	Jan. 8, 1877	Jan. 10, 1881	8,000
Maine	A. Garcelon	1	Jan. 4, 1879	Jan. 1, 1880	2,500
Maryland	John Lee Carroll	4	Jan. 1, 1876	Jan. 1, 1880	4,500
Massachusetts	Thomas Talbot	1	Jan. 1, 1879	Jan. 7, 1880	5,000
Michigan	Charles M. Croswell	2	Jan. 1, 1879	Jan. 1, 1881	1,000
Minnesota	John S. Pillsbury	2	Jan. 8, 1878	Jan. 13, 1880	3,000
Mississippi	John M. Stone	4	Jan. 8, 1878	Jan. 3, 1882	4,000
Missouri	John S. Phelps	4	Jan. 8, 1877	Jan. 10, 1881	5,000
Nebraska	A. Nance	2	Jan. 7, 1879	Jan. 4, 1881	2,500
Nevada	John H. Kinkead	4	Jan. 6, 1879	Jan. 1, 1883	6,000
New Hampshire	Benjamin F. Prescott	1	June 5, 1878	Jan. 4, 1879	1,000
New Jersey	George B. McClellan	3	Jan. 15, 1878	Jan. 18, 1881	5,000
New York	Lucius Robertson	3	Jan. 1, 1877	Jan. 1, 1880	10,000
North Carolina	Thomas J. Jarvis	4	Feb. 5, 1879	Jan. 1, 1881	4,000
Ohio	Richard M. Bishop	2	Jan. 14, 1878	Jan. 12, 1880	4,000
Oregon	W. W. Thayer	4	Sept. 11, 1878	Sept. 13, 1882	1,500
Pennsylvania	Henry M. Hoyt	3	Jan. 21, 1879	Jan. 17, 1882	10,000
Rhode Island	Chs. C. Van Zandt	1	May 28, 1878	May 27, 1879	4,000
South Carolina	W. D. Simson, acting	2	Dec. 28, 1878	Dec. 27, 1880	4,500
Tennessee	Albert S. Marks	2	Jan. 15, 1879	Jan. 15, 1881	4,000
Texas	Oran M. Roberts	2	Jan. 15, 1879	Jan. 15, 1881	4,000
Vermont	Redfield Proctor	2	Oct. 4, 1878	Oct. 5, 1880	1,000
Virginia	F. W. M. Holliday	4	Jan. 1, 1878	Jan. 1, 1882	5,000
West Virginia	Hy. M. Mathews	4	Mar. 4, 1877	Mar. 4, 1881	2,700
Wisconsin	William E. Smith	2	Jan. 7, 1878	Jan. 5, 1880	5,000
Arizona	John C. Frémont	4	June 12, 1878	June 12, 1882	2,600
Dakota	W. A. Howard	4	Mar. 12, 1878	Mar. 12, 1882	2,600
Idaho	Mason Brayman	4	July 24, 1876	July 24, 1880	2,600
Montana	Benjamin F. Potts	4	July 13, 1878	July 13, 1882	2,600
New Mexico	Lewis Wallace	4	Sept. 3, 1878	Sept. 3, 1882	2,600
Utah	George W. Emery	4	July 1, 1875	July 1, 1879	2,600
Washington	Elisha P. Ferry	4	Apr. 26, 1876	Apr. 26, 1880	2,600
Wyoming	John Hoyt	4	Apr. 10, 1878	Apr. 10, 1882	2,600

So upon an average the governors get $3,698 annually for sitting all the year, while Congressmen get $5,000 per annum. This calculation may have some errors, but in general it is correct.

Now let us see what has been the public indebtedness of our General Government from its origin until the present.

Tabular statement of United States debt.

Year.	Amount.	Year.	Amount.
1791	$75,463,476 52	1838	$10,434,221 14
1792	77,227,924 66	1839	3,573,343 82
1793	80,352,634 04	1840	5,250,875 54
1794	78,427,404 77	1841	13,594,480 73
1795	80,747,558 39	1842	20,601,226 28
1796	83,762,172 07	1843	32,742,922 00
1797	82,064,479 33	1844	23,461,652 50
1798	79,228,529 12	1845	15,925,303 01
1799	78,408,669 77	1846	15,550,202 97
1800	82,976,294 35	1847	38,826,534 77
1801	83,038,050 80	1848	47,044,862 23
1802	86,712,632 25	1849	63,061,858 69
1803	77,054,686 30	1850	63,452,773 55
1804	86,427,120 88	1851	68,304,796 02
1805	82,312,150 50	1852	66,199,341 71
1806	75,723,270 66	1853	59,803,117 70
1807	69,218,398 64	1854	42,242,222 42
1808	65,196,317 97	1855	35,586,858 56
1809	57,023,192 09	1856	31,972,537 90
1810	53,173,217 52	1857	28,699,831 85
1811	48,005,587 76	1858	44,911,881 03
1812	45,209,737 90	1859	58,496,837 88
1813	55,962,827 57	1860	64,842,287 88
1814	81,487,846 24	1861	90,580,873 72
1815	99,833,660 15	1862	524,176,412 13
1816	127,334,933 74	1863	1,119,772,138 63
1817	123,491,965 16	1864	1,815,784,370 57
1818	103,466,633 83	1865	2,680,647,869 74
1819	95,529,648 28	1866	2,773,236,173 69
1820	91,015,566 15	1867	2,678,126,103 87
1821	89,987,427 66	1868	2,611,687,851 19
1822	93,546,676 98	1869	2,588,452,213 94
1823	90,875,877 28	1870	2,480,672,427 81
1824	90,269,777 77	1871	2,353,211,332 32
1825	83,788,432 71	1872	2,253,251,328 78
1826	81,054,059 99	1873	2,234,482,993 20
1827	73,987,357 20	1874	2,251,690,468 43
1828	67,475,043 87	1875	2,232,284,531 95
1829	58,421,413 67	1876	2,180,395,067 15
1830	48,565,406 50	1877	2,205,301,392 10
1831	39,123,191 68	1878	2,256,205,892 53
1832	24,322,235 18	1879	2,245,495,072 04
1833	7,001,698 83	1880	2,120,415,370 63
1834	4,760,082 08	1881	2,000,000,000 00
1835	37,513 05	1882	1,918,316,744 09
1836	336,957 83	1883	1,884,171,970 07
1837	3,308,124 07		

It is seen from the above table that in 1860, before the war began, the public debt of the United States was $64,769,703.08, while the population was a little over 31,000,000, about $2 per capita; now the debt is $1,884,171,478.07, while the population is a little over 52,000,000, making over $36 per capita. If the United States debt had to be paid now by direct tax upon the poll it would cost every man, woman, and child in the United States $36, while before the war it would have cost only $2 each.

How is this debt to be paid, and who pays it? The sources of revenue now are the sales of public lands, Post-Office Department, Patent-Office Department, internal revenue, and tariff on imports. These at present rates about run the Government and pay the interest on the public debt, which amounts to about $350,000,000 annually; add this, and the amount upon every head would be some $44. The great body of this must come from the consumers and laboring classes of people. While these great burdens are hanging upon the toiling millions, the salaries of many officers has been almost doubled, still adding more leaden weight to the bond-ridden, bank-ridden, salary-ridden, and tax-ridden laborers of our once happy and free land. Should not salaries be regulated in accordance with the condition of the country? All other labor is.

PROPERTY OF THE UNITED STATES.

Turn even to another branch and corroborative argument. Take the entire property of the United States from 1850, inclusive; it is thus shown:

1850	$7,000,000,000
1860	16,000,000,000
1870	31,000,000,000
1880 (say)	43,000,000,000

So from 1860 to 1870 the property did not quite double itself, while the debt increased over thirty-fold, and in 1880 over twenty-fold. Put a direct tax upon property, and it would now take twenty dollars' worth of property to pay the debt where in 1860 it would have taken one.

See how this pressure would bear upon the unfortunate South even under our present system of taxes. In 1860 the States of New York, Pennsylvania, Massachusetts, Illinois, Indiana, Ohio, and Missouri owned $8,000,000,000 in property, while in 1870 the same seven States owned $20,000,000,000 in property. In 1860 Tennessee, Virginia, Georgia, Mississippi, Alabama, North Carolina, and South Carolina owned $4,000,000,000 in property, while in 1870 the same seven Southern States owned $2,000,000,000 in property. The result of the war was the South lost some $4,000,000,000 in property while the North increased some $15,000,000,000 in property. The excise or internal-revenue tax has rested largely since the late war upon the South. The cotton tax was wholly there and sectional; tax on litigation was mostly there; most of the courts having been closed for four years a harvest of litigation sprang up; the tax on tobacco, whisky, brandy, wine, &c., rested largely there. So the tax upon imports rested much more there, according to property, than in the North.

Notwithstanding the impoverished condition of the South, they have still had to bear the greater part of the burdens of government, while by far the greater number of governmental officers have come from the North. Then, with peace and harmony restored and brotherly love cultured, should not equality follow and the Government act upon great national principles, knowing no North, no South, no East, no West; and not permit the wheels of government to be used as a great machine to float the last vestige of property from the impoverished and pour it into the bosom of the rich. Is it not the very nature and basis of our Government that all classes and sections shall stand equal under the law, and the law be not used as an instrument of adversity to one and prosperity to another? Such is foreign to all true republics and slavish in its workings. Our Constitution denies the right of Congress to create titles of nobility. Does it not in spirit and truth equally deny the right to create lords, nobles, and foster monopolies?

PROPERTY TAXED.

In 1870 the property of all the States of the United States was worth about $30,000,000,000 and that made taxable was worth about $15,769,000,610—about one-half of the property taxed by the United States, counties, and corporations. About the same proportion obtains in 1880. From States, counties, and corporations are freed property belonging to the United States, United States banks, and bonds, and the States free property belonging to church corporations, school corporations, charitable institutions, benevolent societies, religious institutions, cemeteries, &c., amounting to about one-half the entire property. So it is seen the most if not the entire burden of supporting all the Government rests upon private land-owners, consumers, and laborers. Number of farms in States and Territories in 1880, 4,008,997; acres, 536,081,835; improved, 284,771,042; unimproved, 251,310,793; value of farms, $10,197,096,776; so about one-half of the land taxed is in woods and unimproved, producing little or nothing. Value of farming implements and live-stock on farms, $1,906,904,772, eating, lying idle, and decaying half of each year. So the entire farming property is $12,104,001,568, about one-third of the entire property.

Number of laborers of all grades in 1870, landholders and those following agricultural pursuits	5,922,471
Domestic servants	975,734
Ordinary laborers	1,031,666
Trade and transportation	1,191,233
Manufacturing	2,255,314
Miners	500,000
Professional men and bankers	677,345
Making, in all	12,553,763

The proportion to the population is about the same in 1880. Hence about one-half of the property and one-fourth of the population bear all the burdens of supporting governments. Then pray tell me why they have not a right to appeal to the rectitude and conscience of Congress and ask that their rights be respected; that the Government and laws be used as a shield to protect them and not as a sword to cut them; that equality, equity, and justice spread their wide wings over the whole people, and that they gather thereunder as the hen gathereth her brood.

CIRCULATING MEDIUM.

Take next the question of currency and see the effect of it upon the tax-ridden people. From the close of the war till about 1873 the circulating medium was near $2,000,000,000, when contraction took place, bringing it down now to some $400,000,000 or less. Of this amount there are some $27,000,000 in circulation in the Southern States, while there are some $370,000,000 in the Northern and Western States. Before the war Georgia alone had in circulation $24,000,000, and the Southern States some $70,000,000 to the Northern States' $100,000,000. Then the New England States had in circulation $40,000,000, now they have in circulation $103,000,000. The State of New York alone has in circulation $65,000,000, more than double as much as all the South.

It is a well demonstrated fact that the scarcity of money diminishes the price of property and labor but does not diminish the amount of debts or taxes; hence it takes that much more property and labor to pay the debts and taxes. Certainly land is no better now than when the war closed, nor can a man do any more labor now than then, nor does it take any less to raise horses, cattle, hogs, &c., while from 1865 to 1873 a bushel of wheat would bring $2; pork, 10 cents per pound; a good horse, $200; labor per hand by the day at ordinary work, from $1 to $2; and land, $40 per acre. Now the same kind of wheat would bring $1 per bushel; pork, 5 cents per pound; horse, $100; labor, from 50 cents to $1; and land, $20 per acre. Hence the same amount of money will purchase twice as much of the above articles; therefore it requires double the amount of property and labor to run the Government and pay the debt.

Upon what hypothesis, then, can it be argued the salaries of officers should be doubled? The argument would bear with much more emphasis upon a reduction of salaries. If the Government debt was small, circulating medium full, property and labor high, then it would come with good grace to maintain a corresponding increase of salaries in all the offices. Great Britain has a population of some 32,000,000, a circulating medium of about $905,168,000, making $32 per capita; France has a population of some 36,000,000, a circulating medium of about $2,050,000,000, making $60 per capita; Germany a population of some 42,000,000, a circulating medium of about $704,000,000, $17 per capita; while the United States has a population of over 50,000,000, and a circulating medium of about $400,000,000, about $8 per capita.

Now, take the running expenses of our General Government, and it amounts to some $300,000,000 annually, almost equal to the circulating medium, leaving out the expenses of the State, county, and corporate governments. Monarchical governments have no State expenses, as they have no States. Too often Congressmen forget the United States have some 115,000 officers, besides the officers of thirty-eight States and almost innumerable county and corporate officers, preying upon the substance of the people. Surely goodness and mercy should follow the tax-ridden people all the days of their lives and they should dwell in the house of the Lord forever.

Our system of government differs from most all others. The people have two legislative, executive, and judicial governments to support, thereby doubling the burdens. Average the thirty-eight States at one hundred legislators each, and we have over 3,800; add in the Territories, and the number exceeds 4,000; take the four hundred and one in the United States Senate and House, and we have the enormous number of 4,401 legislating for the people of the United States.

The truth is the wealth of nations depends upon a variety of causes—situation, soil, climate, production, economy of the Government, and people; the degree of information the people possess; the state of commerce, arts, and industry, the manners and habits of people, &c. The consequence is there can be no common measure of national wealth, and of course no general rule by which the ability of a people to pay taxes can be determined, and in addition to the above a number of causes may exist that cause the riches of persons, classes, and industries, and the poverty of others. The Government, through its unjust and partial laws, may be used as a great lever to foster one and impoverish the other, thus enhancing the manufacturing by burdening the agricultural, pour gold into the coffers of bondholders and banks by the sweat of labor's face, for the people to give the officers fat salaries, increase the number of officers to give them more power and widen their influence without giving any benefit to the laboring classes, increase the number and power of moneyed corporations and monopolies to draw tighter chains around the liberties of the masses.

Table showing lowest and highest prices of commodities for fifty-three years, 1825–1877.

Year.	Hops, per pound.		Iron, bar, per ton.		Iron, Scotch pig, per ton.		Lard, per pound.		Leather, hemlock, per pound.		Mackerel, No. 1, per barrel.		Molasses, New Orleans, per gallon.		Oats, per bushel.

a Nominal.

Take the above list for the years 1825, 1860, 1877, selecting three years of peace as far apart as the list will permit. In 1825, lowest and highest price: Hops, from 18 cents to 25 cents per pound; iron bars, from $85 to $120 per ton; pig-iron, from $35 to $75 per ton; lard, from 7 cents to 10 cents per pound; leather, from 21 cents to 25 cents per pound; mackerel, from $5 to $5.75 per barrel; molasses, from 28 cents to 43 cents per gallon; oats, from 26 cents to 40 cents per bushel. In 1860: Hops, from 6 cents to 25 cents per pound; iron bars, from $41 to $44 per ton; pig-iron, from $20.50 to $27 per ton; lard, 10 cents to 13 cents per pound; leather, from 20 cents to 22 cents per pound; mackerel, from $15 to $18 per barrel; molasses, from 36 cents to 55 cents per gallon; oats, from 37 cents to 47 cents per bushel. In 1877: Hops, from 10 cents to 13 cents per pound; iron bars, from $44 to $48 per ton; pig-iron, from $25 to $28 per ton; lard, from 6 cents to 8 cents per pound; leather, from 26 cents to 30 cents per pound; mackerel, from $8 to $15 per barrel; molasses, from 40 cents to 59 cents per gallon; oats, from 22 cents to 26 cents per bushel.

Here it is seen the difference in the price of such things as hops, lard, leather, molasses, &c., has not varied much for fifty-two years, in times of peace—the necessaries of life. The greatest difference seems to have

been in iron, it having cheapened nearly one-half. The price of articles during our late war can not be looked to, because of the uncertainty of money, scarcity of them, &c. True, the great increase of machinery and facilities of transportation has had something to do with this, but all this has only kept prices upon about an equilibrium as to the necessaries of life.

The following list shows for a period of fifty-two years in times of peace the difference in the price of pork (mess), sugar, wheat, and wool has not been varied much. The greatest difference seems to have been in rice, whisky, and tobacco, salt alone having grown cheaper. Notwithstanding all the great increase in machinery and transportation, the material necessaries of life and production of labor seem to have remained about the same. In this I discard the prices during wars, as they are fluctuating and uncertain. The table I am using approximates as near as I am enabled to get at prices, though there may be some errors and mistakes made.

Table showing lowest and highest prices of commodities for fifty-three years, 1825–1877.

Year.	Pork, mess, per barrel.		Rice, per 100 pounds.		Salt, Liverpool, per sack.		Sugar, raw, per pound.		Tobacco, Kentucky leaf, per pound.		Wheat, per bushel.		Whisky, per gallon.		Wool, per pound.

Take the above list for 1825, 1860, 1877, selecting three years of peace as far apart as the list will permit. In 1825: Pork, mess, from $12 to $14.75 per barrel; rice, from $2 to $4 per 100 pounds; salt, from $2.67 to $3 per sack; sugar, from 6 to 11 cents per pound; raw tobacco, from 3 to 9 cents per pound (leaf); wheat, from 75 cents to $1.05 per bushel; whisky, from 25 to 31 cents per gallon; wool, from 30 to 38 cents. In 1860: Pork, mess, from $16.12 to $19.75 per barrel; rice, $3 to $4.62 per 100 pounds; salt, from 68 cents to $1.15 per sack; sugar, from 6 to 8 cents per pound; raw tobacco, from 3 to 13 cents per pound (leaf); wheat, from $1.35 to $1.70 per bushel; whisky, from 19 to 27 cents per gallon; wool, from 34 to 40 cents per pound. In 1877: Pork, mess, from $11.75 to $17.37 per barrel; rice, from $5 to $7 per 100 pounds; salt, from $1.10 to $2.25 per sack; sugar, from 7 to 10 cents per pound; tobacco, from 7 to 16 cents per pound (leaf); wheat, from $1.06 to $1.85 per bushel; whisky, from $1.04 to $1.09 per gallon; wool, from 33 to 46 cents per pound.

Table showing lowest and highest prices of commodities for fifty-three years—1825–1877.

So take the above list for the years 1825, 1860, and 1877—the extent of the list in three years of peace—and we have, for the year 1825: Beef, mess, from $8 to $10 per barrel; butter, from 8 cents to 22 cents per pound; cheese, from 5 cents to 10 cents per pound; coal from $8 to $11 per ton; coffee, Rio, from 16 cents to 19 cents per pound; corn, from 42 cents to 75 cents per bushel; cotton, from 13 cents to 27 cents per pound; flour, from $3.80 to $4.25 per barrel; Western hams, from 7 cents to 10 cents. In 1860: Beef, mess, from $4.50 to $5.50 per barrel; butter, from 10 cents to 22 cents per pound; cheese, from 9 cents to 12 cents per pound; coal from $5.50 to $6 per ton; coffee, Rio, from 11 cents to 15 cents per pound; corn, from 64 cents to 95 cents per bushel; cotton, from 10 cents to 11 cents per pound; flour, from $4.25 to $5.25 per barrel; Western hams, from 10 cents to 13 cents per pound. In 1877: Beef, mess, from $9.50 to $11.25 per barrel; butter, from 13 cents to 14 cents per pound; cheese, from 8 cents to 16 cents per pound; coal, from $3.25 to $3.75 per ton; coffee, Rio, from 15 cents to 21 cents per pound; corn, from 41 cents to 58 cents per bushel; cotton, from 11 cents to 13 cents per pound; flour, from $4.75 to $8 per barrel; Western hams, from 10 cents to 14 cents per pound. Then for a period of fifty-two years the above list shows in time of peace the difference in the price of mess beef, Rio coffee, cotton, corn, and hams has not varied much. The greater difference seems to have been in butter, cheese, and coal, notwithstanding the great increase of machinery and immense facilities for transportation. Of course the markets above referred to are Liverpool and New York as the standards. The tables referred to shew clearly labor and the fruits thereof have been kept at the lowest prices and the market at all times controlled against the interest of the toiling millions.

PLATFORMS AND PRINCIPLES.

The great leading principle embodied and taught in all the Democratic platforms since the late war is retrenchment and reform. When the war is over, peace restored, cannon muzzled, musketry stacked, sword sheathed, battle-ax laid down, and pipe smoked, soothe the harrowed nerves with the balm of Gilead, plant the olive-branch at every door, cultivate brotherly love, and cement peace with kind words and deeds; recede from war debts, warfare, war prices, war punishments, war laws, war taxes, war salaries, and war offices; restore the writ of habeas corpus, and make military law subordinate to civil; put the pruning-knife to the tree of Government, trim from all its branches the five years' spurious growth, that it may again bring forth choice fruit. Let retrenchment and reform be by deed as well as word, and not as the tinkling cymbals and sounding brass. The maxim is, a free and intelligent people should be governed as little as possible, or, in other words, that they should govern themselves as much as possible. Equal and exact justice to all, special favors to none; freedom of religious worship, free air, free water, freedom at the ballot-box, and an honest count; equal protection to agriculture, manufacturing, capital, and labor; conflicts between none.

The old ship of state has been and still is floating upon troubled waters swiftly to breakers. The shadow of Republican death is now visible to the natural eye, and unless stayed by healthy and honest legislation, reform and retrenchment, the time is not far distant when this Government, the colossus of the world, head and shoulders above all others, must crumble and fall upon its own ruin. Let all lovers of liberty flock to the rescue and stay the uplifted hand now ready to send the dagger to our national heart.

The war has devastated the South; labor is demoralized; tramps swarm; fields lie idle. All has been but a picture of gloom and despair, when surveyed by the proud heart seeing the gloomy clouds cover the present and future generations and no hope for a brighter sky. With a suicidal dagger their own bosom is pierced, leaving to mourn the loss a wearied wife and helpless family, and thus the commingled cries of starving millions ascend to Heaven for bread to satiate hunger.

Quick changes, great innovations, and a flood of new laws in governments are but repeated volcanic eruptions, darkening the political heavens and shaking the government from center to circumference. History proves governments are oftener wrecked by many than few laws. When once a government has good and wholesome laws they should never be invaded for light and trivial causes. Our common-law system, founded upon the customs, usages, and habits of the people, has been tested by long and tried experience. The philosophy of human action has been too often changed by unwise legislation.

The principles hereinabove enunciated have been clearly illustrated in our Constitution. At first we had only eleven States and soon thereafter thirteen, sparsely settled—people living almost in a wilderness, little machinery, small commerce, and only paths and dirt roads to travel. And now, after this Government has rolled in its orb for near a century, we have thirty-eight States, covering an area of over 4,000,000 square miles of land, some 6,000 miles of seacoast, 115,000 miles of railroad, three billion dollars' worth of machinery, over 50,000,000 of inhabitants, and unparalleled civilization and education. And yet the same Constitution, with ten amendments made soon after its adoption and two soon thereafter, remained unaltered for about sixty-five years, and only three amendments since that time to the present.

The same Constitution that spread its genial protecting wings near a century ago over 3,000,000 of people, thirteen States, and 350,000 square miles of territory, now expands them over 50,000,000 of people, thirty-eight States, and 4,000,000 square miles in the most approved state of cultivation. Neither breadth nor time weakens it. Like the vaulted heavens it may mantle billions and extend thousands of years. To be maintained it needs but to be obeyed. There is nothing written superior to it save the Ten Commandments. It is the great reservoir of our lives, our liberties, our property, and pursuit of happiness. It embodies the principles under which we live; we inhale them at every breath and imbibe them at every pore. We wind around it as the vine does around the sturdy oak, moving onward and upward to a higher and better clime, purer and better land. It is our companion in sickness and in health, in darkness and in light, alone and in company, on land and at sea, in storm and in calm, in war and in peace, in prosperity and in adversity. We meet with it when we awake and when we lie down to sleep. It stands as a sentinel at the door of every chamber at night and in daylight. It is our companion when we travel and when we stay at home. It protects us in birth, shields in manhood, and guards us in death.

Retirement of the Trade-Dollar and the Continuance of Silver Coinage.

Gold and silver, the two great recognized species that represent the lasting conventional credit of mankind.—*Burke.*

SPEECH

OF

HON. A. J. WARNER,

OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 1, 1884.

The House having under consideration the bill (H. R. 4976) for the retirement and recoinage of the trade-dollar—

Mr. WARNER, of Ohio, said:

Mr. SPEAKER: While the bill under consideration proposes merely the retirement of the trade-dollar, the whole silver question seems to have been imported into the discussion. I shall therefore not confine myself entirely to the question of retiring the trade-dollar, but shall attempt to reply to some of the arguments that have been presented, and to show that conclusions drawn by some gentlemen respecting silver in this country are erroneous.

I am in favor of this bill. The trade-dollar is an anomalous coin. Its adoption in the first instance was a blunder. It was issued on the erroneous theory that if we coined silver into larger pieces the silver would bring more per ounce abroad. Now the silver in one hundred and fourteen trade-dollars will make almost exactly one hundred and sixteen standard dollars, and there never was a time in any country when one hundred and sixteen standard dollars would not exchange for just as many commodities as one hundred and fourteen trade-dollars.

The bad reasons put forward for coining this dollar have given rise to the charge that it was covertly connected in its origin with the scheme to demonetize silver and drop the standard dollar from our currency. At any rate, it was an ill-advised coin, which has plagued its originators, plagued the Government, and plagued the people, and should be taken out of circulation. It would have been better had this been done before, when more of these coins were in the hands of the people and fewer in the hands of brokers. A bill to take up this coin did pass the House, in the Forty-sixth Congress, but failed in the Senate. But the idea that a government like ours may issue a coin and make it a legal tender, and afterward repudiate it or change its value, as princes were wont to do in the Middle Ages, is utterly indefensible, and is repulsive to a just sense of the obligations of a government on which rests the responsibility of establishing weights and measures and coining money.

Besides, it could be shown, I think, that there is no other way to get these coins out of circulation but by redeeming them at their original legal-tender value. There is, therefore, nothing left to do but to pass this bill, even though undeserved profit may go to some holders who have bought these coins at a discount. The trade-dollar is still a lawful coin of the United States, and can not justly be ignored by the Government that issued it.

As to the fourth section of this bill, I shall vote to strike it out; but the main object being to retire the trade-dollar, I shall unhesitatingly vote for the bill with that section left in. I do not agree with some of my friends that it is of so much importance that these trade-dollars, six, seven, or eight millions of them, when they have been taken up by the Government and have become bullion, should be coined into other dollars in addition to the $2,000,000 of bullion per month required by law to be coined into standard dollars. Still I would prefer that this should be done. These coins are already in quasi-circulation, and their recoinage simply changes their form into that of the standard dollar, at a saving to the Government of 7½ grains on each piece, which will more than cover the cost of recoinage.

This leaves the coinage of the standard dollar, under the act of February 28, 1878, to stand by itself, as I think it should. The recoinage of the trade-dollar would then be a mere change of the form and weight of an existing coin, and the coinage of the standard dollar would go on, as now, without disturbance. The effect, however, on the currency of the country either way will be very slight, because with a total currency of from twelve to fourteen hundred millions in actual circulation, the addition of six, seven, or eight millions more is not of so much consequence. However, to make the trade-dollar when redeemed a part of the bullion required, under existing law, to be coined each month, by lessening by so much the demand for silver bullion, will tend to lower the price of bullion. Nevertheless, I repeat I shall vote for the bill with the fourth section in it, because the main object I have in view is to retire the trade-dollar.

With regard to the amendment proposed by the gentleman from Texas [Mr. MILLS], I agree with him that it would be better to have a greater number of half-dollar pieces coined, but before doing that, I think we should increase the weight of the half-dollar to two hundred and six and one-quarter grains, making it contain just half the quantity of silver the dollar piece contains.

Mr. CHACE. That is what the gentleman proposes to do.

Mr. WARNER, of Ohio. That being done, I see no reason why the half-dollar should not be made a legal tender equally with the standard dollar. The half-dollar piece is a more convenient coin for small transactions than the dollar piece, and would largely take its place if made full tender and abundantly coined. But I think certificates should be issued only on full dollars. But the reason I do not think it advisable to include such a provision in this bill is, that it is a matter which should go to the Committee on Coinage and be considered there in connection with a further revision of our coins. I think the dollar gold piece, the 3-cent nickel piece, and perhaps some other pieces ought to be dropped. At any rate, when such a change is made in the half-dollar piece as is proposed by the amendment offered, provision should at the same time be made for recoining all outstanding half-dollar pieces, so as not to have two coins of the same nominal value, but of different weights, in circulation at the same time.

On the general question I can only touch on a few of the more important points raised in this discussion. While I do not at this time advocate the free coinage of silver without international concurrence on some agreed ratio, I do agree with the gentleman from Missouri [Mr. BLAND] that it is only by unrestricted coinage that natural regulation of a currency is possible. Then the mines regulate its volume and not legislation. But passing from this point, I wish first to answer the gentleman from New York [Mr. HEWITT] and the gentleman from Michigan [Mr. LACEY] on the point they have made, that under free coinage in this country all the coined silver of France and other European countries would come here; come, as the gentleman from New York says, "As quick as steamships could bring it."

It is the more important to show the fallacy of this notion because it seems to be so commonly entertained. But it is a fallacy, nevertheless, as I will show you. Suppose a banker in Paris, seeing the mints in Philadelphia and San Francisco open to free coinage, and entertaining the same notion as the gentleman from New York that there would be 15 per cent. profit in changing silver francs into dollars, should send a million dollars in silver franc pieces, or say five million silver francs, to the mint at Philadelphia, what could he get in return for them? The ratio between coined silver and gold in France is 15½ to 1. Ours is 16 to 1.

A million dollars in silver francs—that is, what in France is equivalent to a million dollars and what it would cost a million dollars in gold to get—weigh 67,825 troy pounds. But a million dollars on our ratio of 16 to 1 weigh 72,000 pounds, or over two tons more than a million dollars in silver francs. The French banker, then, would get just as many dollars as his 67,825 pounds of silver would coin into, or $969,700, leaving off fractions, and no more. In other words, in changing his silver from francs to dollars he has lost 12.6 grains on every dollar. By this time our banker has probably taken a second thought and asked himself how he is going to get back the difference between the dollars he now holds and the francs he has parted with. Suppose the most favorable conditions possible to exist—conditions that would almost certainly not exist; suppose that, having got his silver coined into new dollar pieces, he could exchange them without leaving the mint for $969,700 in gold—and certainly he could not get any more—how is he to get back the $30,300 which he has lost? You say he would take it back to Paris. What! and repeat the operation? Not many times, surely.

Let us see. Suppose he does return to Paris with his $969,700 in gold and tries to buy silver francs with it. How many can he buy? Why, $969,700 in francs and not a franc more; or at 5 francs to the dollar he would get 4,848,500 francs for the 5,000,000 francs he started out with. Now, that is just what that operation would come to. He would have lost 151,500 francs, or $30,300, besides the cost of sending the silver here

and taking the gold back. If instead of exchanging his silver dollars for gold he had bought commodities, flour for instance, he could have done no better. He could buy no more flour for his new silver coins than for gold. No, you can not figure out a profit in any such operation. And if the gentleman from New York and the gentleman from Michigan, acting under the belief they have expressed here, should try such a speculation they would not try it more than once. They would find that with a million in gold dollars they could get but a million in silver francs, or 5,000,000 francs, and we have seen what they could do with them.

Therefore, Mr. Speaker, under free coinage not a lira, not a rupee, not a silver florin, not a coined shilling, would come to the United States to be recoined. Gresham's law is as true now as when first announced, and gold and not overrated silver leaves and would continue to leave European countries in settlement of adverse balances. And here is where our friends go astray; they do not distinguish between silver in the form of coin, upheld by legal tender and limited coinage, and silver bullion. Coined silver in France is more than bullion; it is money. My friend from Michigan before me [Mr. HORR] will say, I know, that that has nothing to do with the value. But what is the fact? The stamp of a government can not create value, it is said. But the stamp of the government, with legal tender behind it, may give to or extend, the use of a metal, and to the extent the stamp and legal tender give use to silver to that extent they give it value. To the extent these conditions add to its use, I say, to that extent they add to its value; and in this way the value of either metal may be, and often is, very greatly increased.

Why, the fact is that the great mass of silver now in use as money—all the coined silver in Europe—is kept at a parity with gold perforce of limited coinage and legal tender, and not by its bullion value. France has $600,000,000 of silver kept at par with gold in this way. Germany still keeps $220,000,000 of silver—quite as much as we have. Austria and Spain each has $75,000,000; Italy, $60,000,000; and altogether Europe has not less than $1,300,000,000 of coined silver, on the ratio of 15½ to 1, and all kept, as I have said, at par with gold by legal tender and limited coinage. So, after all the fuss that is made about it, you see we put more silver in our dollars than any country in Europe puts into its silver coins. Why does not silver drive gold out of Europe? There is far more silver relatively to gold now in circulation in Europe than in this country. Why the alarm about silver here then?

Mr. CHACE. Suppose a Frenchman should buy merchandise in India, would he not remit silver to India to pay for it?

Mr. WARNER, of Ohio. That would depend upon whether it was more profitable to remit silver or to remit merchandise. He would not, however, remit silver coins. He might buy bullion and ship that. Which would be most profitable for him, silver bullion or merchandise, would depend upon circumstances.

Mr. BRUMM. Even if he should remit silver he would ship bullion and not coined silver.

Mr. WARNER, of Ohio. Yes, he would ship bullion rather than coined silver, notwithstanding the fact that coinage is free in India on the ratio of 15½ to 1, because gold is at a premium in India over rupees, but not at a premium over francs in France. The French merchant, therefore, had better ship silver bullion or merchandise or even gold rather than silver coins. For a thousand francs in gold at Paris will exchange for only fifteen and one-half times their weight in silver. But gold being at a premium in India, a thousand francs in gold, or a thousand ounces of gold, will exchange there for more than fifteen and one-half times their weight in silver bullion, or silver rupees. But the fact I wish to impress upon the House is the all-important one that coined silver on the ratio of 15½ to 1 will never leave the countries where it is legal tender to come here where the ratio is 16 to 1.

Never will the silver coins of countries holding to the ratio of 15½ to 1 come here till such coins are first demonetized in the countries in which they have been coined. This fact I hope I have made clear. But of course if France, for instance, should do as Germany did in 1873 and demonetize her $600,000,000 of coined silver, then the case would be different. Hence the importance of international agreement on this question so vital to the whole world; for we see how the action of one country may affect the currency of another, or of all others. Indeed, should France take such a step as I have suggested and demonetize her silver and call for a redistribution of gold, it would not only convulse France but disturb all Europe and prostrate the commerce of the whole world.

The next proposition to which I wish to reply is the claim so persistently made by those who insist on the suspension of silver coinage, or on its abandonment as money altogether, that the change in the relative value of silver to gold is due solely to the increased production of silver in the last few years.

Here again, Mr. Speaker, it is important first to ascertain the facts and then to know that our conclusions are right. What are the elements which determine value in money? What is it that determines the value of gold and silver metal?

A prevalent error, and one which many gentlemen here seem to labor under, is that gold is a metal which possesses in itself a certain fixed or "intrinsic" value, and for that reason is taken as a measure of the value of other things. This is the common idea about gold, but it is a mistaken one. Until very recently 75 per cent. of the gold in the whole world and 75 per cent. of the entire production of the gold mines of the world was devoted to monetary use, and only about 25 per cent. to use in the arts and as ornaments. Now, there is but so much gold in the world, and the mines put out only so much annually—that is, the stock in hand amounts to four or five thousand millions, or by weight about 8,000 tons, with an annual production of $100,000,000.

Here, then, are the elements of the problem: 8,000 tons in the hands of man, and two hundred tons, or a hundred millions, produced annually; 75 per cent. of the demand for this has heretofore, I say, grown out of its use as money, and 25 per cent. from its use in the arts and as ornaments. Hence 75 per cent. of the value of gold has come from its monetary use and but 25 per cent. from its use in the arts. Then, the quantity remaining the same, any conditions that affect the use of this metal, must, and does, affect its value as compared with everything else. Any conditions which alter the ratio between quantity, on the one hand, and use or demand on the other—not use as money alone, nor use in the arts alone, but all uses which give rise to demand—affect value. That is the law of value of everything, and gold is no exception. It is equally a mistake to attribute the value of gold to the cost of producing the annual supply. It is the whole mass we are dealing with, not merely the $100,000,000 produced last year; and only to the extent that cost of production affects the relation of all the gold in existence to the demand for it all does it affect its value.

Then, let us next inquire whether anything has taken place, or is now transpiring, to affect the value of gold.

The Director of the Mint tells us that the use of gold in the arts, in dentistry, and as ornaments is rapidly increasing. We know, also, that some countries which formerly used silver exclusively as money now use gold. We know, in short, that the monetary use of gold has been materially extended in many directions in the last fifteen years. At the same time we know that production has fallen off. What are the consequences flowing from these disturbing causes? Just what must occur—a steady rise in the value of gold. The same rule applies to silver.

The estimate of Humboldt, Jacobs, and others was that about two-thirds of the silver in the world, and in about the same proportion the annual production, went to monetary use, and about one-third into the arts; consequently two-thirds of the value of silver arose out of its use as money, and one-third out of its use in the arts. Any condition that has restricted or now restricts the monetary use of silver, or its use in the arts, must of course affect the value of silver. So, too, of course any conditions which affect the quantity, not the annual supply merely, so as to change the ratio of the whole quantity to the demand for it, whether the demand arises from the arts or for money, must affect its value.

Until the demonetization of silver in Germany and in this country, and the restriction of coinage in Europe generally, a condition existed which equalized the demand for gold and silver for money. That condition was this: In all the principal countries in Europe, except England, and in England down to 1816, it was the right of everybody having money to pay to elect to pay it in either metal. The metals themselves were held as money metals; coinage was unlimited, and anybody could make payment of any sum in either metal. That is the force of legal tender. But if the one to whom money is paid has the right to elect what kind of money he will receive—a right never set up till of late—then there would be no use in having legal tender. The dearest money would always be exacted, and there would soon be but one kind of money, and that the dearest. But by the power of legal tender the two metals were held together for long periods as effectively as if they had been melted together and coined as one metal.

If the value of one tended to fall, it being legal tender, it was taken up and its use extended, and thus the two metals, not as separate standards, but the two constituting one standard, made up the volume of money. The production of each varied relatively to the other, but the production of the two taken together has always been steadier than the production of either one alone.

During the first half of the present century the production of silver relatively to gold was nearly three times that of gold. In 1810 the production of silver relatively to gold was eleven times as great as in 1860, and yet during all these changes in the relative production of the two metals there was no change in their relative values. For two hundred years prior to 1871 there was no variation in the London price of silver, except such slight variations from 60½ pence per ounce as was due to varying mint charges and the course of exchange. Now the silver production is a trifle more than the production of gold, and that fact is seized upon as a sufficient explanation of the depreciation of silver throughout the world. Is there no other sufficient cause? Is there no other cause consistent with the true theory of value? Let us see.

In 1870 and 1871 a great war was waged in Europe. Paper money was issued in large quantities. Gold went from France to other European states, but nevertheless the ratio between gold and silver did not change. Germany compelled the payment by France of the unprecedented sum of $1,000,000,000. Upon this Germany stopped the coinage of silver and began the coinage of gold. In 1873 Germany demonetized a considerable part of her coined silver. France and the states

of the Latin Union, soon after, first restricted and then stopped the coinage of silver. Here, then, was the situation: In 1871 the price of silver in London was 60½ pence per ounce. Germany stopped the coinage of silver, and then began to sell silver and buy gold. Between this time and 1876 Germany put into the market $200,000,000 of silver and bought $350,000,000 of gold—that is, Germany in these few years made a new market for $350,000,000 of gold, and not only shut off a former market for silver but turned into other markets $200,000,000 of silver, the other markets at the same time being restricted by the action of France and the states of the Latin Union in closing mints which had been before open to all the world on the ratio of 15½ to 1. The United States had, in the mean time, demonetized silver. Silver fell from 60½ pence per ounce in 1871 to 47 pence per ounce in 1876; and yet with all these changes in the monetary demand for silver we are told that the fall in silver was due entirely to increased production, while the actual increase in production was only from $60,000,000 in 1871 to $80,000,000 in 1876! Is it possible that the market for silver could be restricted to one-half what it had been, as I have shown, and then $200,000,000 of additional silver be thrown onto the market so restricted, and on the other hand a new demand be made for $350,000,000 of gold, without affecting the relative value of the two metals? Impossible. Here in these very conditions we have the whole cause of the fall of silver. The effect of the slight increase in production has been almost inappreciable.

On this point it is pertinent to quote the opinions of some high authorities. The select committee appointed by Parliament in 1876 to inquire into the cause of the depreciation of silver says:

> And the conclusion seems justified that a review of the relations of metals in times past shows that the fall in the price of silver is not due to any excessive production as compared with gold. The fact is that, as was correctly pointed out by Mr. Giffen in his evidence, the changes have been in the uses of the metals.

Mr. Ernest Seyd, in a very able inquiry on this subject, published in 1879, says:

> In truth, the real cause of the fall of the price in silver is the enforced cessation of the demand resulting from its demonetization by mistaken legislation.

Again, the same author says:

> The greatest variations in the relative production between gold and silver have taken place within the last two centuries without causing any difference in the relative value between the two metals.

Indeed, I think writers on money generally agree in the opinions expressed by the authorities quoted.

The effect of the increase in the production of either of the metals, relatively to the other, on their value has never been in proportion to such increase; and with free coinage as it existed for a long time prior to 1873 it had no effect on their relative value at all; and at any time the annual production of either metal goes into the common mass, and affects the relative value of each only as it affects the relation of the total quantity of each. Laveleye illustrates this very handsomely in this way:

> This immense stock of the precious metals lessens the variations in the value which might result from the variations in the annual supply, just as the level of a great lake is little affected by any changes in the discharge of the rivers which flow into it.

So annual production, at most, affects the relative value of the metals only as it affects the proportion between the whole mass of each in existence, at any given time, and the demand for each. Hence I think it proven that the change in the relative value of silver and gold which has taken place in the last twelve years has been due almost entirely to the restriction of the monetary use of the one, and the increase in the use of the other, both as money and in the arts, and this is due almost exclusively to legislation. Now, what is the remedy?

Mr. HORR. We remonetized silver upon the theory that the remonetization was going to increase the value of the metal. Now will the gentleman explain how it is that silver has been going down ever since we remonetized it?

Mr. WARNER. I will answer the gentleman's question with great pleasure. Silver has not been going down ever since we began coining $2,000,000 per month. Silver was as low as 46¾ pence per ounce in London in 1876. The average London price last year was 51.23 pence, as given by the Director of the Mint. Now, what are the facts of the case? Silver did decline rapidly from 60½ pence per ounce in London in 1871 to 50 pence, and even to 47 pence, in 1876 and 1879, and unquestionably it would have fallen lower but for the market we made for it here when we began coining two million dollars' worth of bullion a month.

This is the problem: a hundred millions of silver are produced annually; our mints take $28,000,000 of it; the rest goes to India or China or South America, or is used in the arts. If we took none the quantity thrown upon other markets would be so much greater, would it not? And of course the price would go down. If, therefore, our coining two million dollars' worth of bullion a month has not had the effect of bringing silver to a par with gold, it certainly has upheld it and kept it from going as low as it otherwise would have gone. For no one would claim that a market for $28,000,000 a year has had no effect on price. What the effect of coining $50,000,000 a year instead of $28,000,000 would be can not be stated exactly. But it is as certain as the multiplication-table that if there is a production of $100,000,000 of silver a year, and $30,000,000 of that is required in the arts, and that India would take $25,000,000 for money at the ratio of her coinage to gold, and China, South America, and other countries would consume for currency $10,000,000 more, and the United States should coin $50,000,000, there would be a scarcity of silver, and that under these influences silver would approximate if not reach the value of gold.

But I am not advocating even an increase of coinage for this country now, for before taking any important step we ought to know that Europe would at least maintain the *status quo* of silver, and that the mints of British India would be kept open; so that in any view of the case international interests are involved. I do not say either that the time will not come when we should reconsider the question of silver coinage here. I can see how such reconsideration might be forced upon us by the action of other countries. If the states of the Latin Union, for instance, should determine to reduce the proportion of silver in their currency by selling off a part, which they are not likely to do, or if England should determine to close the mints of India, under such circumstances it might become necessary for us to change our policy. The Latin Union compact, however, holds till the close of 1885, and there is no occasion now for alarm or for lessening by a dollar the present rate of coinage; on the other hand, there are many reasons why the coinage should be continued.

In the first place, our paper currency is in an unsettled condition. The debt is being paid off and bonds called in. Bank circulation is undergoing diminution. It is possible that the contraction of that part of the paper circulation may be considerable at no distant day. In that event silver and silver certificates would be the only substitute, without which there might be a contraction which would seriously affect the business interests of the country. Stability of value, which is only secured by stability of volume, is what the business interests of the country demand. We want neither contraction nor inflation. Stability is the prime requisite of money.

But I must proceed at once to the great question: Shall the coinage of silver be stopped or be further restricted? In this question the whole country is interested. It concerns not the banker only, but the merchant, the producer, the laborer, everybody, and merits the fullest consideration and the most careful action. It is well known that the large cities, especially the Eastern cities, are pressing for a suspension of silver coinage, and generally, I believe, they are opposed to silver altogether. These cities, I say, are calling on us to stop the coinage of silver. They say its continuance will drive out gold. But at the same time in the other end of the Capitol they are asking that steps be taken to prevent the contraction of the national-bank currency, or business, they tell us, will suffer.

Now, I say to these people—bankers, merchants, or whoever they may be—that they must take one horn or the other of this dilemma. A million dollars in bank notes has the same effect precisely upon the gold currency of the country as a million dollars in silver certificates, and will drive out gold just as effectually. I am not talking now against bank notes or paper currency. But I do say, and challenge refutation, that $200,000,000 in bank notes, or any other form of paper currency, will displace or drive out just as much gold, or keep just as much from coming in, as $200,000,000 in silver or silver certificates. Will anybody deny that? No; it can not be denied. It is too patent to admit of denial.

But let us examine the question a little further. Our currency now consists of $700,000,000 of paper, $165,000,000 of full-tender silver—four times as much paper as silver—and five to six hundred millions of gold; or if we take out permanent reserves, twelve or thirteen hundred million dollars in all, as the effective money volume, or that which operates on prices. This volume is just sufficient, and no more than sufficient, to maintain prices here at the level of prices abroad; that is, on this volume an equilibrium of international prices is maintained. Out of it of course a little gold at one season may shift to one side and at another season shift back to the other—although usually the part that goes out or comes in is taken from reserves and not from circulation. Now, grant that there shall be no increase of the paper currency, and how will $165,000,000 of silver expel $600,000,000 of gold? Or how will the coinage of $2,000,000 a month expel it? It would do so in time if our population were stationary, but it would take many years even then.

But gentlemen forget one important factor in the problem, and that is that our population is not stationary. On the contrary, we are adding to it every year a number almost equal to the entire population of a State like Indiana—nearly 2,000,000 a year. In the year 1900, only sixteen years off, our population will be 83,000,000—more than the population of England and France together; and wealth increases faster than population. The 2,000,000 added annually to our population require as much bread and meat and clothing, and do as much work, on the average, as any other 2,000,000; and will they not call for as much money? Certainly they will. What increase, then, in the money volume will this increase of population and wealth require in order to maintain the present relation of volume to population? And the only way possible to preserve stability of value is to keep this ratio constant. Let it be repeated and emphasized that there is one way and one way only by which the stability of money can be maintained, and

that is by maintaining the stability of volume. No other way is possible.

Now, what will these conditions require? Our population is now over 56,000,000, and if we take the present volume of actual circulation at $1,300,000,000 we have in round numbers $23 per capita. We are coining silver at the rate of about $28,000,000 a year. But this is only $14 per capita for an increase of two millions of population. By the year 1890 an addition of at least $50,000,000 will be required in a single year to meet the demands growing out of increased population and increased wealth. Indeed, the report of the Director of the Mint, which I hold in my hand, shows an actual increase of our currency last year of $40,000,000, which just about satisfied the demand of the added population. Now what is the production of our gold mines? Thirty-two millions a year. Mr. Burchard tells us $12,000,000 of this is consumed in the arts at home, leaving but $20,000,000 to be coined into money. We will require, then, gentlemen—unquestionably we will require, if our prosperity continues—in addition to the coinage of $28,000,000 of silver a year, the coinage of all the gold that our mines produce, save what will be consumed at home in the arts.

So, Mr. Speaker, instead of driving out gold, the coinage of only $28,000,000 a year will not supply the demand growing out of the increase of population and wealth, and more currency of some kind will be required to keep up the ratio of money to population and wealth. And if the paper part be not increased then the gold part will increase naturally itself. And is not this just what has taken place since 1878? Was it not said in 1878 that the coinage of silver would drive out gold, or keep it out? But what are the facts? The volume of gold has increased from less than $250,000,000, all told, in 1878, to $600,000,000, according to the Director of the Mint, and that under the continued coinage of silver.

But this question is of such importance that I will give another illustration. France has $540,000,000 of full-tender silver, coined on the ratio of 15½ to 1. She has a population of 38,000,000. This gives her $14 per capita in silver. If we go on coining silver at the rate it is now being coined until the year 1900 we will then have about as much coined silver as France now has, or some less than $600,000,000. Our population will then be from eighty-two to eighty-three millions. That will give us about $7 per capita of silver, or half what France now has.

I give this to show that there are no rational grounds for alarm over the continued coinage of silver. On the other hand, should coinage be stopped and at the same time the paper currency be contracted by the withdrawal of national-bank notes, the country may prepare for serious consequences; for there is nothing that so quickly paralyzes the industries of a country as a contraction of volume and a consequent appreciation of the value of money. All your great industries would feel it; your commerce would feel it; labor would feel it; everything would feel it. No greater mischief can be done; no greater wrong can be inflicted by a government upon its people than to alter the value of their money. And whatever contracts or expands unnaturally the volume of money does alter the value of every unit of the volume.

Hence, where two metals are in use as money, or where two or more kinds of money are in use, to take away or abridge one affects the value of what remains. If silver is taken out of the stock of solid money now existing and only gold left, the value of the gold itself will be increased. Nothing can be plainer than this, and hence to abandon silver is to change the standard of money. If that be not so, if to take one metal away does not affect the value of the other, then the addition of a third metal to the stock of money would not affect the value of the two now in use. We often hear it said that the value of money does not depend upon its quantity. If it does not, then why fear the continued coinage of silver, or its unlimited coinage? If to lessen the volume of money does not increase its unit value and bring on lower prices, how would an increase of the volume diminish the value of our money and raise prices?

But such inconsistencies are heard every day. We have been told time and again in this debate that if we continue to absorb silver into our currency we will reduce its value. But what will be the effect of shutting silver out? From the earliest accounts of the use of money through all the course of civilization the mines of both gold and silver have contributed, without limit, to the supply of money, and the world has never suffered from oversupply; but commerce and trade have more than once felt the withering effect of a dearth of money. What can now be the purpose of restricting metallic money to the production of the gold mines alone? Is it an intelligent purpose and that for the world's good? Who asks it? Only those whose interests lie in having money dearer; the holders of the vast debts of the world; only those who have fixed incomes, are asking it. It is not to the interest of any other class. It is not the interest of the producing class, the trading class; it is not the interest of the vast property-holding class. It is the interest of the debt-receiving class alone. But justice to all demands that the measure of debts and property, labor and living, shall be kept as nearly invariable as nature, law, and science combined can make it.

Can any one in his right mind claim that this is all secured in a gold standard? What do they mean by a gold standard? There is not a country on the face of the earth that has a purely gold standard. Our currency now consists of $700,000,000 of paper, $165,000,000 of full-tender silver, and $600,000,000 of gold. What, then, is the standard? It is this money volume of about $1,450,000,000, or whatever the real effective amount may be. The gold is diluted, so to speak, by about $700,000,000 of paper and $200,000,000 of silver, including subsidiary coin. Is not that it? Certainly it is. Take away the paper and the silver, and then we would have a pure gold valuation. Then the real measure of value would be gold. But as the total volume would be not much more than one-third the present volume, $1 would represent, or stand for, three times as much property as now. Would anybody claim that a dollar or unit in a volume of $600,000,000 in the same country, with the same population and wealth, would have no more value than a dollar in a volume of $1,500,000,000? Nobody in his right mind could claim such a thing.

In England gold is diluted with $100,000,000 of silver, $225,000,000 of paper; in France by $550,000,000 of silver and $600,000,000 of paper; in Germany by $225,000,000 of paper and $220,000,000 of silver. If the paper and the silver in all these countries were removed, then you would have a purely gold standard for these countries. Would the value of gold remain what it now is? Of paper and silver together there is one-half more than there is of gold, more than half as much silver alone as gold, and more paper than either gold or silver. Only by removing the paper and the silver is it possible to have an unmodified gold standard. Liquor four parts water is not pure alcohol. Money two parts paper and silver is not pure gold. Is it not plain enough that the money of these countries consists of constituent parts, and that an augmentation or reduction of any of the constituent parts must affect the whole? And the fact that to take away or restrict one metal increases the value of the other can not be too strongly emphasized. To give up silver is to increase the value of gold; that is the purpose, so be not blinded. To abandon silver in one country, moreover, affects gold not only in that country, but the world over.

To illustrate this, take the currency of the United States, England and France as just given, together. The several volumes of the different countries are each what is required, under the conditions that exist in each of the countries named, to maintain the equilibrium of international prices. While that condition exists suppose France under the stress of war should issue $500,000,000 of paper and make it legal tender. This would expel $500,000,000 of gold, less France's proportion of this new accession of money. Where would this gold go? It would go to other gold currency countries to augment the volume of each, and the effect on the stock of money would be the same as the effect of a production of so much new gold. The fact that the action of one country may affect the money of another emphasizes the importance of a consensus of nations in the matter of money. For since one country can not change its own money, if it be comprised in whole or in part of money that enters into international circulation, without affecting the others, it becomes at once a question of international concern.

My friend from Pennsylvania [Mr. KELLEY] says he wants to restrict the coinage of silver in the interest of bimetallism. He wants "to force arrogant England" to join in a conference to save her silver in India. But England has another remedy; she can close the mints of India and uphold the value of the rupee in the same way that the silver money in Europe is upheld. And the holders of $7,000,000,000 of interest-bearing capital in England will force England to adopt that remedy and stop the coinage of rupees and maintain their value as France maintains the value of francs, and as silver dollars are maintained in this country—by the restriction of coinage.

I say the interest that controls money legislation in England, and has controlled it for a hundred years, is the moneyed interest. The home debt of England, all held at home, is $3,782,000,000, the annual interest on which is $150,000,000. Besides this, Englishmen hold colonial debts of $3,100,000,000, yielding an annual interest of $153,000,000. The debts of other countries are also held there, making a total of more than $7,000,000,000, and yielding an income of more than $300,000,000 annually. The receivers of this income make the laws. They understand perfectly well what conditions tend to increase the worth of money. They understand, too, how to guard India against cheap silver and uphold the value of the rupee. If I could believe with the gentleman from Pennsylvania that to discontinue the coinage of silver here would have the effect upon England which he thinks it would have, I would be with him; because I recognize here a practical question. We must deal with it as statesmen. International concurrence is essential to a full solution of the silver question. But believing, as I do, that the result would be to move England to close the mints of Bombay and Calcutta, in order to maintain the value of the rupee, as silver coins in Europe and in this country are upheld, and that in that case silver would fall not to 48 pence, as in 1873, or 47 in 1876, but possibly to 40, 35, or 30 pence, I must dissent from his views. Why, I ask again, this demand to shut off the silver mines and limit the supply of metallic money to the gold mines alone? Is it not a fact that the supply of gold is diminishing from year to year? Is it not certain to diminish from century to century? Geologists are in perfect accord on this. The supply of gold is certain to be a waning supply. What, on the other hand, are the conditions as to its use? Population and wealth increasing, more extended commerce demanding more money, and a larger use of gold in the arts.

Mr. Burchard, the Director of the Mint, tells us that not 25 per cent.,

as formerly, but 50 if not 75 per cent. of the gold production of the world to-day goes into use in the arts and as ornaments. Fifty millions of gold a year, at most, left for monetary supply, and to make up for abrasion and loss; fifty millions of gold for abrasion and supply, and that diminishing from year to year, and half the world crazy to shut off silver entirely! Why, at the rate of increase in the use of gold in the arts that has been going on for the last decade it will not be ten years more till every dollar of the world's production of gold will be used in the arts and for dentistry, leaving not an ounce for new coins. An allowance of 6 cents for each inhabitant of the globe for filling teeth would take every ounce of gold now produced for dentistry alone. In the face, then, of a diminishing supply, and the rapidly increasing demand for gold in the arts, for dentistry, &c., is it not astounding that such a clamor should be raised to shut out silver?

What fools these mortals be!

If it were not for the world's vast indebtedness would such a demand be made? Can the motive, then, to reduce the solid money of the world to one metal be a righteous one? To do it, remember, is to change the relation of debt to property throughout the world and to increase the debt burden of every people on whom debts rest. It is to lay on labor greater toil for lesser rewards. I think I have shown that to keep our volume of money stable from forty to fifty millions must be added each year to meet the demands of increased population and wealth, and I have shown that twenty-eight millions of silver or silver certificates will not alone be sufficient. Gold or paper must be added or the volume relatively to our population will shrink. There is no probability that the paper part of the volume will be increased immediately. On the other hand, the question of the national-bank currency remains unsettled, and some contraction from this side is almost certain.

In view of these facts, how absurd to say that the coinage of $28,000,000 of silver or the issue of $28,000,000 of silver certificates will drive out gold without an increase of paper! But silver, we are told, will not go into circulation. In Heaven's name, then, how will it drive out gold? One currency can drive out another only by taking its place in circulation and filling to overflowing the channels of trade. Yet silver will not go into circulation, but will drive out gold, is paradoxically asserted in the same breath. But why will not silver, or its representative certificates, go into circulation? Is Gresham's law suspended in this country? Silver is legal tender, and that is enough to insure its place in our money system.

Another strange delusion has taken possession of the country in connection with the idea that silver was about to expel all of our gold. Just how $165,000,000 of silver was going to expel $600,000,000 of gold, nobody has told us, but if one believed the admonitions of Wall street and the press, gold nevertheless was on the eve of taking wings and departing forever. At least gold was going to a premium immediately. Now, a half per cent. premium would undoubtedly take gold out of circulation at once; let us see how that would affect things. It takes now $700,000,000 of paper, $165,000,000 of full-tender silver, and $600,000,000 of gold, or, leaving out reserves, say $650,000,000 of paper, $150,000,000 of silver, and $400,000,000 of gold—$1,200,000,000 in all of effective currency—to maintain prices in this country at a level of prices in other countries. Now, imagine the $400,000,000 of gold taken suddenly out of this volume by a premium, what would be the result? The active money volume would then stand at $800,000,000 instead of $1,200,000,000. Under such conditions prices would collapse, and gold would come in to restore the equilibrium. No; it is impossible for $150,000,000 of silver to drive out $400,000,000 of gold—if that be the amount in circulation—and it is equally impossible for gold to stand at a premium as long as any remains in circulation.

The gold can all be expelled only by adding at once $400,000,000—or an amount equal to the gold in circulation—more silver or paper to our present currency, and not till all the gold, or substantially all of it, is driven from circulation can gold stand at a premium. I do not, however, wish to be understood as advocating the enforced circulation of the coin itself. There is in my opinion nothing gained in that. If people prefer paper representatives in the form of certificates, why should they not have them? There is no good reason for compelling those who use money in large amounts to carry or handle the metal itself. Let every one choose for himself between coined dollars and paper representatives, and for one I am opposed to retiring the small notes. They are convenient, and the people are accustomed to them, and there is nothing in the world gained by compelling all payments of small sums to be made in coined money. Paper saves abrasion of the coin and is light and convenient.

It is a shallow view of the money question, it seems to me, to compel the handling of the metal itself when people prefer something else. Let that be a matter of choice. The great question is to maintain the stability of the whole mass. By doing that you secure the stability of the value of each unit. How the whole shall be subdivided and how it shall be represented is of minor importance and should be left entirely to the choice of those who use it. For this reason I should be quite willing to let certificates issue on the bullion, at the same ratio and in the same way and in the same amount only, as now issued on coined silver, and let the silver be actually coined only when called for. For it makes not the least difference whether the metal circulates by certificates or the metal itself is actually handled, only it be so that when the certificates are out the metal is in, and when the certificates are in the metal is out.

And it is an entire misapprehension of the true situation to suppose that because silver is locked up in the Treasury vaults it is no part of the money of the country, for to the extent that certificates are out silver is doing money's work the same as if the coin itself were circulating, and it gives a sense of security to know that solid money is behind this form of paper. It is very different from the credit currency of private issuers. Certificates representing the metals not only have a solid basis, but they are titles to the metal and limited by the metal itself, and in that lies their greater stability; and I repeat that what bimetallists plead for is stability in the value of money, and that can only be secured by stability of volume.

Tax Reform—Pledges to the People Must be Redeemed.

SPEECH

OF

HON. SAMUEL W. MOULTON,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 27, 1884,

On the bill (H. R. 5265) to extend the time for the payment of the tax on distilled spirits now in warehouse.

Mr. MOULTON said:

Mr. SPEAKER: If the Democratic party fail to make a reasonable reduction in the customs duties, and leave the protected industries of the country where they now are, and no reform should be attempted in the interest of the whole country, then I can see no special reason, so far as the interests of the people are concerned, why the Democratic party should be in power rather than the Republican. If it had been understood by the people at the last election that the Democratic party were not then in favor of immediate reform and a reduction of the revenue to the real necessities of the Government, the large majority we have here would have been relegated to private life. And I will add that if no attempt in good faith is to be made to reduce the outrageous war tariff that now oppresses the whole country, other men will fill the places of the majority on this floor.

It is surprising to find men here, elected as Democrats, claiming that no reform or reduction in the tariff is necessary, and if it was this is not the time to attempt it. They say that any agitation of the tariff question will frighten and disturb the business interests of the country, and that financial disaster and panic among the protected industries would be the result; that notwithstanding millions of money is unjustly taken from the pockets of the people and accumulated in the Treasury, no remedy for the great wrong is to be applied, and this vicious system is to go on without day and without hinderance. This has been the argument and fraudulent pretense of the Republican party and protected classes for the past twenty years. It would seem that the Democrats favoring protection have gone over entirely on this question to the protectionists, and they are making common cause with them to defeat any reduction in customs duties. Although the revenues of the country give the Government nearly $100,000,000 yearly more than is required for the ordinary expenditures of the Government, yet the protectionist Democrats and Republicans say this is not the time to reform and reduce the tariff; and, what is remarkable, no time is mentioned by these protectionists when this important question of a reduction of taxes is to be considered. Nothing can be clearer than that the protectionists upon this floor and in the lobbies of this House intend by every possible means to defeat any action tending to reduce the tariff. The clamor of the protected classes is to be respected against the cry of the great mass of the people for relief from burdensome and unnecessary taxation.

The Democratic doctrine upon the subject of the tariff is that no more revenue should be collected from the people than is necessary for the expenditures of the Government economically administered; or, in other words, customs duties should be for revenue only. This doctrine has been announced in the conventions of the party and substantially adhered to from the beginning of the Government to the present time. If there is any principle that can be said to be Democratic doctrine and running through all the years of the Government, it is that a tariff should be for revenue only. I know that incidental protection is sometimes talked about, but protection for the sake of protection and without reference to revenue has always been repudiated by the Democratic party as a pernicious doctrine and without sanction in the Constitution. I maintain that the tariff is a party question, and always has been so considered and acted upon by the Democratic party.

As showing the doctrine of the Democratic party upon the question

of the tariff and revenue, I will read some of the resolutions adopted by the party, beginning with the year 1800:

The first Democratic platform was adopted by the party, then called the "Republican," as distinguished from the Federalist party, in a Congressional caucus at Philadelphia in 1800, the year in which Jefferson was first elected to the Presidency. It demands:

6. Free commerce with all nations, political connection with none, and little or no diplomatic establishments.

The next Democratic platform, known as the "Locofoco" platform of 1836, was adopted by the first national convention for nominating candidates for the Presidency. It proclaims:

Hostility to any and all monopolies by legislation, because they are violations of the equal rights of the people.

The true foundation of republican government is the equal rights of every citizen in his person and property and in its management.

The next Democratic platform was that of 1840, adopted by the Presidential convention at Baltimore, which contains these resolutions:

Resolved, That justice and sound policy forbid the Federal Government to foster one branch of industry to the detriment of another, or to cherish the interest of one portion to the injury of another portion of our common country.

5. *Resolved*, That it is the duty of every branch of the Government to enforce and practice the most rigid economy in conducting our public affairs, and that no more revenue ought to be raised than is required to defray the necessary expenses of the Government.

The Democratic convention of 1844 reaffirmed the fourth and fifth resolutions of the convention of 1840.

The Democratic national convention of 1848—

Resolved, That it is the duty of every branch of Government to enforce and practice the most rigid economy in conducting our public affairs, and that no more revenue ought to be raised than is required to defray the necessary expenses of the Government, and for the gradual but certain extinction of the debt created by the prosecution of a just and necessary war; and, that the results of Democratic legislation in this and all other financial measures, upon which issues have been made between the two political parties of the country, have demonstrated to the careful and practical men of all parties their soundness, safety, and utility in all business results.

Resolved, That the fruits of the great political triumph of 1844 have filled the hopes of the Democracy of the Union in the noble impulse given to the cause of free trade by the repeal of the tariff of 1842, and the creation of the more equal, honest, and productive tariff of 1846, and that in our opinion it would be a fatal error to weaken the bands of a political organization by which these great reforms have been achieved, and risk them in the hands of their own adversaries with whatever delusive appeals they may solict our surrender of that vigilance which is the only safeguard of liberty.

The Democratic convention of 1852—

Resolved, That it is the duty of every branch of the Government to enforce and practice the most rigid economy in conducting our public affairs, and that no more revenue ought to be raised than is required to defray the necessary expenses of the Government and for the gradual but certain extinction of the public debt.

Resolved, That in view of the condition of popular institutions in the Old World, a high and sacred duty is devolved with increased responsibility upon the Democracy of this country, as the party of the people, to uphold and maintain the rights of every State, and thereby the union of States, and to sustain and advance among them constitutional liberty by discontinuing legislation for the benefit of the few at the expense of the many.

In 1856 the Democratic national convention—

Resolved, That justice and sound policy forbid the Federal Government to foster one branch of industry to the detriment of another, or to cherish the interest of one portion of our common country.

It also repeated *verbatim* the first resolution quoted above of the convention of 1852, and then it—

Resolved finally, That there are questions connected with the foreign policy of this country which are inferior to no domestic questions whatever. The time has come for the people of the United States to declare themselves in favor of free seas and progressive free trade throughout the world, and, by solemn manifestations, to place their moral influence at the side of their successful example.

In 1860 both the Douglas and Breckinridge platforms reaffirmed the resolutions of 1856, quoted above.

In the year 1864 the continuation of the civil war, which made imprudently high duties necessary to raise sufficient revenue, precluded the necessity of discussing the extraordinary and willingly endured burdens imposed by it on the people of the Northern States, and nothing was said about the tariff.

The Democratic convention of 1868 demanded:

3. Payment of all the public debt of the United States as rapidly as practicable—all money drawn from the people by taxation, except so much as is required for the necessities of the Government, economically administered, being honestly applied to such payment. * * *

6. * * * A tariff for revenue upon foreign imports and such equal taxation under the internal-revenue laws as will afford incidental protection to domestic manufacturers, and as will, without impairing the revenue, impose the least burden upon and best promote and encourage the great industrial interests of the country.

In 1872 the Democratic convention (so called) held at Baltimore, which was in fact a Greeley and not a Democratic convention, did not adopt any Democratic resolutions, but indorsed the platform of the "Liberal Republican" convention held at Cincinnati, which contained the following curious declaration, making the tariff "a local issue:"

We remit the discussion of the subject [protection and free trade] to the people in their Congressional districts and the discussion of Congress thereon, wholly free from executive interference or dictation.

This is the only hiatus in the chain of assertions by the Democratic party of the doctrine of a tariff for revenue only. It resulted in the shameful defeat of a candidate supported by the party in defiance alike of principle and policy.

In 1876 the Democratic convention spoke with no uncertain voice:

We denounce the present tariff, levied upon nearly 4,000 articles, as a masterpiece of injustice, inequality, and false pretense. It yields a dwindling, not a yearly rising revenue. It has impoverished many industries to subsidize a few. It prohibits imports that might purchase the products of American labor. It has degraded American commerce from the first to an inferior rank on the high seas. It has cut down the sales of American manufactures at home and abroad and depleted the returns of American agriculture—an industry followed by half of our people. It costs the people five times more than it produces to the Treasury, obstructs the processes of production and wastes the fruits of labor. It promotes fraud, fosters smuggling, enriches dishonest officials, and bankrupts honest merchants. We demand that all custom-house taxation shall be only for revenue.

In the Democratic platform of 1880 the old doctrine was tersely reproclaimed:

Home rule; honest money, consisting of gold, silver, and paper convertible on demand; the strict maintenance of the public faith, State and national, and a tariff for revenue only.

The doctrine that the citizen should be left free to buy where he can purchase the cheapest and sell where he can command the best price seems to me to be axiomatic. No argument can add to the common sense of the proposition. This doctrine universally obtains among the citizens in their intercourse with each other, and it is the rule in interstate commerce and to the great advantage and benefit of all. Not a man in the whole country would for a moment submit to any limitation of this right of free trade among ourselves and the States.

But the protectionists say that this free-trade doctrine operates well within the limits of a nation, but the moment you extend this doctrine to free trade with other nations then the principle is reversed and it becomes dangerous and ruinous to the nation adopting it. It seems to me that what is economic and prudent in the conduct of every private family can scarce be folly and ruinous in that of a nation. If a foreign country can supply us with a commodity cheaper than we ourselves can make it, we had better buy it of them with some part of the produce of our own industry.

Dr. Adam Smith, in his "Wealth of Nations," illustrates this principle in this way:

The natural advantages which one country has over another in producing particular commodities are sometimes so great that it is acknowledged by all the world to be in vain to struggle with them.

By means of glasses, hot beds, and hot walls, very good grapes can be raised in Scotland and very good wine, too, can be made from them at about thirty times the expense for what at least equally good wine can be brought from foreign countries. Would it be a reasonable law to prohibit all foreign wines merely to protect and encourage the making of claret and burgundy in Scotland?

This example of Adam Smith may be extended to hundreds of cases in our country where high protective taxes are given at the expense of the whole people to maintain certain industries that could not live without this bounty or subsidy. This is an unnatural condition of any industry so protected, and ought not to exist.

It is a remarkable fact that most of these protected industries tend directly to enhance the cost of all the necessaries of life, and I will give some examples illustrating this.

WOOLEN BLANKETS.

Blankets are one of the great necessaries of life, and the people ought to have them at the lowest price, but by the operation of the present tariff the cost is greatly enhanced. Good blankets can be bought in Europe for 30 cents per pound; our tariff on such blankets is 20 cents per pound and 25 per cent. ad valorem. This amounts to near 100 per cent. and this makes the tariff nearly prohibitory. Now, $25,000,000 worth of blankets are purchased and used yearly in this country, and by reason of the tariff the people are forced to buy from the protected manufacturer here and compelled to pay double the price for which they could obtain them but for the tariff. This enhanced price goes into the pockets of the manufacturers, as we are compelled to buy of them.

Take the price of men's clothing in New York and London. For instance, a broadcloth dress suit which costs $50 in New York costs only $22 in London. A heavy business suit which costs $30 in New York costs but $13 in London. A spring serge overcoat which costs $20 in New York costs but $8.50 in London. A winter beaver overcoat which costs $35 in New York costs but $14.50 in London. A silk hat which costs $5 in New York costs but $3 in London. These articles altogether cost in New York $140. In London they cost but $61. The man who buys these clothes, therefore, in New York pays $79 more for them than he could buy them for in London.

Flannels, worn in some form by nearly all of every age, sex, and condition, pay a duty ranging from 88 to 100 per cent., which is prohibitory. So of woolen hats, that are in general use—the tax on them is so high as to prevent their importation; but, as in all such cases, the duty is added to the price of the article, and goes into the coffers of the manufacturer. Odious and cruel, the present tariff is leveled with unerring precision at labor and poverty, and seeks to favor luxury and wealth. Thus the duty on hats is 64 per cent., while the duty on silks is but 60 per cent. Salt, that article of first necessity to man and beast, is taxed 70 per cent., and diamonds only 10 per cent. Trace-chains are taxed 56 per cent., while treble ingrain carpets pay but 50 per cent. Brussels carpets are taxed 68 per cent., and coarse blankets 104 per cent. Fine woolen rugs for the lady's parlor and covers to keep the dust and moisture from the piano are taxed 45 per cent., while flannels to keep the body warm, to protect the shivering invalid, the workingman and his wife, and the aged people alike from the freezing blasts of winter, are taxed 100 per cent. Plain unbleached cotton cloth for shirts and other garments worn by the laboring masses of both sexes is taxed 49 per cent.,

and the window-glass in their houses 67 per cent. Fine porcelain ware for the rich man's table is taxed only 45 per cent., and the artificial flowers and feathers for the adornment of his wife and daughters pay only 50 per cent. And such instances could be multiplied into hundreds.

The same may be said of copper, tin, steel in various forms, and various other necessaries of life. The prices are all increased by the tariff from 50 to 100 per cent.

SPECIFIC DUTY REDUCED TO AD VALOREM.

The table below is for the purpose of showing the ad valorem duty where the specific duty is 4½ cents per square yard on colored cotton goods counting less than 100 threads to the square inch, counting warp and filling. These figures should show to all who are in favor of an equitable tariff the injustice of the present one to a class of goods constantly needed and chiefly used by the poorer classes. Allow us to ask if goods measuring from 32 to 36 inches wide, and costing in Glasgow from 1⅞ pence to 2¾ pence, and goods measuring 50 inches wide, costing from 2 pence to 4½ pence, should pay an average duty of over 100 per cent., when it is well known that the labor value of these goods does not exceed 25 per cent.? It should also be borne in mind that the labor value of these goods in Scotland is about 15 per cent., and to this must be added freight from Glasgow and other charges amounting to about 10 per cent. on these classes of goods. From these figures it will be seen that the percentage of duty on these goods is the percentage of profit secured to the American manufacturer. We may add that these classes of goods are all made from American cotton:

BLACK CRINOLINE LINING.

Quality numbers.	Cost per yard in Glasgow.	Width.	Custom-house valuation here.	Amount of duty per running yard.	Equal to an ad valorem duty of—
	Pence.	*Inches.*	*Cents.*	*Cents.*	*Per cent.*

Average duty					103

The Republican Congress of 1882, by the almost universal condemnation of the war tariff then in force, found it necessary to pretend to do something that seemed to favor a reduction. To this end, and in order to deceive the people and still maintain the tariff in the interest of protectionists and monopolists, they created the tariff commission scheme. This was a shameless desertion of their duty and a scheme to postpone tariff reform at the expense of a tax-burdened people. This commission, after perambulating the whole country and listening mostly to those whose interest it was to preserve the tariff as it was, reported that the tariff ought to be reduced 25 per cent.

Now, upon this report what did this Republican Congress do? Instead of reducing the tariff 25 per cent., as recommended by the commission, and which ought to have been done, it appears now from the figures from the Treasury and the report of the Committee of Ways and Means of this Congress, and not disputed by any one, the Republicans of the Forty-seventh Congress reduced the tariff only 1.74 per cent. That is to say, the importation of goods valued at $100 is $1.74 less under the new Republican tariff than the old law. Thus it will be seen that the people have been deceived and that the tariff remains to-day substantially at war rates. This is a disgrace to our civilization and a fraud upon the people. It is in the interest of the few and against the rights of the many.

But the protectionists say in answer to all this that if we are not protected in our industries we can not live; that unless the whole people, by means of a tariff, are compelled to help us and enable us to charge double what our products can be purchased for elsewhere we will have to close our business. This is the argument in defense of the present war tariff. There are no principles more clearly laid down by political economists and demonstrated by the experience and observation of the business world than these: That a trade or business which is protected and forced by means of high duties and monopolies is disadvantageous and ruinous to the country in whose favor it is meant to be established; but that trade which without force or constraint is naturally and regularly carried on between individuals or any two places or nations is always advantageous; that no commercial nation was ever ruined, impoverished, or even injured by opening the ports to trade with its commercial neighbors; that every country, on the contrary, in proportion as it has opened its ports to all nations, instead of being ruined by this free trade, as the principles of the protective system would lead us to expect, has been enriched by it. These principles have been illustrated at different periods of our own country. The less restraint upon trade and the freer a people are the more prosperous and happy they are.

There is free trade between the States and to the advan tage of the whole country.

What is of the most importance to us now is free trade with the commercial nations of the whole world, so that we may have a market for our overproduction caused by the unnatural stimulant of a high protective and prohibitory tariff. The home market is wholly inadequate for the consumption of our productions under existing circumstances. Our factories and warehouses are overflowing with goods, with no buyers, and thousands of workmen out of employ; and yet the protectionists insist that there shall be no change in the tariff laws, and that the present deplorable condition shall remain unchanged. The position of the Republican party is well expressed by one of the leading protectionists, Hon. WILLIAM P. FRYE, in the Senate of the United States, February 10, 1882, in these words:

If there were no public debt, no interest to pay, no pension-list, no Army and Navy to support, I should still oppose tariff for revenue only, and favor protective duties.

To-day we are reaping the fruits of their astounding folly and monstrous heresy. To enable this country to compete in the markets of the world with other nations our tariff should be reduced to a revenue standard, and all raw materials that enter into the composition of manufactured articles should be admitted duty-free. A tax on raw materials to the extent of the tax adds to the cost of the manufactured articles of which the raw material is a part. Most nations admit raw materials free. That gives the manufacturer in those countries an immense advantage over the American manufacturer. The tariff on the raw material, increasing its cost, prevents American competition and we are shut out of the foreign market. Many of the manufacturers of the country are beginning to appreciate the effect of a high tariff on raw materials and now are boldly advocating the repeal of all taxes on raw materials in order that they may compete with foreign nations in the markets of the world. Protection of industries and taxes on raw materials cannot exist for any length of time. Taxes on raw materials invariably lead to the decay of manufacturing industries. No country presents better examples of this than our own—strikes, stoppage, half-time, reduction of workmen's wages, bankruptcy, and ruin. If our industries are to lead an active, healthy life, then every tax must be taken off of raw materials. This reform will work wonders. Our manufacturers will then demonstrate that they can compete with Europe in the neutral markets of the world.

WOOL.

The high tariff on wool is wholly indefensible. It absolutely prevents us exporting manufactured articles of wool.

Wool can be grown as cheaply here as in any country in the world. The extent and variety of our climate invite to it. We have all the advantages of Australia and South America. Why should the people of all the States pay toll to the farmer of Ohio or Pennsylvania if his land has become too valuable for sheep-raising. Sheep-raising has naturally gone West upon cheaper lands. This is the natural law of that industry. Let the Ohio people use their lands for other purposes more profitable. High tariff upon wool has been a disadvantage to wool-growers in this country. As a rule the higher the tariff on wool the lower has been the price. In 1879, under the war tariff, wools were taxed 10 cents per pound and 11 cents ad valorem; the price of wool that year was lower than it had been for many years, running down to 12 cents per pound. The high tariff excluded the foreign wools. These wools were wanted for mixture with the native wools in manufacturing, and without the foreign wools there is less demand for native wools and consequently lower price. This has been the history of tariff on wools.

Mr. James Leach, the oldest importer and dealer in wools in the United States, and a recognized authority in all matters pertaining to the trade, was asked the other day what had caused the recent disasters in the woolen trade. "In two words," replied Mr. Lynch, "overproduction and overcompetition." Continuing, he said:

The excessive protection and overfostering of the business for a period of sixteen years has caused an excessive supply of raw material and of all the articles made from wool. Now, in the present condition of things it is quite clear that we have more wool and woolen goods of all descriptions than we are able to consume, and we have no market beyond the United States, the tariff on the raw material preventing us from competing with older countries where no duties

are imposed. This excessive protection of the raw wool is more than our manufacturers can overcome. They can't send their goods out of the country for a market; hence the plethoric supplies and the overloading of commission merchants in woolen goods, clothing merchants, and so on. Wool has been protected to death.

The same reasoning will apply to most of the other manufacturing interests of the country where the raw materials used are highly taxed. And the ruinous effect of this policy is felt by the consumers in the increased cost of most of the necessaries they use.

SUGAR.

The demand for free sugar is almost universal. It comes up from almost every part of the country. The reduction in the tariff on sugar was expected to be opposed by the sugar-planters in Louisiana. We find persons representing this interest have been here, and according to their own statements attempted to pool their interest with Pennsylvania in regard to iron and coal, and Ohio in relation to wool, and combine whatever other interest they could against a reduction of the tariff. The average consumption of sugar per capita in this country is forty-five pounds. The poorest find it a necessity. In 1883 the Government collected about $48,000,000 in duties on sugar. The tariff was over 60 per cent. The same class of sugar for which we have to pay 9 and 10 cents per pound the people of England obtain for 6 to 6½ cents per pound.

The tariff is equal to $9 or $10 on a barrel of sugar. This the consumer has to pay for the benefit of the few sugar-planters in Louisiana. The protectionists, rather than reduce the tariff on sugar to benefit the poor consumer, propose to reduce the surplus revenue by taking the tax off of whisky and tobacco. The people of this country consume annually 1,000,000 tons of sugar.

Now, the Louisiana planters who are demanding this high tariff only produce about 8 per cent. of the sugar consumed in the country. The annual average value of the sugar crop in Louisiana is only about 26 per cent. of the tariff the people pay on the imports of sugar.

During the last fiscal year the value of sugar imported was $93,525,732, upon which duties to the amount of $47,977,000 were collected. The history of sugar-planting in Louisiana shows that a high tariff has little or no influence in stimulating the production of sugar. The largest crops have been raised when the tariff has been the lowest. The sugar-planters of Louisiana need no protection, as the following facts will show.

The following extract is from a prize essay read before the Planters' Association of Louisiana in 1883. If its statements are true, and we have no reason to doubt them, they prove that domestic sugar-growers are receiving greater returns from their crops than is obtained by any other class of agriculturists:

RESOURCES OF THE SUGAR REGION.

No agricultural product in any part of the world gives a return equal to a well-conducted sugar plantation. Hitherto it has required large capital to embark in this business, but since the establishment of central factories in our State every cultivator has within his reach the means to become a sugar farmer and the certainty of obtaining a good price for his cane. Poor men in no other country have such opportunities as are here offered, for by proper cultivation they are certain of securing from $80 to $100 per acre for their cane crop, and one man can cultivate from ten to fifteen acres in cane, besides raising corn and other supplies sufficient for his family, all on land which to-day can be purchased at from $5 to $20 per acre. This new feature in the sugar industry is destined to more than double our sugar product in five years, and under favorable legislative protection this industry in the near future will assume grand proportions, for not one-half of the territory adapted to cane is as yet cultivated in this plant. It has been found that cane does remarkably well on the high lands, as proven in East Baton Rouge by sugar farmers who are growing wealthy with small mills; and cane pays well even in the sandy soil of the other Florida parishes, where nourished by fertilizers. Recent important improvements in machinery have greatly increased the sugar yield per ton of cane, and the refuse or bagasse, which a few years ago was a great burden to sugar-planters, has recently been utilized for fuel; but a better use for it will soon be found, for it makes the best paper-stock, and will in a year or two be extensively employed for that purpose. In fact, paper barrels for sugar and molasses will soon take the place of the ancient wasteful and cumbersome cypress hogsheads and barrels.

An average duty of over 60 per cent. is maintained on sugar and kept at that excessive rate in obedience to the demands of the domestic sugar industry.

It is claimed in the above paper that with proper cultivation $80 to $100 per acre is obtained from sugar. The tobacco crop of 1882 paid $64.32 per acre; hay, $11.44; potatoes, $43.89; corn, $11.94; wheat, $11.99; rye, $8.28; oats, $9.89; barley, $13.54; buckwheat, $9.49. These figures show conclusively that there is no necessity for a high tariff on sugar, and that as a crop it yields the producer six to eight times the return obtained from cereals. And yet the average rate of wages in the grain-growing States of the West and Northwest is from six to eight dollars per month greater than in Louisiana. Free sugar would still enable producers to get superb returns from their land as compared with grain-growers and give to consumers a gift of $40,000,000.

The people of this country could better afford to pay the Louisiana sugar-planter the value of his annual crop than to pay duties on the importation of foreign sugar amounting to $48,000,000. Even then the people would save over $30,000,000 per annum.

The sugar tax is an enormous fraud upon the people, and it ought to be removed. There is not as much reason for protecting the sugar-planter as there is for protecting our Western farmers against taxes upon almost everything that is used by them. Foreign nations do not give us cloths, silks, wools, or sugar; but they are to be paid for in our agricultural products; there is no other way. All the specie in the country could not pay for one year's imports—for 1883, $700,130,688. Not a yard of cloth comes into the country but what encourages American labor, because some one has raised cotton, wheat, corn, pork, beef, and other products to pay for it. Under a high tariff agricultural products will fall in price, and rise under a low tariff. This was true under the compromise tariff of Mr. Clay, from 1839 to 1842. As the duties came off agricultural products rose in price, and we increased our exports. Under the high tariff of 1843 our agricultural exports fell off and the price went down again. In 1846, under what is known as the Walker tariff, which was simply a revenue tariff, and the duties were ad valorem, the price of agricultural products rose and our exports largely increased. The same result followed under the low tariff from 1856 to 1861.

This illustrates the simple rule that when we buy of others they will buy of us. The more we import the more we export. The dutiable imports for 1883 were in value nearly $500,000,000. The following table shows some of the principal articles of import and their value:

Live animals	$3,513,329
Barley	6,288,341
Buttons and button materials	3,599,323
Crude opium	3,931,278
Watches and watch materials	2,221,703
Coal, bituminous	2,240,260
Cotton cloth	2,538,871
Cotton knit goods	7,941,381
Clothing and other cotton goods	23,808,930
Earthen, stone, and china ware	6,969,923
Fancy articles, perfumeries, &c	7,402,856
Hemps and substitutes for	4,576,324
Jute and sisal grass	5,720,995
Manufactures of flax, jute, &c	24,133,992
Fruits and nuts	17,407,607
Furs, dressed, on skins	5,325,133
Pig-iron	5,745,999
Tin-plate or taggers tin	18,075,814
Various manufactures of tin	13,875,693
Precious stones	8,550,818
Leather	7,228,409
Gloves, kid and leather	3,589,653
Silk, dress and piece goods	16,821,441
Silk, clothing, laces, ribbons, &c	18,280,474
Brandy, &c	2,246,526
Molasses	6,980,219
Sugar, Dutch standard in color	87,774,898
Leaf-tobacco	8,312,913
Cigars, cigarettes, and cheroots	3,055,770
Wine, in casks	3,012,977
Wine, in bottles	5,207,345
Lumber	7,433,989
Wool, unmanufactured	11,843,625
Woolen cloth	12,922,521
Women's and children's woolen goods	17,095,269
Woolen goods, unspecified	8,430,558
Total	396,150,721

These thirty-six headings embrace more than three-fourths of the dutiable commodities brought into this country. It will be observed that by far the greater portion are articles of prime necessity. Sugar, cotton goods, and cotton clothing, woolen goods and woolen clothing, manufactures of flax, tin, and manufactures of tin, iron, and manufactures of iron make up much the larger part of the goods upon which duties are imposed. These are articles indispensable in every household in the land. These enter into the life of every human creature. The duty on these articles is from 40 to 50 per cent. It is not stating the case too strongly to say that on the six articles we have just named the laboring classes pay annually over $100,000,000 tax to the Government, or $2 to each person, and $10 to each average family. This, of course, takes no account of the amount they pay to protect home industries which does not go into the Treasury. This amount is indefinite, but is variously estimated to reach three times the sum, or more than is paid to the Government (more nearly five times, or $50 per family); that is to say, $6 to each person, and $30 to each family in the United States. If this tax were levied direct on the people the present tariff would not stand a month. It falls on them none the less surely and is much less equitably distributed than are direct taxes, but so disguised as to excite no general protest. It is only by discussion that the truth can be brought home to the people who bear the burdens.

Under the Morrison bill wood, sawed lumber, coal, and salt are added to the free-list, and to these, in my judgment, there ought to be added wool, sugar, and many other articles of prime necessity. The effect of the present bill will be to reduce the present tariff about 15.74 per cent., as estimated by the Ways and Means Committee, making about $31,000,000 reduction. This is something to be sure, and perhaps as much as can be obtained at this time under the circumstances.

The bill under consideration does not propose to reduce the tariff in any material respect below that of the Morrill tariff of 1861. At that time that was the highest tariff known to our laws.

Twenty-three years have elapsed since the adoption of that high protective tariff. At that time it was thought necessary to make some excuse to the people for so exorbitant a tariff. It was urged by the protected class that their business was in its infancy and required protection to keep it alive. Yet many of these infant establishments had been in existence and flourishing and yielding large dividends for more

than forty years. Now nearly a generation of protection has been added, and if there is any virtue in it certainly the infant ought to be of age now and no longer has the right to demand a subsidy or gratuity at the expense of the whole people. If the Morrison bill becomes a law, the average tariff on the dutiable articles will be over 30 per cent. This certainly ought to be sufficient to satisfy all reasonable men. It gives the manufacturer 30 per cent. the advantage over the great mass of the citizens, but this protected and rapacious class still plead infancy and more protection.

It is urged by the protectionist that the internal-revenue tax should be abolished. This is principally on whisky, beer, and tobacco, and yields a large amount of revenue, nearly $132,000,000 annually. If this revenue is taken off it would give the protectionist increased advantage for insisting that there shall be no reduction of the tariff, but rather an increase. Of course protectionists are in favor of abolishing the internal-revenue system.

I am opposed to the abolition of the internal-revenue system as applied to whisky and tobacco. These articles are not necessaries. Whatever of this tax is paid is voluntary. No one need pay a dollar of this tax unless he chooses; and the abstinence from the use of these articles, and therefore from the payment of this tax, would always be to the advantage of the individual.

It is estimated that our tariff and revenue laws will give $100,000,000 more than is wanted and can be used by the Government under the law. What reason can be given for taking this large sum from the hard earnings of the people? The Democratic party have given their pledge to the people to reform the abuses in our tariff system, and, for one, I am for faithfully redeeming these pledges.

The Bonded Extension Bill.

SPEECH

OF

HON. JOHN A. KASSON,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 27, 1884,

On the bill (H. R. 5265) to extend the time for the payment of the tax on distilled spirits now in warehouse.

Mr. KASSON said:

Mr. SPEAKER: At the suggestion of various members of the House, and in response to sundry arguments on the general question of free trade which have recently appeared in the CONGRESSIONAL RECORD, I submit herewith as part of my remarks the views which I have recently expressed elsewhere on that subject. The speech referred to was reported and printed as follows:

FREE TRADE NOT THE INTERNATIONAL LAW OF THE ALMIGHTY.

[Congressman JOHN A. KASSON, of Iowa, delivered an address before the Brooklyn Revenue Reform Club, in the hall of the Long Island Historical Society, on the evening of February 6. The address was entitled "Free trade not the international law of the Almighty." Mr. KASSON was listened to with the closest attention, and was frequently applauded, especially where he showed that from England, a country "blessed with free trade," the annual immigration to this country has largely increased since the introduction of the system which was denounced by its opponents as one of "robbery and injustice."]

Mr. KASSON prefaced his remarks by referring to the famous declaration of Cobden that free trade is the international law of the Almighty, and said that he had chosen for the title of his address "Free trade not the international law of the Almighty," as indicating the distinct issue between the two principles of free trade and protection. Whatever most promotes the welfare of the people, he said, must be regarded as being in obedience to the laws of Divine Providence. The rule may be just between two barbarous tribes who exchange the shells of the seashore for an elephant's tusk from the interior; but as soon as civilization and the skill of labor intervene and money becomes an element of exchange for materials regulations are made in the interest of self-protection and for the promotion of wealth. The truth or falsity of the maxim must depend upon the condition of each country. One form of it may be true of one nation and the converse of it true of another. Its application must depend upon the particular conditions of each country, and the object of this address is to show that so far as the United States are concerned Mr. Cobden was wrong, without disputing that he may have been right in applying his maxim to the people of England.

As I understand the principles of this club, its favorite reasoning is from theories to laws. That is to say, you find laid down in the books certain principles on which society ought to be founded, assuming that no wars will exist, that communications are always open, that the people of all nations seek the same conditions of existence, and will be animated by the motive of mutual equity, without seeking advantage one over the other. But history proves these assumptions to be false. Wars do arise. Communications are obstructed and barred. Different nations seek different results from social organization. Some seek wealth and power alone for a privileged class, a hereditary aristocracy, and accept as necessary the debasement of labor. Others seek the elevation of all classes, the comfort and security of all, and would give dignity to all useful occupations. These and other differences necessarily result in different processes of legislation. One country has great and diversified resources, another has few and perhaps none to provoke enterprise. Thus when your theories are carried into laws you often find them wholly inapplicable to the conditions of the country you would subject to their jurisdiction.

For myself I favor a reasoning which will lead from facts to law. The laws which govern mental philosophy can not possibly be applied to the practical affairs of men. These are so variable that a system which is excellent for one quarter of a century would be utterly opposed to a system adapted to the next quarter. The reading of works on political economy, like those of Adam Smith, Say, Ricardo, McCulloch, Bastiat, and a host of others, will show that the effort of each succeeding writer is to correct the errors into which his predecessor has fallen. There is no theory of political economy in its application to the changeable affairs and interests of man which can be said to be permanent in its application. As in the case of political institutions one kind of government is best adapted to one people, and another to another people with different traditions and different education, so one theory of taxation may be well adapted to a nation in Europe and at the same time be ruinous to the development of a nation in America.

APPEALING TO HISTORY.

But I too have a favorite book of authority in which to find the principles of my political economy. That book is the history of my country for the century of its existence. It is a history of experiences and trials under both systems. I read there that my country at the beginning was substantially without manufactures and largely dependent on a nation 3,000 miles away. As soon as our forefathers consolidated the States under national authority, in the first Congress assembled they laid duties "for the encouragement and protection of manufactures." The laws of 1789, 1816, 1824, and 1828 were all protective in their character and adopted in part by the same men and under the influence of the authors of the Constitution.

The right to impose duties with reference to the protection of American industries was completely established. During this period the rate of duties was steadily advanced, not for revenue only, but for protection also, from about 6 and 8 to nearly 50 per cent. ad valorem. Each successive rate promoted the industries of the country while it enriched the Treasury. The revenue became too great for the wants of the Government, and the sliding scale of 1833 was adopted as an experiment, under the belief that the revenue could be reduced without the destruction of the industries which had grown up under the uniform fostering care of Congress. The revenues were reduced far beyond the wishes of the authors of the scheme, and ruin of our domestic industry and of the public credit followed as its legitimate result, and one of the greatest and most distressing panics the country has ever known became a reality in 1837.

This experience led logically to the restoration of a higher and protective tariff in 1842, under the influence of which industries revived, prosperity returned, and the Treasury was again amply supplied. But the economic views of the opponents of protection again prevailed, and again the tariff was assailed by successive Congresses, beginning in 1846. Then again, in 1857, came bankruptcy of manufactures, of trade, and of the Federal Treasury. Once more the policy of protection came to the front, in 1861, and from that time on this policy has been perpetuated in the legislation of the country. It has now been continually tested for a period of twenty-two years.

You will observe that after each disaster which followed the free-trade periods there was no recovery of either public credit or public prosperity until a change of law and system from free trade to protection; and then prosperity did return. I beg you also to observe that during this period of twenty-two years a financial convulsion befell both Europe and America. Our revenue system was not changed, while our monetary system was; and the United States was the first of all nations to recover its prosperous tide, which has continued to this day and has become the admiration of all nations.

INCREASE OF IMMIGRATION AND POPULATION.

Under these circumstances, as I understand the theory of your association, I ought not to consult the facts of history to ascertain whether free trade or protection is the system most advantageous to my country, but I should go to the books and writings of McCulloch, of Ricardo, of Wells, and of Sumner, and learn from them whether it is possible that a country should become prosperous under protection, or whether it is a system of "robbery and plunder and disaster to the people." I must decline to ascertain from books written in the past whether my country can be prosperous under one system or the other. My appeal for information on that subject is to history, and not to the theoretical writings of philosophers. I look upon the condition of the United States as I found it under the beams of the rising sun this morning. Churches, schoolhouses, dwellings in town and country, savings in bank, the public treasury, mills, factories, farms, barns, storehouses, railroads, mines, herds and flocks, clothing of the people, popular contentment, love of country—I look at all this, and ask myself: "Is all this evidence of suffering under a long-continued system of 'robbery and plunder of the people?'"

Take, for example, your declaration that a protective tariff is necessarily robbing the many for the benefit of the few; is an unjust and burdensome taxation, oppressive to the people, and especially to the poor. If that is true you will admit that it ought to discourage immigration, retard the increase of population, and embarrass the material development of the country. You must further admit that the laboring classes certainly should not leave a country blessed with free trade and go to a country oppressed by this system of robbery and injustice. When I appeal to the facts of history I find that instead of retarding immigration and embarrassing the growth of population there came from the free-trade country whose policy you ask us to follow only 78,000 in 1860; after our system of "robbery and injustice" was adopted, twice the number, or 151,000, came in 1870 from the same country, and 164,000 in 1880; and while there was under free trade in 1860 a total immigration of only 150,000, it rose in 1870 to 356,000, and in 1880 to 593,000. Were all these immigrants incapable of judging for themselves whether there was more profit to the laboring classes in a free-trade country or in a protective country? Did they not know whether, on the whole, the comforts of life and means of gain were greater in the country which they left or in the country to which they came? Shall I go to the writings of the free-trade economists to find this fact, or am I justified in learning it from the men who had experienced both the blessings and the wrongs under both systems? When each 100,000 of immigrants wrote back to persuade another 100,000 to come, did they do it blindly and wickedly, or did they do it because of the greater blessings, the superior comforts, the better chances of life which they here enjoyed?

And how was it with the population? Instead of the slow growth of European nations we find that at the close of our free-trade period the entire population of the United States was 31,000,000. It rose to 38,000,000 in 1870, and to 51,000,000 in 1880. Does this indicate increased difficulty in the means of subsistence, increased embarrassment in the acquisition of wealth, or does it show that the country has become more and more capable of sustaining a large population in comfort and wealth?

GROWTH OF AGRICULTURE AND MANUFACTURES.

Has this system which you so violently condemn impeded the development of the country? If I look in your books on political economy I perhaps should answer "Yes." I prefer to look into my own book, which is the history of the United States as disclosed by the census taken under the law. I inquire, first, as to its effects upon that class of population with which I have been identified, and which you say suffers most of the burdens and injustice. I find that the value of the farms of the country in 1860 was $3,200,000,000, rising to $7,000,000,000 in 1870, and in 1880 to $10,197,000,000. The gross value of their products in 1860 was not returned, but is estimated at $1,400,000,000; in 1870 it was $1,800,000,000, and in 1880, $2,200,000,000. And just here let me re-enforce my statement respecting the growth of agriculture in this country by an extract from the British Agricultural Commission's report in 1882, in which this sentence occurs: "It is safe to say that for the last two years the agriculture of America has been at the very flood-tide of its prosperity." So even the census of 1880 has not fully told

the magnificent story of our agricultural development under this system of "robbing" the farmers, our foreign rivals being the witnesses.

But what is the condition of the same agriculture under free trade in England, where the farmers, instead of being "robbed" by protection, have the blessings of free trade? Let the great free-trade organ of England, the London Times, tell the story in its issue of April 19, 1882. Its four-column article is under the title "Agricultural Decline in England," and is a review covering thirteen years. It declares that England now has about $40,000,000 less value of live-stock, and a further loss of $20,000,000 in grain crops, irrespective of the falling off in yield per acre planted. That paper says sadly, in summing up: "We present the above statements illustrating the decline in agricultural wealth and production, leaving to farm occupiers and their landlords to consider how far the facts constitute an indictment against their craft, or only a record of its misfortunes."

Now, put in contrast with this what is said by the British Agricultural Commission of our agriculture in its report of the same year, 1882: "It is safe to say that for the last two years the agriculture of America has been at the very floodtide of its prosperity."

Which system has "robbed the farmer" or plundered the poor? Which has proved most beneficial to the farmer?

On that other equally important branch of national industry—the product of manufactures—I find that the values have risen in the three decennial years from $1,885,000,000 in 1860 to $3,385,000,000 in 1870, and to $5,369,000,000 in 1880. These aggregates of two branches of American industry have required vastly improved facilities for transportation to market. Consequently our railroad mileage has increased from a few thousand miles in 1860 to a greater mileage at this time than is furnished by the entire system of Europe. The iron ore mined in the United States in 1880 reached the enormous aggregate of nearly 8,000,000 tons. The results of coal mining are still more remarkable, having risen from 14,000,000 tons in 1860 to 71,000,000 tons in 1880.

IMPORTANCE OF THE COAL INDUSTRY.

Mr. KASSON here paused in his argument to illustrate the importance of the coal fields of the country and their development as perhaps the best indication of the development and growth of the great industries of the nation, as the creator of the force required for handling the vast agricultural and manufactured products of the country, as well as the source of supply for fuel for the increased population. He referred to it not only as an original source of wealth, but as an instrument for the creation of wealth in nearly every department of human enterprise, claiming that no more significant proof of the enormous prosperity of the country during the last twenty years can be furnished than an exhibit of the rapid increase in the production of this mineral, more valuable than gold and silver. In concluding his proof of the unparalleled development of national prosperity he gave the census figures for the total wealth of the United States as $16,000,000,000 in 1860, $30,000,000,000 in 1870, and $43,000,000,000 in 1880.

The free-trade economist, Mulhall, estimates the annual accumulation of wealth in the—

United States at	$825,000,000
France	375,000,000
Great Britain	325,000,000
Germany	200,000,000

He says of us: "Every day that the sun rises upon the American people it sees an addition of two and a half million dollars to the accumulated wealth of the Republic, which is equal to one-third of the daily accumulations of mankind!" Does this look like "robbery" in America, as compared with Great Britain?

THE BALANCE OF TRADE.

After citing some additional facts, he proceeded: I perceive also that those who base their statesmanship upon the writings of the scholar at his desk and the professor in his college endeavor to convince us that the balance of trade has little to do with the prosperity of the country. In answer to this, looking again into my book of our national history, I find that the change in our balance of trade with foreign countries, which was effected eight or ten years ago and has since continued, has caused a change of ownership in the great mass of United States bonds, has caused a cessation in the payment of interest to foreign countries, has swollen the contents of our savings banks and the credit balances of our depositors, has enabled us to resume specie payments, has filled the country with gold and silver, and added hundreds of millions to the circulating medium of the United States, has reduced interest to the lowest point ever known in the history of the country, both for governments and individuals, has raised the public credit to the foremost rank among the nations of the world, and has so magnified the capital of the country that borrowers have ceased to seek lenders, and lenders are seeking everywhere in beneficent enterprises places for the investment of their wealth. You may say that this can not be, because all the books say it is inconsistent with a system of taxation which is "robbery and injustice." My only answer is that it is so. If your theories and our facts come into collision the theories must retire, in good order if possible, or the facts will trample them under foot and soil the fair paper on which they are written. If we bring in fifty millions of sound money each year from the rest of the world in payment of the favorable balance of our trade, we must in twenty years have a thousand millions more to work with in our own interest. If money is not itself wealth it is an enormously powerful instrument in the production of true wealth. Nations seek to acquire it for the same reasons that individuals do, and both find it to their advantage to possess it. You can hardly convince them of the contrary.

COST TO THE CONSUMER.

But you have a further and a very favorite argument, which sounds and resounds from the Atlantic to the Pacific, and which reverberates in the center of the continent. This argument declares that the tariff enhances by the amount of the duty the price of every article on which it is imposed. You further say that it not only adds so much to the expense of the consumer but it also enhances the domestic prices by the same amount on all the like articles produced at home. Where shall I go to test this argument? Shall I go to your books, which only tell me what ought to be as a logical deduction from logical propositions? Again I make my appeal to our favorite book, the history of facts. As you know, our duties on nearly all importations were increased more than once after 1860. I take the list of principal articles where the American competitive industry has been protected, and I find in a great majority of cases (I believe in all) that prices are lower than they were before the imposition of increased duties. It would require more than one address to go over the list of articles in respect to which this is found to be true. I will mention some by way of illustration. We have always had a high duty upon silks, regarding them as luxuries. It has been so high as to be also a protective duty.

Enterprising Americans resolved to avail themselves of it and introduced that industry into the United States. It has been developing for about twenty years, and has now extended into several States. The result is certified by Mr. Wyckoff, who prepared the census report on that subject, in a letter to me. The general reduction in prices since 1860 averages about 25 per cent., and in some instances over 30 per cent., while about one-half the entire consumption is the product of American labor. In steel rails before the imposition of duties we paid England over $100 per ton. Since American manufactories have grown up we have purchased them as low as $35 per ton. Similar results have attended the duties on cutlery and other hardware. The same is true of cottons and of woolens. Common clothing is to-day sold in the United States to the consumer as cheaply as in Great Britain, as we learn from consular reports and personal investigation. I must warn you, gentlemen, against deceptive comparisons of prices. It is only just when the comparison is grade for grade. Many of our goods of the same name are vastly superior to those of England. A toy pistol must not be compared with a navy revolver because both are called pistols. On this subject the London Times admits that "the Americans succeed in supplanting us by novelty of construction and excellency of work. They do not attempt to undersell us in the mere matter of price. Our goods may still be the cheapest, but they are no longer the best."

You say, if I understand you correctly, that we can not export products of domestic manufacture because our protective duties so enhance the price. This may be true of some articles. But I have before me a certified statement from the Bureau of Statistics showing an increase of exports of domestic manufactures under the protective system as follows:

In the free-trade year:	
1860	$45,639,730
In protective years:	
1870	47,871,027
1880	79,457,325
1883	111,890,001

Mr. Kasson gave further illustrations in support of his argument, and declared that it was the result of the law which the advocates of free trade choose to ignore—the law that home competition is the greatest factor in the reduction of prices. He then read an extract from the report of the French Centennial Commission in 1878, as follows: "A veritable economical revolution has taken place in the United States. Under the shelter of a prohibition system * * * they have organized a powerful industry which rivals England in cheapness."

This he supplemented by a remark of the president of the German commission to the Philadelphia centennial in the following language: "The present condition of American manufactures shows the fallacy of the free-trade doctrine that the productions of a country are raised in price by protective duties."

And again, from the London Engineer, a periodical devoted to British manufacturing interests, he read as follows: "As far as the American consumer of iron is concerned, he is better off for protection." And the English consul-general at New York, Mr. Archibald, officially reported that the prices of carpets in the United States were 12 per cent. cheaper in 1879 than in 1860, while prices of dress goods had fallen about 25 per cent. Surely all these are unquestionably competent witnesses, and entitled to belief rather than your logical deductions from books.

Continuing, he said: Although American exports of manufactures as well as of raw products have largely increased, they would be much larger if Congress would open lines of transportation under American control, which should give us access to the markets which legitimately belong to our geographical situation and to the enterprise of our people.

HOW THE LABORING CLASSES SHOULD BE TREATED.

The speaker then appealed from the question of money to the questions of patriotism and humanity. He affirmed it to be the duty of every citizen to support all legislation which makes the United States independent of foreign countries, in war as well as in peace. It was, he contended, a higher duty to sustain the integrity and honor of the country and its absolute independence of foreign control, commercial as well as political, than it was to provide for a temporary increase of wealth, if that were possible, by a sacrifice of the elements of safety. The object of the statesmen of the United States, an Englishman has said, is not to secure the largest amount of wealth for the country generally as much as to keep up by different means the standard of comfort among the laboring classes. He proceeded to show the importance of giving these classes the means of educating their children, of opening all avenues of advancement to them, of making them feel themselves an integral part of the nation, enjoying its blessings as well as its liberties. He denounced all modifications of legislation the effect of which should be either to rob them of employment by the destruction of industries, or by crippling the industries to rob them of wages necessary to their comfort and reduce them to the grade of living of workmen abroad.

He concluded by portraying that condition of labor which is aimed at by the policy of protection, which involves equal advancement of all classes in society. He claimed that there should be a soul put into political economy, which should recognize the rights of humanity as well as the right to a market for goods. This protective system, so much assailed, has meant and still means wages for the laborer, bread and clothing and education for his children, and hope for the future. It means that employment of capital which distributes its earnings among the largest number. It means diversity of national industry, which defends us against privations in war and secures our independence in peace. It means national enrichment, by buying at home instead of spending abroad. It means accumulation of national wealth, which in turn flows back in a thousand channels to fertilize new enterprises and develop new sources of wealth. It means the beneficence of boundless charity and the endowment of schools and colleges and churches. It means the progress, the prosperity, the comfort, and the happiness of a people already great, and with a yet greater destiny in the future.

[At the conclusion of his address Mr. KASSON was given a vote of thanks, accompanied by loud applause.]

Retirement and Recoinage of the Trade-Dollar.

SPEECH

OF

HON. LUMAN H. WELLER,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 1, 1884,

On the bill (H. R. 4976) for the retirement and recoinage of the trade-dollar.

Mr. WELLER said:

Mr. SPEAKER: In the discussion of the bill under consideration, that my remarks may be better understood and, as I trust, more highly appreciated, I desire to present to the attention of this House some of the main cardinal principles of my political creed touching national affairs and the needs of this day for the general welfare.

I will now present those views, formulated as follows:

First. We, the people, are the Government; and therefore all legis-

lation, both national and State, should represent the majority will and best interests of the people—the Government—constitutionally expressed.

Second. All special legislation tending to and resulting in the building up and fostering of consolidated corporate monopolies not only is destructive to our form and character of government—of, by, and for the people—but positively aids in creating a government of vicious, speculating, usury-sucking, prosperity-destroying, crime-breeding, tramp-creating aristocracies; a government of outrageous inequalities among the people; a government of money as king and labor as slave.

Third. The spirit of the age demands progress in all ways possible; therefore, leave the past with its sanctified good and strike boldly for the grand possibilities to humanity coiled up in the present and future.

I here present statements as a proper basis for philosophic, philanthropic, and statesmanlike action in legislating for a goverment of, by, and for the people.

STATEMENTS FOR ACTION.

First. To establish the unlimited coinage of gold and silver, present standard of weight and fineness.

Second. To substitute a permanent Government legal-tender paper money for bank issues of currency without contraction or inflation thereby.

Third. To promptly pay the bonded debt.

Fourth. To reduce the taxes and expenditures to the people by substituting a system of equitable taxation and just reduction of official salaries.

Fifth. To destroy sectional strife.

Sixth. To overthrow corruption at the polls and in representative bodies, and that the people be insured a free ballot and fair count.

Seventh. To justly control by law and bring into subjection to the interests of the people all corporations and monopolies which have corrupted the public service, and by combination and extortion have established absolute dominion over money, over transportation, over invention, and over land and labor.

Eighth. A revision of the tariff in the interest of labor, but not in the interest of rich corporations and monopolies.

Ninth. No sumptuary enactments inimical to the letter and spirit of the United States Constitution.

But I return to argue more specifically the terms of the bill under consideration. It may be that the bill was unconsciously framed in the interest of the money-lenders, persons of fixed incomes, and dominating corporations. Whether intentional or not, it in my opinion is so framed.

The first section reads that the trade-dollars shall be received at their face value in payment of all dues to the United States. The second section reads that the holder of trade-dollars may, on presentation at the proper Treasury department, receive in exchange standard silver dollars therefor.

These two sections, standing alone, should they be enacted into a law, would practically remonetize the trade-dollar, and would increase the volume of money to the extent that such silver coin would be exchanged for standard dollars now locked up in the Treasury.

Section 3 requires that all trade-dollars received by, paid to, or deposited with the Treasurer, or any assistant treasurer or national depositary shall not be paid out again, but shall be transmitted to the coinage mints at the expense of the Government and recoined into standard dollars.

These three sections, standing by themselves alone in this act, and if made into a law, would result in an increase of the volume of money to the extent of such receipts, recoinage, and exchange, provided it be true as stated by gentlemen that these trade-dollars are not now in circulation and thus serving the purposes of money.

But if, as I now allege, these dollars are now largely in the hands of speculators, who bought them up out of the hands of the people at 70, 75, 80, and 85 cents on the dollar-piece, and thus have them stored away from circulation, then for the Government to receive them in exchange for standard dollars will liberate from the Treasury an equal number of dollars now hoarded there, as useless as if they were in the bowels of the earth, whence the material of which they are composed was originally taken. But the shrewd manipulators prompting this action have inspired the fourth section, which reads as follows:

SEC. 4. That the trade-dollars so received at the coinage mints shall be regarded and treated as silver bullion, and, at their bullion value, shall be deducted from the amount of bullion required to be purchased and coined by the act of February 28, 1878.

This fourth section is capable of but one single, direct interpretation, although it is shrewdly worded. The first statement is, "That the trade-dollars so received at the coinage mints shall be regarded and treated as silver bullion." How does the Treasury Department now treat silver bullion?

It can under existing law coin of it into standard silver dollars not less than two nor more than four millions per month. If the purposes of this section were not clear from the language quoted, most certainly the remainder of the section would place the meaning and intent beyond dispute. It reads: that at their bullion value they shall be deducted from the amount of bullion required to be purchased and coined by the act of February 28, 1878. Now, suppose there be under this bill as framed 1,000,000 trade-dollars in bullion value turned into the Treasury or coinage mint for coinage purposes during any month, the Secretary of the Treasury would be compelled to deduct that sum from the sum of his purchases under existing law, so that, the existing law being complied with, not less than two nor more than four millions per month in all could be coined.

Thus, it being true that under the terms of this fourth section the officials being obliged to take all trade-dollars offered, and when taken to recoin them under the terms of existing law as to coinage, there could be no more dollars coined than as though this bill had never existed, and it would be a positive bar to the purchase of other silver bullion, and therefore to its coinage, and thus diminish the volume of silver dollars to that extent. As I view this bill, it has but three general purposes: First, to play into the hands of speculators that swindled the people at every turn out of 10, 15, or 20 cents on every piece, and, now that the speculators have the great bulk of these dollars, to permit them to exchange, piece for piece, at the expense of the Government into (lighter) standard dollars, that, strange to say, are worth as a debt-paying agent from 10 to 20 or 25 per cent. more than the big, heavy Sherman and Blaine dollars. Yes, this and more as a purchasing agent also.

Second. To diminish the volume of money in circulation, and thus make it more difficult for the debtor class to meet their obligations of whatever kind solvable in money.

Third. To bring about a condition of things that will prompt or force a discontinuation of the coinage of silver.

If I am correct, and I aver that I am, and have laid bare the stimulating motive, the sum of this proposed unwise legislation is to decrease the volume of money in general circulation, and thus enable the creditor class to close his securities when the thus diminished value of such securities will enable him to rake in the property of his debtor at many per cent. less of value, measured in legal dollars, than was its market value when the loan was made.

I notice that eminent gentlemen on this floor make great stress of what will be the acts of other nations, especially the Latin Union, whether they adopt the monometallic standard of gold or a bimetallic standard of gold and silver. I shall be surprised if some of these gentlemen do not in the near future advocate that the Constitution of these United States should be so revised as to accord in letter and spirit with the characteristics of a monarchical form of government. Every effort to secure an international standard of coin money has so far failed, and must continue to fail for the very obvious reason that all such governments are inimical to republican forms of governments, and therefore those financial and other conditions essential to a monarchical form of government would be inimical to a people's government. Therefore any condition of measures or national policies that would prove of great value in building up a peculiar government such as ours would in all their tendencies prove destructive to any monarchical form and character of government.

Thus it is that the British Government, as well the German Empire and others, have been seeking to destroy us, not by shot and shell, the sword and bayonet, but by the subtle and more potential way of fastening on our people a financial system that would in its practical operations reduce the masses of the people to the ranks of tenantry, then deprive certain classes of the ballot for the alleged reason that such are not qualified by intelligence or property ownership to properly exercise that right according to their ideas of propriety, and then establish a strong government, with life-tenure in office, the few dominating the many, the few living in luxury and idleness from the productions of the toiling masses. This can be accomplished in a large degree by the demonetization of that metal money most abundant in order to thus diminish the volume by creating it only of that metal least abundant.

This remarkable language is found in the first volume of the report of the silver commission, made in 1876:

DECREASING VOLUME—ITS EFFECTS.

At the Christian era the metallic money of the Roman Empire amounted to $1,800,000,000.

By the end of the fifteenth century it had shrunk to less than $200,000,000.

During this period a most extraordinary and baleful change took place in the condition of the world. Population dwindled, and commerce, arts, wealth, and freedom all disappeared. The people were reduced by poverty and misery to the most degraded conditions of serfdom and slavery. The disintegration of society was almost complete. The conditions of life were so hard that individual selfishness was the only thing consistent with the instinct of self-preservation. All public spirit, all generous emotions, all the noble aspirations of man shriveled and disappeared as the volume of money shrunk and prices fell.

History records no such disastrous transition as that from the Roman Empire to the Dark Ages. Various explanations have been given of this entire breaking down of the framework of society, but it was certainly coincident with a shrinkage in the volume of money which was also without historical parallel.

The crumbling of institutions kept even step and pace with the shrinkage in the stock of money and the falling of prices. All other attendant circumstances than these last have occurred in other historical periods unaccompanied and unfollowed by any such mighty disaster.

It is a suggestive coincidence that the first glimmer of light only came with the invention of bills of exchange and paper substitutes, through which the scanty stock of the precious metals was increased in efficiency.

STEADINESS OF INCREASING VOLUME—ITS EFFECTS.

On page 51, same book, we read as follows:

It is in a volume of money keeping even pace with advancing population and commerce, and in the resulting steadiness of prices, that the wholesome nutriment of a healthy vitality is to be found. The highest moral, intellectual, and material development of nations is promoted by the use of money unchanging in its value.

That kind of money, instead of being the oppressor, is one of the great instrumentalities of commerce and industries.

Page 52:

Steadiness in prices insures labor to all and exacts labor from all.

It gives security to credit and stability and prosperity to business.

It encourages large enterprises, requiring time for their development, and crowns with success well-matured and carefully executed plans.

It discourages purely speculative ventures, and especially those based upon disaster.

It encourages actual transactions rather than gambling on future prices.

It metes out justice to both debtor and creditor, and secures credit to those who deserve it.

It prevents capital from oppressing labor and labor from oppressing capital, and secures to each its just share of the fruits of industry and enterprise.

It secures a reasonable interest for its use to the lenders of money, and a just share in the profits of production to the borrower.

It keeps up the distinction between a mortgage and a deed.

It insures a moderate competence to the many, rather than colossal fortunes to the few at the expense of the many.

EFFECTS OF A DECREASING VOLUME OF MONEY.

On page 53, same book, we read:

While the volume of money is decreasing, even although very slowly, the value of each unit of money is increasing in corresponding ratio, and property is falling in price.

Those who have contracted to pay money find that it is constantly becoming more difficult to meet their engagements. The margins of securities melt rapidly away, and the confiscation by the creditor of the property on which they are based becomes only a question of time.

All productive enterprises are discouraged and stagnate because the cost of producing commodities to-day will not be covered by the prices obtainable for them to-morrow. Exchanges become sluggish, because those who have money will not part with it for either property or services, beyond the requirements of actual current necessities, for the obvious reason that money alone is increasing in value, while everything else is declining in price.

This results in the withdrawal of money from the channels of circulation and its deposit in great hoards where it can exert no influence on prices. This hoarding of money from the nature of things must continue and increase not only until the shrinking of its volume has actually ceased but until capitalists are entirely satisfied that money lying idle on special deposit will no longer afford them revenue, and that the lowest level of prices has been reached.

It is this hoarding of money when its volume shrinks which causes a fall in prices greater than would be caused by the direct effect of a decrease in the stock of money.

Money in shrinking volume becomes the paramount object of commerce instead of its beneficent instrument.

Instead of mobilizing industry it poisons and dries up its life-currents. It is the fruitful source of political and social disturbance.

It foments strife between labor and other forms of capital, while itself, hidden away in security, gorges on both.

It rewards close-fisted lenders and filches from and bankrupts enterprising borrowers.

It circulates freely in the stock exchange, but avoids the labor exchange.

It has in all ages been the worst enemy with which society has had to contend.

On pages 53 and 54, we read (this was in August, 1876, and reviewed the continuing results of the panic of 1873):

The great and still continuing fall in the prices in the United States has proved most disastrous to nearly every industrial enterprise.

The bitter experience of the last few years has been an expensive but most thorough teacher.

It has taught capitalists neither to invest in nor loan money on such enterprises, and just as thoroughly has it taught business men not to borrow for the purpose of inaugurating or prosecuting them.

Of the few business enterprises now being successfully prosecuted the larger part are based on a monopoly secured either by patents or exceptional conditions.

The business man has discovered that the less active and enterprising he is the better he is off.

The manufacturer avoids loss by damping down furnace fires and slowing down machinery. * * *

The miners ascend from the dark and gloomy depths of the mine with a scanty pittance called wages to find in a famishing household a gloom that is more profound.

They await with heroic fortitude and a sometimes impatient hope the advent of another Sir Humphrey Davy with a lamp capable of shedding light on the cause of existing evils, and of protecting them and all others who depend on their labor for their daily bread against a lingering misery more to be dreaded than the deathly danger that lurks in the treacherous fire-damp.

Securities have already become so impaired through falling prices that loanable capital has fled affrighted from the newer and more sparsely settled sections of the country, and accumulated in large amounts in the great financial centers, where securities are more ample.

The personal and property securities of individuals have generally ceased to be available, except at the highest rates of interest or at ruinously low valuations.

Money can be borrowed readily only upon securities as bonds which are based on the unlimited tax-levying power of the Government, or upon the bonds and stocks of first-class trunk lines of railroad corporations, whose freight and fare rates are practically a tax upon the entire population and resources of the regions which they traverse and supply.

The competition among capitalists to loan money on these more ample securities has become very keen, and such securities command money at unprecedentedly low rates.

These low and lowering rates of interest, instead of denoting financial strength and industrial prosperity, are a gauge of increasing prostration.

The foregoing solemn statements of eminent men accord with the voice of history and of experience as well, that when one-half of the money of a people or nation is destroyed or taken out of circulation the remaining part must be in greatly increased demand and correspondingly dear. In 1857 Germany demonetized gold, and the "hard-pan" advocates issued a formidable propaganda on the discovering of gold in California and Australia, claiming that the productions of this precious metal would soon become so abundant as to nearly lose its value for purposes of money.

I am unable to discover how one piece of silver coined containing 412½ grains of silver nine-tenths fine can be a dollar in very truth and fact unless two pieces of equal weight and fineness equal $2. If the truth is that two pieces of equal weight and fineness are, and only are, of twice the value as money to one such piece, what possible objection can there be to permitting the free coinage of silver as of gold, each party bringing his bullion to the Mint, paying the expense of coinage, and then be compelled to take away the product at his own expense and dispose of them as best he can, unless there be much in the statement that the volume of dollars in circulation determines in a large degree the commercial value or purchasing power of each of said dollars, and thus affects the producing class on the one hand and the monopolies on the other?

It can not be successfully denied that the result of this measure as it came from the hands of the committee would be to restrict the volume of silver money within the jurisdiction of our Government. I would oppose unlimited inflation if it were a possibility, but demand that the volume shall be so adequate to the business demands of the people that they shall not be dependent on the whim of the money-lender or national banker.

But this bill, unless the fourth section be stricken out, gives peculiar advantage to the holders of silver bullion in the shape and character of trade-dollars—and they are but stamped bullion—over the holder of other stamped bullion in the shape and character of silver bricks or bars, the law (passed February 12, 1873, chapter 131, volume 17, page 424, section 21) being that the holders of silver bullion may deposit the same at any mint and have the same formed into bars for his benefit, and thus permits the holder of one class of silver bullion to get it coined into standard dollars, but debarring all holders of another class of silver bullion of equal fineness from such a benefit.

Will any one attempt to deny that such a measure enacted into law would be special-class legislation and therefore undemocratic?

The amendment which I have proposed I will read as a part of my remarks, and seek to show that it, incorporated in this bill, will at least obviate the special-class legislative feature of the bill. It is as follows:

Amend section 4 as follows:

"*Provided, however*, That the Secretary of the Treasury and all officials of the Government shall in all cases receive other silver bullion suitable for coinage purposes in the stead of trade-dollars to the extent of all requirements under existing law when offered at less price than said trade-dollars are."

It needs no argument to show that the effect of this amendment, if adopted, would compel the Secretary of the Treasury to purchase other silver bullion for coinage purpose under existing law, if offered at a less price than trade-dollar bullion. I am heartily in favor of wiping out the trade-dollar swindle, and trust that no future legislation in the matter of coinage of metal money will be had that will permit the perpetuation of such a fraud on the workingmen of the country.

The legislation that I would propose in the matter of all silver bullion is that the Secretary of the Treasury be authorized to receive all silver of suitable fineness for metal-dollar coinage purposes at the rate of its present general market value, measured in legal standard dollars, and pay therefor in standard silver dollars at face value, the same to be coined into such standard dollars and the profits to be set apart as a special fund to be applied to payments of the national debt. I would increase the price to be so paid for such silver bullion at the end of four months 1 per cent., and at that price continue for the next four months; at the end of which time increase the price 1 per cent. more, and thus continue until the price of silver bullion should equal the legal value of the standard dollar less the actual cost of coinage.

I regard it as worse than mere folly, I regard it as criminal, to assume for a moment to the understanding of the intelligence of this the nineteenth century of the Christian civilization that silver of sixteen parts to one of gold would ever be less than par with gold if the coinage of silver was made as free as gold, and the silver dollar thus coined had given to it the same legal functions as money as given to gold within the jurisdiction of our Government.

I state further, and defy successful honest showing to the contrary, that neither gold nor silver United States money coin is money outside of the jurisdiction of our governmental authority.

Outside it is only a commodity of a certain stamped weight and fineness. It is there used and dealt with as a commodity. It has no legal functions as money. It can not, outside the jurisdiction of the Government making and ordaining it to be money—dollars—be tendered as lawful money in cancellation of an evidence of indebtedness solvable in the money, with legal authority to any court therein to order in due form such cancellation in case such tender is not received but refused.

I trust that the time is not far distant when the intelligence, wisdom, and patriotism of the whole people shall see to it that laws shall be enacted in the premises of the money question that shall directly and specifically thereby promote the general welfare of the whole peo-

ple, in promoting the arts of peace and elevating the masses to conditions of general prosperity such as will make them the owners of homes of their own, instead of a mass of tenantry under a landlord system approaching the abominations of that now cursing liberty-loving Ireland.

Should the previous question be moved and ordered, and my proposed amendment be shut out under the rules by such action, I shall hope that the sober, good sense of members on this floor will see to it that the entire fourth section be stricken from the bill. With that section eleminated, I will vote for the bill as being the best that can be accomplished at this time, although it would not then be such a bill on the silver question as I would present for consideration.

Tariff on Wool.

SPEECH

OF

HON. BERIAH WILKINS,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 7, 1884.

The House having under consideration the bill (H. R. 1218) to restore the rates of duty on imported wool—

Mr. WILKINS said:

Mr. SPEAKER: In the brief time given me by my distinguished colleague [Mr. CONVERSE] it will be impossible for me to give many of the reasons why I shall vote for this measure, or why it should receive the favorable consideration of every member of this body. I would be recreant to the trust reposed in me by the people who have by their suffrage sent me here to represent them and their interests upon this floor, did I not by my voice and by my vote endeavor to secure the passage of this resolution—a measure which to them means much, and to the wool-grower in Ohio means everything. To that end have I worked earnestly, zealously, diligently, with what result is not yet determined; but, sir, however that result may be, I am satisfied in having done my duty and that my course receives the commendation of the people I am honored in representing on this floor.

Sir, I am not a believer in the doctrine that the many ought to be taxed for the benefit of the few, or that any private enterprise ought by legislation to be built up into monopolies at the expense of the people. Neither have I climbed to that pinnacle of sublime statesmanship as would make me unmindful of, or forget, or even be indifferent to the great interests which so directly concern the constituency I represent, or these matters so important to the people of my State. It is seldom Congress has questions of such magnitude presented for their consideration, and not often do the farmers come to these halls asking legislation in their own interests at the hands of their legislators; but, sir, when they do come, as they have in this instance, asking that so long as they pay their fair share of the taxes necessary to conduct the affairs of this Government they may receive their fair share of its protection—I say when they do come they and their cause should have free, fair, and honest consideration.

Now, sir, why is this bill before us; and what are the circumstances that have brought about this state of affairs requiring legislation upon this subject? Unjust and discriminating legislation, hastily enacted into law during the closing hours of the Forty-seventh Congress, sacrificed one of the great industrial interests of the country; a law which reduced the rates of duty on imported wools from 9 to 36 per cent., paralyzing the business, and to-day is proving disastrous to the industry of wool-growing to an alarming extent. This result was then prophesied upon this floor. This, sir, is one of the reasons why this bill is before us. Another and more potent reason why the wool-grower comes to this House for relief is found in the fact that the legislation which brought about these results was enacted by a Republican majority in a Republican Congress, made possible by an outrageous rule sustained by a Republican Speaker. Where, may I ask, would the farmer go to have his wrongs righted, to have justice done him, if not to a Democratic Congress, to the representatives of that party that has from its birth declared always in the interest of the people. Declarations of State conventions by planks in their platform denouncing the action of the then majority in this House, promises made on the stump and through the press, are other reasons why the wool-grower comes to this Congress for justice.

It has been said to me since the agitation of this question was begun, "We have no right to make any such promises." What, sir! No right to promise that a wrong so transparent that even the party who committed the wrong are to-day regretting their act, and are willing to join hands with us to correct their acknowledged error; have we no right to promise the substitution of right for wrong? Had we no right to promise that a Democratic Congress would follow the same line, the same policy, inaugurated by Jefferson, which has come down to us advocated by Madison, Jackson, Pierce, Polk, and Buchanan, "a fair and just protection to all the great interests of the whole Union?"

In the light of the history of the Democratic party, its position in the past, its assurances for the future, I submit we had the right to promise relief to this industry at the hands of this Congress. The circumstances which have brought about this state of affairs are briefly these, and they are familiar perhaps to every member on this floor: The appointment of a tariff commission who traveled the country over, taking the testimony and the statements of persons interested in all the great industrial pursuits, collecting and compiling information, having in view a full and exhaustive report of their investigations to Congress, and, sir, in all that great mass of testimony taken before that commission, throughout the sixteen hundred or more pages of evidence printed for the information of Congress and the people, not one man, not one intelligent American citizen engaged in the business of wool-growing, examined by this commission on this subject, but what then insisted that a reduction of the duties on imported wool would strike a vital blow to their interests. All they asked then and all they ask now in this measure is a just tax and fair protection to their industry. They ask no more; they will not be satisfied with less.

Yet, sir, notwithstanding these protests, in the face of and contrary to all the evidence adduced before this commission, they reported favoring the reduction of the tariff duty on wool, which was in this particular adopted by the Forty-seventh Congress and made a law in its closing hours with less than three hours' debate. The duty on wool was reduced an average of 18 per cent., leaving out of account the reclassification. These are the estimates of the present presiding officer of this body, then a member of the conference committee on the part of the House which considered the disagreeing votes between the two Houses on this tariff bill. The acts, suggestions, and report of this Tariff Commission, together with the unjust and unequal law growing out of and suggested by that unfair and prejudiced report, are reasons why this matter is agitated to-day.

The importance of this industry to the prosperity of the nation was early recognized; if I am not mistaken the first tariff was laid on imported wool in 1824, and from that time until the present it has been a dutiable article, and is found in every tariff law enacted from that time until the present. The necessity of the fostering care of the Government in extending its protecting hand with discriminating justice to this industry was discovered in the early days of this Republic, and has continued the policy of the Government ever since. Sir, James Buchanan took occasion to say, in the course of the debate on the tariff question in 1824, that "if this bill [then under discussion] would compel the agricultural interests to bow down before the manufacturing interests, I should consider myself a traitor to my country in giving it my support." Later on, when Mr. Buchanan was elected by the Democrats to the Presidency in 1856, in his messages to Congress in 1858 and 1859 he recommended an increase of duties, and a bill embodying his views was presented to Congress and passed the House but never reached a final vote in the Senate; but in 1861, after the Senators from the South had left the floor of the Senate, the bill passed that body and became a law, and is now known as the Morrill tariff bill.

The history of the tariff duties on wool and the steady growth and almost unexampled prosperity of this great industry consequent to those duties are well worth the time and study of any member of this House. I ask the indulgence of the House for a moment only while I give very briefly the history of the different tariff laws, in so far as they relate to the duties on wool, together with the amount of those duties. As I said, the first tariff law embodying raw (?) wool was passed in 1824; the duties were: not exceeding 10 cents per pound in value, 15 per cent. ad valorem; exceeding 10 cents per pound, 20, 25, and 30 per cent. ad valorem. In 1828 the duty was made 4 cents per pound and 40 per cent. ad valorem, until June 30, 1829; after that date 5 per cent. to be added annually until the ad valorem duty should amount to 50 per cent. In 1832, under 8 cents per pound in value was placed on the free-list; exceeding 8 cents in value, 4 cents per pound and 40 per cent. ad valorem. In 1836, under 8 cents in value, free; exceeding 8 cents in value, 4 cents per pound and 38 per cent. ad valorem. In 1841, under the value of 8 cents per pound, free; 8 cents and exceeding that sum, 4 cents per pound and 32 per cent. ad valorem. In 1842, under the value of 8 cents per pound, free; 8 cents in value or exceeding that sum, 4 cents per pound and 26 per cent. ad valorem.

By the act of 1842 all wools were dutiable. "The free-list was suspended." All wools of the value of 7 cents or under, 5 per cent. ad valorem; exceeding 7 cents per pound in value, the duty was fixed at 3 cents per pound and 30 per cent. ad valorem.

In 1846 all wools of whatever class were subject to a 30 per cent. ad valorem duty. In 1857 wools of the value of 20 cents or less per pound were put upon the free-list; upon those exceeding 20 cents per pound in value an ad valorem duty of 24 per cent. was laid.

The tariff acts of 1861 laid the duty on all wool worth under 18 cents per pound at 5 per cent. ad valorem; on all wools of the value of 18 cents per pound up to and including 24 cents per pound in value, at 3 cents per pound; exceeding 24 cents per pound in value, the duty w. fixed at 9 cents per pound; and I want to call your attention to this law particularly. This law of 1861 is what is known as the Morrill tariff

law, for it is to this law, to the rate fixed by this law, that the so-called Morrison tariff bill seeks to reduce the present rate of duty on wool—under the classification as fixed by the law of 1867.

In the event of the failure to secure the passage of the bill under consideration to-day, the figures and rates in the law of 1861 (the Morrill bill) will have new significance to the wool-grower, for under a provision in this Morrison tariff 20 per cent. horizontal-reduction bill the duties shall be decreased 20 per cent. below present rates, provided the 20 per cent. reduction on any article does not fall below the rate fixed by the Morrill law of 1861. If the rate does fall below, then the duty shall be that of the Morrill bill. Our friends will at once perceive this means a further reduction of 1 cent per pound. On the class of wool we in Ohio are most concerned about the reduction would be 2 cents per pound but for this saving clause should this Morrison bill, which is now on the Calendar of this House, and may under the rules be called up any day, become a law.

But, sir, to resume: the duties on unmanufactured wool by the law of 1864 not exceeding 12 cents per pound in value, 3 cents per pound; exceeding 12 cents per pound in value to 24 cents per pound in value, 6 cents per pound; 24 cents to 32 cents per pound in value, 10 cents per pound and 10 per cent. ad valorem; exceeding 32 cents per pound in value, 12 cents per pound and 10 per cent. ad valorem. We now have arrived at the law of 1867; to its rates do we by this bill desire to restore the tariff duty.

The act of March 2, 1867, made a new classification, which I submit with your consent, that they may be printed as part of my remarks, together with the law pertaining to the same:

[United States Revised Statutes at Large, volume 14, page 559.]

An act to provide increased revenue from imported wools, and for other purposes.

SECTION 1. From and after the passage of this act, in lieu of duties now imposed by law on the articles mentioned and embraced within this section, there shall be levied, collected, and paid on all unmanufactured wool, hair of the alpaca, goat, and other like animals, imported from foreign countries, the duties hereinafter provided. All wools, hair of the alpaca, goat, and other like animals, as aforesaid, shall be divided, for the purpose of fixing the duties to be charged thereon, into three classes, to wit:

CLASS 1.—CLOTHING-WOOL.

That is to say, merino, mestiza, or metis wools, or other wools of merino blood, immediate or remote; down clothing-wools, and wools of like character with any of the preceding, including such as have been heretofore usually imported into the United States from Buenos Ayres, New Zealand, Australia, Cape of Good Hope, Russia, Great Britain, Canada, and elsewhere, and also including all wools not hereinafter described or designated in classes 2 and 3.

CLASS 2.—COMBING-WOOLS.

That is to say, Leicester, Cotswold, Lincolnshire, down combing-wools, Canada long wools, or other like combing-wools of English blood, and usually known by the terms herein used; and also all hair of the alpaca, goat, and other like animals.

CLASS 3.—CARPET WOOLS AND OTHER SIMILAR WOOLS.

Such as Donskoi, native South American, Cordova, Valparaiso, native Smyrna, and including all such wools of like character as have been heretofore usually imported into the United States from Turkey, Greece, Egypt, Syria, and elsewhere.

* * * * * * *

And upon wools of the first class, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall be 32 cents or less per pound, the duty shall be 10 cents per pound, and in addition thereto, 11 per cent. ad valorem; upon wools of the same class the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall exceed 32 cents per pound, the duty shall be 12 cents per pound, and, in addition thereto, 10 per cent. ad valorem; upon wools of the second class, and upon all hair of the alpaca, goat, and other like animals, the value whereof at the last port or place whence exported to the United States, excluding charges in such port, shall be 32 cents or less per pound, the duty shall be 10 cents per pound, and, in addition thereto, 11 per cent. ad valorem; upon wools of the same class, the value whereof at the last port or place whence exported to the United States, exceluding charges in such port, shall exceed 32 cents per pound, the duty shall be 12 cents per pound, and, in addition thereto, 10 per cent. ad valorem.

Upon wools of the third class the value, &c., shall be 12 cents or less per pound, the duty shall be 3 cents per pound. Upon wools of the same class the value, &c., shall exceed 12 cents per pound, the duty shall be 6 cents per pound, &c.

Mr. Speaker, I need not enumerate the tariff laws enacted since 1867; this House and the people are familiar with them, the last one being but a year old; hence its working successfully or otherwise, except as to this interest, has not yet been determined.

Wool-growing was stimulated by the demands of the war, by the then recognized necessity of governmental care and the fair protection extended the industry in 1861; and by the more reasonable, just, and equitable law of 1867 it has grown to the immense proportions we find it to-day. It cannot be denied that the law of 1867 gave cheer to the wool-grower and encouraged many to engage in the business. Whether or not it was these tariff laws that gave him confidence to embark in the business, whether or not he believed that the only tariff which has given any consideration whatever to the agricultural interests in America would be interfered or tinkered with to his injury, I will not determine, but, sir, it is a significant fact that from that time until the passage of the law in 1883, reducing the rates of duty, sheep-husbandry has continued to prosper in this country.

Few men, unless they have made a study of the subject, comprehend the magnitude of its growth. According to statistics at my hand there were 22,471,275 sheep in the United States in 1867. In 1870 the number had increased to 28,477,951, and in 1880 to 35,192,074, their product growing from 60,000,000 pounds in 1860 to 155,000,000 pounds of wool in 1880. Twenty-five millions of this amount, or a fraction over 16 per cent., was raised in the State of Ohio alone, of which the district I represent furnished in 1880 728,000 sheep and 3,745,000 pounds of wool. I will not indulge in estimates for the four years that have elapsed since the statistical reports of 1880, but will quote from the address of the National Wool-Growers' Association. In that address Mr. Markham, the secretary, says (and this authority is unquestioned):

There are 50,000,000 of sheep in the United States, with an annual product of wool of over 300,000,000 pounds, besides supplying annually over 12,000,000 carcasses of mutton. The annual value of the wool product is over $85,000,000; of the mutton product, $40,000,000. The capital invested in sheep alone is over $200,000,000, while the capital invested in the land necessary for their subsistence is estimated at not less than $1,000,000,000, giving employment to more than 1,000,000 persons.

These figures and estimates are given that we may form an intelligent idea as to the magnitude to which this industry has grown under the fostering care of wise and judicious protection, and the losses the country may sustain by this Congress refusing to listen to the petitions of thousands upon thousands of American citizens, praying this wrong may be righted by restoring the tariff duties as contemplated in this bill.

My colleague from Ohio [Mr. CONVERSE] is the recognized champion of this industry upon this floor. He recognizes, as do I, the equality and justice of this measure. He reminded the last Congress, as I remind this, that the agitation then begun will be kept up until we shall have obtained the relief which our industries demand.

The passage of this bill is a necessity to us in Ohio. The Legislature of the State have unanimously passed resolutions asking the passage of this bill. They are near the people; they know their wants, their necessities. We would be untrue to them, we would be untrue to the people they and we represent, did we, the Representatives from that great State, not heed their instructions and vote for this measure. Now, Mr. Speaker, a word or two more and I have done.

Can this industry stand the unequal competition of England and her Australian colonies, of South America, Asia, and Africa, without the guardianship of a sufficient and judicious tariff? The fact that we produce but a small percentage of the world's product is to my mind sufficient answer that it can not long survive.

The total wool product of the world is estimated at 2,500,000,000 of pounds taken from a thousand million sheep; and it seems a plain proposition that the farmer of my State can not successfully compete in the free markets of the world with his product grown upon lands worth from twenty to one hundred dollars, or even more, per acre, with the product grown in New Zealand and Australia where the lands are of little value and the expense of growing the product comparatively small.

As I said in the beginning, Mr. Speaker, it is seldom the farmers come to Congress asking legislation. They never come asking special favors or special privileges, but always, as in this instance, asking simple justice; and so long as I have a voice or a vote on this floor they will not ask of me in vain. I hope this bill will pass.

Bureau of Labor Statistics.

SPEECH

OF

HON. CHARLES A. SUMNER,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 19, 1884,

On the bill (H. R. 1340) to establish and maintain a bureau of labor statistics.

Mr. SUMNER, of California, said:

Mr. CHAIRMAN: The bill before us is in compliance with a special demand which is every way entitled to such consideration and respect, as the recommendation accompanying this measure imports. But it is also a bill of general importance that ought to have received legislative sanction years ago, without waiting for any direct appeal from any considerable portion of our fellow-citizens. From many points of view it will stand justified and justifying the wisdom of those who shall enact it into law.

It is stated that this will interfere with or trench upon the regulations or the rights and duties of the separate States. Interfere? One can not be sure as to what is meant by such terms in such relation. On the contrary, it "interferes" not at all with any bureau or department that any of the States have established or may choose to create. There may be under it concurrent action; there will be no conflict. And as to the question of principle involved, the alleged infringement of the doctrine of State rights, it requires a stretch of the ordinary imagination that reaches into the domain of the morbid to suppose that the labor of collecting the statistics here called for will overstep the boundaries that should mark the line of national authority and commonwealth sovereignty. The nervous dread exhibited in this particular is a curious exhibition of the extreme sensitiveness engendered by a con-

stant reference of every measure of widespread consequences to a single standard of observation and judgment.

Viewed in a strictly practical light, the bill has strong recommendation and impetus both from the action and the non-action of States. Some States have during many years past gathered statistics in part of the kind and character of those designed to be obtained and published under the terms of this bill, and have confessedly derived great benefits from the work. The records provided by States that have gathered such items as are here contemplated with anything like approximate perfection of detail have indeed been held in high esteem, and made great use of, not only by writers on political economy, but by thinking citizens of every class who are interested in the subject of the rights of labor and the improvement of society.

But the work has been done very imperfectly except in two or three States. In a majority of the States, including Commonwealths where perhaps such search and a report were most needed, there has been no systematic inquiry whatever, or only such voluntary investigation and partial returns as were calculated to subserve the interests of those not friendly to schemes for promoting the welfare of the laboring men and women of the land. Indeed, the question might be submitted whether there has not been on the whole a real and large injury to the cause of labor by the isolated, sectional, and fragmentary examinations into the condition of the laborer and his surroundings that have been made in some of our communities and summarized in print.

It is objected that if these statistics are collected by national authority some Congressional action will be based upon them, and that we shall then necessarily or unwittingly drift into vicious legislation on this account, in violation of the spirit if not in disobedience of the letter of the Constitution and in flagrant contravention of the traditional policy of the Democratic party. Doubtless much legislation will result from the publication of the volumes that are here proposed; it would be strange if that did not prove to be the case; but this product will be found in the shaping of statutes on subjects that have always been matters of Congressional notice and control rather than in the direction of absolutely new enactments upon propositions with which this national body has not been accustomed to deal.

How often do we pause and vacillate and desist altogether from action with respect to bills legitimately brought before us from the lack of that very information which is to be supplied if this measure becomes a law. Why, even now, Mr. Chairman, some of our committees hesitate because, among other reasons, they have not that exact knowledge about the cost of labor, or, what is quite as material and important, about the actual amount paid for the construction or the maintenance of public works, or the real labor value of and in the property of certain private corporations. To-day some of us are confronting representatives of huge and greedy and grasping monopolists, who brazenly misrepresent and magnify the amounts that they have paid and are paying as wages for labor upon their lines of traffic, concealing the truth in this relation where they can, avoiding statements if possible, but halting not in deceitful and lying speech when that alone will serve a desperate cause.

The people of California are especially concerned in one clause of this bill—that contained in the nineteenth line of the second page, "Chinese labor." Let us know all about that. Let all the people of this country by authenticated publications know all about that. Let the inquiry be made there with great particularity, and, for the first time, with entire impartiality. The report will be a revelation to thousands and millions of our people—that volume which shall bring the facts and figures forth in orderly and precise and indisputable columns. We have suffered grievously and have been long-forbearing under our burden for the want of just such a record as this bill should, and as it is to be reasonably believed this bill will, bring forth in regard to the habits, haunts, and habitations of the Chinese on the Pacific coast.

Eight years ago a partial and what we regarded as a somewhat unfriendly investigation—unfriendly to our people—did indeed disclose some main facts in the premises that ought to have had a publication reaching every voter in the land; but the inquiry was every way inadequate, and the little of the painful truth that to a limited extent was made known was largely covered up by partisan opinions, printed in the same book with the evidence, that prevented the reading of the testimony or warped the judgment of the reader who had had no personal observation to aid him in arriving at a just estimate of the sworn statements and a righteous verdict thereon.

Pass this bill and give us a correct enumeration and a faithful description under it, and the people of this country with almost one voice will join us in demanding that the ports of this Union be closed forever against the intrusion of a single member of the Chinese race purposing to come and settle in our midst.

But it is said by way of objection, by gentlemen for whom we have the greatest personal respect, that "political thought" will control any action had by authority and instruction under this bill. To a certain extent the action here and hereunder must be formal and, as has been suggested, mechanical. And the fruits of this inquiry up to that point of seeing and telling will be considerable and unquestionably beneficent. If beyond that, if in matters that are not to be exclusively expressed in figures—in days and hours, in dollars and dimes, and the like—partisanship appears in the first returns, surely we can discern it and expose it, and provide special and sufficient remedy and guard. But we must or should distinguish between a committee of this Congress appointed under auspices such as existed here, in a dominant majority in 1875, and a commissioner of the nation receiving his credentials and his commands under the language of the section that lies before us.

It is true, "and pity 'tis 'tis true," that figures have been known to lie even in a census report, as was once notably shown by a publication circulated throughout this country as an appendix to a work of fiction. But the exigency that called for that kind of misrepresentation has passed away forever. And if there be anything like similar temptation or inducement we shall, as indicated a moment ago, become speedily apprised of it, and by the greatest publicity that is possible in this nation, from this floor and from yonder Chamber, we shall enlighten the people with respect to it and provide against its repetition. The sinister motive, the partisan publication, will only quickly serve to bring the truth in the premises into marked prominence and glaring light.

But this is probably considering a fear that is or will prove to be without foundation. The commissioner, whoever he may be, will not be apt to subject himself to the criticism, to the contempt and the disgrace which would follow the printing of false statements from his pen or the utterance by him of a series of wholly unwarranted deductions and suggestions. Taking the bill all in all, reflecting upon the duties imposed, the continued employment and the increasing honor for the servants under it if zealous and scrupulously honest in their bureau, it is safe to predict that there will be no such open or slyly inwrought "political thought" as some gentlemen who oppose this measure seem to apprehend and unnecessarily deprecate.

Judicial Proceedings in the Territories.

SPEECH
OF
HON. GRANVILLE H. OURY,
OF ARIZONA,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 8, 1884,

On the bill (H. R. 4705) in relation to courts and judicial proceedings in the Territories.

Mr. OURY said:

Mr. SPEAKER: The Territories have too long been an unconsidered quantity in this Government's economy, except in so far as they offered locations in which to plant men who were notorious for nothing but being failures at home, but who happened to be the pets of politicians, Senators, and Congressmen of the dominant party to whom they had been useful. Governors, secretaries, Indian agents, and judges have all come from the ranks of what are known as political henchmen. In the early days of a Territory, when men have no political status, when there is no social organization, when order has not yet been eliminated from chaos, when civilization is struggling to plant its standard on the ruins of barbarism, then could be offered some excuse for the practice of such a policy; but when society is organized, when recklessness has given place to reason, when social ethics find an apostle in the roughest man, when homes cover the land and patriotism is one of the deities worshiped at each family altar, such a system should be relegated to the days that are dead and gone.

The sentiment of the people of the Territories has been fittingly and eloquently expressed on this floor, when the House had been told that the thirteen colonies had greater political privileges at the time of the Revolution than we of the Territories have to-day. It is true. Why, sir, a man can live on the west bank of the Colorado River of the West, in California, and be a citizen of the State, armed with all the privileges which such status gives him—a partner in the political sense upon even terms with the best man in the land; but if he lives on the eastern bank, in Arizona, his citizenship falls from him; his rights, coming down to him perhaps from ancestors who died to achieve this country's independence, are abrogated; he becomes a political pariah disfranchised by the Government of the country, while he breathes the same air, feels the same free emotions stirring within him, and lives under and glories in the same flag. All through the legislation (or scarcity of legislation, for you do but little for us) of this Government the same unjust system prevails in regard to the Territories. Do you stop to think what is embraced within the scope of those words? Nearly half the United States in area, a population climbing into the millions, and wealth which is increasing at a rate that no old State of the Union and no new country in the world has ever equaled.

In my own Territory, Arizona, the census of 1880 gave 41,580 people, the census of 1882 gives 82,976, a clean increase of 100 per cent. in two years. Cattle increased in two years 300 per cent. Land has increased in favored localities from $10 to $100 per acre.

In 1880 there was only $4,472,471 worth of gold and silver taken out of the Territory, in 1882 there were $9,298,267. In 1880 only 2,000,000 pounds of copper was our product. In 1882 we shipped 15,000,000, and in 1883, 20,000,000 pounds. In every direction has our material wealth increased in the same ratio as our population. Do you not see, Mr. Speaker and gentlemen, in these figures a reason why we are entitled to legislation that will help us in the work of development, and a most convincing argument in favor of this bill?

With our increase in population and wealth comes, as a consequence, an increase in our legal business. We have three men who must sit in judgment in exceptionally difficult cases arising at all points of this country, which covers more than 113,000 square miles. They must hold courts in the different counties at stated times, and no inclemency of weather, no difficulty of travel, no distance, no weight of years, excuses their non-attendance. That is argument in favor of an additional judge; but the best reason why the number should be increased is that then no man need sit in review of matters already adjudicated and determined by him. Judges are but men after all, and many of them become wedded to their opinions as well as men of meaner mold. There have been many cases of the reversal of decisions of lower courts by the supreme court of our Territory, but universally without the assent of the judge who tried the case at nisi prius.

I am in favor of this bill, as it goes far toward remedying the evils attendant upon our judicial system, though I would rather have it comprehensive enough to make it necessary that the men appointed to the bench should be residents of the Territories. If that was the law the man who sits in judgment would be better equipped for his duties from his knowledge of the class of litigation which is most common in our courts, and his decisions would command greater respect.

Mr. Speaker, Arizona has been fortunate in few of the judges who have been sent to preside over the courts of the country, few who by their honesty, fairness, and legal attainments have endeared themselves to the people of the Territory, a fact in my judgment attributable solely to the bad system of their appointment. I have no personal complaints to make here, but I do condemn the principle of making the judicial ermine a covering for political adventurers. No man stands in closer relationship to the rights and privileges of the people than he who sits in judgment upon their differences, and no man should be placed in that position whose life and attainments do not dignify the position.

The bill under consideration, Mr. Speaker, in my judgment will go far toward remedying the evils of our present judicial system, and will, I believe, prove satisfactory to the people of the Territories; its passage will be a simple act of justice to the Territories, and I hope it will pass without a dissenting vote.

Retirement and Recoinage of the Trade-Dollar.

SPEECH

OF

HON. JOHN B. STORM,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, April 1, 1884,

On the bill (H. R. 4976) for the retirement and recoinage of the trade-dollar.

Mr. STORM said:

Mr. SPEAKER: The question of the retirement of the trade-dollar would be a very simple one if members could abandon pet theories and discarded heresies long enough to let the voice of reason and common sense be heard. In the discussion of the question before the House members have turned aside to discuss theories of finance that have no practical bearing on the subject.

When we reflect that the precious metals have been employed as a medium of exchange and a standard of value from the first traces of human society on the earth, it is not flattering to our advanced state of civilization that we should be at odds on a question so elementary and simple. I am inclined to think that Abraham, more than four thousand years ago, in the plain of Mamre, when he weighed "four hundred shekels of silver, current money, with the merchant," to Ephron as the price for the cave in Machpelah, had a clearer conception of the real functions of money than our modern statesman and economist.

What is the proposition involved in the bill under consideration? Simply to retire the "trade-dollar" from circulation by issuing to the holders a standard silver dollar for each trade-dollar so retired; to recoin such trade-dollar so retired; and the coin so received shall be treated as silver bullion at its bullion value, and shall be deducted from the bullion required to be purchased and coined by the act of February 28, 1878. The trade-dollar was called into being under the act of February 12, 1873. The section reads as follows:

SEC. 15. That the silver coins of the United States shall be a trade-dollar, a half-dollar or 50-cent piece, a quarter-dollar or 25-cent piece, a dime or 10-cent piece; and the weight of the trade-dollar shall be 420 grains troy; the weight of the half-dollar shall be twelve grams (grammes) and one-half of a gram (gramme); the quarter-dollar and the dime shall be, respectively, one-half and one-fifth of the weight of said half-dollar; and said coins shall be a legal tender at their nominal value for any amount not exceeding $5 in any one payment.

It was made a legal tender and stamped with the insignia of sovereign power.

There is nothing in the statutes nor in the devices and inscription stamped upon the trade-dollar to show that its circulation was intended solely for China or Japan, as has been so frequently asserted in this debate. To the common man it had all the appearance of the "coin current of the realm." It is true that in 1876, after $16,000,000 of these dollars had been issued, the legal-tender quality was withdrawn by an act of Congress. Yet after the act of 1878, providing for the coinage of the standard silver dollar, who believed that the Government of the United States would refuse to receive the trade-dollar at its face value when it had 7½ grains more of silver in it than the so-called "Bland dollar?" Therefore, on the resumption of specie payments the trade-dollar was the first to greet us, and to lead us to hope that the long reign of depreciated, irredeemable paper money was at an end.

But, Mr. Speaker, in the course of time the silver current became a torrent! The compulsory provisions in the act of 1878 which directed the Secretary of the Treasury to purchase and coin not less than two million dollars' worth of silver bullion monthly soon flooded the country with silver dollars. The people soon began to prefer the greenbacks for whose redemption in coin the Government had provided; the counters of brokers and bankers soon began to be loaded down with silver dollars. And then happened just what might have been expected—the trade-dollar was rejected. The standard dollar was a legal tender and we were forced to receive it. The trade-dollar shorn of this honor had to disappear; and thus we saw a dollar containing 420 grains troy drop from 100 cents to 87 cents, and a dollar containing only 412½ grains still continued in circulation retaining its par value of 100 cents.

Could anything better illustrate our ignorance of monetary laws than this portion of our financial history? The trade-dollar is already "retired" by virtue of a "higher law" than this Congress can enact, a law as irresistible as fate. Take from the standard silver dollar the adventitious circumstance of its legal-tender property, and in obedience to that higher law that rules in the domain of the financial world it will drop to 85 cents, its true and actual bullion value.

What is this law that governs the matter of coinage? It is this: When you overvalue any precious metal in your coinage law by putting into the standard of value too little of the metal, you only increase the price of the commodity to be exchanged to the amount the standard of value is overvalued; or if you deprive it of its legal-tender property it drops down to the value of bullion plus the trifle its coinage costs; or, if it comes into the great money markets of the world, its bullion value only is regarded.

Silver, when coined into money containing a less number of grains than will keep it in circulation equally with gold, is simply fiat money in every other nation to the extent of its deficiency in weight. Gold in point of fact has become the recognized standard of value throughout the commercial world. Germany and the Scandinavian nations have entirely demonetized silver, and all the nations of the Latin Union have restricted and limited its coinage. Gold is the standard of value in Great Britain. These nations, in fact, constitute Europe, and everywhere on the continent do we see the tendency to monometallism, and that metal gold. An act of Congress can not fix the price of silver any longer. That is fixed in New York, London, and Paris. According to the New York newspapers the standard silver dollar on the 1st of March was quoted at 84.87 in the list of foreign exchanges.

Issue your fiat money, whether in the form of a short-weight silver dollar or an irredeemable paper promise to pay; make it a legal-tender; let the Supreme Court of the nation set to it its seal of approval; but then you are done. When once it is issued all the powers of earth can not prevent such money from the operation of the law of depreciation due to short-weight coinage or an inflated circulation. We saw such money in our Revolutionary struggle become utterly worthless. In our later financial experience we saw our Treasury notes depreciate until they were worth only 35 cents on the dollar.

But why, Mr. Speaker, pursue this subject further? There is only one member of this House, my colleague from the Schuylkill district [Mr. BRUMM], who still adheres to the fallacy of fiat money, and he has been so long joined to his idol that I despair of his conversion.

What are some of the objections urged against this bill?

One is that the bankers and brokers have bought the trade-dollar at a large discount, and that they will make a large profit out of the transaction unless they are redeemed at their bullion value—about 87 cents. In the first place the statement is not true. Most of the members who have spoken for this bill have stated here as a matter of personal experience that most of these trade-dollars are held by poor people and by people in moderate circumstances. Such is my own experience. Many banks took them at 100 cents, when the cry was first raised against them, to accommodate their depositors, believing that movement would soon end and that they would again pass into circulation. In the next place, if it were true that a considerable amount of these outstanding trade-dollars is in the hands of speculators it is no valid reason why they

should not be redeemed at par. It is now impossible to separate the good from the bad. And the repeal of all bad laws must of necessity work hardships in some cases.

Another objection comes from the gentleman from Missouri [Mr. BLAND]. It is that the passage of this bill will make silver cheap. The gentleman is the author of the act of 1878, which provides for the coinage of our present standard silver dollar; he has justly earned the historic distinction of being the father of "the dollar of our daddies." And this distinction will stick to him as long as "Old Bullion" stuck to Mr. Benton. By that act the gentleman from Missouri made silver bullion a commodity; by it he made the Government a purchaser, and a very large one too, of this silver commodity. The Government has to buy monthly, whether the market is favorable or not; and he ought to be the last person to complain that the Government can "bear" the silver market. His law has made the Government a "bear" from necessity, and the bullion kings of Nevada and Colorado "bulls" from choice. Our concern ought to be, as the representatives of the people whose money pays for the bullion consumed in our monthly coinage, to protect them from these silver kings and bulls. The interests of this latter class will be properly looked after here by their champion on this floor, the irrepressible and radiant member from Colorado [Mr. BELFORD], who ends all his speeches with, "The surplus must be abolished;" "*Delenda est Carthago.*"

The last and most serious objection is, however, made by the gentleman from Missouri to the fourth section of the bill, which provides—

That the trade-dollars so received at the coinage mints shall be regarded and treated as silver bullion, and, at their bullion value, shall be deducted from the amount of bullion required to be purchased and coined by the act of February 28, 1878.

He argues that unless we strike out this section we will decrease the silver coinage to the amount of the outstanding trade-dollars, which he fixes at $10,000,000, as against the statement by Mr. Burchard, the Director of the Mint, that the amount is about $7,200,000.

The question, properly stated, would be this: If you pass the bill with the fourth section in as the Committee on Coinage has reported it, you leave the amount of coinage as it is; if you strike it out, you increase the coinage about $10,000,000.

But will any gentleman here at all disposed to be fair say that there is any necessity for increasing our silver coinage beyond what is provided for by the act of 1878? We have now in the vaults of the Treasury $126,822,399 of standard silver dollars; a large outlay will soon be required to provide for safe places of deposit for them. You can not force it into circulation. The people will not have it for the reason they do not want it. Abuse of the Secretary of the Treasury is unjust as well as unnecessary. He may lead the national horse to the silver stream, but he can not make him drink.

Congress in the exercise of its constitutional prerogative may coin money and declare it a legal tender, but it is powerless to make it circulate against the will of the people, and especially when there is no demand for it. Our national banking notes and our United States Treasury notes under our present law furnish such a safe and convenient circulating medium that the people prefer them to the cumbersome silver dollar. And the law of the survival of the fittest finds its best illustration in our unnatural, unscientific monetary system.

Let us rid ourselves now of one of our most disgraceful anomalies in our currency laws: two standards of value, unequal in their intrinsic and exchangeable values, the best the poorest and the poorest the best, and neither honest.

A sound currency is an indispensable requisite in every well-ordered government. As the natural body can not be in a healthy condition unless pure blood circulates through all its parts, neither can the body-politic exist in a healthy condition when it is pervaded by a vitiated currency. When the currency of a nation is not based upon sound and correct principles of finance, prosperity in commerce, trade, and manufactures is impossible. A bad currency robs the laborer of his wages, the capitalist of his profits, and the land-owner of his return from the soil. Social and economic laws may be harder to discover and understand than natural laws, but they exist nevertheless, and are just as immutable as the laws of nature. We may act with them and thus to a certain extent direct them, or we may act directly against them and be crushed. The miller may make the force of the wind or the momentum of the water turn his wheel and grind his corn, but when he attempts to make his wheel turn against the force of wind or water he fails.

A nation in order to its own well-being must live and act in harmony with its environments; it can not segregate itself from the other nations of the world; in trade, commerce, and exchange it is constantly coming in contact with them. To reap our full share of the blessings of commerce with other nations our laws must be so framed as to recognize this great truth.

We can not much longer close our eyes to the tendency of the great commercial nations of Europe to demonetize silver or to recognize it only as a subsidiary coin. I shall vote for the bill as it is. Should the fourth section be stricken out, then a choice of evils will be presented to us, and for myself I will accept the smaller one and vote for the bill with that important section out.

Payment of Pensions.

SPEECH
OF
HON. COURTLAND C. MATSON,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, April 17, 1884.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 6094) making appropriations for the payment of invalid and other pensions of the United States for the fiscal year ending June 30, 1885—

Mr. MATSON said:

Mr. CHAIRMAN: That branch of the public service on account of which more money is paid than on account of any other is certainly one that, as stated by the gentleman from West Virginia [Mr. GOFF], ought to engage the serious consideration of Congress. And so far as concerns every sentiment expressed by that gentleman in relation to prompt and effectual legislation in the interest of soldiers he will find in me, and I am sure, too, in the Committee on Invalid Pensions, at all times those who are ready to favor any proposition that will lead to it. I desire to say here also that I trust the Committee on Appropriations in the consideration of this bill will be liberal in regard to the matter of raising points of order against any proposed amendments, so that we may if possible accomplish some of the things which, as my friend from West Virginia has said, everybody concedes ought to be accomplished.

I am in favor of his amendment with one or two qualifications which will suggest themselves if he will read the bill and the report submitted on the subject by the Committee on Invalid Pensions. That gentleman proposes by his amendment that the rule shall be adopted, without any qualification whatever, that all who served in the Army shall be presumed to have been sound at the time of enlistment.

I suggest to that gentleman that certainly those disabilities ought to be excepted from the operation of the rule which were prescribed by an order of the Secretary of War to be such disabilities as would not prevent the enlistment of a man. That is one of the exceptions which he certainly will agree to.

Then there is another which I think is necessary. In case the Government can show that any man enlisted knowing the fact that at the time of enlistment he was unsound, the Government ought not to be estopped from showing his fraud and deception in procuring the enlistment. It is a matter of public history that near the close of the war one of the regiments which were raised near Baltimore, Md., was composed very largely of that class of men who had been refused enlistment in other organizations. The gentleman certainly will not say that that class of men ought not to be excepted from the application of the rule which he proposes.

With those modifications I think his amendment should be adopted; and I am not only ready and willing to see it adopted to-day, but I shall urge its adoption as a part of this appropriation bill.

I have obtained the leave of the Committee on Appropriations to speak in the time of those who favor this bill. But I wish to say before I proceed that I obtained that leave after explaining to the gentleman in charge of the bill [Mr. HANCOCK] that I would be compelled to take issue with the committee upon some minor points.

As to the sum of the appropriation and the manner in which it is made I have but little to say; nothing in regard to the sum except that it is admitted upon all hands that the amount hereby appropriated will be amply sufficient to meet all the expected demands of the service for the coming fiscal year.

As to the manner of the appropriation there has been some criticism made. One gentleman has ventured to say that it involves within it a political trick; that because the amount of the unexpended balance of appropriation for the Pension Bureau for the present fiscal year is not named in round numbers it is to be assumed that those reporting the bill desire that it shall go to the country as appropriating less money than it really does.

In answer to that, I have only to say that, so far as I can ascertain the facts, the clause in the bill making the appropriation of the unexpended balance is in the usual language employed for that purpose. There certainly is nothing in that criticism. Then the sum appropriated and the manner in which it is appropriated ought not to be criticised.

But some new legislation is proposed by the committee in relation to specific matters outside of the mere matter of appropriation.

Mr. PEELLE, of Indiana. Will my colleague [Mr. MATSON] permit me to ask him a question?

Mr. MATSON. Certainly.

Mr. PEELLE, of Indiana. Can the gentleman state to the House what will be the probable amount of unexpended balance remaining on the 30th of June next?

Mr. MATSON. I understand that the estimated unexpended balance will be $66,000,000. But if the sum of $66,000,000 should be appropriated as the unexpended balance, and there should happen to

be more than that amount remaining unexpended at the close of the fiscal year, of course an unexpended balance would then remain unappropriated. If the sum of $66,000,000 is named as the unexpended balance, and it should turn out to be more than remains unexpended, then there would appear to be more appropriated by the bill than there really is. Therefore I say that the Committee on Appropriations is entirely justified in making the appropriation in the manner in which it has made it, and in fact it could make it in no other way.

Mr. RANDALL. I suggest to the gentleman that in this respect we have followed the example of previous Committees on Appropriations.

Mr. MATSON. As suggested to me by the gentleman from Pennsylvania [Mr. RANDALL], the Appropriations Committee has in this matter followed the example of previous Committees on Appropriations as to unexpended balances not only in pension appropriations but in all others.

Now as to the legislation suggested upon these specific subjects. In the first place, the committee proposes that we shall legislate in reference to the fees to be paid to claim agents or attorneys. This I think was a wise thing for the Committee on Appropriations to do. Very many evils have arisen in the practice before the Pension Department; and they have arisen very largely from the fact that the Secretary of the Interior has not been allowed to prescribe the qualifications of attorneys, and every man and every woman, without reference to his or her ability to prosecute a claim, has been at liberty to act in the capacity of a claim agent. The Committee on Appropriations has not seen fit to propose any legislation in this respect. There, I think, they have made a clear omission; and but for the fact that the Select Committee on Payment of Pensions, Bounty, and Back Pay will propose a substitute for this portion of the bill, I should offer an amendment in this regard taken from a bill introduced by the gentleman from Missouri [Mr. MORGAN], which I think would meet the approval of this House. It simply declares that the Secretary of the Interior shall have the right to prescribe the qualifications of those persons who practice before the Pension Department.

The evils which have grown up in the practice before this Department have resulted not only from that cause, but also from the fact that attorneys were allowed to collect their fees in advance. In this respect the legislation proposed by the Committee on Appropriations meets the evil. They propose to amend the law so that the fee of the attorney shall be collected only upon the allowance of the claim, and shall be contingent wholly upon its successful prosecution. But I think the Committee on Appropriations in this proposed legislation have not met the whole evil. I believe that many soldiers have had just ground of complaint on account of the restrictions which have been put upon their right to contract for the payment of fees. In this way they have been prevented in many cases from contracting for the payment of a fee large enough to enable them to prosecute successfully a claim more than ordinarily difficult. It has thus happened that very many claimants have been unable to prosecute their claims at all, because they were prohibited from contracting for the payment of any fee greater than $10. In my judgment, the law ought to be so amended as to allow the claimant to pay with the approval of the Commissioner of Pensions a fee as great as $25.

I have carefully read the substitute which will be offered for the second section of this bill by the Select Committee on the Payment of Pensions, Bounty, and Back Pay; and I find that this proposition meets these evils in all particulars, and I shall therefore give it my hearty support.

While the Committee on Invalid Pensions has not taken any formal action upon this matter, I feel safe in saying, from what I know of the discussions in the committee on this subject, that they will approve the substitute to which I have referred. That substitute provides that the Secretary of the Interior may prescribe the qualifications of attorneys prosecuting claims in his Department; and it thus meets one of the evils I have pointed out. It provides further that no fee shall be paid by a claimant until the claim has been allowed; and that a fee of $25 may be contracted for, subject to the approval of the Commissioner of Pensions.

The substitute contains other provisions which I need not recite. It also guards the interests of the soldier as to contracts already made and does not permit any demand upon the part of the attorney for any greater fee than the law now allows in cases pending at this time.

Mr. Chairman, I wish to say a word in regard to another subject about which the Committee on Appropriations propose that Congress shall legislate—the compensation to be paid to pension agents. I started out with the belief that the Committee on Appropriations had fixed a proper sum as compensation. It was my opinion that the filling of these vouchers could be contracted for at a less price than 5 cents each; that these pension agents, if allowed 5 cents for the filling of each voucher above one thousand in each quarter, could by a system of subletting have the work done for about 3 cents each. After more mature investigation I think I was not entitled to come to that conclusion, because I started with the belief that all that was necessary to be done was simply to fill the vouchers, mail them to the claimants, and afterward forward them to the proper accounting officers of the Treasury. But upon a careful survey of the whole matter, in conjunction with the Commissioner of Pensions, I have made up my mind that perhaps 10 cents for each voucher would be about right. My judgment is that we ought to make this allowance. I do not like the proposition submitted by the gentleman from Minnesota; I think this preferable. If a sum in gross should be allowed to pay the expense of clerk-hire there might be difficulty in adjusting the particular amount which this or that pension agent should receive.

It would be difficult, therefore, to distribute it equitably; but on the basis of paying to each a sum certain for work done there can be nothing inequitable about it.

Mr. WASHBURN. Let me ask the gentleman from Indiana this question, whether under the operation of this rule of paying so much apiece it operates justly and equitably? For instance, if you fix a certain amount, say 15 cents apiece, for the preparation of vouchers, we will suppose in some office it produces $8,000 more than is actually expended. The result is it gives this agent in the way of perquisites about $4,000; that is, instead of giving him the same salary as the other agents, he gets twice the salary in the way of perquisites. The point I make is that we should so adjust it as to eliminate the element of perquisites. I do not believe in any perquisites under any government. I believe in paying a definite amount, and then the country knows exactly what is paid. It was with that view that I made the suggestion I did.

Mr. MATSON. I have already answered the gentleman's question as far as I can. My belief is if a sum certain is fixed for each voucher the sum paid to the pension agents will be more equal necessarily than it could possibly be under any other system. That is my judgment. There is a matter of judgment between us; the gentleman from Minnesota thinks otherwise. I can not.

Mr. Chairman, in addition to what has been said in relation to the manner in which these pension agents are to be compensated, I wish to suggest that during the last Congress I urged upon the attention of the Committee on Invalid Pensions the substitution of the supernumerary paymasters to fill the office of pension agents. It is well known there is a large number of them, enough and more than enough supernumerary paymasters of the Army to fill the office of pension agents, and I think that it ought to be done. They are men qualified to do it, and these Army officers have never been in any sense political agents. They have a record for financial integrity second to no other class of officers in the Federal Government, or in the government of any of the States. They are well qualified to do it, and I am informed by my distinguished friend from California, General ROSECRANS, who has most thorough information in relation to Army matters, that he will offer an amendment of that kind providing that these supernumerary paymasters shall be detailed for the purpose of filling the office of pension agents. That proposition will meet with my approval and shall have my hearty support.

A good deal, Mr. Chairman, has been said in relation to the matter of special examiners. Some complaint has been made that the claims which are now pending in the Pension Office have been greatly delayed, and some have assumed to say that these delays have occurred because of the fact that the claims have been referred to special examiners who go out to the homes of the claimants and examine into the matters connected therewith. There has been some delay, possibly some unnecessary delay, and the Commissioner of Pensions has asked Congress to give him an additional force in order that he may relieve that complaint as to the special examination of claims.

The Committee on Invalid Pensions have before it a bill introduced by the honorable gentleman from Kansas [Mr. PETERS], and have been considering that matter. That bill asks for one hundred and fifty more special examiners to be selected from those skilled in the law, and to confine the appointment to lawyers to be employed for one year, their term of office to end at that time. The Committee on Invalid Pensions have not regarded that proposition with favor. As we understand the law enacted July 25, 1882, it gives the Commissioner of Pensions the right to detail from among his clerks any number of persons he may see fit to send into the field to act as special examiners.

Mr. PETERS. I desire to ask the gentleman whether it is not the fact that the Commissioner of Pensions can not spare any more force from the Pension Office for that purpose.

Mr. MATSON. Upon the contrary, the Commissioner of Pensions has recommended in his report the reduction of his force to the extent of two hundred and fifty clerks July 1, 1884. That is a reduction of one hundred more than the number provided in the bill of the gentleman from Kansas. But I wish to be fair and just to the Commissioner, and I will say that in addition he insists these men now in the Pension Office, and whom he proposes to discharge at the end of the present fiscal year, are not the best qualified for that purpose.

Mr. PETERS. Let me ask another question. Is it not the duty of the Commissioner to supply that force of special examiners from the men most competent to do efficient service?

Mr. MATSON. I understand that is so, but I can see no reason for having lawyers, and only lawyers, to go out into the field to discharge no other function than merely writing down testimony, not having to decide any case at all, for the cases come to the Pension Office to be decided. I say I can see no good reason why these clerks in the Pension Office would not be more competent to perform that duty, men who have worked about the Pension Office for a long time and are perfectly acquainted with the modes of business. And more than that, the old

soldiers I know would be much better satisfied to have old soldier comrades who have had experience in these pension matters, and who can enter into sympathy with their experiences, to handle their cases than to have the young lawyer, fresh from a law school and with no Army experience, and without any ability to understand or appreciate the statements of those who were familiar with war in its actual facts.

Mr. PETERS. I would like to ask one further question.

Mr. MATSON. Certainly.

Mr. PETERS. Is it not a fact that these special examiners must necessarily weigh evidence and must be conversant with what is competent and what is non-competent testimony?

Mr. MATSON. I think not. Their duties are essentially different. The case is sent to the board of review to be adjudicated, and within my own observation and experience more than one case has been recommended by the examiners in the field which has been rejected by the board of review in the Pension Office. These examiners do not in any sense of the word decide the case. It is the practice of the office to take their recommendations and the matter passes a revision before this board of review. But it is not now and has not been the law that these examiners shall decide the case.

Mr. REED. But let me ask the gentleman, is it not essential that a lawyer shall be employed in order to get at the testimony that is necessary? Is not a knowledge of the law of evidence an absolute essential to the proper discharge of the duties of that position?

Mr. MATSON. I think not. In my judgment and from a very extensive observation in the Pension Office, I can say that there are plenty of clerks who have been employed there for two years who are quite as well prepared to go out into the field and write down the testimony that is submitted ordinarily in pension cases as the lawyer.

Mr. REED. But does not the examiner of the Pension Department have something else to do as well as to write down the testimony in the case? Is it not expected that he shall examine it, cross-examine it, and is he not expected to be competent to hunt up additional testimony as well as to examine the testimony brought before him? It is a duty, it seems to me, which requires the services of a lawyer, and a lawyer alone, and which could not be performed by a person who was not a lawyer. Besides that, it is necessary to have something besides two years' training in the Pension Office for a proper performance of this work outside of it.

Mr. MATSON. My own observation is that there are very many there who are quite as efficient to perform these duties as a lawyer, although they have not studied even the elementary principles of law. A lawyer is certainly not necessary. But I do not care to pay any further attention to that particular subject. I do insist, however, that the remedy is in the hands of the Commissioner of Pensions now, and that he can detail from his office under the general appropriation bill providing for the payment of pensions, passed in 1882, enough men to relieve the Pension Office of this work so far as the clog in the work of special examinations is concerned.

A great deal has been said in relation to the examining surgeons. There have been many complaints made upon that point. Some gentlemen have gone so far as to say that these examining surgeons have not done justice to the soldiers. Possibly there may be some exceptions of that kind; but I must defend the administration of the Pension Office in that particular. I insist that the Pension Office and the Commissioner of Pensions, in the selection of surgeons, has, as far as possible, selected them from among those who served as army surgeons. He has selected therefore those who were soldiers themselves to examine the soldiers, in so far as he could. And what, let me ask, can be suggested to replace the board of examining surgeons? I asked the gentleman from Ohio the same question the other day, as to what he would suggest instead, and after some circumlocution I understood him to say, though I have not been able to see his remarks in print, that he thought a sort of neighborhood court would answer the purpose; a court where the witnesses and the lawyers and the doctors could all meet and upon an investigation of the subject the lawyers, the witnesses, and the doctors could fix upon a rating for the man for his particular disability. That is what I understood him to suggest as the preferable plan, and which would obviate the complaint that one man here in the Pension Office revises the work of all of the examining surgeons. There is one man there for that purpose, and it is absolutely necessary that one man should do the work in order to secure uniformity in the rates. If any other system is resorted to there would be one rate here and another rate there for the same disability; but when one man reviews the work of the pension examining surgeons the effect is an approach at least to uniformity of rating. There may be just complaints in individual cases against some of the examining surgeons; but the complaint against the office of examining surgeon is not well founded and can not be sustained.

In the deficiency bill already passed an appropriation was made for these examining surgeons on account of the expense largely exceeding the estimate for the last fiscal year, and I say that the Government has not spent any money that has made a better return than that which has been spent for these examining surgeons. There is no money that has brought a better return, not to the Government only but to the soldiers; and who will deny that when this matter was left to the examination of one surgeon, either through ill-will, prejudice, or something of the kind, wrong was more likely to be done than through the judgment of a board of three surgeons?

So I say that these appropriations to pay these surgeons ought to be made cheerfully. I think, however, they are paid just $2 where they ought to be paid $1. The office of the examining surgeon has got to be quite a lucrative one. I apprehend if the whole amount appropriated was divided by the number of examining surgeons it would be found the members of the boards of examining surgeons are paid now a salary equal to nearly $1,500 a year; and they have their time, almost all of it besides, to devote to the practice of their profession. I think they are paid too much, and that if the fees were reduced to $1 for each examination we could have just as competent surgeons, and there would scarcely be a resignation in the United States on account of the reduction of fees.

Mr. CANNON. Will the gentleman allow me a single question?

Mr. MATSON. Certainly.

Mr. CANNON. I desire to ask the question because I know my friend from Indiana would not do the Commissioner of Pensions an injustice. I was absent a moment ago when he spoke of the special examiners. My friend is aware of this fact, I take it; if not I would be glad to have it appear in the RECORD: First, that the clerks the Commissioner proposes to dispense with are copyists who do machine work. Second, even if you had clerks competent to do this examining work the appropriation for the per diem and traveling expenses of these people is not sufficient, and they have had to call in the present force. A few days ago a provision was made for a portion of the present force in the urgent deficiency bill. We gave a small additional balance to enable the Commissioner to keep the present force. I speak of this because I know the gentleman from Indiana does not desire to do the Commissioner an injustice.

Mr. MATSON. I am far from wishing to do the Commissioner of Pensions an injustice, for taking it as a whole I approve of his administration, and what I said on that subject I stated very carefully. I stated when the gentleman from Illinois was absent that the Commissioner of Pensions insists that the men he has in his office now whose services he does not need he regards as not qualified for the work.

Mr. CANNON. And there is no appropriation to detail special examiners.

Mr. MATSON. As to that matter the gentleman has more information than I have, as he is a member of the Committee on Appropriation.

Mr. CANNON. Such is the fact.

Mr. MATSON. I have no doubt it is as the gentleman states.

Mr. BRUMM. Does the gentleman from Indiana not know that the Commissioner of Pensions has called in a number of these special agents because of the deficiency in the appropriation?

Mr. MATSON. I am not aware of that.

Mr. BRUMM. I know that is a fact.

Mr. MATSON. Possibly these have been called in to the office because they were found to be not adapted to that work. I know there were recently about two hundred and sixty of them in the field, and I know my friend from California [Mr. ROSECRANS] will propose that the retired Army officers be detailed for the purpose of taking charge of these special examinations. I shall not favor that proposition in so far as it proposes to take away from the work those who have already acquired some skill in it; but I will favor it in so far as it proposes the Commissioner of Pensions shall draw upon them for any additional force that is necessary.

Now, Mr. Chairman, I shall venture to trespass upon the committee with a few observations in relation to general pension legislation, and I am free to say that I do this mainly for the purpose of showing that the Committee on Invalid Pensions has not been negligent of its duties in this Congress, and that it has in every practicable manner undertaken to meet the reasonable demands of the brave men who have served their country in its hours of danger and who deserve the most liberal treatment at the hands of a prosperous people. But before I proceed to point out what has been accomplished, I wish to say that there are differences here among the legislators as to what legislation should be passed, just as there are differences at home among the soldiers themselves as to which of the many meritorious propositions should be preferred. It is not expected or even hoped that all of the many demands for legislation in the interests of ex-soldiers will be accomplished at this Congress, and each particular measure has its champions.

If I was allowed to select from among all the one which I would first pass, upon its right to precedence, it would be a just measure to equalize the bounties of all the soldiers in the late war for the Union. Such a bill was passed in the Forty-third Congress and was allowed to fail to become a law upon the ground that the condition of our finances would not permit the expenditure of the large sum required in that direction. Such an objection could not now obtain, and the justice of the measure, affecting as it would so large a number of the late defenders of the Union, can not be successfully denied. We are able now to do justice to those who at the first signal of danger rallied to the defense of the flag and who were influenced, not by the promise of large bounties as rewards, but solely by a high sense of duty. This legislation should not be postponed a single day, and I trust that the Select Committee on the Payment of Pensions, Bounty, and Back Pay, which has exclu-

sive jurisdiction of this subject, will speedily report a bill of this kind and urge it to its passage.

The Committee on Invalid Pensions, in attempting to bring to the attention of the House such legislation as in its judgment could be formulated into laws, on the 20th day of February reported to this House a bill to prescribe a rule of evidence in pension cases, which I ask the Clerk to read.

The Clerk read as follows:

Mr. MATSON, from the Committee on Invalid Pensions, reported the following bill as a substitute for H. R. 2023, 2276, and 4281:

A bill prescribing a rule of evidence in pension cases.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in the adjudication of claims for pension on account of physical disabilities contracted in the military or naval service of the Government, including those claims already filed, no proof of soundness prior to being mustered into said service shall be required, and the Government is hereby declared to be estopped from making said inquiry by proof of the fact that the soldier or sailor was regularly mustered into the service: *Provided*, That this act shall not apply to such physical injuries or deformities as were at the time held to be no bar to being mustered into said service, nor to cases of enlistment or muster into service through the fraud or deception of the soldier or sailor, the burden of the proof of which shall be upon the Government.

Mr. MATSON. This legislation was suggested by a bill referred to the committee, and introduced by the honorable gentleman from Michigan [Mr. ELDREDGE]. We insist, and shall insist, that it contains in its provisions a statement of a principle of absolute justice to the soldier. The whole matter may be briefly stated as follows: That it is not right for the Government to receive a soldier as sound and free from disability, accept his service as such, and then, after a lapse of years, as a condition precedent to the enforcement of his rights, require that he should prove that fact. We have been informed during the progress of this debate that the Committee on Payment of Pensions, Bounty, and Back Pay will on Monday next move to suspend the rules and pass a bill to give relief in this direction. I have not examined the proposed legislation, but I take it that it has been carefully drawn and will be found to be effective for the removal of the gross wrong so justly complained of by the soldiers of our country.

INCREASE OF WIDOWS' AND DEPENDENT RELATIVES' PENSIONS.

A bill was introduced by me in this House on the 29th day of January last to increase the pensions of all widows and dependent parents from $8 to $12 per month. This was reported favorably to the House on the 1st day of March, and is now upon the Calendar of the Committee of the Whole House on the state of the Union. I expect at the earliest opportunity to move to suspend the rules and pass this bill, and for that reason I am sure that I will be indulged now in pointing out to the House the scope and effect of this legislation.

I know that the first inquiry that will arise will be as to the cost of the proposed measure, and it is a matter of sincere satisfaction to me to be able to say to the House that a calculation has been made, with the aid of those greatly experienced in pension matters, and for many years employed in that branch of the public service, which I do not hesitate to say to the House may be taken as a full estimate of the addition that will be made to the annual value of the pension-roll. Indeed, I am satisfied that in no year will the figures be reached that we have submitted in our report upon this bill.

This rate of $8 per month for widows of soldiers was established in 1816, and although since then every other rate has been increased, they have been neglected. At the time this rate was fixed for them it was the highest rate known to the law paid to any soldier for any disability. Now it is well known many receive as much as $72 per month for certain extreme disabilities, and hundreds of thousands of others now receive more than is allowed to this most worthy and deserving class. The law contemplates that this pension shall supply the means of support that are taken away from them by the death of those upon whom they were entitled to depend. Who will say that the present rate of $8 in these times will be equal to the sheerest necessities of the most humble of them. So that, considered either in its relation to the other or in the abstract, it must be admitted that justice demands of us that we should extend to them some relief.

Another view of this matter I wish to suggest to the House. No pension bill could be suggested that would tend more toward a just and equitable distribution of pension-money to the different sections of the country. It is a well-known fact that the pensions that are paid to those who live in the States lately in rebellion against the Federal authority are paid for the most part to the widows of the wars in which the Government was engaged prior to 1861; and while it is not denied that in all general pension legislation, so far as localities are concerned, the advantage is of necessity with the States who stood by the Government in its greatest war, yet in this legislation our friends from the South must see that the proposed bill will add to the share of their people as much as any bill that could be framed. No opposition has as yet been developed to this most righteous proposition that tends in the direction of caring for those who have suffered most from our wars and are so illy able to care for themselves, and I indulge the hope, and have allowed that hope to grow into a fixed belief, that when the proposition is submitted to the House no voice will be heard to oppose it.

INCREASE OF PENSION TO THOSE WHO HAVE LOST ONE EYE.

This Congress has received many petitions upon the subject of increasing the pensions of those who were then pensioned at $4 per month for the loss of one eye. Upon an investigation of the subject the Committee on Invalid Pensions discovered that this was purely an office rate and not controlled by any law, and that the remedy for what seemed to be a palpable wrong was entirely within the power of the Secretary of the Interior. So that committee at once addressed a letter to that officer, and the result is to be seen in the letters which I now send to the Clerk's desk to be read.

The Clerk read as follows:

DEPARTMENT OF THE INTERIOR, PENSION OFFICE,
Washington, D. C., March 6, 1884.

SIR: I have the honor to acknowledge the receipt by reference of the letter addressed to you on the 26th February, 1884, by the individual members of the Committee on Invalid Pensions, in which they call your attention to the low rate fixed by the rule of the Department for the disability arising from the loss of one eye. I find upon investigation that it has been for so many years the rule to rate the loss of one eye at one-half of total rate that the original order establishing the same has been lost, and the oldest employé of this bureau can not remember when such has not been the rate. It has, therefore, the sanctity of custom, and may be regarded as an established rule of the bureau. The injustice, or rather I would say the inadequacy of such a rate for such a disability has been apparent to me for a long time. Not the least important factor in such a disability is to be found in the deformity and its conspicuous prominence.

After mature deliberation and consulation with different persons in the office who have had long experience, I am free to say that in my judgment the rating of total according to rank for the loss of one eye, or the sight thereof, where the other eye is not complicated or affected through sympathy, will not be considered an excessive rating. In this connection allow me to call your attention to the rating for partial deafness. The statute, section 4698, provides for total deafness for both ears at the rate of $13 per month. I would suggest as a fair substitute for the existing rule, upon the rating for partial deafness, that the maximum of $13 be considered as 13-18 disability as fixed by section 4696, Revised Statutes, and that inferior degrees be rated at 12-18, 11-18, 10-18, 9-18, 8-18, &c., to comport with the actual degree of disability found from partial deafness.

I have the honor to remain, very respectfully,

W. W. DUDLEY, *Commissioner.*

Hon. H. M. TELLER,
Secretary of the Interior.

DEPARTMENT OF THE INTERIOR, PENSION OFFICE,
Washington, D. C., March 29, 1884.

SIR: Since writing the letter I had the honor to address you on the 6th instant, relative to the proper rating to be fixed for the disability occasioned by the loss of an eye, in which I stated "that in my judgment the rating of total according to rank for the loss of one eye, or the sight thereof, when the other is not complicated from sympathy, will not be considered an excessive rating," my attention has been called to the decision of Mr. Acting Secretary Cowen and Secretary Delano, dated, respectively, the 11th and 25th of June, 1874, in the case certificate No. 75652 of O. H. P. Krise, and your attention is respectfully invited to the same.

In these decisions it will be seen a distinction is drawn between a disability caused by the loss of the sight of one eye and the disability caused by the loss of the eye itself. This distinction, in my opinion, is just and proper, and after having fully considered the matter, I am now of the opinion that the disability occasioned by the loss of the sight of one eye should be rated at total grade of rank, and that the disability caused by the loss of one eye, with the consequent deformity, should be rated at third grade, except in cases where that grade is less than total of rank.

Very respectfully,

W. W. DUDLEY, *Commissioner.*

The honorable SECRETARY OF THE INTERIOR.

DEPARTMENT OF THE INTERIOR,
Washington, April 3, 1884.

SIR: I have the honor to acknowledge the receipt of a communication dated the 26th ultimo, signed by you and other members of the Committee on Invalid Pensions of the House, recommending that in the adjudication of claims for pension by the Pension Office, the rate of pension for disability resulting from the loss of one eye be increased beyond that now fixed by that office for said disability.

In reply I transmit herewith copies of letters dated the 6th and 29th of March from the Commissioner of Pensions, in which he recommends that the practice of his office be modified to allow higher rates of pension as therein specified for the loss of sight of one eye and for the loss of an eye, and also an increase in the allowance of pension for disability for partial deafness.

I have approved these recommendations and have instructed the Commissioner to cause the practice of this office to conform thereto.

Very respectfully,

W. M. TELLER, *Secretary.*

HON. C. C. MATSON,
Chairman Committee on Invalid Pensions, House of Representatives.

Mr. MATSON. Thus it will be seen that something has been accomplished for this worthy class of pensioners to the extent of giving them hereafter double the rate they have heretofore received.

Mr. Chairman, there is another subject to which I wish now to invite the attention of this committee. In the estimation of the great majority of the soldiers, I feel sure it is regarded as necessary to do justice to all. It rests upon the axiomatic proposition that if a soldier is entitled to a pension he is entitled to be paid from the date of his disability or discharge. The statement of this proposition is, as already suggested, the proof of its correctness. It is not right to pay a pension to one soldier from the date of his disability or discharge and to another from a date long after his disability. Some remedy is demanded for this manifest wrong, and I shall be ready to give my support to any measure that can the most certainly and speedily apply a remedy, particularly to those who are now suffering from the injustice. Many objections are made to any further legislation in this direction, because it has been found to be expensive, because it has stimulated the filing of false claims, and because those who now feel aggrieved once neglected an opportunity to get their full rights.

It will not be denied that there is some force in the last two objections. It has also been said that an absolute repeal of the statute of

limitations as to the filing of pension claims would not only stimulate the filing of false claims, but that the cost of such a measure could not be estimated, and that no prudent legislator ought to embark in any measure of legislation without being able to at least approximate the expense thereby entailed upon the people. There is force again in this objection, but I submit that a measure proposing to extend the benefits of the act giving arrears of pension to all these who have filed their claims up to some given day in the recent past would obviate this very strong objection. Such a measure I hope to see soon reported to this House, because I think it can be passed; and while it may not be all that it is desired, nor indeed all that may be rightfully demanded, yet it will almost entirely equalize the rights of those who are now receiving pensions and be an earnest that the great principle of justice to all is the established policy of the Government.

There are other matters of general legislation relating to pensions to which I would be glad to call the attention of this House, but I know that I have now trespassed upon the time of an overtaxed Congress, and I shall soon yield the floor. I can not, however, leave this subject without inviting members of this House to scrutinize the work of the Committee on Invalid Pensions. By day and by night this committee has labored to the end that not only justice shall be done in the way of general pension legislation but that in individual cases equity may be done to the worthy soldiers and their representatives who fail in the prosecution of their claims under the law because of technicalities.

That committee up to this time has had referred to it 2,097 bills and 600 petitions, about one-third of all the bills and petitions introduced in this House. Of these we have reported upon 532, and it is only fair to say that the credit of such a record is due very largely to the industry and ability of individual members of the committee, and conspicuous among us where all are compelled to do much hard work—I am sure it will not be regarded by my brethren upon the committee as making an invidious distinction when I state the fact that one-third of these reports have been made by the gentleman from New York [Mr. BAGLEY], who has shown not only an extraordinary diligence in the business of this session but has at all times brought to the consideration of these individual claims the most just discrimination, indefatigable industry, and kindly disposition toward the soldiers of the Union who offered themselves to their country in the hour when it most needed to be upheld by strong arms and brave hearts. Others of this committee are entitled to honorable mention, but the work of the gentleman from New York [Mr. BAGLEY] has been so conspicuously successful that I should fail to respond to the most generous impulses of my heart if I did not review it briefly here.

One word, Mr. Chairman, and I have done. I know that much is expected from this House in the way of legislation in the interest of the ex-Union soldier. In fact I am not prepared to say whether too much has not been expected, and whether there has not been encouragement given to this expectation in the hope that the soldiers would find themselves disappointed. I can only say now that I feel sure that when the sum of all the legislation by this House is added that is had at even the present session the soldiers will have no reason to complain when they compare it with that accomplished at any long session of any Republican House. The Democratic party will continue, as it has been in the past, the friend of the soldiers of this country, and it will be, as I am sure it should be, guided by this motto: Just and reasonable legislation in behalf of the soldier, so that the pensions paid by the Government may continue to be popular with the people.

Bureau of Labor Statistics.

"The laborer is worthy of his hire."

SPEECH

OF

HON. JOHN J. KLEINER,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 19, 1884,

On the bill (H. R. 1340) to establish and maintain a bureau of labor statistics.

Mr. KLEINER said:

Mr. CHAIRMAN: I see greater interest manifested here to-day upon this question than I have ever seen before upon any subject brought to the attention of the House. I am moreover convinced that if this Congress did less talking and more voting much valuable time would be saved, and the bill under consideration would become a law at once, and the cause of labor substantially advanced.

The two things, Mr. Chairman, that puzzle me most are the damnable rules of the House and the "talking cranks." These two are with us always. The latter are exposing their long ears, if nothing else, at all times and upon every occasion. The vast amount of information obtainable from them upon every conceivable subject is the only excuse for their toleration. One would suspect that the gentlemen whose lily-white hands had performed every kind of manual labor, from childhood up to the day they broke into this Congress, ought to exempt them from exerting themselves during the remainder of their natural lives, especially with their mouths. From this latter affliction may the good Lord deliver us hereafter, for the toiling millions will gather neither relief nor information sought under this bill through their efforts.

I have no use for pretenders either in or out of Congress, and as this bill has been carefully considered by the committee and unanimously reported to this House with a favorable recommendation, I trust it will pass speedily. The information to be derived can not fail to be of benefit to the workman as well as the capitalist. It will, in my opinion, set at rest the conflicting opinions now held by the people of this country respecting that vexed question, capital and labor, and its seemingly many divergent interests. Judging from the way in which this debate has been conducted, I believe that the remarks of many gentlemen are misdirected. To my mind the greatest curse that has afflicted and depressed the condition of the laboring man has been the present war tariff.

Inasmuch as all taxes and burdens must be raised from the hand of the laborer, whether in the workshop or on the farm, it is clear to my mind why he should be poor to-day while his employer should roll in wealth long after the conditions that made the war tax necessary have passed by. Workmen in this country can not be led to believe in the equality of all men before the law while they are ground down into peonage and servitude. They can not be made to respect the Constitution of a country that divides the people into a peasantry and a moneyed aristocracy. While one part of the people, and a small part at that, roll in wealth, erect palaces and costly homes, drive through the streets in costly turn-outs, with crests and heraldic insignia emblazoned on them, is it not a marvel that there is not more unrest among the masses who produce all this by their skill and labor?

You must remove this infamous tariff and stop paying tribute to a select few if you would solve the labor question. This country possesses all the diversities of soil and climate to enable its people to compete with any other in the world. Why should we with 60,000,000 people daily parade our poverty and fear of England with 20,000,000? Are we still so helpless and feeble that we must ask alms from infinitely weaker nations? Shame on such cowardly conduct. What a commentary we are, anyway, on the heroes of the Revolution and our patriotic ancestors of 1812. Why, Mr. Chairman, this country has the dry rot like the dug-outs we call our Navy; strangled with infernal class legislation and dying from internal corruption; "dying as Rome died by its vices as it had formerly flourished by its virtues; dying because her wealth and her lands were legislated into the hands of the few, as ours were, converting a race of freemen into a herd of serfs;" and here we stand watching for the forging of the chains that are to bind us. "Life, liberty, and the pursuit of happiness" was first proclaimed as the cardinal doctrine of our national faith.

By that doctrine true manhood was held paramount to the claims of mere wealth. Yet to-day our whole land is honey-combed with monopolies fostered by national legislation. Our money and our lands are thrown into their capacious coffers, our lives, our franchises, and our liberties are all being rapidly transferred to their keeping. I tell you the land that will not be warned from the disasters and ruin of the Roman Empire, and the rise and fall of nations since the dawn of time, will speedily drop into decay. Stop the iniquity of giving the nation's bounty to the rich while the poor among us are begging bread, and you will have solved the problem of this country's greatness.

The manufacturer of this country is shut out from the markets of the world, hence he must depend upon the home consumption. High tariff has induced overproduction, and consequent stagnation. According to the census returns, our factories could produce twice as much as they now do; yet they are idle now nearly half the time. Give our industries a chance at competition with the world, and with our cheap raw materials at our doors we could soon drive from active competition with us every nation on the earth.

The protectionists keep telling us that they want a monopoly of the trade of America to insure good wages to the laborer. This has been the plea of the protectionists and the only one; yet they know that they have established agencies among the pauper-labor countries in order to supply this country with the same class of men they so much decry.

The intelligent workmen of this land are beginning to wake up to the impositions practiced upon them, for they often rise up in the morning and find themselves face to face with a ship-load of heathen mongrels ready to displace them, or car-loads of convicts from our own penitentiaries. The protectionist asks that the workman's product be protected against competition, but he scours the earth to find labor degraded enough to compete with his own workmen. Thus, in order to continue in employ he too must submit to a reduction in keeping with that of the convict and criminal as well as the imported hireling from the jungles of Asia and slums of other lands.

I do not propose to overdraw this picture, for it is a well-known fact that in spite of their enormous profits and ability to pay fair wages, the

protected manufacturers have uniformly paid the lowest wages, and to enable them to still more depress the wage-worker they have established agencies in foreign countries through which they can supply their factories with cheap workmen. I shall confine myself to the record and shall quote from Mr. Henry Sterne, United States consul in Hungary. Mr. Sterne, in his report to the State Department, under date of 1882, submitted the following:

I have information that agents are managing the business a good deal in the manner of the cooly trade, and that these immigrants are shipped to the United States about like so many cattle.

Here are the words of our consul officially submitted for the information of Congress. Here we discover the agent of the philanthropic protectionist employer recruiting among the serfs of Hungary for pauper labor with which to supply his factories, and this the gentleman from New Jersey [Mr. PHELPS] no doubt considers as one of the chief beauties of the protective system for New Jersey. For in the town of Malaga, N. J., the American workmen had to leave their homes in midwinter by order of the manager of a factory in order to make room for a cargo of pauper laborers fresh from the bogs of Belgium who were brought in to take their places. Yes, shipped here "like so many cattle."

It has been observed that in some of the largest factories of this country there were found, instead of intelligent American citizens, ignorant and indifferent foreigners, who do not speak any language recognized in this country, and hence can not become informed as to the economic conditions that exist here. These men were all under contract for a term of years at a rate less than standard wages. The management discourage the introduction of any general information, as in their ignorance they were more tractable and obedient—would more readily submit to impositions such as would arouse the free American citizen into mutiny and open rebellion.

But, Mr. Chairman, there are still other sources of information on this "slave-trade" carried on by the protectionists in the interests of American industry.

Count Esterhazy, the Austrian consul to New York, established a bureau for the protection of Hungarian immigrants. In one of his reports he says:

There is no doubt that a contract system is being carried on, and I believe it has reached large proportions. Certain it is that great numbers of emigrants are landed on these shores who are owned by capitalists.

"Owned by capitalists"—by the men who hang around the halls of Congress and prate about their devotion to American labor. These are the words of the Count.

What think the friends of the protectionist in this House who in the interest of their cause buy and sell men, women, and children twenty years after the abolition of slavery in this country? Greed and avarice combined have made our country a prey to the cupidity of man, and he has succeeded well in disgracing us in the eyes of all civilized nations. There can be but one object in this traffic, and that is to degrade our American workmen and supplant them with cheap labor hired under contract abroad.

The object of the protectionist is clear, and his profits are certain while home consumption is equal to his ability to supply. Since the supply is greater than the demand he desires to sell his wares abroad. But we have no ships and no commerce, and healthy competition is out of the question. So long as the protectionist can force his home customer to buy his wares at the high-tariff prices he is content. The foreigner, however, will buy where he can obtain his goods in open competition; hence to sell the American must sell below the tariff, while to the American farmer and laborer he sells above the tariff rates regardless of the fact that imported pauper labor made the goods sold.

Under the war-tariff system the workman can not fail to grow poorer day by day as long as the labor market of the world holds out, and some pretext or another will be found to bring it here just as long as a premium is held out for it by our national policy. We might as well try and build a Chinese wall about this country and expect it to prosper as to shut out our commodities from the markets of the world and expect to get rich by swapping pennies among ourselves. This peanut policy must stop or we will soon smother and stifle all individual effort. Our Government will be made a paternal one. Wealth will accumulate and men will decay. Strong armies will become a necessity to prevent outbreaks in every part of the country. Here is a sample of what protection is doing for our people and for American workmen, for whose sole benefit we are told it is maintained. On July 11, 1883, the Window-Glass Manufacturers' Association held their meeting at Long Branch and adopted the following resolution:

Resolved, That the treasurer be authorized to pay a sum not exceeding $30 per man for each blower or gatherer brought over from Europe after August, 1883, provided the same be employed by some member of this association, and provided that they are not workmen who have been in this country within the twelve months last passed.

In this manner thousands of paupers are brought over from Europe on short notice at so much per head, and powerful corporations often refuse to employ any other. The great continental lines of railways toward which the Government gave hundreds of millions in money and lands were all built with pauper labor, averaging not to exceed 28 cents per day for each man employed—filthy heathen, subsisting on rats and snakes, brought here by protectionists to compete with American labor. From gentlemen who testified before the committee I submit brief extracts. Mr. S. V. Penderly, a master workman, says:

These imported men show no disposition to become citizens. I have seen eight men and one woman living in a small house, without beds or furniture, sleeping on the floor. Their total expense for subsistence was $3 per month for each person.

I have seen men engaged at Castle Garden and taken to Frostburg, Md., where they lived in a wooden building, without furniture, sleeping on bunks. This building was fenced in to prevent the inmates from being communicated with by the people whose places they had taken. Their daily food was water and mush, with a small quantity of meat on Sunday.

These men were fenced in to prevent them from obtaining any information concerning the business of their oppressors. I commend them to the pitying care of the gentleman from Pennsylvania [Mr. KELLEY], whose sympathy for the poor oppressed pig-iron makers has blinded him to the real cause of our national decay which he so much deplored.

Mr. Bouilet, of Zanesville, Ohio, said he was hired by an agent at Antwerp with sixty others, who found upon arrival that they were to work for 25 per cent. less than the regular rate. At Kent, Ohio, they contracted for three years upon condition that they would not associate with American workmen. Several men violated this part of the agreement and were arrested. When they arrived at Mansfield the few who could speak English were warned not to talk to any one. Their engagement was at from 30 to 50 per cent. below the regular rates.

Most of these contracts are drawn waiving all the workman's rights under the statutes of the States passed for the protection of labor, and to save him from the avarice and greed of the manufacturer. I could continue citing cases as they exist in almost every section of the country. The intolerance of the bosses in Pennsylvania, however, has reached the top rung in the ladder. Mr. Barclay, who represents the mining region of Pennsylvania, testified before the committee. He says men and women are brought into the country under contract; there was an agency in New York and another in Pittsburgh who made a specialty of receiving this kind of labor. They were very desirable, and firms employed them because they were easily imposed upon.

Mr. Barclay says he counted one day thirty-five women and children employed in forking coke and working about the ovens. The children were very poorly clad and of every age, ranging from 5 years upward. Their habits were disgusting in the extreme. They had no beds, but laid on the floors "heads and tails." It is strange that the attention of the gentleman from Pennsylvania [Mr. KELLEY] was not arrested by this state of facts right at his door, for in his plaintive story the other day he rung the changes of distress and misery as it existed in England; yet not a single statement made by the gentleman compared in the horrors of detail to the state of facts that exist in his own home and in the State he represents on this floor.

A yard-boss in Pennsylvania took thirty-seven men from a single house containing four small rooms. They had no beds, but lay on the floor. The little money they get they save to go back home on. When they get sick they go to the poor-house. They work for two-thirds the regular rates. The companies employing them compel them to buy goods at their stores, which are retailed to them at enormous profits. If they refuse to receive their pay in this way they are discharged, in spite of the statutes of the State of Pennsylvania. Any attempt to organize against this oppression and tyranny on the part of the workman is met by the employer black-listing the offender and refusing him work.

In the mines these ignorant people are employed at so much per ton. As they do not know what a ton is they are again overreached. The agencies that bring these people get so much per head for each one imported. These degraded people, who are brought here by the shipload to compete with and lower the standard of American labor, will "subsist on offal, they will eat mules and hogs killed or that have died from diseases."

No wonder protectionists are getting rich; but their riches are founded upon a bank of sand, and I warn them now to desist, for their cause is doomed. An outraged and enslaved people will sooner or later break forth into open revolt.

At Kent, Ohio, the imported men all work on Sundays, doubtless to make up for lost time, while the bosses go to church. At Muskingum the men work seventeen hours per day, and to enable them to eke out a miserable existence they cultivate their little gardens by the aid of lamps. Why, the African slave was a prince by the side of this new system of torturing mankind, for when sick his property value secured him decent attention at least.

It is a strange fact, but it exists nevertheless, that these cries come chiefly from States and localities which have been held up by this national bounty called tariff. Miseries that shame the conjectured tortures of hell are found right in the midst of the highly protected industries, showing conclusively that no part of the rich bounty granted by the Government is shared with the workman, but is invested in costly mansions, luxurious living, fine horses and turnouts, and expensive tours abroad for the general gratification of the employer. For of the 32 and 67 per cent. profits which the poor man created he has now, like the Son of Man, not even a place whereon to lay his weary head.

The Tariff.

SPEECH

OF

HON. HERSCHEL H. HATCH,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 1, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 5893) to reduce import duties and war-tariff taxes—

Mr. HATCH, of Michigan, said:

Mr. CHAIRMAN: The bill before us proposes a "horizontal" reduction of the tariff. No attempt is made to readjust the tariff on one article to the tariff on another, but it is violently assumed that all duties levied under present law are at least 20 per cent. too high. No inequalities are admitted. All lengths are just so much too long. This is a very strange condition of affairs, to say the least, and if the assumption is true it is a condition not often found.

The measure is sought to be supported upon the theory that our present tariff laws are highly protective and that all protective tariffs are wrong in principle and vicious in practice. The questions involved have been often debated heretofore, and have now engaged the attention of the House for many days.

For one I have listened to the discussion with great interest and assiduously studied the speeches for and against the measure. Some errors into which I had fallen have been corrected, and some former convictions deepened. For this I am indebted to both the friends and the foes of the bill. I am far advanced in the belief that the extreme advocate of neither side sees all the truth, but that it lies somewhere between.

That the policy of protection has been in the past of great benefit to the country I have no doubt, but that it will continue to be equally beneficial in the future is not so clear. Its advantages are passing and temporary. I can not go all lengths with some ardent protectionists that can be named, and the expressions of the doctrine as occasionally laid down in party platforms will have to be qualified to fit it to my convictions.

In the course of my remarks I shall develop nothing new—only restate some of the truths already brought out in the debate. Indeed very little new ground remains to be occupied; the field has already been trodden to a waste.

First, let us seek a clear idea of the operation of a protective tariff—as clear as may be, for it is involved in most perplexing complications. How does it affect the interests of capital, of labor, of the consumer?

I shall content myself with the restatement of first principles. We shall the better grasp the subject by returning to the "simples." No apology is needed if we begin at the beginning.

The difficulty lies in separating from the great mass of facts and results those attributable to the operations of the tariff and distinguishing them from those which flow from other sources. We shall best solve the problem by attending carefully to the workings of the natural law of commerce—the law of supply and demand—remembering that men will usually do those things which are most for their advantage. These are propositions which no man denies, namely:

An increase in the supply of a commodity tends to lower the price of that commodity;

A diminution in the supply tends to increase the price;

An increase in the demand tends to increase the price; and

A diminution in the demand tends to diminish the price.

Beyond this let us believe that a person under ordinary circumstances will buy where he can buy cheapest, sell where he can sell dearest, and follow in the path along which he believes his best interests to lead.

Wages in America up to this time have usually been higher than in the older parts of the world—higher in New England than in Old England.

Following are some of the comparative statistics on this subject:

Weekly wages for 1883.

Occupation.	Newark, N. J.	Paisley, Scotland.
Cop-winders	$8 00	$3 50
Finishers	5 00	2 50
Rulers	8 00	4 25
Spoolers	8 00	3 25
Foremen	20 00	7 00
Pickers	7 00	4 12
Hank-winders	7 00	3 75

Ship-builders in America now receive $12 per week, and in Scotland $6.25.

Here is another statement from free-trade sources:

WAGES IN THE WOOLEN INDUSTRY.

In woolens wages on the average are now about 30 per cent. higher in the United States than in England, and in England about 20 to 35 per cent. higher than in France and fully 50 per cent. higher than in Germany. The actual difference between the wages of the operatives of the British and those of our own woolen mills can however, best be ascertained from the following table:

[Values reduced to American dollars; English shilling, 24 cents.]

Description of occupations.	Great Britain.				United States.	
	1865.	1880.			1878.	1881.
	Huddersfield, &c.	Batley.	Dewsbury.	Huddersfield.	Massachusetts.	Massachusetts.

*Piece-work.

Wages in the newer parts of our own country are higher than in the older—higher in Dakota and Montana than in New York and Pennsylvania. This arises from the fact of cheap lands. While land is yet cheap and easily obtained the laborer is not dependent upon others for remunerative employment. If the wages offered are in his judgment too low he at once resorts to the land and there finds adequate compensation. Thereby the supply of labor offering in the market is diminished. As a result the price of wages must be advanced to induce him to engage in the work of another. The wage which will operate as an inducement must be a larger one than that usually paid in communities where the laborer does not have the resource, cheap lands. But when the value of land rises the laborer can not obtain it unless he possesses accumulated capital. Ordinarily the laborer living in a country of high-priced lands must accept the fluctuations of the market and be content with the terms fixed by the employer, who, however, in his turn is governed by the inexorable law of supply and demand.

The cost of an article is the price paid first for the labor involved in its production; secondly, the use of the capital employed; and lastly, the royalty on the raw material. The cost of a pound of iron is the price paid for the labor bestowed on its production, plus the price paid for the use of the capital used, plus the royalty paid to the land-owner upon whose lands the ore was dug. The cost of a thousand feet of lumber is the value of the labor, the value of the use of the capital, and the value of the standing tree. The cost of a bushel of wheat is the labor, the use of the capital, and the rent of the land upon which it is grown.

Some there are who resolve two of these elements of cost—namely, labor and capital—into one, namely, labor. Some go even further and resolve all of them into labor. But we are not interested in this refinement.

Wages being higher in the United States than in England, if a manufacturer in the United States undertakes to produce any commodity, as for instance cloth, it will cost him more than it will cost the English manufacturer. Then if cloth of the two makes are brought together for sale in the same market, the English cloth will undersell the American make and drive it out. The American buyer will buy where he can the cheapest; he will follow the lead of his own interest. What is the result? The American manufacturer stops producing, and discharges his hands. Unless some change can be wrought that industry in America must cease, and all engaged in it, both capital and labor, seek elsewhere for employment.

Now comes in the tariff law. The United States Government under its grant of power to levy imposts for revenue imposes a duty upon the foreign merchandise. The English cloth now costs to deliver in the American market as much more as the tax amounts to, and (assuming the duty to be high enough) more than the price at which the American article can be profitably produced. The amount of such profits is largely but not altogether determined by the amount of the tariff. By this means manufacturing is stimulated, an increased demand is created for labor, and wages are advanced.

The first practical result reached, then, is that the American manufacturer secures a greater return upon his capital than the foreign manufacturer, and the American laborer secures greater wages. The latter is aided now not only by cheap lands but by the increased demand for his labor in other departments of industry.

Another effect produced is that the American producer commands the American market and dictates the price of his commodity to the consumer. So far he can go, but no further. The American manufacturer can not even under these circumstances compete in any other market. Abroad the Englishman is complete master of prices. The American's market is only within the shadow of the American custom-houses. Without their protection he is powerless.

But there are other consequences which in due time follow. This increase in the returns accorded to American capital and American labor attracts foreign capital and foreign labor. Their interests lead toward the United States and toward a share in this general prosperity. An increase in the demand for capital and labor induces an increase in the supply. The supply will come in part from our own natural increase in capital and in labor, and in part from foreign sources. There is nothing in the way to prevent the foreign supply from responding to the demand. No tariff duties have ever been exacted from capital in the form of money, or from labor, as a condition of importation. The door stands at all times wide open for them freely to enter and follow the lead of their best interests.

As matter of fact the observed result is that the supply of capital comes most largely, most entirely from the increase of our own wealth, while the increase of labor is much more largely from abroad. It will now follow that two manufactories are put in operation where but one existed before, and three laborers are seeking employment for one before; production is enormously increased, the market is overstocked, supply exceeds demand, and prices decline. The decline is more marked in the case of commodities than of labor. So much for the theory. Now, what are the observed facts?

In this connection I subjoin tables prepared by the gentleman from New York [Mr. HISCOCK], which show the decline in the price of commodities.

Comparative prices of woolen fabrics in 1859 *and* 1884.

Fabrics.	1859.	1884.
Flannels per yard:		
A and T white (none made in 1884)	$0 18½	
A. A. F. scarlet	26	$0 24½
J. R. F. twilled scarlet	39	28½
B. twilled scarlet	26	25½
Double-weight scarlet twilled	27½	*32½
F. and C	36	33½
Talbot, R., 3-4, plain and scarlet	26	25
Ballard Vale, 4-4, white No. 1	75	67½
Ballard Vale, 4-4, white No. 2	60	40½
Ballard Vale, 4-4, white No. 3	45	7½
Ballard Vale, 4-4, white No. 4	†40	42½
Blankets per pair:		
Holland, 10-4, all wool	3 50	3 00
Holland, 11-4, all wool	5 00	4 25
Cocheco, 11-4, extra super	6 00	6 00
Cocheco, 12-4, extra super	7 50	6 00
Cumberland, 10-4	3 00	2 00
Rochdale, 10-4, super ex. super	3 50	3 00
Rochdale, 11-4	4 50	4 00
Rochdale, 12-4	5 50	5 00
Rochdale, 10-4	4 50	4 00
Rochdale, 11-4	5 50	5 00
Rochdale, 10-4, premium	4 50	4 00
Rochdale, 11-4	5 50	5 00
Rochdale, 12-4	6 50	6 00
Shawls, Middlesex County	7 00	5 56

*These goods are improved in quality.
†The Ballard Vale flannels are exceptionally fine goods, the chief cost of which is labor, and are slightly advanced because of the advance in wages of labor.

Wholesale prices per yard of leading standard staple goods bought by country dealers, January, 1860, *with prices of January,* 1884, *annexed.*

Articles.	1860.	1884.
4-4 heavy brown sheeting	$0 08½	$0 07½
4-4 fine brown sheeting	08½	07
4-4 fine bleached sheeting	12½	10
4-4 common bleached sheeting	09½	06½
Best ticking	17	14½
Best denim	15½	14½
Lining, colored cambrics	06½	05
Corset jeans	09½	07½
Ginghams	10½	08
Standard prints	08½	06
Hublet's cotton flannel	13	11
Good twilled flannels (wool)	36	36
Good Kentucky jeans	27½	27½

Comparative prices of boots and shoes in 1860 *and* 1884.

	1860.	1884.
	Per pr.	*Per pr.*
Men's rubber boots	$3 60	$3 00
Boys' rubber boots	2 40	2 18
Women's rubber boots	1 75	1 56
Misses' rubber boots	1 50	1 33
Men's overshoes	80	55
Women's overshoes	60	38
Children's overshoes	40	30
Men's best calf machine-sewed boots	4 00	3 00
Men's best calf pegged boots	3 00	2 75
Men's good common calf pegged boots	2 50	2 17
Men's best thick boots, farmers' wear	2 75	2 50
Men's good common boots, farmers' wear	2 25	2 00
Boys' good common boots, farmers' wear	1 62	1 50
Men's good double-sole kip brogan	1 37½	1 25
Men's good double-sole split brogan	1 15	1 10
Men's good common split brogan	1 00	85
Men's best calf machine-sewed Congress and Balmoral	3 50	3 00
Men's good common machine-sewed Congress and Balmoral	3 00	2 75
Men's good common buff Congress and Balmoral	2 00	1 65
Men's good common pegged Congress and Balmoral	1 60	1 25
Men's good common low-cut shoes	1 17	1 00
Men's carpet slippers	50	37½
Men's goat slippers	1 00	85
Men's grain slippers	65	55
Women's best kid and goat boots	2 00	1 75
Women's good kid and goat boots	1 50	1 25
Women's best serge Congress	1 25	1 05
Women's good serge Congress	92	80
Women's grain-pegged Polish boots	87½	85
Women's goat gored Benker's boots	92	80
Women's serge slippers	50	37½
Women's web slippers	37½	25
Boys' good kip brogans	80	75
Boys' good Congress	1 10	1 00
Boys' good split pegged Balmorals	1 10	1 00
Youths' good split pegged Balmorals	95	85
Misses' best kid or goat Polish	1 50	1 25
Misses' good common button	75	75
Children's best kid and goat	1 25	1 05
Children's good common goat	1 00	85
Children's cheap shoes	25	20

Comparative prices of pig-iron per ton for the month of January in the years named:

1860	$23 00
1880	40 00
1881	25 00
1882	26 00
1883	25 00
1884	20 50

All are agreed that prices have gone lower; we differ only when we come to assign the cause. Some say that it is the result of the tariff. But how then shall we explain the fact that a similar decline has taken place in countries which have no tariff. A cause must be sought which is common to both England and the United States. That cause is increased competition. Competition has operated abroad as well as at home.

The statistics of wages are not so clear.

Wages are ofttimes reduced by suspending work for a time, for a portion of the year or a portion of the week or day. In making the comparison of wages comparative efficiency must be considered; also the cost of living and the purchasing power of money. In our country we have not yet experienced the depression of an overstocked labor market, at least so far as the tables of statistics show. There has been a small advance in the wages paid in most mechanical industries within a few years. In the report of the statistics of labor made by the bureau of the statistics of labor of the State of Massachusetts in the year 1882 an elaborate table of such statistics is given. Following the table is a summary of results set forth in the report which I copy.

The foregoing rates of wages for 1881 show the following percentages of increase or decrease by industries as compared with 1878:

		Per cent.
Agriculture	increase	14.1
Blacksmithing	increase	11.8
Boots and shoes	decrease	4.4

Percentage of increase or decrease, &c.—Continued.

		Per cent.
Building trades	increase...	4.9
Cabinet-making	decrease...	1.7
Carpetings	decrease...	7.9
Carriages	decrease...	5.4
Clothing	increase...	20.7
Cotton goods	increase...	9.1
Glass	increase...	11.6
Hosiery	increase...	13.5
Leather	increase...	5.5
Machines and machinery	increase...	22.0
Metals and metallic goods	increase...	2.0
Metals and metallic goods (fine work)	increase...	13.7
Musical instruments	increase...	13.3
Paper	increase...	7.5
Printing	increase...	10.2
Rubber goods, elastics fabrics	decrease...	0.5
Stone	increase...	11.4
Straw goods	decrease...	2.7
Woolen goods	increase...	7.3
Average increase [of wages] all industries		6.9

Another table in the same report is given, showing the purchasing power of money in 1878 and 1881. The results reached are summarized as follows:

Averaging and consolidating the above returns under the group-heads designated in the table we find that in 1881 as compared with 1878—

	Per cent.
Groceries have advanced in price	9.1
Provisions have advanced in price	20.1
Fuel has advanced in price	31.1
Dry goods have advanced in price	9
Boots have fallen in price	1.6
Rents have advanced	35.1
Board has advanced	13.7

On all these items of expense entering into the cost of living the average increase is 21.2 per cent.

Wages advanced 6.9 per cent., the cost of living 21.2 per cent. If in 1878 a man earned $1 a day in wages and paid out 50 cents a day for board, then, applying these ratios in 1881, he would earn $1.07 and pay out 61 cents, showing in the aggregate a reduction in his net savings.

As food for reflection I call especial attention to the advance in rents.

It is a notable fact that a small advance in wages has occurred in European countries as well as in our own.

But, considering the increased productiveness, improved methods, and improved machinery, it becomes apparent that the cost of labor involved in the manufacture of most commodities has very largely decreased. This process will continue, and the signs of the times indicate that ere long, if not already, the general price of wages will follow the price of commodities.

Under the operation of such facts the same conditions will be, indeed in very many cases have been already, reached on the inside as on the outside of the tariff. The time must surely come when it will cost no more to produce a yard of cloth or a steamship in our country than it costs elsewhere. The natural laws of commerce will assert their sway. Supply and demand will equalize the American market with foreign markets. The waters within and without will come to the same level.

But another result will then be reached. The markets of the world will be open to us and we shall be able to compete on equal terms with any other producers; this only upon condition that we accept an Englishman's returns upon capital and pay only an Englishman's price for labor.

Certain other incidental facts are to be observed. By the promotion of these manufactures so introduced a variety of industries is secured, diversity of employment obtained. Thereby a portion of the laboring population has been drawn off from agriculture, and instead of being producers are consumers of agricultural products, a home market created, the producer is brought nearer to the consumer, and the cost of transportation saved to both.

In the course of our investigations we shall observe that the expected results are not always found in the facts, but that ofttimes interruptions occur. These interruptions, however, are only transient in their influence, and while they serve to delay, do not defeat anticipation. These results are practically inevitable. Some of the disturbing causes may be noticed.

If the prices of labor in a given industry in England exceed those in France, upon theory the workingmen of France should at once emigrate to England in such numbers as to reduce the level of English prices. But as a matter of fact they do so, if at all, only very slowly and after the lapse of a long time. Information of the fact travels but slowly; race prejudices, the disinclination to remove to strange countries, the expense of removal, all come in to play a part and prevent the Frenchman from becoming an emigrant. But let the difference be great enough and continue long enough, all difficulties will be surmounted and the French laborer will respond to the demand.

Our own country affords an illustration. The high wages produced by cheap lands and a protective tariff have been long maintained. It has taken years to bring a knowledge of these facts to the laborers of Europe; but now it is known in every hamlet from Ireland to Russia, and behold the result. Witness the hosts of emigrants that throng upon our shores. The populations of great states are coming annually.

The same facts are observed of capital. It does not instantly respond to the increased demand. It takes time and the growth of confidence to produce the result.

Trades-unions are another disturbing element. By means of them laborers attempt to combine and prevent the oncoming of the inevitable reduction in their wages, but all to no lasting purpose.

Combinations between capitalists to keep up prices, to limit production, are similar in design. Such attempts to control the action of the law of supply and demand invariably end in failure.

Labor-saving machines have come in to affect the time when American producers can successfully compete with foreigners in foreign markets. They do not disturb the predicted result. They only hasten the period when the tariff law will no longer be of any avail.

We gather from this discussion that in a new country—in a sparsely settled country such as ours has been up to this time, and is now in large sections of it—in a country of cheap lands—

First. That many forms of manufacturing industry can not be carried on successfully if our markets are left free to the competition of foreigners.

Second. That to foster such manufactures a tariff protection must be afforded.

Third. That the first effects of such tariff is to promote the profits of capital and the wages of labor and to increase the price of commodities to the consumer.

Fourth. That these results may continue for a long time.

Fifth. That such tariff protection, however, tends in the long run—in the totality of events—to defeat itself, and the time comes when it is no longer of any advantage to either the manufacturer or laborer.

Sixth. But that in the mean time the industry becomes established, variety of labor secured, a home market for the farmer obtained, the expense of transportation diminished, and finally the consumer buys the manufactured article as cheaply of his own countryman as it can be purchased of the foreigner.

Such are some of the more important consequences of the protective system.

ARE THEY DESIRABLE?

Certainly they are to the manufacturer and to the laborer for the present, and are likely to be for some time to come.

But are they desirable to the consumer? He pays the cost of all this increased prosperity of manufacturers and laborers.

The only consumer that will be considered in this connection is the farmer. He finds his compensations in a diminished competition, in the increased profits of a home market, in the saving of the cost of transportation.

We have not far to seek for statistics that bear witness to the prosperity of the farmer under the operation of a protective tariff.

The following table shows the comparative value of farming lands in the several States, arranged in groups according to the amount of manufacturing carried on in each, respectively:

Aggregate value of products manufactured by States, acres of land in farms, and value of farm lands, by States and groups of States.

FIRST GROUP.

States.	Value of products of manufacture.	Total land in farms.	Value of farm lands.	Value per acre.
	Dollars.	*Acres.*	*Dollars.*	*Dollars.*
Massachusetts	631,125,284	3,359,079	146,197,415	43 52
Rhode Island	104,163,621	514,813	25,882,079	50 27
Connecticut	185,697,211	2,453,541	121,063,910	49 34
New York	1,080,696,596	23,780,754	1,056,176,741	44 41
New Jersey	254,380,236	2,929,773	190,895,833	65 16
Pennsylvania	744,818,445	19,791,341	975,689,410	49 30
Delaware	20,514,488	1,090,245	36,789,672	33 74
Total	3,021,405,831	53,919,546	2,552,695,060	47 34

SECOND GROUP.

Maine	79,829,793	6,552,578	102,357,615	15 62
New Hampshire	73,978,028	3,721,173	75,834,389	20 38

Ohio	348,298,390	24,529,226	1,127,497,353	45 97
Michigan	150,715,025	13,807,240	499,103,181	36 15
Indiana	148,006,411	20,420,983	635,236,111	31 11
Illinois	414,864,673	31,673,645	1,000,594,580	31 87
Total	1,247,046,686	105,587,433	3,558,969,239	33 71

THIRD GROUP.

Wisconsin	128,255,480	15,353,118	357,709,507	23 30
Minnesota	76,065,198	13,403,019	193,724,260	14 45
Iowa	71,045,926	24,752,700	567,430,227	22 92
California	116,218,973	16,593,742	262,051,282	15 79
Total	391,585,577	70,102,579	1,380,915,276	19 70

Aggregate value of products manufactured by States, &c.—Continued.

FOURTH GROUP.

States.	Value of products of manufacture.	Total land in farms.	Value of farm lands.	Value per acre.
	Dollars.	*Acres.*	*Dollars.*	*Dollars.*
Maryland	106,780,563	5,119,831	165,503,341	32 33
Virginia	51,780,992	19,835,785	216,028,107	10 89
North Carolina	20,095,037	22,363,558	135,793,602	6 07
South Carolina	16,738,008	13,457,613	68,677,482	5 10
Georgia	36,440,948	26,043,282	111,910,540	4 30
Florida	5,546,448	3,297,324	20,291,837	6 15
Alabama	13,565,504	18,755,334	78,954,648	4 19
Louisiana	24,205,183	8,273,506	58,989,117	7 13
Texas	20,719,928	36,292,219	170,468,886	4 70
Arkansas	6,756,159	12,061,547	74,249,655	6 16
Tennessee	37,074,886	20,666,915	206,749,837	10 00
West Virginia	22,867,126	10,193,779	133,147,175	13 06
Kentucky	75,483,377	21,495,240	299,298,631	13 92
Missouri	165,386,205	27,879,276	375,633,307	13 47
Kansas	30,843,777	21,417,468	235,178,936	10 98
Nebraska	12,627,336	9,944,826	105,932,541	10 65
Colorado	14,260,159	1,165,373	25,109,223	21 55
Oregon	10,931,232	4,214,712	56,908,575	13 50
Utah	4,324,992	655,524	14,015,178	21 38
Total	676,427,860	283,233,112	2,552,840,616	9 01

In 1880 the aggregate value of the products of agriculture was more than double the aggregate for 1860. The comparative values of some of the principal products are as follows:

Products.	1860.	1880.	1882.
Cereals	$558,345,836	$1,329,930,517	$1,468,693,393
Cotton	211,516,625	271,636,121	309,696,500
Hay	152,671,168	410,146,545	369,958,158
Potatoes	44,459,547	81,848,474	95,304,844
Tobacco	21,710,473	38,758,215	43,189,951
Total	988,703,649	2,132,319,872	2,286,842,846

An increase of products out of all proportion to the increased numbers employed. But the price per bushel of the standard grains has in general advanced since the adoption in 1861 of the present tariff laws.

Average farm values of agricultural products in 1860, 1880, *and* 1882, *respectively.*

Cereals.	1860.	1880.	1882.
Wheat, per bushel	$0 72.0	$0 95.1	$0 88.2
Corn, per bushel	43.0	39.6	48.4
Oats, per bushel	25.0	36.0	37.5
Rye, per bushel	52.0	75.6	61.5
Buckwheat, per bushel	58.0	59.4	72.9
Barley, per bushel	55.0	66.6	62.8
Potatoes, per bushel	40.0	48.3	55.7
Tobacco, per pound	05.0	08.2	08.4
Cotton, per pound	09.3	09.8	09.9
Hay, per ton	8 00.0	11 65.0	9 70.0

The greater the amount of manufacturing the greater the value of the farm. This arises, however, from the fact that manufacturing draws together a large population who are only consumers of agricultural products and not producers thereof. A similar result will flow from an aggregation of non-agricultural population, although no manufacturing be engaged in. The city of Washington is a good illustration. Here a large population is drawn together, but they are not engaged in manufactures or commerce. They are mere consumers. Lands are high in price both within and without the city. A university town would affect values in like manner.

The effect upon values produced by a protective tariff, however, is artificial and not natural. Such a policy is only to be justified by the positive good it may produce in excess of the evil. It should be no longer continued than it can be shown that the advantages outweigh very clearly the disadvantages. When the reason for the law ceases then the law should cease.

Pass some of the principal reasons in review in this connection.

A tariff produces diversified labor.

When, therefore, we have secured a diversified labor, then it should cease. When a particular industry has been firmly established among us, so far as this proposition goes and as to that industry, a tariff will no longer be beneficial.

A tariff affords a home market for agricultural products.

In theory this effect may be long continued. Indeed I see no end to its operations. Still its perceptible benefits may eventually become very much diminished.

It increases wages.

This is a powerful argument in favor of a tariff, and, as long as it continues, a good reason for holding on to the policy. But eventually a protective policy will cease to operate in favor of the laborer, and then the argument will fail.

Vast sums of money have been invested in manufacturing in reliance upon the tariff, and capital has acquired a vested right to its continuance.

This is a matter of the greatest possible importance and should engage the careful attention of those proposing a change. No violent measures should be adopted, and for this if for no other reason, that the time must in the nature of things surely come when a tariff will not be needed to protect our manufacturing capital. When competition shall have sufficiently reduced prices at home our producers can safely compete abroad. If we can wait patiently the tariff laws, for all the interests of the capitalists worth preserving, will eventually repeal themselves.

No attempt is here made to apply these principles to particular articles of manufacture or production. It was stated the other day in the course of this debate that there are now over sixty articles produced in the State of Connecticut from which the tariff could be safely removed.

In my judgment the tariff should be carefully revised and the doctrines above enunciated, as far as possible, applied. But the bill before us proposes no revision, only an unceremonious and reckless reduction. For that reason I am opposed to its passage.

Bureau of Labor Statistics.

SPEECH

OF

HON. N. E. WORTHINGTON.

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 19, 1884,

On the bill (H. R. 1340) to establish and maintain a bureau of labor statistics.

Mr. WORTHINGTON said:

Mr. CHAIRMAN: I am in favor of any legislation that will throw light upon the great questions involved in this bill. No investigation is of greater importance than that which seeks to ascertain what policy will best secure to men and women, willing and anxious to work, fixed, honorable, and remunerative labor. There is no sadder spectacle than to see laborers unemployed who want to work, or to see them toiling from dawn to darkness for a miserable pittance that barely affords the absolute necessities of life. God never intended that life should be a perpetual struggle for mere existence, without hope of advancement nor chance of improvement; that it should be a constant fight to keep the gaunt wolf of want and famine from the door, rayless, gloomy, and shadowed from the cradle to the grave. We live in a land of wonderful resources, of unsurpassed fertility, of unequaled variety of climate and productions. The fruits and grains of both the tropic and the temperate zones ripen beneath our flag.

Corn and wheat, the vine and the olive, in quantities far beyond the range of the consumption of our own people, are annually produced. Land is cheap. Our Government is yet young in the history of nations. No other country in the world offers such natural advantages to industry, economy, and labor. And yet, while only in the beginning of the second century of our national existence, we are already confronted squarely with the perplexing problems of labor and capital, of men and women out of employment, and of wages that barely keep soul and body together. This, too, in the face of that other unhealthy fact in a free government, that immense fortunes, dangerous to the liberties of the people and incompatible with a just administration of law, have been accumulated within an ordinary lifetime, without corresponding labor, but by speculation and combinations of capital. I do not know that legislation can cure these evils. They may be to some extent inherent to civilized society.

But the information that the bureau proposed by this bill will furnish, or can furnish if its duties are discharged in an intelligent and non-partisan manner, must illumine many disputed questions that are now being canvassed. It proposes to investigate the relations of labor to capital, the means of promoting the material, social, intellectual, and moral prosperity of laboring men and women; to inquire what have been the effects of the division of labor and the improvements and increasing use of machinery in all departments of industry; to ascertain the number of those employed in the various branches of manual labor, the wages they receive, the hours of daily work, the average time they are annually employed, and the difficulty of securing remunerative employment; to report the effects and prevalence of the truck system of payment of wages, together with the ages at which children are employed and the influence upon their health of such employment; to inquire into the effect of convict labor, methods of taxation, the cost of living, comparing wages and the costs of the necessaries of life, the ac-

cidents peculiar to different kinds of employment and the means of their prevention, the inspection of factories, mills, mines, and tenement-houses, and all other matters and things that relate to or affect the condition and prosperity of the laboring classes; and to cause a report to be made annually by the chief of the bureau, with recommendations, to the President and Congress. The economic questions that will be touched by these statistics are the most important that can engage the attention of either a State or a national legislature or that can affect the condition of the millions who live by the sweat of their brows.

There are at present, upon the basis of the last census, a population of about eighteen million that is engaged in the various professional and industrial occupations of this country. Of this number about twelve million work for day's wages. Two-thirds, then, of the working classes of the country are directly interested in the information which this bill seeks to annually secure. But it is not the working classes alone that are interested. Our banks, our bond-holders, our manufacturers, our land-owners, our merchants, and in fact business men of every kind and character, are deeply interested in the practical solution of the great problems to which this bill refers.

The stability of the Government, the order of society, the execution of the laws, and the absence of mob violence and public tumults depend largely upon the employment, the comfort, and the prosperity of the working people. We can not close our eyes to the fact that the seeds of communism, scattered broadcast in the labor centers of European countries, have also been sown in many of our large cities, and are in danger of producing fruit. It is easier to check the spread of communism by removing the causes which tend to produce it than to put it down and stamp it out when men and women are maddened by hunger and want of employment. The sword and the bayonet are dangerous instruments and cut both ways when turned against the bone and sinew of the land. It is the part of wisdom, then, Mr. Chairman, not only to investigate thoroughly every agency that affects the toiling millions, but also to conduct that investigation in such a thorough, honest, and impartial manner as shall convince every workingman that the Government is in earnest in making his condition as tolerable and prosperous as legislation and an impartial administration of the law can secure.

It can not be denied that at present wage-laborers have just cause of complaint on account of many matters, both of administration and of legislation, in both State and national affairs. They do not ask assistance from the Government. They do not ask subsidies, nor protection, nor special privileges. They are not asking to feed at the public crib nor to be supported at the public expense. They are not asking even that this Government shall enter upon great works of internal improvement, as some European governments have done, for the purpose of furnishing employment to those out of work. But they do ask, and have a right to demand, that they shall not be handicapped and weighted down for the benefit of other classes of society, but that they shall have a fair start and an equal chance in the race of life.

Look, for instance, at the relation of convict labor to free and honest labor. The expenses of our jails and workhouses and penitentiaries ought to be borne equally in proportion to property by all classes of society. In theory they are so borne. The laboring man pays his tithe of taxes for their support; but after having done so he finds in every trade that he must compete with convict labor farmed out, at rates that will not support a free man, to contractors, who put their wares thus produced in the open market in competition with the products of honest labor. Society, for the sake of saving expense in taking care of its outlaws, pays for their board and clothes and sets them to work at half-price to break down the means of livelihood of that class of its members that receives the lowest wages and has the hardest struggle for an honest maintenance.

Let the facts, then, Mr. Chairman, be brought to light, and let statistics gathered by a department of this Government show how many convicts in our jails, workhouses, and penitentiaries are being farmed out at from 20 to 40 cents a day to compete with the honest laborer, who from the fruits of his toil must support himself, his wife, and his children. And let us cease to compliment that shrewd business management which makes our public reformatories self-sustaining at the cost of our hardest worked and poorest paid laborers.

There is another line of inquiry, Mr. Chairman, which should be embraced in this bill. That is the extent and effect of the importation of laborers under the contract system. It has always been our boast that our doors were open to the down-trodden and oppressed of every clime. But to welcome the active and enterprising who independently seek homes for themselves in a free land is a very different thing from receiving immigrants by hundreds and thousands who come under contract to work at low wages, imported for the express purpose of displacing our own citizens or of compelling them to work at the prices dictated by their employers. To tolerate this forced and purchased immigration is to allow capital to take advantage of the distress and low wages of European operatives, to the direct injury and suffering of our own.

Another broad scope of inquiry is the subject of taxation. No more difficult problem is presented to legislative bodies. All agree that taxes should be levied upon a basis just to all, and collected in proportion to the property of the persons taxed. But no system has yet been devised that in its practical workings accomplishes this end. It is a notorious fact that the poor and those in moderate circumstances pay more than their proportion of the expenses of government, both State and national. Visible property can be reached by the assessor. The household furniture and homestead of the laborer, the farm, the goods of the merchant, the shops and wares of the manufacturer are all in view of the tax-gatherer, and, if he does his duty, are made to contribute ratably to the revenues of the State. But as wealth accumulates and hides itself in stocks and bonds and notes and mortgages it largely escapes the vigilance of the most careful assessor, and no oath has yet been found that so searches the conscience as to bring it honestly in the assessor's book for taxation.

The result is, Mr. Chairman, that the class of capital that is most securely invested by its owners, and that pays the surest returns, and that ought to bear to the fullest extent its share of the expenses of government, is taxed least of all. Labor is oppressed by unjust taxation to the extent that capital escapes taxation, and the tendency of capital thus invested to increase and double upon itself is promoted by the failure to secure from it that full but just measure of taxation that capital so invested, more than any other species of property, is able to pay. This is one of the causes that help to the colossal fortunes that men of moderate wealth are able to accumulate. When a certain stage is reached further accretions are practically untaxed, and the richer the capitalist becomes the less tax he pays in proportion to his wealth. I believe, Mr. Chairman, that accurate statistics bearing upon this subject of taxation will lead to an income tax, as the only method by which the wealth of the Republic can be made to pay its just proportion to the public Treasury.

Another fruitful subject of investigation, and one no doubt contemplated by the distinguished gentleman from Pennsylvania who introduced this bill, is the effect of tariff duties upon wages and the expenses of living. The friends of a tariff for revenue only will welcome any fair, thorough, and honest investigation of this subject. They will be glad of the opportunity of pointing to undoctored statistics that will show the dollars that a high tariff puts in the pockets of the manufacturer and the cents that he drops in return into the hands of the laborer; that will show how an artificial stimulus leads to overproduction, and overproduction to low wages, and low wages to strikes, the closing of factories, the lack of employment, and all the evils that follow in the wake of willing labor inadequately paid or standing idle because no work is to be had.

The honorable gentleman from Massachusetts, Mr. RUSSELL, on Thursday last used the following language and gave us the following table, for which I am under obligations:

There are articles consumed largely by the rich, not absolutely essential to comfort and support, upon which to impose duties for revenue. A list of a few of such articles I give below, the table showing value of goods imported and revenue derived last year under present rates of duty:

Article.	Value.	Duty.
Beer, ale, and porter	$1,146,796 74	$511,462 51
Diamonds, &c	7,603,752 61	761,886 41
Fancy articles (alabaster, &c.)	1,665,680 71	641,467 71
Fancy feathers and artificial flowers	4,399,294 46	1,378,369 63
Musical instruments	1,486,251 15	446,099 79
Paintings and statuary	3,088,673 34	313,584 75
Silk, piece goods and manufactured	33,307,112 37	19,677,999 53
Spirits and wines	2,296,734 37	3,358,463 12
Champagnes and wines	4,603,723 61	2,219,672 18
Other spirits, &c., and still wines	5,679,969 10	3,152,267 85
Tobacco and cigars	10,515,806 00	7,700,458 34
Braids, laces, &c., for ornamenting hats	2,297,962 00	704,890 66
Laces, cords, braids, gimps	6,392,257 90	2,237,348 06
Chinaware, decorated	2,587,545 03	1,204,337 06
Cotton embroideries	4,928,775 37	1,725,607 78
Meerschaum pipes	38,305 74	32,671 11
Fire-crackers	265,023 97	281,148 08
Fruits and nuts	18,157,386 79	4,609,883 38
Fine cut-glass ware	1,017,677 84	407,075 04
Fire-arms	1,336,327 28	467,738 75
Total	112,815,356 28	51,922,431 74

The increased importation of this class of goods has been for the past two years at the rate of $10,000,000 per annum.

Here are $51,992,431 collected as import duties upon articles that are mainly luxuries and which are proper objects of taxation. Add to this sum the amount of internal tax which is collected upon spirits, beer, and tobacco under existing internal-revenue laws and you have a total sum which, with slight import duties upon other goods, will meet the annual expenses of the Government, pay the interest upon its public debt, and its principal as rapidly as it can be economically discharged. Reduce taxation then by a substantial lowering of import duties upon all other imported goods and take from the shoulders of labor the excessive cost which a war tariff now places upon almost every article that is necessary to life, even in the plane of economy that the wage laborer is compelled to occupy.

Let the reports which this bill proposes be thorough, and show that

under so-called protection the manufacturer not only dictates the wages of his operatives but also dictates the prices that they pay for the wares that necessity compels them to buy; that it leads to irregular and uncertain employment, to an expensive system of taxation that is deceptive in not showing its cost to the people and unjust in not being apportioned according to the property of the tax-payer. Let us have then all the statistics that this bill proposes and all the information that they can afford. The advocates of revenue reform will take all the risks of defeat that are liable to follow, upon any proof that figures can offer, to show that taxation enriches any country or makes its citizens more happy and prosperous. And if the statistics collected by this bureau when established shall help to blaze the path and turn the course of legislation to that broad highway of unrestricted commercial liberty where no taxation is laid or subsidy levied upon any class of citizens, section of country, or business interest for the benefit of some other, they will do more, in my judgment, Mr. Chairman, for the relief of the wage laborers of the United States than any special legislation that may be asked or that can be devised.

Pension Laws.

SPEECH
OF
HON. D. B. HENDERSON.
OF IOWA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 21, 1884.

On the bill (H. R. 6535) to regulate the granting of pensions in certain cases, which reads as follows:

"*Be it enacted, &c.*, That every person specified in the several classes enumerated in the pension laws of the United States, who served in the field in the military or naval service, in any war in which the United States has been engaged, for a period of three months or more, and has an honorable discharge, and is not receiving a pension or a greater pension than that provided for herein, but who, by reason of any wound, injury, or disease which there is probable cause to believe originated in said service in line of duty and not the result of his own misconduct or bad habits or other known cause occurring since such service, is now disabled, in whole or in part, for procuring his subsistence by manual labor, shall, upon making due proof of the facts under such regulations as may be prescribed by the proper authority, not inconsistent with the provisions of this act, be placed upon the list of pensioners of the United States, and be entitled to receive a pension during the continuance of such disability at a rate proportionate to the degree thereof; the true physical condition of the claimant to be ascertained and certified as provided by law upon examination by a competent board of surgeons duly appointed; such pension to commence at the date of filing the application therefor. And any person who has filed, or may hereafter file, an application for a pension under the act of July 14, 1862, and acts amendatory thereto, or under any act entitling him to arrears, may, by a declaration over his own signature, attested before any officer duly authorized to administer oaths for general purposes, elect to prosecute his said claim under this act, which election shall be final; and in such case his pension, if allowed, shall begin from the date of filing such declaration of election.

"SEC. 2. That in considering the claims of dependent parents the fact and cause of death, and the fact that the soldier left no widow or minor children, having been shown as required by law, it shall be necessary only to show by competent and sufficient evidence that such parent or parents are without other present means of support than their own manual labor or the contributions of others not legally bound for their support.

"SEC. 3. That in all applications under the general pension laws, including this act, where it appears by record evidence that the applicant was regularly enlisted and mustered into the service, and served for a period of three months or more, that fact shall be sufficient *prima facie* evidence that he was then in good health and free from the disease or cause of disability for which he claims a pension; but such evidence shall be subject to rebuttal by record or other positive evidence of the prior existence of such disease or cause of disability: *Provided*, That no agent, attorney, or other person shall demand or receive any fee for his services in any pension claim arising under this act, until the payment of the pension, not exceeding $10 in amount."

Mr. HENDERSON, of Iowa, said:

Mr. SPEAKER: I am in favor of this bill. In some respects it is a step in the right direction, though far from covering all the ground that should be covered in order to do justice to the soldiers, to their widows, and to their children. I regret that this bill has been presented to the House to be considered under a suspension of the rules, thus cutting off all opportunity for amendments that are needed. I regret that the committee did not ask the House to make this bill a special order, so that it might have that full consideration to which the persons sought to be benefited are entitled at our hands. The first section of the bill should be amended in several particulars. It does not go far enough. On the 7th day of January last I introduced a bill (H. R. 1983) which I think more nearly presents what is needed. My bill is as follows:

Be it enacted, &c., That from and after the passage of this act every person who, having enlisted in the regular or volunteer Army or Navy of the United States in any war waged by the United States, or in time of peace in the regular Army or Navy of the United States, and specified in the several classes enumerated in section 4693 of the Revised Statutes of the United States, and amendments thereto, shall be shown by the records of the War Department to have rendered three months' actual service and to have received an honorable discharge from such service, and who, upon a careful and thorough examination by a duly appointed and qualified board of examining surgeons of the Pension Bureau, shall be found to be unable by reason of physical disability, not resulting from bad or vicious habits, to earn his subsistence by his own labor, or shall be found to have reached the age of sixty-five years and is dependent upon his own labor or the charity of others for maintenance and support, shall, upon making proof of such last-named facts, to wit, to have reached sixty-five years and to be dependent as aforesaid, according to such forms and regulations as are or may be provided in pursuance of law by the Commissioner of Pensions, be placed on the list of invalid pensioners of the United States, and be entitled to receive for a total disability or a permanent specific disability such pension as has been or may be hereafter provided in such cases, and for an infirm disability, except in cases of permanent specific disability, for which the rate of pension is specifically provided, an amount proportionate to that provided for total disability. And such pension shall commence upon the date of filing a formal and duly executed declaration therefor, and continue, in case the same be granted for a disability, during the existence of such disability; and in case the same be granted on account of age and dependence, during life: *Provided*, That any applicant for invalid pension having an application therefor pending, and any person coming within the provisions of this law, who shall hereafter file his application for such pension, may, by declaration executed before an officer authorized to administer oaths for general purposes, having a seal, elect either to prosecute his said claim under the provisions of this law, or under the provisions of the act of July 14, 1862, and the acts amendatory thereof and additional thereto now in force, or hereafter enacted; but having so elected to prosecute his said claim under this act, he shall not be permitted to change such election, but shall be bound thereby, and his pension, if allowed, shall commence on the day of filing such declaration under this act, or upon the day of filing his declaration of election if his claim shall have been heretofore filed: *Provided further*, That the grade of pension allowed under this act shall be fixed solely upon the degree of disability found to exist as aforesaid, and shall be based upon the amount now allowed by law, or that may be hereafter allowed, to an enlisted man for total disability, and in accordance with the law now in force granting a higher grade of pensions to such enlisted men; but in no case shall rank fix the grade of pension to be allowed under this act.

SEC. 2. That nothing in this act shall be taken or held to repeal any laws now in force relating to pensions, except as to the classes and in the manner herein stated.

It will be seen by a comparison of the first section of H. R. 1983 with the first section of the bill now before the House that the committee have adopted a part of the provisions of the bill which I had the honor to introduce. But the present bill does not go far enough; and since the committee that has brought in this bill has taken the pains to consolidate several bills before them, it is to be regretted that they did not go further and cover all the ground which experience teaches us should be covered in order to do justice to this important subject of pensions.

This bill will go far, however, toward correcting many of the difficulties in the way of honest and deserving claimants, and I am grateful to the committee for giving us this much by way of relief.

I do not like the last clause of section 3. I would move to strike that out if it were proper to do so under the iron rules of this House. I contend that evidence to rebut the presumption that the soldier was sound at enlistment should not be required. In most instances a man deserved all the greater credit and kind consideration because he entered the Army though not perfectly sound. We were glad enough to get them as they were. We appealed to them to enlist. We urged them to leave wife, children, home, and enter a service promising disease and death; and now to let this rich Government, saved and prosperous, turn upon these men and say that they can not be pensioned because they were not sound and well when they entered, life in hand, for the nation's defense is a proposition so cruel and unjust that it can not pass without my condemnation.

I have said on this floor on a former occasion, and I repeat it here, that the Government should now be estopped from saying that her soldiers, her defenders, her saviors were unsound at enlistment, when the Government through her own examining surgeons pronounced them sound and was only too glad to get them into the ranks. I say that if the United States accepted the services of a man who had but one arm and he served faithfully as a soldier and received an honorable discharge, he should now receive the same pension as one who lost an arm in battle.

I would also move, if it were possible, to strike out the words "which there is probable cause to believe originated in said service in line of duty." This provision was not in the bill introduced by me, and it will I fear continue the very difficulty that I aimed to destroy and that I urged upon the attention of the committee in my argument in behalf of my bill. Unless the Pension Bureau shall give this section a very liberal construction, the soldier, though broken down and ruined in health by his army life, may still be called upon for proofs which death of comrades, lapse of time, and perhaps poverty or ignorance may put beyond his power to produce.

What member of this House representing a district where Union soldiers are to be found has not become disgusted and indignant at the trouble that the soldier and the soldier's parents, wife, and children are subjected to in order to establish their claims under existing law? Poor fellows who can hardly read, though they could "dress up" for an attack and could aim an Enfield with a true and steady hand, put in their claims and for years are loaded down with long letters and printed circulars complicated enough to distract a "Philadelphia lawyer." They are required to prove that they were well when they enlisted, and since the war they must show all medical treatment from year to year with an accuracy involving the need of a daily journal of events to have been kept not only by their physicians but by themselves. Under our present laws the educated or rich soldier, able to employ talent, can get his proofs up in proper shape, and can get his pension, while the poor fellows who did just as good fighting, and whose

honest poverty may have deprived them of education, go year after year without their well-deserved pensions, and wonder if, after all, "republics are ungrateful."

I have a simple rule. It is this:

First. Was the claimant in the service three months, say long enough to have "served" in the sense that every soldier understands?

Second. Was he honorably discharged?

Third. Is he now disabled without such disability being caused by bad or vicious habits?

If those three questions can be answered in the affirmative, then I say it is the duty of this Government to give him his pension, to give it promptly, and not to wear out his life, the little he has left, in hunting up proofs that are not attainable in more than half the cases.

I am glad to find by repeated consultations with our able and large-hearted Commisssioner of Pensions that his experience has made him a courageous advocate of the rule just laid down.

I wish it were possible to make it certain by proper amendment that the bill before us contains in section 1 these needed elements. I fear it does not, though I believe the committee intended that it should.

I shall vote for the bill and gladly, only regretting that it does not go further and that it does not make certain the legislation which the sentiment of the country demands for her loyal sons.

The Tariff.

SPEECH

OF

HON. WILLIAM McKINLEY, JR.,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, April 30, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 5893) to reduce import duties and war-tariff taxes—

Mr. McKINLEY said:

Mr. CHAIRMAN: I do not intend to be drawn into any extended discussion of the two systems of levying duties upon imports, upon which the two political parties of the country are in conflict, except as such discussion may be necessary to the consideration of the bill now before us.

It is gratifying to know that at last the true sentiment of the Democratic party of the country dominates the party in which it has so long been in the majority, and no longer submits to the dictation of a factious minority within its own ranks. It is gratifying because the people can no longer be deceived as to the real purpose of the party, which is to break down the protective tariff and collect duties hereafter upon a pure revenue basis, closely approximating free trade. Patent platforms and the individual utterances of Democratic statesmen will no longer avail, and false pretenses can no longer win.

A HORIZONTAL REDUCTION.

The bill reported from the Committee on Ways and Means is a proposition to reduce the duties upon all articles of imported merchandise, except those embraced in two schedules, to wit, spirits and silks, 20 per cent. It is to be a horizontal reduction, not a well-matured and carefully considered revision. Its author makes no such claim for it; but confesses in his recent speech that, while a revision and adjustment are "essential," "they are believed to be unattainable at the present session of Congress." It admits of no exception or discrimination, except only that the proposed reduction shall not operate to reduce the duty below the rate at which any article was dutiable under the tariff act of 1861, commonly called the Morrill tariff, and in no case shall cotton goods pay a higher rate of duty than 40 per cent. ad valorem, and wools and woolens a higher rate than 60 per cent. ad valorem, and metals a higher rate of duty than 50 per cent. ad valorem.

With these exceptions and qualifications only 80 per cent. of the duties now imposed by law are to be collected under the bill we are now considering.

The friends of this measure have felt called upon in advance to apologize for the smallness of the proposed reduction, and attempt to conciliate that large majority of their party which is in favor of the English system by declaring that this is only a step, and the first step, in the direction of the ultimate enactment of a pure revenue tariff. It is the first move toward the destruction of that system of tariff duties which has been recognized in this Government from its foundation as essential to its revenues and the proper care of its own industries.

WHICH MEANS A TAX UPON TEA AND COFFEE.

It is not because they are favorable to protection, even incidentally, that only 20 per cent. reduction is proposed, but because believing this is all they can accomplish this year they invite all the friends of tariff reform to join them, with the assurance that next year and for the following years additional steps will be taken which will ultimately bring our tariff taxation to a strictly revenue basis; which means a tax upon tea and coffee and such other articles as we can not produce or manufacture in the United States, and the release of all others from customs duties.

My distinguished friend, the chairman of the Committee on Ways and Means, shakes his head in disapproval of that proposition. Why, this theory of taxation is as old as the Democratic party, and in the Forty-sixth Congress my distinguished friend and colleague [Mr. HURD] introduced into this House a joint resolution a copy of which I have in my hand—he one of the most conspicuous leaders of the free-trade party here to-day—and he distinctly declared in the ninth section of that joint resolution that to the end the present tariff shall become one for revenue ONLY the following changes should be made:

1. Upon all dutiable articles producing little or no revenue to the Government the duty should be returned to a revenue basis or they should be placed on the free-list.

2. The duty on tea and coffee shall be restored.

And that is what a revenue tariff means. It means collection of revenue upon the fewest possible articles, chiefly of necessity, that are consumed by the people of this country.

Mr. HAMMOND. Will the gentleman permit me to ask him a question?

Mr. McKINLEY. Certainly.

Mr. HAMMOND. What became of that resolution?

Mr. McKINLEY. It was not passed by the Forty-sixth Congress. It was undertaken to be passed, but no vote was ever had thereon.

A MEMBER. That was a Democratic Congress.

Mr. McKINLEY. Yes, the Democrats were in control; but that Democratic Congress failed to do a great many things which it believed ought to be done. It lacked the courage of its convictions. The truth is, that has been the trouble with the Democratic party for the last twenty-five years in failing to enforce its true convictions.

Mr. HAMMOND. That was the argument or the opinion of one man, but not of the party.

Mr. McKINLEY. It was not only the opinion of one man, permit me to say, but that resolution was reported to this House by the chairman of the Committee of Ways and Means, upon which committee was found such gentlemen as the distinguished Speaker of this House and the eminent gentleman from Virginia [Mr. TUCKER]. Whether it was the voice of this House or not, it was the voice of that great committee which was the organ of this House on all economic questions.

THE FIRST ASSAULT UPON DISCRIMINATING DUTIES.

So that before we enter fully upon the discussion of this particular measure we might as well understand that this is but the first assault, which is to be followed by a succession of assaults, to the total overthrow of the protective system; and that the fight we now make is not against this bill only, but is directed as well against that which will surely follow if we permit this incipient step to be taken. This apprehension is fully justified by the report of the majority and by the utterances of the advocates of the bill, who do not hesitate to say that this is only "a measure of partial relief." "It is," says the chairman of the Committee of Ways and Means, "but an advance toward a more complete revenue reform." "It is," says the gentleman from New York [Mr. HEWITT], "a step in the right direction, but it does not go far enough. It does not touch the heart of the question. It is the entering-wedge." While my friend from Texas [Mr. WELLBORN], who concluded his speech a moment ago, declared this was the initial step which doomed protection.

This is notice of Democratic purpose without cover or concealment, and the friends of protection therefore know what this bill means. The issue is made up. The gage of battle is thrown down—we cheerfully take it up, and appeal to the people, whose servants we are and to whose will, legally expressed, we will give cordial acquiescence.

THE BILL TOO AMBIGUOUS FOR A PUBLIC LAW.

My first objection to this bill is that it is too ambiguous and uncertain for a great public statute. It will involve dispute and contention upon nearly every invoice, and will lead to frequent, expensive, and annoying litigation. It will be difficult, if not impossible, of execution, requiring mathematical experts to determine the assessable duty upon practically every bill of imported goods. It will not only require mathematical experts but it will require a judge familiar with the interpretation of law to give construction to and harmonize if possible its several inconsistent and conflicting provisions. I doubt if any member of the Ways and Means Committee would be bold enough to venture upon its administration, certainly my friend from Texas [Mr. MILLS] would not be willing to undertake its execution; and I am sure that the chairman, if himself required to give it force and construction, would never have brought it into this House, and would be the first to pray for its repeal.

On a large number of articles under the bill the duties will be determined by the Morrill tariff of 1861. Under the cotton schedule there will be four classes; flax, four classes; metals, twenty-one classes; books and sugar, one class each; wood, two classes; earthenware, two classes; provisions, four classes; chemical products, six classes; sundries, twenty-

three classes, the duties upon which the act of 1861 will determine and control, so that the Morrill act will be in constant requisition and use in the determination of duties. It would have been better legislation upon the part of the majority, more certain and statesmanlike, to have proposed a re-enactment of the Morrill tariff, taking it as a whole, than the uncertain and incongruous bill they now offer.

Again, where an article pays an ad valorem rate under one act, and a specific or compound rate under the other, difficulties at once arise. Of these there are one hundred and eighteen classes, of which only four pay a specific duty under the act of 1861, and only three pay an ad valorem duty, and four pay compound duties under the proposed bill—the remainder pay specific duties.

These represent cases only where there is no doubt of the effect of the bill, and this is the legislation which the statesmen of the Forty-eighth Congress offer us.

Mr. MORRISON. Would the bill commend itself to the favor of the gentleman if the Morrill tariff clause was stricken out? Would the gentleman then give the bill his support?

Mr. McKINLEY. I would answer my distinguished and honorable friend by saying that I would not support this bill if it was a straight 20 per cent. reduction of the duties of 1883, and I will tell him why I would not. Some articles of imported merchandise can better stand a reduction of 20 per cent. than others. A 20 per cent. reduction will destroy some of the great manufacturing industries of the United States, while a few others might live. It would be death to some and only distress to others. Take twenty inches off of the leg of the distinguished chairman of the Committee of Ways and Means and you would still leave a stump, but take twenty inches off of one of the smallest persons to be found about this House and you would leave him without any stump at all. [Great laughter on the Republican side.] That is why I would not vote for a simple 20 per cent. reduction, horizontally applied to every article imported into this country.

Mr. TUCKER. That is a good stump speech. [Laughter.]

THE BILL IN SOME OF ITS PROVISIONS INCAPABLE OF EXECUTION.

Mr. McKINLEY. To resume: There are other articles not included in either enumeration. There will be found many difficult and perplexing questions arising from the various rates of duties under the two acts. It will be difficult, if not impracticable, to conform the rates under the act of 1861 to the classification and description of articles and the rates under the act of 1883. Where the description or classifications are different, how will you ascertain the dutiable rate? The mode of levying either the ad valorem, specific, or compound duties are so confusing, requiring so much calculation, that it is almost impossible to disclose in the time allotted to me the difficulties to be encountered in the endeavor to administer the proposed bill. To illustrate, take iron ore; an article subject under the act of 1861 to an ad valorem rate, and under the proposed bill to a specific rate. The rate under the present law is 75 cents per ton, and by the bill under consideration is subject to a reduction of 20 per cent., making it 60 cents per ton. Under the act of 1861 it is subject to a duty of 20 per cent. ad valorem. There was imported in the year 1883, 609,322 tons of iron ore, at an average cost of $2.61 per ton. The average price of $2.61 per ton is an exceptionally low price. A large proportion of the importations of this article the last year must have cost more than $3 per ton. If there should be none costing above $3 there will be no difficulty, but if it should cost over $3, say $3.05 per ton, the 20 per cent. duty will be 61 cents, and the duty under the proposed bill would, instead of 60, be 61 cents, and so on, varying in every instance where there is any excess of $3 per ton. By a reduction of one-ninth of the proposed specific rates or its equivalent ad valorem, 22.73 per cent., we reduce it below the act of 1861, and in every case where the value exceeds one-sixth or more of the present value of $2.61 per ton the rates would have to be readjusted; so that in a cargo of 1,000 tons or less there may be a dozen different rates.

Take files, rasps, and floats. The difficulties are greatly increased. Under the act of 1861 these are dutiable at 30 per cent. ad valorem; under the act of 1883, at so much per dozen, according to length. There are four classes—from four inches and under; from four to nine inches; from nine to fourteen inches; and over fourteen inches—all at different rates. You must ascertain the exact value of each per length, and calculate upon each to find the precise reduction or rate, so as not to be below the rate of 1861 or above the maximum rate, as provided for in the proposed bill. A similar difficulty is found as to wood screws, where the rates are so much at variance.

I would like some of the advocates of this bill to sit down and make a calculation upon the articles I have named and give their dutiable rates. I am sure before they have finished their work they would pronounce this bill too complicated for human ingenuity and too uncertain for public law.

The bill is full of just such complications and abounds in incalculable inconsistencies and confusion, is indefinite and indeterminable, and is the work not of experts, is the outgrowth not of knowledge or information or study of the subject, but rather of the desire to do something—to take one step, no matter where it leads or what results may flow.

Sulphur under the act of 1861 paid a duty of 20 per cent. Under the proposed bill, $8 per ton—equal to 20.56 per cent. A slight rise of one-fortieth of the present cost would have the effect of changing the proposed rates, and the rates would be different upon every invoice valued in excess of $40 per ton. Take brass sheathing or yellow metal, gold-leaf, metallic pens, grindstones, chloroform, hops, magnesia (calcined), sal-soda, &c.: the change in values (and values are constantly changing) would make the duties different and the difficulties of ascertaining them increased. In every instance where the specific is substituted for the ad valorem rate, or *vice versa*, the value of each invoice would have to be ascertained to find out the equivalent specific for the ad valorem rate of 1861, and perhaps in one single cargo there would be a dozen or more different rates upon the same article, though these articles might vary very slightly in value.

ABSURDITIES OF THE BILL.

The absurdities of this bill, says an officer conversant with the revenue law, will be apparent to any one at all familiar with the practical workings of our complicated tariff. By law the collector is charged with deciding the rate of duty and the appraiser with determining the value. Practically, however, the appraising officers indorse upon the invoice both the statement of value and the rate of duty which in their judgment the goods should bear. At the larger ports of entry, like Boston and New York, this work is generally done by the grade of officers known as examiners, and their returns are generally accepted by the collector as the basis for liquidating the entry. We will then see what work an examiner would have to do in computing the rates of duty, taking first, say, cotton goods.

Under the tariff of March 3, 1883, cotton thread and cotton yarn pay eight different rates of duty dependent on value, the duty ranging from 10 cents to 48 cents a pound.

The examiner will have first to determine the value of the merchandise, and which of the several eight different rates of duty it has to pay. Then he will have to take 80 per cent. of the rate applicable and see what ad valorem rate it amounts to. Then, if the rate is higher than 40 per cent. ad valorem, all his labor has gone for naught, for the goods are to pay no higher duty than 40 per cent. ad valorem, except such 40 per cent. may be lower than the duty imposed by the Morrill tariff of 1861. So he examines the Morrill tariff and finds that spool and other thread of cotton pay 30 per cent. ad valorem; that cotton yarn and cotton warps were not mentioned therein, and so probably fall into the classification of manufactures of cottons not otherwise provided for, which also pay 30 per cent. ad valorem; so once more he raises the duty up again to 40 per cent. He next takes an invoice of cotton cloth and attempts to classify it. The rates of duty on cotton cloth are dependent upon various criteria: First, upon the number of threads to the square inch; second, whether the goods are unbleached; third, whether they are bleached; fourth, whether they are dyed, colored, stained, or painted. These complex conditions have to be ascertained and the rates of duty per square yard first applied to the act of March 3, 1883. When the amount of duty on this basis has been ascertained, the appraiser strikes off 20 per cent., making the 80 per cent. under the Morrison bill. Then he has to appraise the goods for value, and if 80 per cent. of the rates imposed by the act of March 3, 1883, does not exceed the 40 per cent. restriction of the Morrison bill the examiner may rest contented unless he again finds that his work is overruled by the remaining conditions found in the act of 1861, which may determine the whole thing.

In the act of 1861 the rate of duty was dependent upon, first, whether the goods exceeded 140 threads to the square inch, then from 140 to 200; then for goods having more than 200 threads to the square inch. In the act of 1883 the duty is dependent, first, upon goods having less than 100 threads to the square inch; then between 100 and 200, and then exceeding 200; so that the conditions and classification of the two acts are not the same.

Now take Schedule K, relating to wool and woolens. By the Morrison bill 80 per cent. of existing duties are to be imposed, provided that none of the goods contained therein shall pay a higher duty than 60 per cent. ad valorem, coupled again with the check found in the Morrill tariff. The duties imposed by this schedule have been carefully adjusted with reference to the various qualities of goods, their position in the trade, and to a large extent with reference to the position they occupy in the various branches of American manufactures. It is now symmetrical, and easily understood. To say that no goods under that schedule shall pay any more than 60 per cent., as does the Morrison bill, is to do violence to whatever principle there may be in the schedule. Besides, in comparing the wool tariff in the act of March 3, 1883, with that in the Morrill tariff, it is found that the groups and classifications are so entirely different as to make comparison in many cases impossible.

Now, turn to the iron tariff. Eighty per cent. of the existing duties are to be imposed on articles in Schedule C, provided that none of the articles shall pay higher duties than 50 per cent. ad valorem.

If there is any merit whatever in the tariff as it now stands as a protection to American manufacturers in their competition with the cheap labor of Europe, by which they have been enabled to develop the various branches of American manufactures, a reduction to a common level of 50 per cent. ad valorem is neither sensible nor just. By such a rule there are many articles on which the duties have been carefully

adjusted, where the ad valorem duty of 50 per cent. would increase the trouble consequent upon undervaluations.

Then again, the bill provides that when under existing law any of said articles are grouped together and made dutiable at one rate, nothing in that act shall operate to reduce the duty below the highest rate at which any article was dutiable under the Morrill tariff. What is meant by grouping together is not explained by the chairman of the committee, and will prove a constant source of contention and litigation.

In the act of 1883 iron or steel wire of various dimensions have separate classifications. The rates have been carefully adjusted. In the Morrill tariff wire not less than one-fourth of an inch in diameter is classified with steel in ingots, bars, and sheets, and is dutiable at various rates, according to value, beginning with 1½ cents per pound or 2 cents per pound, according as the value is over or under 7 cents; but then again, taking the tariff of 1883, we find that iron or steel wire above No. 5 is not enumerated, and pays 45 per cent. ad valorem duty, so that we have to ascertain whether the 45 per cent. ad valorem, less the 20 per cent. reduction, is more than the 1½ cents per pound or 2 cents per pound imposed by the Morrill tariff.

The changes in trade or commercial designations of the various manufactures of metal since the Morrill tariff was enacted have been so great that the present tariff bears no comparison to it. Therefore it would be in many cases difficult if not impossible to tell to what group many of the articles should be assigned.

The ambiguity and uncertainty in the tariff seriously embarrass all branches of trade as well as the administrative officers of the Department. If a person is intending to engage either in the manufacture or importation of any article affected by the tariff, he naturally wants to know beforehand the rate of duty he will have to pay or the amount of protection he will find in the existing tariff. He gets no light from this bill. He must grope in the dark.

In ascertaining the rate of duty on an article that pays a compound duty—that is, a duty upon both quantity and value—under the proposed bill, and an ad valorem or specific rate under the act of 1861, a mathematical calculation would be necessary in each case to ascertain what rates to assess; first, to ascertain whether it is at or above the rate named in the act of 1861, or as to the restriction of the proviso in the proposed bill touching cottons, metals, and woolens.

And all these absurdities, complications, and incongruities a majority of this House and the people of this country are asked to submit to and solemnly enact into public law because there are gentlemen who are unwilling to sit down and carefully mature a discriminating tariff act.

THE BILL UNSCIENTIFIC—A CROSS-CUT MEASURE.

The advocates of this bill criticised the Republicans of the last Congress because of the creation of a tariff commission, asserting that such action was a confession of the incapacity of a majority of the Committee on Ways and Means to revise the tariff. By reason of incapacity, as they declared, the committee farmed out the subject to a commission of nine experts. Much opprobrium was sought to be put upon the majority because of its alleged abrogation of a constitutional duty. What can be said of the capacity of the majority of the Committee on Ways and Means as evidenced by the bill now before us? It is a confession upon its face of absolute incapacity to grapple with the great subject. [Laughter and applause on the Republican side.] The Morrison bill will never be suspected of having passed the scrutiny of intelligent experts like the Tariff Commission. This is a revision by the cross-cut process. It gives no evidences of the expert's skill. It is the invention of indolence, I will not say of ignorance, for the gentlemen of the majority of the Committee of Ways and Means are competent to prepare a tariff bill. I repeat, it is not only the invention of indolence but it is the mechanism of a botch workman. A thousand times better refer the question to an intelligent commission which will study the subject in its relations to the revenues and industries of the country than to submit to a bill like this.

They have determined upon doing something, no matter how mischievous, that looks to the reduction of import duties; and doing it, too, in spite of the fact that not a single request has come either from the great producing or great consuming classes of the United States for any change in the direction proposed. With the power in their hands they have determined to put the knife in, no matter where it cuts nor how much blood it draws. It is the volunteer surgeon, unbidden, insisting upon using the knife upon a body that is strong and healthy; needing only rest and release from the quack whose skill is limited to the horizontal amputation, and whose science is barren of either knowledge or discrimination. And then it is not to stop with one horizontal slash; it is to be followed by another and still another, until there is nothing left either of life or hope. And the doctrinaires will then have seen an exemplification of their pet science in the destruction of the great productive interests of the country, and "the starving poor," as denominated by the majority, will be found without work, shelter, or food. The sentiment of this country is against any such indiscriminate proposition. The petitions before the Ways and Means Committee from twenty to thirty States of this Union appeal to Congress to let the tariff rest where it is, in general, while others are equally importunate to have the duties on two or three classes of American products raised. The laboring men are unanimous against this bill. These appeals should not go unheeded. The farmers for whom you talk so eloquently have not asked for it. There is no appeal from any American interest for this legislation.

It is well if this bill is to go into force that on yesterday the other branch of Congress, the Senate, passed a bankrupt bill. It is a fitting corollary to the Morrison bill; it is a proper and necessary companion. The Senate has done wisely, in anticipation of our action here, in providing legal means for settling with creditors, for wiping out balances, and rolling from the shoulders of our people the crushing burdens which this bill will impose.

REDUCTIONS OF THE LAW OF MARCH 3, 1883.

The chairman of the committee reporting the bill falls into a grave error, not intentionally of course, in his use of the table furnished by the Chief of the Bureau of Statistics which, if not explained, may mislead. It will be found that the reduction secured by the bill of last year was not as is alleged, but far greater, as I will show:

Value of imports of dutiable merchandise entered for consumption in the United States, with the amount of duty and the ad valorem rate of duty collected during the six months ended December 31, 1882 *and* 1883.

	Six months under the old law—1882.			Six months under the new law—1886.			Difference in rates.
	Value.	Duty.	Rate.	Value.	Duty.	Rate.	
	Dollars.	*Dollars.*	*Per ct.*	*Dollars.*	*Dollars.*	*Per ct.*	*Per ct.*
Sugar and melada.	44,432,311	23,180,590	52.17	46,793,822	23,520,030	50.26	1.90
All other dutiable goods	216,423,926	88,085,917	40.70	189,104,287	72,994,106	38.59	2.11
Total	260,856,237	111,266,507	42.65	235,898,109	96,514,136	40.91	1.74

It will appear from the above statement of figures that there has been a reduction in receipts of duties amounting to $14,752,371 notwithstanding an increase of rates upon earthenware and china and on still wines, on champagnes, which are included in the foregoing importations under the head of "all other dutiable goods." The small difference of 1.74 per cent. shown by the table exhibited by the chairman of the Ways and Means Committee in his report accompanying this bill between the old law and the act of March 3, 1883, is delusive and arises from the low price of sugar and other merchandise since the new law went into effect, and therefore does not fairly disclose the actual percentage of reduction.

In the year 1882 there was imported 976,099,448 pounds of sugar, valued at $44,432,310 at a specific rate of 2.37 cents per pound, equal to 52.17 per cent. ad valorem at an average value of 4.55 cents per pound; while in 1883, 1,205,893,322 pounds, valued at $46,793,822 at an average specific rate of 1.95, equal to 50.26 per cent. ad valorem at an average value only of 3.88 cents per pound, being 14.72 per cent. less than cost of 1882. The difference between 2.37 cents per pound in 1882 and 1.95 cents per pound in 1883 is .42 cent per pound less, or a reduction of 17.72 per cent. on sugar.

The importation of sugar in 1883 was one-fifth of the value of the entire importations, and it is fair to assume that the exceptionally low price of other imported articles will fully account for the small apparent reduction shown by the table of the chairman of the committee.

WILL NOT REDUCE THE REVENUE.

This bill will not secure the results claimed for it by its advocates in decreasing the revenues of the Government. The history of all tariff legislation is that a decrease of duty increases the imports temporarily and therefore swells the revenue from that source. The honorable gentleman from Virginia [Mr. TUCKER] said in a speech in this House on May 8, 1878, that "a decrease of duty will increase the imports still more," and of course add to the revenues.

The gentleman from Connecticut [Mr. EATON] in his speech made on the 26th of March said of this bill:

> The theory of my friend from Arkansas, like the bill of my distinguished friend the chairman of the Committee on Ways and Means, has not been quite sufficiently well considered, because that bill if it ever becomes a law will increase the surplus in the Treasury and not decrease it.

Mr. HEWITT said March 27, 1884:

> But what I fear in regard to the bill reported from the Committee on Ways and Means is it may be delusive in that particular, and so far from being a measure of reduction of revenue it may turn out to be a measure for increase of revenue. I do not say that it will be so. I hope that it will not, but if the free-list is made larger, if it is extended, then it is certain that the revenue will be reduced, but it is only by enlarging the free-list that we can be sure of any such result.

Mr. MILLS said that "this bill would increase importations" and correspondingly increase the revenues against which every interest is opposed. Failing to accomplish that, where is the virtue of this measure; what effect can it have except to disturb the business of the country, diminish values, and decrease the price of labor?

NO DEMAND FOR THIS LEGISLATION FROM THE MASSES.

The gentleman from Texas [Mr. MILLS] is greatly mistaken in the opening of his speech on the 15th, when he declared the demand for a

reduction of duties upon imports was universal throughout the United States. He omitted to state from what source he derived his information and from what quarter this demand came. I have been unable to find a single petition presented to this House or referred to the Committee on Ways and Means by the House suggesting, much less demanding, the reduction of import duties proposed by this bill, or any other reduction of customs duties. On the contrary, the petitions have been uniformly in opposition to the enactment of this measure.

I have been unable to find any sentiment in the United States, except in the utterances of the Democratic majority in this House, and outside of the city of my distinguished friend [Mr. DORSHEIMER] who sits before me, being the free-trade clubs of his and the neighboring city of Brooklyn, any sentiment in favor of the passage of this bill. There is where it exists, and it is remarkable fact that that class of gentlemen "neither sow nor reap, and do not gather into barns."

Mr. KASSON. And the lilies?

Mr. McKINLEY. Yes, the lilies. "They are like the lilies of the field; they toil not, neither do they spin." [Laughter.]

They have fixed incomes, belong to the independent and wealthy classes, who now buy most of their goods abroad and hope to buy them cheaper if the duties are reduced.

THE BILL A BLOW AT THE FARMERS OF THE COUNTRY.

The gentleman from Texas justifies his advocacy of this measure on the ground that it is in the interest of the farmers of the United States, and a large portion of his speech was devoted to showing that with this reduction the markets of the world would be open for the competition of our food producers. Why, sir, they are open now. He announced the startling doctrine that a foreign market was better than a home market for the farmer; that is, it was better that the farmer should ship his products to other nations rather than to sell them to consumers at home, and that the tariff was a restraint and obstruction to the sale of our products abroad. He did not disclose how or in what way. I take it the farmer will send his products abroad when there is a demand for them, and only then. He did not show us in what way the benefit was to accrue. He did not demonstrate that the price received by the producer would be larger if sold to a foreign consumer than if sold to our own people.

It has always seemed to me that it was infinitely better that the farmer should have a market at home, a market at his very door, than to be compelled to seek a market in distant countries and among distant populations. As long as there is a demand at home it is a self-evident proposition that it is better than to seek consumers abroad, and that the home demand is safer, more reliable, and more profitable than any foreign market can possibly be. American buyers are the best in the world. He did not tell the committee what is the fact, that 90 per cent. of the food products of the United States is consumed at home, and that only about 10 per cent. has to find a market abroad. He differs, too, from his colleague [Mr. HEWITT, of New York], who said in his speech, March 27:

Now how can the farmer be benefited? What does he want? He wants to sell his productions at a higher price. And how is he going to sell his products at a higher price as the grain trade stands to-day? The markets of Europe are overcrowded with food products. To-day the farmer is met at Liverpool and London by the food products of India, and that competition so far from being less is going to increase. Therefore the farmer has reached the limit of the demand for his products in foreign lands. Where, then, is he to find his market for them? He must find his market at home, and how is he going to get it at home? Why, only by one method—manufactures must be fostered and grow and not be diminished.

Mr. MORRISON. What per cent. is consumed by the manufacturing people?

Mr. McKINLEY. They consume all that they need and no more; and the gentleman's proposition would drive these workingmen, who are the consumers of the products of the farm, out of the industries and force them into the great fertile lands of the West, and instead of their being the consumers of the products of the farmer they would become his competitors.

This foreign market, for which every tariff idealist and every Democratic free-trader longingly sighs, is only mythical in the present condition of our country. We should capture the home market, first get control of it, before we seek the foreign one. We can not command a foreign market until we can control our own. It seems to me that proposition is so plain and palpable that it must commend itself to every intelligent man.

FREE RAW MATERIAL A DELUSION.

This talk about free raw material and the necessity for our having it to compete with the markets in other lands is wholly ideal. Raw materials are partially free now when manufactured for export purposes, and any citizen of the United States can import a large number of materials and manufacture them, and if he exports he receives back from the Government 90 per cent. of the duty he paid upon such article or material.

Sections 3019, 3020, 3021, 3023, 3024, and 3026 of the Revised Statutes of the United States declare in their several provisions that certain materials imported here for manufacture, when put into the finished product and exported, the manufacturer is entitled to a return of all the duty paid less 10 per cent. So that if we are ready now for the foreign market, if we are ready to compete with England and France and Belgium by the use of free raw materials from the other side, we have them in a large measure now, and no further legislation is needed to encourage our export trade. When we get able to supply ourselves with all the articles we use and employ, we can then address ourselves more intelligently to the foreign trade. This bill will aid in diminishing our great market for agricultural products. The market which consumes 90 per cent. of our farm products is worth preserving and infinitely more important and valuable than any other.

Let me pause here to say that free raw material has nothing to commend it to legislative favor which is not common to every other American product. The same necessity for protection, within reasonable limits, applies to what are commonly called raw materials as to the finished or more advanced manufacture. There is no such thing as raw materials distinguished from other products of labor. Labor enters into all productions, the commonest as well as the higher forms.

The ore costs something to mine it; the coal, to take it from the ground; the stone, to quarry it; much labor enters into the production of wool; leather costs something to tan; and to the extent that labor enters into their preparation, what are usually termed raw materials should have ratable protection with the completed product. Pig-iron is the raw material for bar-iron, and yet no one has been heard to advocate free pig-iron. Cloth is the raw material for the tailor, the finest steel is the crude material of the watchmaker, and so on interminably. There can be no just line drawn, and no reason exists for such a discrimination. When the country is ready for free trade let us have it in all things without exception or restriction.

GROWTH OF POPULATION OF THE UNITED STATES.

We forget in all our discussions the growth of the population of of the United States. We forget that about every twenty years a nation of people come to our shores, whose labor we employ and whose wants we supply. Our population in the last fourteen years has increased fully 17,000,000—half of the entire population of Austria, three times the population of Belgium, 70 per cent. more than the entire population of Brazil, equaling the population of Egypt, and one-half of the population of Great Britain and Ireland. These become the consumers of the products of the farm and increase them, and enlarge our market. They are the best customers and the most certain and reliable.

A HOME MARKET FOR FARMERS—A LOW TARIFF DESTRUCTIVE OF AGRICULTURAL INTERESTS.

The farmer is best off with a home market. The farmer himself knows this, and no amount of rhetoric can deceive him. The gentleman from New York [Mr. HEWITT], himself a practical business man, recognizes it. The fathers of the Republic saw it and proclaimed it. We can only have a profitable home market by encouraging manufacturing industries. "Plant the forge by the farm" is the old doctrine, and it is as true now as it was when uttered.

Mr. Ewing, of Ohio, a distinguished United States Senator, expressed the necessity for manufacturing and its benefits to agriculture in the following language, on February 17, 1832, the tariff then being under consideration in the Senate:

In short, every portion of the world was searched by our intelligent merchants, and all combined did not furnish a market adequate to our surplus productions. Every farmer in Ohio long knew and felt the pressure consequent upon this state of things. Year after year their stacks of wheat stood unthrashed, scarcely worth the manual labor of separating the grain from the straw; so low was it reduced in comparison with manufactured articles that I have known forty bushels of wheat given for a pair of boots. Such was the state of things in the Western country prior to and at the time of the revision of the tariff in 1824.

Then, sir, at the period of which I am speaking, 1822, 1823, and 1824, which I refer to as the season of the greatest agricultural depression, especially in the West, we had supplied and were supplying every country upon the globe with our products to the extent that they would receive, and even beyond it. We had glutted every market, and by the excess of the supply which we furnished we lessened the aggregate sum which we received in return. This was the case with every article of our products, whether of the forest or the field; everything which we had to export or which our labor would produce, and which could be made the subject of exchange, was sent abroad and exchanged for foreign manufactured articles.

The state of things which I have dwelt upon somewhat at large was that of our whole country in 1823-'24. It was in the situation of the farmer, with his ten boys, who could find employment but for eight; and such more especially was the situation of the Middle and Western States. The low state to which our farming interest was reduced, the low price to which our fine lands and the products of our lands had sunk, produced unexampled pecuniary distress and called aloud for relief. Our statesmen were not slow in discovering the cause of the evil and in applying the remedy; hence their united support of the tariff of 1824, the merit of which I claim for them, for the Middle and Western States.

This honorable Senator graphically describes the effect upon agriculture of the low tariff prior to 1824, and subsequent history and experience are only confirmatory of what he so strikingly said then. And to this feast the controlling wing of the Democratic party invites you.

WHAT PROTECTION HAS DONE; CONDITION OF THE COUNTRY UNDER IT.

We invite your attention to another and better picture. The growth of this country in the last twenty years is the wonder of the world. Our manufacturing products have increased from $1,885,000,000 in 1860 to $5,369,000,000 in 1880. The agricultural development shows a like gratifying progress. There was an increase in the acreage in farms from 407,000,000 acres in 1860 to 536,000,000 acres in 1880, an increase of 32 per cent.; and in the value of farms an increase from $6,645,000,000 in 1860 to $10,197,000,000 in 1880. We started in 1830 with 23 miles of

railway. In 1860 we had 30,635 miles; in 1880 we had 84,393 miles; in 1881 we had 94,147 miles; and now we have about 120,000 miles. Our material wealth has increased beyond parallel in everything which goes to make a nation strong and self-dependent. The energies of our people have opened up new avenues of industrial development, have overcome what seemed insuperable barriers. The finances of the country were never in better condition than to-day. Our exports during the last fiscal year were over $804,000,000, as against $733,000,000 during the preceding year, an increase of nearly $71,000,000. The value of the exports of manufactures from the United States during the last year was $112,000,000 in round numbers, as against $103,000,000 during the preceding year, and exceeded the exports of any previous year in the history of the country. Our exports have exceeded our imports over $100,000,000, so that the balance of trade is in our favor. We are rapidly reducing the national debt, and have been doing so for years at an unexampled rate. Interest-charge has been reduced, and we present the spectacle of a government, in less than twenty years from the close of a great, destructive, and wasteful war, with unprecedented credit and a surplus of revenue in the Treasury.

This has all been accomplished during an era of protective tariffs, which the free-traders characterize as extortion and robbery upon the people, destructive of their energies, and obstructive of industrial progress and national development. How it contrasts with the low tariff period from 1847 to 1860, when we had practically a revenue tariff, such as is advocated by the Democratic party of to-day! It was a period of universal business depression, deficiencies in the public Treasury, when both nation and individuals were compelled to borrow money at the most exorbitant rates of interest; and it was in this condition that the Republican party found the country when it came into power on the 4th of March, 1861. The Democratic policy of the tariff was immediately reversed; and the splendid achievements in every department of industrial activity, the large revenues of the Government, its improved credit, and its present flourishing monetary conditions are the highest vindication of its policy. Every class in the country has been benefited. The necessities of life have been cheapened to the consumer. Every article of merchandise that has been made possible of manufacture in this country by reason of protective duties has been cheapened, and none have been enhanced in price.

ENGLAND WANTS THIS LEGISLATION.

England is more concerned to-day for the passage of this bill than any citizen or class of citizens of the United States, unless it be the importers. She is watching with the deepest concern the progress of this bill, and she does not refrain from saying that if it becomes a law it will put money into the pockets of her manufacturers. She does not hesitate to declare that from selfish motives she wants the full success of the Democratic party in this measure. Here is what her trade papers say.

The London Iron and Coal Trades Review for December 7, 1883, says:

Our best customer for iron, steel, hardwares, and many other goods has long been the United States, notwithstanding the very heavy duties that are there levied, and the greatest interest is always manifested by our business men in American politics where they are likely to affect the tariff. It is pretty evident that the protectionists are no longer to have it all their own way.

The Machinery Market, a London publication, said in January last:

The year is likely to see important political changes on the other side of the Atlantic which will have their influence on business here. Events move rapidly in America, and the coming triumph of the Democratic party there means the triumph of the free-trade movement in the States. It is not to be supposed that there will be free imports into the States, but "a tariff for revenue only," which is the leading cry of the Democrats, will open an immense additional field for the sale of English manufactured goods in the States.

The same journal said in March last:

It appears, therefore, on the whole we are buying nearly as much in the way of manufactures in iron and steel, machinery, &c., from the States as we are selling to them. The result must be looked upon as miserable, and is not equal to our position as a manufacturing country. The United States is a producing country, not a manufacturing, in the sense to which we apply this term to ourselves. It is high time we turned our attention actively elsewhere for a better customer, not forgetting all the same to watch the opportunities which the tariff reduction in the States will open out to us.

The London Iron and Coal Trades Review for February 8, 1884, says:

Though our trade with the United States has fallen off very much of late, that country still occupies the position of our leading customer, and every change in its condition yet has its influence upon our market. It is, therefore, important to notice that the intelligence from the other side has been of a rather more encouraging character during the last few days.

At present, and for some time past, there has been little chance of supplying English pig-iron at a profit in the States, owing to the very low prices of native iron. But the most satisfactory news is that on Monday Mr. MORRISON, the chairman of the Ways and Means Committee, introduced another tariff bill in the House of Representatives. Considering that it was only last year that a tariff bill was passed, which considerably reduced the duties on a large number of articles, the introduction of another bill so soon affords a sign that the protective doctrine is a good deal "played out." The new bill proposes a reduction of 20 per cent. in the duties, to take effect from July 1. Mr. MORRISON and his colleagues, who have drawn up the bill, have shown their wisdom in placing in the free-list a number of raw materials, such as copper and iron ores, slack, and coal.

They had not seen the amended bill when this article was written; for iron-ore, &c., have been left out of the new revision.

Mr. MORRISON. I would be glad if it was in.

Mr. MCKINLEY. I have no doubt you would be glad if it was in; and I am only surprised the distinguished gentleman should have permitted his own convictions to be overruled by that little factious element in his own party that would control legislation. [Applause.]

Though the bill may not pass without considerable modification, it will probably result in a substantial reduction.

To these opinions we may add the following blunt but frank admission by the London Spectator on the 8th of December last:

Of course the North of England holds that American free trade would be greatly to the interest of British manufacturers.

And this from the Pall Mall Gazette:

The progress of the Morrison bill will be watched with considerable interest by English exporters to the American market, inasmuch as it can hardly fail to tend in their favor.

This deep solicitude of our English friends is of course unselfish and philanthropic; it is all for our benefit, for our good, for our prosperity. It is disinterested purely and arises from the earnest wish of our English manufacturers to see our own grow and prosper.

They want this market. It is the best in the world. They can not get it wholly while our tariff remains as at present. They can not get it so long as our manufactures can be maintained. They must be destroyed, their fires must be put out, and this Congress is to-day engaged in an effort to help England, not America, to build up English manufacturers at the expense of our own.

DEMOCRATIC TRIUMPH A VICTORY FOR ENGLAND.

The foreign manufacturers do not conceal their deep interest in the success of the Democratic party. They do not conceal the reason for such interest. It is because the party stands for a doctrine which will break down American competition and open up the market of this great nation to the products of English skill, English labor, and English capital. Why, sir, they saw the first glimpses of the realization of their theories in the elections throughout this country last fall. They heralded as the dawning victory for free trade the triumph of that sentiment in the organization of this House in December last. That victory was welcomed everywhere upon the other side and by the importers on this. There was not a manufacturer in England who did not see in that overwhelming defeat of the protection sentiment in the Democratic party, in the setting aside of one of its oldest and most trusted leaders, gain and prosperity to him, distress and loss to his American competitors. They rejoiced and were made glad.

IMPORTERS CELEBRATE DEMOCRATIC VICTORIES.

One firm of importers celebrated that free-trade victory by christening a line of English goods with the significant trade-mark, "The Carlisle shape" [laughter and applause], and published it as "the coming thing" [applause], named in honor of Speaker CARLISLE, to whom the country looked to reduce the present outrageous tariff on crockery. [Applause.] This Democratic House is now employed in the direction of this suggestion under the leadership of my distinguished friend, Mr. MORRISON. This line of goods named for one of the ablest and purest Democrats in the House or the country comes from his representative capacity. He stands at the head of a great political organization committed to the English system, which all England believes will increase her prosperity and enrich her manufacturers.

These goods, made in a foreign pottery with foreign materials, foreign labor, and foreign capital, are fittingly crowned with the head of the British lion. [Applause.] Pass this bill and you will all have shapes and be honored with like manifestations of approval. [Applause.] I know my honored friend the Speaker craves no such distinction; I know he would shrink from such public demonstrations of approval, and I believe he will not feel flattered by this well-intentioned compliment; but they could not avoid expressing in some public way their appreciation of his victory. This is but an advanced manifestation of the joy which will be felt on the other side should the bill pass.

A PROGRESSIVE MEASURE.

This bill is a progressive measure. You can discern that at a glance. It commences where we started in 1860, and occupies the ground we broke twenty-four years ago and which we abandoned long since. It has none of the virtues of originality, and the chief claim to merit is the fact that it is something a little like what we approved in 1860, forgetful of the fact that in 1860 we were legislating for 30,000,000 of people, and now have 55,000,000, and that all the economic and industrial conditions have changed. It was a good thing then, wise and necessary. Your party then opposed it, and now that we have outgrown it, advanced from it, you are ready to adopt it. We are glad even at this late day to have your approval of that great measure, which served its purpose at the time—and it was a high and noble one. We would have been more gratified could you have seen its merits a generation ago, when it was alive and in force, and suited to our needs and essential to our then revenue necessities and industrial development.

FREE TRADE CONTRADICTIONS.

There is a remarkable exhibition of free trade confusion and contradiction in the speech of my learned colleague [Mr. HURD] made in this House on the 8th of April last, in his discussion of the wool bill.

First. He asserts that the manifest effect of an increase of the duty upon wool is to increase the price of woolen goods, because it adds to the price of the wool, to which he is unalterably opposed because it im-

poses new burdens upon the consumers of wool, who use it "as a shelter to the houseless and a covering to the shivering."

Second. He asserts that a high duty upon foreign wool means a low price for American wool, the logic of which is that the higher the duty upon the foreign article the lower the price of the domestic one. Now if cheap wool be the real necessity of the manufacturer, as my colleague states in his first proposition, to the end that the laboring man may have cheap goods, then, according to his second proposition, the way to secure it is to increase the duty.

If he would do that the wool-grower would be satisfied and the consumers for whom he speaks ought not to complain.

He does not stop with the mere assertion that protective duties have lowered the price of wool to the consumer, but he gives historical facts. He says "during the low duties on wool from 1847 to 1861 the farmers got 5 cents per pound more for their wool than they have received from 1867 until now under the high protective tariff adopted in the year last named." He enforces his argument by invoking the experience of England and France, and if his proposition be true then protective duties are not added to the cost of the imported goods, and if he wants cheap wool for his shivering consumers the course to pursue is not to reduce the duty on wool as proposed in the Morrison bill, but to increase it as provided for in the Converse bill; and according to his second proposition the latter would secure cheap wool.

A FREE TRADER CONFESSES AMERICAN MANUFACTURERS MAKE A MARKET FOR THE FARMERS.

I was glad, too, to find my colleague conceding, as he did, "that it is the American manufacturer who makes the market for the American farmers, and just as he is prosperous or depressed is the price of wool high or low," and the same must be true of every product of the farm. So that if we would bring prosperity to the American wool-grower and the American farmer, we must foster and encourage and maintain our woolen and other manufactures at all hazards, and this can only be done by adequate duties levied upon foreign goods which compete with our own manufactures. Free trade or a revenue tariff will glut this market with foreign woolens made by foreign labor cheaper than our own, and the effect will be to break down our woolen factories "which makes the market for our own farmers." This is the proposition of the Morrison bill, plain and simple, or else this market will be overcrowded with foreign wools admitted at low duty, the effect of which will be to force ruinous prices upon our own producers and eventually destroy this valuable production in the United States.

I warn you that every assault made upon the woolen manufacturer, no matter how slight, is directed alike at the wool-grower. You can not cripple the one without diminishing the value of the other. The woolen manufacturers do not want free wool. They so declared before the Ways and Means Committee. They require our wools, and it will be to their serious disadvantage to curtail the production in the United States. The wool-grower does not want woolen goods to come into this country free of duty. They want a market. They know that when the manufacturer thrives the price of wool is good and firm.

AGRICULTURE AND MANUFACTURES ESSENTIAL TO EACH OTHER.

Agriculture and manufactures should go hand in hand; the one enriches the other, the one trades with the other—they are mutually dependent one upon the other. There is no conflict of interest. Agriculture increases in its products and its wealth with the growth and increase of manufactures. Prices are better, steadier, and more reliable to the farmer with prosperous manufacturing industries employing labor which consumes and does not compete with his products. Impair or destroy our ability to manufacture, strike down any of our great manufactures, and the farmer would be the first to seriously feel the loss. Dismiss the army of operatives from the workshop and send them to the great unoccupied and fertile lands of the West and the farmer would not only lose just so many consumers or customers, but more than that, he would find them as his competitors in the field of production.

THIS BILL WILL REDUCE THE PAY OF WORKMEN, SKILLED AND UNSKILLED.

Finally, and of greater importance than all else, the effect of this bill will be to reduce the price of labor in the United States.

My friend the chairman of the Committee on Ways and Means indicates dissent by his manner.

Mr. MORRISON. We are doing that every day.

Mr. McKINLEY. Yes; it has been done. If the gentleman will remember, there has been general depression all over the world, and wages have stood some reduction. But the proposition you make today, if it goes into operation, will inevitably reduce the price paid labor in the United States.

This is the inevitable logic of the bill, and no amount of argument can escape it. Said an intelligent manufacturer, Mr. Day, of Ohio, in his statement before our committee:

No reduction of duty can be made without crippling our manufactories. There is no point on which we can make a reduction of cost, except on our skilled labor, unless we are compelled to cut down the wages of common labor and all. We get our common labor at the market price, which is fixed not by us, but by the price of common labor in the neighborhood. We get our coal, as cheaply, of course, as we can. We get our sand as cheaply as we can. We get our materials of all sorts as cheaply as we can. And there is nothing on which there is a range, or on which we can make a reduction, except skilled labor. Therefore, whatever reduction of duty is made must of necessity, to a very large degree, fall upon our skilled labor.

Mr. MORRISON. Is that the same Mr. Day who imports his labor?

Mr. McKINLEY. It is the same Mr. Day. And do you object to it?

Mr. MORRISON. Yes, sir; I do.

Mr. McKINLEY. You object to his importing labor?

Mr. MORRISON. Certainly.

Mr. McKINLEY. Then I want to say if the gentleman from Illinois objects to his importing labor into this country he does more than his associate on the Ways and Means Committee of this House [Mr. HEWITT] does. When Mr. Day was being examined he put the question to him: "Did you import skilled labor into the United States?" And Mr. Day said he did, and the gentleman from New York [Mr. HEWITT] proclaimed, and it is in the public record, that Mr. Day was a *benefactor*. And the gentleman from Alabama [Mr. HERBERT] and the gentleman from Texas [Mr. MILLS] did not think Mr. Day had any apologies to make; and the gentleman from Texas who sits before me does not think so now.

I am not here to justify or defend Mr. Day. I am not here to defend any manufacturer or his methods. But I am here to say that just to the extent you reduce the duties on imports to that extent the prices of labor must come down in order to enable us to compete with the manufacturers on the other side. That is the inevitable logic. Give us as cheap labor as they have in England (which I do not want) and we need no protection. [Applause.]

Let me call a witness from the ranks of the advocates of this bill.

Said Mr. Theodore W. Morris, of New York, an importer and free-trader, before the same committee:

Mr. McKINLEY. Do I understand you to say that the reduction proposed by the pending bill would not affect the rate of wages? I thought you said it would.

Mr. MORRIS. I said that that was the usual tendency; not that it necessarily would do so.

Mr. McKINLEY. What do you say about it now?

Mr. MORRIS. That that has been usually the tendency. I think that that has been the experience; but I do not admit that it is a necessity by any means.

Mr. McKINLEY. What would be the effect of a reduction of duty upon importation; would the importation increase?

Mr. MORRIS. I think that if we could possibly dissipate these false and unbusiness ideas (in reference to special legislation) that any people go into business from philanthropic motives and in the great interest of American labor, and if you could put them closely and fairly on a business basis, there would be very much less of these troubles. I have no disposition to go into abstract propositions. We are meeting at this time an exceptional, phenomenal condition of affairs. We have an unusual and exceptional price paid for labor, which is in, my judgment, beyond all wisdom. If I cared to do so I could mention facts which would show how absurd these conditions of affairs are, and how frequently and how naturally they follow special legislation.

Mr. KELLEY. State wherein the absurdity of the prices which we pay to labor consists.

Mr. MORRIS. That demands, perhaps, an extended answer, and is also an abstract proposition which I do not feel competent to answer, except so far as my individual convictions go.

Mr. KELLEY. That is what we want.

Mr. MORRIS. Because it establishes, first of all, a basis for legislation, and because all admit that that is a very dangerous thing in this country. It establishes a basis for legislation, because in all the debates that take place in Congress we shall have brought up to us this illustration, how magnificently American labor is paid—

The free-traders do not like this form of discussion—

We shall have brought up to us the fact that we pay American labor 200 or 300 per cent. more than is paid to the pauper labor of Europe. These will be established as precedents to form the basis of many arguments. You will naturally see that the condition is an exceptional condition, an unhealthy condition. Another very serious difficulty about it, and which I think an absurdity, is that it is the creation of an additional obstacle to anything like an uniformly just price for labor, when normal conditions exist, because these men receiving (as I understand they are receiving) a large advance over their average compensation will not be content, when the conditions of the market readjust themselves, to accept a reduction of wages; and anything in the shape of economy will be repugnant to them. That is another reason why I think the condition unfortunate. Manufacturers are creating for themselves an obstacle which in the future will be a severe trial to them.

THE LABORING MEN DECLARE THAT THIS MEASURE WILL REDUCA THEIR WAGES

Said Mr. Thomas Williams, a workingman who appeared before the committee:

They had been asked to come here and state how the workingmen looked at the matter of the proposed tariff reduction, and how it affected workingmen. He was aware that it was often said that the tariff upon imported goods was of no benefit to the workingmen. He was not a public speaker, and had never been accustomed to anything of the sort. He worked in the mill and earned his own living by boiling or puddling, and he thought he knew something whereof he spoke. He happened to have been born on the other side of the Atlantic, and he had worked in an iron mill in England for some time, so that he could tell the committee from his personal experience how the matter was in free trade England and how it was in America. He had worked in England five years in what was known as the Dowlais works. He had been puddling there for five years, and the wages which had been paid to him were about 5*s.* 6*d.* a ton, or at the rate of $1.25 for puddling iron. And even at that the men did not get very steady work. At the end of the week, when they got their pay and paid out of it for their living, there was not very much left to themselves. He was aware that it was often said that living was cheaper in England than in this country, but he denied that statement. He had lived or lodged (as it was called there), paying so much a week for his room, and letting the landlady buy his food for him. He did not live there as workingmen lived in this country. For instance, in the morning when he got up to go to work he got a cup of tea and a piece of bread and butter. At dinner time he got perhaps a little meat, but not always. He generally managed to eat meat at dinner three or four times a week, but never except at dinner. In the evening for tea, as it is called, he sometimes got bread and butter, and if he wanted to be extravagant he might eat an egg or two, but that was accounted a great extravagance. The women earned in the

Dowlais works about 9 pence a day, or 18 cents. They were employed in unloading coal and in throwing coal out of the cars, and otherwise doing the coarse work of men. If one of them got a shilling a day it was considered good wages.

He contrasted the condition of affairs in that country under free trade with the condition of things in America; and what did he find? He found that the puddler or the boiler in this country was paid $5.50 a ton. He was aware that in some parts of the country men were working for less than that, but in Pittsburgh and west of Pittsburgh they were receiving $5.50 a ton for puddling; and what was the result? The men in the old country got only $1.25 per day at the highest average, while here they got $3.25 or $3.50 a day. It occurred to him, as an American citizen, that it was not right for American lawmakers to go to work and say to the men who had left England and come to this country with the intention of benefiting their own condition that they must now compete with that same system of labor which they had in England. He ventured to say (and he thought the facts would bear him out) that if the proposed tariff were enacted into a law the time was not far distant (if workmen had any work at all here) that they would have to compete with English labor, and would have to live just as workmen lived in the Old Country. As an American citizen he objected to that. He did not believe that the workingmen of America should be compelled to compete with the pauper labor, or the comparatively pauper labor, of England or of any part of Europe. He had a somewhat extensive acquaintance with workingmen in that country. At the Dowlais works, where he had worked, there were employed altogether about 15,000 men, including the iron-ore miners, coal-miners, the blast-furnace men, and the men who worked in the mills. And of all that number he did not know more than two or three men who owned their own homes.

Said Mr. A. C. White, another workingman:

He had come to request that the pending measure be not passed, believing that it would not only injure the workingmen but the public at large.

He believed that at the present time any tariff legislation would be injurious to the best interests of the country. The workingmen protested against further action being taken in the matter until the tariff bill of last winter should have been sufficiently tried. It was yet an experiment and it was not known whether that bill would be for good or for evil. A great many of the workingmen held that the tariff legislation of last winter was unnecessary, uncalled for, and unwise.

They believed that this country should have a good protective tariff for various reasons. The workingmen of this country did not desire to be brought down to the level of English workingmen. They believed that workingmen being American citizens were entitled to all the rights and privileges belonging to them. They had a right to live decently and respectably and to be able to clothe and educate their children, to send them to college and fit them to be members of Congress and Senators, if need be. The workingmen were part of the people and they believed that legislation should be for the benefit of the people as a whole.

Said Mr. D. T. Williams, another workingman:

The impression seemed to have gained ground that manufacturers who came here came all the time for their own benefit merely. He wanted to impress upon the committee the fact that it would be a benefit to the workingmen as well to let the tariff remain as it is and not to lower it, because if the tariff were lowered their wages would be lowered on the 1st of June next.

The officers of the Amalgamated Iron and Steel Association made like statements, enforcing them with facts and figures, and I notice by the public press that a few days ago the officers of one of the leading labor organizations of the country met in the city of Pittsburgh, as is the rule of their order, to agree upon the rates of wages to be submitted to their employers for the ensuing year, and after discussion agreed upon a schedule of prices to be insisted upon, provided the Morrison bill was not enacted into law; and if it was, then they would be compelled to submit lower rates. The workingmen themselves, without exception, recognize the inevitable reduction of the wages of labor under the operation of this bill. The reduction of labor in any branch of industry, or the diminution of the power to employ labor, leads to a reduction in the labor price in every field of employment. Not only do the workmen recognize this hard fact, but the manufacturers as well. Said Mr. HEWITT, of New York, in his speech March 27 last:

Now comes the question, how can you make manufactures grow? How can you enlarge their area?

You must therefore cheapen cost. How can you cheapen the cost of manufactures? In only one of three ways. The cost of manufactures consists in capital, labor, and materials.

Can you cheapen capital? To-day capital is cheaper in the United States than in any other country in the world.

Can you cheapen labor? Where is the man who is going to run next fall for Congress who will get up here and say he will advocate any policy which will reduce the wages of labor?

Then you are brought down by the very necessities of the case to cheapen raw materials. Now, how can you cheapen raw materials? Only by removing the duties which press upon them. And when you have taken the duties off raw materials you have protected the manufacturer, because he can produce his ware cheaper; you have protected the laborer because the necessity for reducing his wages, which otherwise would exist, is avoided.

But this bill does not give the raw materials required by the gentleman from New York [Mr. HEWITT], so that the reduction of the labor is inevitable to cheapen the cost of production. This conclusion can not be avoided under the bill now before us.

The difference in the cost of labor in other countries and this, which enters into the product which competes with ours, must be equalized by the tariffs or the higher wages must come down.

Mr. HEWITT admits this difference. My friend from Illinois [Mr. MORRISON] seemed to dissent a moment ago when I said there was a difference in the rate of wages.

Mr. MORRISON. I did not, sir. There is a great difference in the rate of wages in some industries, and some difference in all.

Mr. MCKINLEY. I beg the gentleman's pardon. The gentleman from Illinois, in view of the statements I have made within the last five minutes, now admits there is a difference. I thank him for the frank confession.

Mr. MORRISON. I have never denied it. The gentleman knows he is mistaken. I have admitted it in every speech I ever made in this House.

Mr. MCKINLEY. I have some of the gentleman's speeches here; I do not care to go into them; but I have always understood from the gentleman that while there might be some small difference in the wages between the two countries the wages brought more on the other side, would buy more of the necessities; while there might be a little difference in the sum total of pay received there was practically no difference when the purchasing power was taken into account.

Mr. MORRISON. That is a different question, and one about which I have not spoken.

Mr. MCKINLEY. Well, if the gentleman never said it, it certainly has been said by those who advocate this bill. I would not do him any injustice. I know that it has been said over and over again that this difference in the cost of labor which we talk about is wholly visionary.

AMERICAN WAGES THE BEST IN THE WORLD.

Our wages are higher here than in any other nation of the world, and we are all proud and grateful that it is so. I know it is denied, but experience outweighs theories or misleading statistics. One thing we do know is that our work people do not go abroad for better wages, and every other nationality comes here for increased wages and gets them. The gentleman from New York [Mr. HEWITT] does not seek to escape this difficulty by a denial, but frankly said in a speech made in the first session of the Forty-seventh Congress: "But the difference in wages does exist, and there are branches of industry which can not be carried on without an equivalent compensation in the form of protective duties or of a bounty from the public Treasury. In Great Britain and the United States the rate of wages is on the average about 50 per cent. higher here than there." He puts it much too low.

We are confronted with this problem at the very threshold of this discussion, and we must meet it. The proposition of the chairman of the Committee of Ways and Means will result in reducing the wages of labor or the destruction of many of our most valuable industries, and the deprivation of employment to thousands. The one or the other alternative must come; either will be most disastrous and attended by business depression and individual suffering.

We must not reduce the price paid to labor; it is already sufficiently low. We can only prevent it by defeating this bill, and it should be done without unnecessary delay. The sooner the better, and remove this menace which hangs over all of our industrial life and threatens the comfort and independence of millions of American workingmen.

WOOL INTERESTS ASSAILED BY THE BILL.

The bill strikes down the duty upon wool, and under its provisions the duty on wool valued at over 24 cents, is to be 9 cents per pound.

The duties under the present law are, on wool valued at 30 cents or less, 10 cents per pound, and over 30 cents, 12 cents per pound. This enormous reduction is proposed in the presence of a universal sentiment among the farmers of the United States for an increase of duties upon foreign wools, and in the face of Democratic assurances in at least one State of the Union that the duties should be increased. Great solicitude is displayed by our opponents for the farmers of the country. And yet in the only case where they can be directly benefited by a protective duty it is proposed to wipe it out. They are rich in professions to this great producing class, but barren of fulfillment.

ALL INDUSTRIES INJURIOUSLY AFFECTED BY PROPOSED LEGISLATION.

Every one of the leading industries of this country will be injuriously affected by this proposed change, and no man can predict the extent of it. Cottons and woolens, the producers of wool, iron, steel, and glass must suffer disastrously if this bill is enacted into law, and the proprietors of these establishments are neither robbers nor highwaymen, as the free-traders love to characterize them. They have been real benefactors, and while some of them have grown opulent, in the main they do not represent the rich classes of the country. Their entire capital is in active employment. Many of them are large borrowers. Your proposed action will affect the values of their plant, useless except for the purposes employed, will diminish the value of their invested capital, will decrease their sales and the ability of their customers to buy, and in many cases result in total overthrow and bankruptcy. You can do this if you will. You have the power in this House to accomplish this great wrong, but let me beg of you to pause before you commence the work of destroying a great economic system under which the country has grown and prospered far in advance of every other nation of the world. A system established by the founders of the Government, recognized by the first Congress which ever sat in deliberative council in this nation, sanctioned in the second act ever passed by Congress, upheld by our greatest statesmen, living or dead, vindicated by great results and justified by all of our experience, achieving industrial triumphs without a parallel in the world's history. Its maintenance is yet essential to our progress and prosperity. The step proposed is a grave one. No man on this floor can determine its consequences or predict its results.

A LEAP IN THE DARK.

It is a leap in the dark. No interest is pressing it. No national necessity demands it. No true American wants it. If it is a party neces-

sity to enforce Democratic doctrines and discipline a little segment of the party, you can afford to wait, or clear your decks of mutineers in some other way; let the ship be saved and punish your insubordinate associates without endangering great interests temporarily confided to your care. The interests of this great people are higher and greater than the ambitions or interests of any party. The free-traders have already demonstrated that they are in control of the Democratic party, that they are a large majority of that political organization; but they are happily in the minority in the country. They may dictate the policy here by party caucus, they may disturb the business of the country while yet in power, but they will not, under the policy they are now pursuing, be long permitted to dominate the popular branch of Congress, happily the only branch of the Government which they now control. [Great and continued applause.]

Bureau of Labor Statistics.

SPEECH

OF

HON. THOMAS J. WOOD,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 19, 1884,

On the bill (H. R. 1340) to establish and maintain a bureau of labor statistics.

Mr. WOOD said:

Mr. CHAIRMAN: It is difficult to say what is the best thing to do for the laboring people of the country. The bill under consideration requires a special investigation of the subject of American labor and a report of the result to Congress. I favor the bill, because it may be the means of ascertaining the best way to confer substantial benefits upon a most deserving class of our people. I favor all the labor relief bills before Congress so far as I have examined them, though I confess I believe many of them will confer no immediate or lasting benefits.

The real question at issue is an important problem, now engaging the best economic thinkers. Where will the line be drawn between labor and capital, that will not invoke a conflict between them? Capital without labor would be devoid of results, and labor without capital would come down to distress. The tendency of past legislation has been very favorable to the former. In truth, about all its demands have been granted while the rights of labor have not been correspondingly recognized. Capital has been aggregated very largely in the highly protected industries. The evil of this is apparent. Labor is well distributed over the country. It can not aggregate itself like capital. It would be far better for labor and the country if capital was more evenly distributed and employed in stimulating diversified industry, giving laboring men much more employment. The tariff law, unequal in its protection, has had the effect to dwarf or crush diversified industry by withdrawing active capital for investment in the highly protected industries. These are conducted largely by labor-saving machinery.

I think a high protective tariff the worst foe we have to American labor. It gives high profits to large investments in certain kinds of industry, and every system is adopted or machine purchased that will do away with laboring men. If the tariff act was reformed, the highly protective duties cut down, profits would be lower but reasonable; then the great inducements for centralized capital would cease, and it would go all over the country to establish other but useful industries. One great and highly protected industry, such as iron or steel, woolen or cotton, having from $500,000 to two or three millions invested, with its labor-saving machinery, does not employ a tithe of the labor that would be employed if this aggregated capital was divided among a dozen different and necessary industries. This would curtail the manufacture of iron and steel, woolen and cotton goods; but then the mills would not stop at all on account of overproduction, the markets would become more stable, and labor in them would be more evenly employed, while the other useful industries would become prosperous and useful to the country and hire much labor seeking employment. Capital rarely engages in any single industry to such an extent as to cause the volume of its products to exceed supply and demand, unless it is stimulated by ulterior forces, like the protective tariff. One great trouble about labor now is that there is not a sufficient market for its products, and one able to consume them.

The great interest, indeed the greatest interest that laboring men can have, is in a large and consuming market for the products of their labor. The home market is necessarily limited, and this would naturally cause them to seek the foreign markets. If all the products of American labor could find ready and willing markets we could only imagine the extent of our industrial prosperity. But the foreign market is made nearly impossible by the protective tariff. Protection benefits the manufacturer, but not the laboring man. Labor and labor wages is in the market like anything else. Supply and demand govern its prices. Competition fixes wages. If the aggregated millions drawn into the few highly protected industries were divided among diversified industries there would not be such competition in labor, and its scarcity would give better wages. Every laboring man ought to see the evil of a protective tariff, as bearing directly against his welfare. Again, it collects from him and other people indirectly and deposits over a hundred millions in the national Treasury from year to year. This volume of capital withdrawn from the business of the country lessens its extent and activity, and bears directly upon the question of labor. I would benefit labor by reforming the tariff, reduce tariff taxes, and cut off this unnecessary and idle surplus; leave it back among the people, to be used by them in all their business affairs necessarily conducted by labor.

I am not pleased at the manner the managers of the highly protected industries treat the labor of the country, and yet I see no remedy but to prevent so much concentrated capital, and a rigid reform of the tariff law will do this and bring no evil. It will only reduce manufacturing capacity in certain industries, and that will be a benefit and not an injury, and the whole country, with its unemployed labor, will receive new life and energy by the capital seeking different industries. These managers come before the committees of Congress and tell roseate stories about the wages of their laboring men, and it is fair to say hardly a word of it is believed, for it is so utterly inconsistent with the distress of labor nearly everywhere, as is known by resolutions and appeals made to Congress for its more adequate protection. These very managers employ nearly 64 per cent. of foreign labor, and yet talk so blandly about protection to American labor. The great industries, with shameful profits, pay the lowest kind of wages. They do not consider how much a laboring man can live for and educate himself and family, but ask, How cheap can his labor be had? They get labor at the cheapest rate, while their profits are abnormally high; and if they can not get home labor cheap enough to suit them, they make labor contracts in foreign countries and import it. I am down on this business. Their hypocrisy is amazing when they urge protection for American labor. This burning wrong has no parallel in industrial history outside of the United States.

I would benefit labor by reforming the present unjust and unequal tariff. I would benefit labor by prohibiting the indigent-labor contract system. I would compel prison contractors to pay the State authorities the full value of prison labor, as that would limit the present system and make prison labor not more advantageous to capital than the useful labor of the country. I would preserve the public lands for homesteads for laboring people more than for any other class, for the reason that they may have a home and a good source for a living during times of superabundant labor through the country. I would benefit labor by enlarging the markets for the products of labor. I would go into the markets of the world with them.

The products of our lands, of our exhaustless mines, can give employment to unlimited labor for centuries to come provided the products of labor can find a free and willing market. The great problem is extended markets. The protective system limits the markets to our own people. This policy says to all Europe and the South American States that America will not trade with you. They in turn say they will not trade with America. We can not expect large foreign markets for our agricultural and manufactured products when we place an embargo, through a protective tariff, upon the trade of other countries. Other countries would trade with America, but the American protective policy makes their trade with America expensive to them.

Sir, this policy means that all the world shall keep away from our shores. It means that merchant vessels loaded with the rich cargoes of other climes shall lower sail and turn back. It means less production in the great Mississippi Valley. The owners of millions of grain raised in the grandest valley of the world must cease all transportation to the seaboard over the waters of the great river that rolls majestically down to the sea. The products of labor must halt at the ocean's wave. No one needs to be told that if the products of American labor can not be sold that labor must go unemployed. The great interest of labor is the open markets of the world. If this sends the money and products of other countries home, it also sends all our products out, and this keeps labor in active and well-paid employment.

The protectionists say that the workmen of other countries are poor and do not live as well as our own. I think that is true; but what is the cause of it? Protection has no more to do with it than the cyclone has to do with the moon. England, France, and Germany have people and resources near enough like our own for comparisons. In those countries the population is very dense, there being two hundred and twenty-seven to the square mile, while in this country there are only fourteen to the square mile. Make due allowance for uninhabitable regions and sixteen to two hundred and twenty-five would be a fair estimate. Now, who wants to be told that fourteen persons can live better than two hundred and twenty-five can on a square mile of land? Of course there are more poor people in those countries and more poverty and distress there, because their population is fifteen times more dense than ours is. You increase our population fifteen times, make it 750,000,000 of people instead of 50,000,000, and I warrant just as much poverty and distress in America as in England or other countries.

The skilled labor of England employed in mills and factories gets as good pay as our own, and there is no inducement on the score of wages for it to come here. But what does protection offer to laboring men outside of the manufacturing industries? Can it speak for the great mass of labor all over the country? Certainly not. The protective system unfairly and unjustly taxes labor for the profit of the manufacturer. Why, the tariff taxes are double on cheap goods, such as poor people must buy to clothe themselves and families, what it is on fine grades of goods purchased by people of ample means. The reason for this higher tariff tax was this: There are about forty millions of our population, old and young, poor people and people of small estates. High duties on low-priced goods would bring enormous profits to the manufacturer. The lower the price of the goods the higher the duties is the character of the present law. Why, it benefits wealth more than labor every time. Again, it unequally taxes the poor. Why? Here is a poor man worth $800. There is a rich man worth $200,000. The tariff on woolen or mixed woolen goods is 65 per cent. The poor man buys $50 worth in a year and pays an extravagant tax of $32.50 on his purchase. The rich man pays the same tax also when he buys protected goods, but the most extravagant consumption of woolen goods by him will not make his indirect tax near as heavy as that paid by the poor man, according to property values. The rich man and the individual and corporate wealth of the country do not begin to bear the indirect taxation that laboring men bear with those people owning small estates. In proportion to his means the wealthy man pays nothing to what the poor man pays when he buys protected goods. Labor is more interested in a reform of the present unjust and unequal tariff law than anything else before the country.

I want to see the laboring man with power to claim American citizenship as his own without the fear of discharge. His labor is on the auction block, with competition for the auctioneer, and his labor is bid in at what capital will give for it. He can not fix the price for his daily toil. I want him to be more than a slave. I want him to be a man, feeling proud of the elective franchise, the last great right of the American citizen, to remedy evils in the policy of this Government.

Bureau of Labor Statistics.

SPEECH

OF

HON. THOMAS M. FERRELL,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 19, 1884,

On the bill (H. R. 1340) to establish and maintain a bureau of labor statistics.

Mr. FERRELL said:

Mr. CHAIRMAN: The Committee of the Whole having under consideration House bill No. 1340, I desire to give brief expression to my views in advocacy of its passage. The short time allotted for its discussion, however, will only permit me to glance at its more important provisions, and comment for a few moments upon the beneficial results which I am persuaded will flow from the bill, if it shall become a law, in affording much needed relief to the pressing wants of our toiling masses.

It provides for the creation of a bureau of labor statistics, and reads as follows:

A bill to establish and maintain a department of labor statistics.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there shall be established and maintained at the seat of Government a bureau of labor statistics, which shall be under the charge of a commissioner of labor statistics, who shall be appointed by the President, by and with the advice and consent of the Senate. The commissioner of labor statistics shall hold his office for four years, unless sooner removed, and shall receive a salary of $3,500 a year. The commissioner shall acquire all useful information upon the subject of labor, its relations to capital, and the means of promoting the material, social, intellectual, and religious prosperity of the laboring men and women; and to this end he shall inquire into the various industries of the United States; the capital invested therein; the division of labor and its results; machinery and its effects; the number of persons employed as laborers, with a classification thereof, male and female, married and unmarried, skilled or unskilled, convict labor, Chinese labor, and foreign imported contract labor, the number and ages of children, nature of their occupation, their attendance at school and church; the wages paid by the day, week, or month, or by the piece, to the different classes; the hours employed; the average earnings of the several classes; the manner of paying wages; the truck or store-order system, and the profits charged on goods by employers; the cost of living, comparing wages and price of necessaries of life in different localities; the sanitary, educational, social, and religious condition of laborers; the average duration of life; accidents incident to employment; insanity; epidemics; factory, mill, mine, and dwelling inspections; schools and churches, facilities for attending, and extent to which they are enjoyed; statistics of crime, &c.; co-operation, its extent and results in various localities and branches of trade; the division of their joint production between labor and capital, where practiced, the pro rata of each, and the general effect; trades unions and labor associations, the number, membership, and objects; strikes, their causes, effects, and remedies. And to enable the commissioner to obtain the information herein specified he shall have authority to issue circulars to various manufacturers and labor associations and persons, with interrogatories to be answered. The commissioner of labor statistics shall obtain all possible information upon the various subjects above specified from the different foreign nations, and shall have authority to issue circulars to United States consuls asking them to obtain the information desired. The commissioner of labor statistics shall appoint a chief clerk, who shall receive a salary of $2,000 per annum, and such other employés as the commissioner may deem necessary for the successful working of the department: *Provided*, That the total expense shall not exceed $25,000 per annum. During the necessary absence of the commissioner, or when the office shall become vacant, the chief clerk shall perform the duties of commissioner. The commissioner shall annually make a report in writing to the President and Congress of the information collected and collated by him, and containing such recommendations as he may deem calculated to promote the efficiency of the department.

Permit me to recapitulate briefly. It provides for a commissioner and associates, whose duty it shall be to inquire into the condition of every class of tradesmen and the employés of every grade and calling; as to wages received for labor and the character of the work performed; the system of trade, whether it be conducted upon the truck or store-order plan, or upon the basis of cash payments; the sanitary conditions under which workmen labor, together with the social and educational advantages afforded them and their families; the co-operative system as applied to the joint product of labor and capital, and its general effect upon laboring classes. These are but a few of the important features of the bill, which provides for the solution of many other problems involved in this great question, which, once formulated into tables of statistics will become a most valuable addition to the labor literature of the country and a great educator of the vast portion of our population who are now asking for this legislation.

But more especially will it be valuable to Congress, who, by the conclusions to be arrived at from such statistics, may shape legislation intelligently and healthfully for capital and labor alike and be able to correct the abuses which now exist, and which will be clearly and vividly shown by the investigation of these several subjects required under the provisions of the proposed act. I find a unanimous desire on the part of the labor associations of the country to have this inquiry made, and made with that thoroughness and efficiency which shall leave little to be done hereafter except to keep pace with and record the progress made, year by year, toward the higher forms of skilled labor, and a stronger development of the mental, moral, and social attributes essential to an honorable, useful, and noble life. Is the employer equally desirous with the workingman of obtaining the legislation proposed by this bill? As a rule I believe he is, for he, alike with the employé, is to receive large benefit from the results.

Moreover, I believe it to be the duty of employers of labor to demand and urge the passage of this humane measure and earnestly seek to make it operative. And what nobler duty, Mr. Chairman, could the employer enter upon, or what more satisfying in its results, than that of nourishing and urging the mental and moral growth of the men who have made for him his wealth and position through their dexterous skill and faithful service? Unfortunately, however, with few exceptions they have left their men to lead in the much-needed reform proposed by this bill, but it is to be hoped their influence and power will be given in support of the measure now that its beneficent provisions are fairly before the country and promise so much of good to all classes of our people. I want to see the day or era when, in our manufacturing districts, the employer shall apply himself as diligently to the improvement of the condition of his workmen in all respects as he does to the calculation of the amount of labor he may obtain from them or the per cent. of profit he can get from his contracts. Such action would go very far toward relieving the distress of our laboring classes in all parts of the country.

The Government of Italy, on February 14, 1877, and also on July 25, 1879, sent out circulars addressed by the minister of agriculture, industry, and commerce to the prefects of the kingdom relative to female and child labor; but the responses indicated an unwillingness upon the part of employers to see a law restricting this class of labor from going into effect.

The government then decided to submit the question to the different chambers of commerce in the following queries, propounded in a circular dated November 20, 1883:

First. Whether the employment of children should not be entirely prohibited until the age of 9 years had been reached?

Second. Whether the hours of labor should not be limited to half a day from the ages of 9 to 12 or 14 years?

Third. Whether from the last-mentioned age to that of 16 years it would not be beneficial to prohibit their employment on Sundays and during the night?

The opinions expressed by the several chambers of commerce in answer to the foregoing queries may be summarized as follows:

First. To prohibit entirely the employment of children at manual labor until they shall have arrived at the age of 10 years.

Second. To prohibit their employment on Sundays and during the hours of night until they shall have arrived at the age of 15 years.

Third. To organize committees in the provinces to see that these laws are enforced.

So likewise should the chambers of commerce in this country, the boards of trade, and large business and manufacturing interests of every

class join in offering our own Government every assistance within their power to improve the condition of the working classes of the country. And this greatly desired result can be reached in no more efficient manner than through the system proposed by this measure.

The purpose of this bill is not to expose pretended or imaginary evils, or to give wrong impressions concerning the manufacturing, laboring, or agricultural districts of the country, but rather to deal with the real condition of the workingman, and, making public his needs and wants, endeavor to apply a remedy for the evils and inculcate and perpetuate that kindly sentiment of mutual dependence which should ever exist between capital and labor.

We are at a loss as yet, for want of the necessary statistics which this measure will furnish when in operation, for the information needed in an intelligent discussion of the great economic questions now before this body; and there is not a member of the House who does not acknowledge the vital importance of such information as he listens to or participates in the daily debates upon the tariff and measures of kindred interest.

The Government in its classification of statistical information, covering such a vast field of investigation for commercial and trade uses, can not be expected to enter into the details of the daily home and working life of our people. Consequently the census reports have failed to provide us with the facts and figures so much to be desired.

Several of our States, unwilling to wait for the slow and uncertain action of the General Government, have taken hold of this great question with promptitude and intelligent liberality, and already Massachusetts, Ohio, New Jersey, Pennsylvania, Connecticut, and Wisconsin have established bureaus of statistics and labor industries, and through these very much valuable and interesting information has been obtained and utilized for the benefit and welfare of the working classes of these respective States, and to the advantage of the employers as well. My observation is that the few States which have done this have accomplished more good for the workingmen of the country, and have become better and more practical educators of the people, than all the others put together through their well-meaning but misdirected efforts. This is conclusively proved by the large and increasing demand which comes up from all parts of the country for the reports of these State bureaus, which it is impossible to supply; and this has led to another needed reform, harmony of action in the several States in the legislation enacted upon this subject.

The prosperity of a State is enhanced by the assurance that the people are blessed with liberal laws, competent lawmakers, and a government economically administered. If this be true—and the condition of the States I have named would seem to demonstrate the proposition—then it is proof positive that these bureaus are not only public benefactors, but that the expense attending their operation is more than met by the benefits conferred. And not the least of these is the destruction of many systems at once inhuman and degrading to the people. To demonstrate these assertions permit me to refer to my own State of New Jersey. After a long agitation over the subject of a State bureau, Mr. Charles Zimmerman, now the secretary of the bureau, drew and had introduced into the house of assembly the bill, which was passed largely through the influence of one of the present able United States Senators, Mr. SEWELL, then a member of the State senate, and under which the bureau now exists.

The first year's investigation, although incomplete and crude as it was, and investigations up to the present time, have developed a condition of affairs not known before that time to exist. Light was let in, discussion ensued in the public prints, and the Legislature was invoked to correct the evils which burdened labor and tainted capital. Convict labor was immediately restricted. The store-order or truck system was abolished and cash payments for labor and goods were substituted. Conspiracy laws were repealed and arbitration in labor difficulties was recommended. The growth of sorghum, of oysters, and the propagation of silk industries were largely promoted by special legislation. All property now bears equally the burden of taxation. Child labor is restricted to the ages of 12 and 14 years; and finally the abolition of convict labor in the State prison has been secured. Ohio and New York have joined us in this work of reform, the outcome of enlightened and liberal legislation in these States. Humane and ennobling in its results, it will soon become one of the questions with which each State represented here will have to deal.

Now, Mr. Chairman, if these be the effects upon single States under their own local governments, what will be the future for this great nation if by the passage of this bill the results should be of a corresponding character to the people of the whole country? The practical working of such a bureau as provided for in this measure means the laying open to public gaze of the wants and needs of a suffering people—the evils, moral and social, which depress their daily life and debar them from progress and culture, and suggests the remedies required, as varied in their nature as the disease is complicated.

If this equitable legislation asked for by millions of workingmen be granted them, this nation will be the first to solve the most intricate problem now agitating the governments of the earth. In the name, therefore, of these millions of America I appeal for the passage of this bill without a dissenting vote.

Pensions.

SPEECH

OF

HON. THOMAS J. WOOD,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 21, 1884,

On the bill (H. R. 6535) to regulate the granting of pensions in certain cases.

Mr. WOOD said:

Mr. SPEAKER: The bill before the House closes the gap in long-delayed justice to the brave men who did so well for their country over twenty years ago. There never was any reason in the pension law compelling the soldier, on application for pension, to prove his soundness when he enlisted in the Army of the Union; none, for he was duly examined by competent surgeons detailed for this duty, pronounced sound and fit for military service, and was mustered into the ranks.

There are very many cases where a truly good soldier who performed faithful and meritorious services is unable to make satisfactory proof that he was physically sound at the time of enlistment, and is therefore deprived of a pension justly due him. Witnesses are dead or removed to distant homes, and human memory after lapse of time becomes fatally deficient on the precise point in issue. This is natural, for nothing revives it in twenty years to carry it back to the facts and impressions of younger days. Then, who can swear to the physical soundness of friends and acquaintances over twenty years ago? If unsoundness is unknown at the time, what neighbor, friend, what relative can come forward and testify to the fact? Such testimony when obtained is frail indeed when dissected by the analytical principles of legal evidence. If the soldier served his country honorably and carries his honorable discharge from the Government, whether his service was long or short, then the Government is in no position to require proof of his physical soundness when he entered her military service. Soundness ought to be presumed to exist from date of enlistment.

I said this bill is an act of delayed justice. I have labored for it ever since I have been in this Congress, and I trust it will pass the House without opposition. I am too much of a friend of the gallant soldier not to speak for this bill. I appreciate his service for my country, and I see the grand results of his sacrifice in all parts of the Union to-day. The brave men he met on Southern battlefields, where nerves of steel were shaken, are proud to-day the old Union of the States was not dissolved; they are proud the old Government was maintained and are its earnest friends in peace, and are ready to become its valiant friends in war. I am proud also to witness this devotion to a common country and this fraternal feeling toward the soldiers of the Union, for I accept it as a reconciliation of the unhappy elements of discord that threatened the old structure in the days of my boyhood. All patriotic people rejoice that the wounds of that desolating strife are healed, and the man who would now break them open is a bloodless traitor to the flag and an arch enemy to the public peace, a wrecker of national prosperity in all the sections of the Union.

The policy of the pension laws has been to raise nearly a conclusive presumption that the soldier discharged without wounds is a sound and able-bodied man. There may be a few, but how many? I turn to the history of the war and see four years of the most terrible campaigns of all the ugly work of men. I read the rapid forced marches in heat and cold, over mountains and through the swamps. I read of the bloody days, of merciless battles fought that chilled the souls of men far away from the ensanguined field. Tell me that the very life-centers of the brave men who acted so well were not shocked at the awful forces sweeping life and limb away with less mercy than the demons of woful ruin! I see the faithful guardians of the country on the alert day and night through the inclement seasons, wading mud and fording rivers, obeying every command. The map of the war shows me the thousands of miles tramped from State to State, from town to city, all over the South. For four years the soldier had hardly an hour of the peace and joy of home. That was found wherever he slept under a peaceful sky, though the earth, his bed, was crimson with the blood of relatives, friends, and comrades. On Southern homes he joined the clash of arms, met the raining lead, walked among bursting shells, and faced the scattering fragments of death like the true hero that he was.

He passes through this terrible ordeal, fights all the battles through, and peace is restored; he is mustered out of the service and receives the plaudits of grateful countrymen. He finds himself not the same man he was when he gave himself to his country, and he asks for a pension. The special examiner sees no bullet-holes and his worthy claim is rejected. He pleads his infirmities that begun somewhere back in those four years of unequaled service to the country, and he is coolly told he must prove that he was able-bodied after the Government duly accepted him. The fairness and justice of all perdition is more admirable than

this. I believe of necessity that there can not be many sound, able-bodied soldiers, and every rule of evidence should make easy the proof of infirmities rather than reject them altogether, for the reason a most worthy case may be rejected. Then it is an exceptional hardship upon the widows and orphans. Removal, death, want of personal knowledge, and treacherous memory make the application for a pension by the widow or minor children difficult to sustain.

Food and Drug Adulteration.

SPEECH

OF

HON. WHARTON J. GREEN,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 21, 1884.

The House having under consideration the motion of Mr. BEACH to suspend the rules and adopt the resolution submitted by the Select Committee on the Public Health regarding the adulteration of food and drugs—

Mr. GREEN said:

Mr. SPEAKER: It is a political axiom that the obligations of government and governed are correlative or reciprocal, protection being the duty of the first; support of the last. Protection is the end and aim of all government, be it patriarchal, monarchical, aristocratic, or democratic; be it absolute or constitutional. For that end primarily is all government devised. Against foreign foe and domestic force, against invasion from without and mob violence within, against open assault and covert design; to that extent at least will all concede that the government is bound to the governed. In return therefor the protected class, the mass, the people, yield obedience and support; in war their personal prowess to resist aggression, in peace and war the requisite percentage of their goods and chattels or yearly accretions, in one way or another, to maintain the organism so established. Admit the predicate, and none dare gainsay it, and the question naturally arises, where do the protective functions of government cease? Are these exhausted when armed invading columns are beaten back, or mobs dispersed, or murderers, ravishers, burglars, house-burners, and the like caught and punished? These undoubtedly are the most palpable and glaring duties of the agent or factor known as the government. The right of demand, however, ceases not here. Immunity from the depredations of law-breakers of every sort and designation is at least their implied right by terms of "original compact."

I purpose to push the claim advanced to its legitimate conclusion and to arraign the counterfeiters and adulterators of meat, drink, and medicine as one of the most criminal of the criminal classes, and hence meet and fitting one for the eye of the law and the heavy hand of the law. If the proposition is, as I maintain, self-evident, then I repeat the people have the right to demand protection against their nefarious practices, covert, cowardly, and false, no less than from predatory bands on land or sea, against bandit or pirate.

Does not well authenticated suspicion, almost tantamount to proof, if circumstantial evidence is ever proof, justify the sweeping allegation which will follow? If not, and I fail to make it so appear, then set me down as slanderer and the objects of my anathema as spotless lambs most unjustly and unrighteously arraigned.

Now for the premise of what I propose to prove under penalty to the extent of which it is here susceptible of proof. If concurrent testimony and widespread accusation through the public prints be not the offspring of pure diabolism; if chemical analysis be not a snare; and if dire effects traceable to sinister causes be not a delusion, I charge and maintain that the whole field of dietetics and medicinals, of articles that we daily eat and drink and take as doctor's stuff, teems with adulteration, noxious or innoxious as the case may be, but hurtful as a rule.

Mr. Speaker, if this be so, it surely appertains to us to inquire into the evil and remedy to devise. If, in spite of universal attaint, it be not so, it is due to the manufacturer, compounder, and consumer alike that the negative be authoritatively established.

The unfortunate whelp that has the cry of "mad dog" raised at his heels might as well be dead; and he who is bitten by such a one had better be, even though the poor cur be innocent of the charge. Abstract justice would enjoin that hydrophobia be established or disproved for the mutual benefit of dog and man alike. A like regard for justice would enjoin that his brother cur of our conformation and purveyor of our diet, who is pointed at as poisoner, should have like opportunity to establish innocence. It is your right, Mr. Speaker, and mine, as his alleged victims, that he be required to do it.

Yes, sir; metaphor aside, if cause there be for this wholesale arraignment, and cause for one I think there be, it is your right and mine, and that of every man who voted for and against us, to have the thing inquired into. If the charge be established against manufacturer or compounder of killing off innocent people by thousands and tens of thousands by slow process and homeopathic doses, wherein has he the advantage over his brother scoundrel, who prefers active agencies and larger measure to remove some hated rival or ambitious foe, as did the Borgias and others of the vile accursed class, through the medium of belladonna, of arsenic, or of ratsbane?

For one, I hold the last less culpable. They killed by units, these by thousands. Better, a thousand times better, the allopathic dose administered by a Madame Brinvilliers, to the graduated modicums of the abominable drugs which enter into our daily food, and protract the life in misery of the victims by thousands, as said, through one or two or twenty years, as may be.

We will probably be met at the threshold of investigation by the hackneyed cry of "sumptuary laws." Sir, no one holds in utter detestation laws of the class named more than I. But why, I demand, should those against slow insidious poisoning be so classed more than the others, aimed against the deadly drugs when given for sinister and specific object?

Yes, sir; I go further and maintain that it is within our province to prevent the admixture of spurious, base, or bad ingredients in our daily food, and have it palmed off upon an unsuspecting world as a better article even if harmless in effect. If it is our right, then when poison enters it follows, as the night the day, it is our duty. Sir, the vile practice of adulteration engendered by sordid greed of gain is, I repeat, now so universal and widespread that it is the merest chance, be your grocer who he may, that you can obtain any genuine edible article, if diabolic science will permit it to be counterfeited to advantage. Sugar, flour, sirups, baking-powders, pepper, spices, brandy, whisky, vinegar, wines, teas, pickles, preserves, ground coffee, canned goods, mustard, lard, butter, table oil, curry, and a host of other articles of every-day life too numerous to mention, all fall to a considerable extent under my sweeping accusation and desired interdict. We buy them, knowing that they are probably spurious.

But what alternative have we except to restrict ourselves to old-fashioned hog and hominy of our own raising, or imitate that would-be-heroic idiot, Dr. Tanner. Surely, Mr. Speaker, there must be some adequate remedy for this crying evil, this monstrous crime. That remedy, I repeat it, is ours to devise. If we are encountered by constitutional objection, then give us an amendment to that India-rubber document that will compass the aim designed. The Constitution of the land ought to be able to protect the physical constitutions of its citizens against the machinations of demons disguised as men. State enactments are utterly inadequate to suppress the evil. We have laws, and stringent ones they are, imposing suitable and adequate penalties upon counterfeiters of the coin and currency of the country. Are there any against counterfeiting articles of diet, drink, and medicine? If so, sir, the brazen effrontery with which they are disregarded proves their total inadequacy. In Heaven's name, why are not the two at least of parity?

Can any hold that the last is crime of minor grade? Who will say that he who stamps and passes off little bits of baser metal than the standard bullion to put into your pockets is guilty of greater wrong than he who prepares and sells you base and counterfeit compounds, not to say deadly, to put into your stomach? Possibly the reason for imposing penalties in the one case and neglect to do so in the other is that our ancestors could not realize that human cupidity could prompt such depravity as trifling with the health, well-being, and very existence of myriads of their fellow-men; just as the Romans had no special punishment for parricide; just as our old English progenitors had no special penalty for that most cowardly and repulsive of all known crimes, the taking of life by deadly drugs, until in a very late reign (one of the last Henrys, I believe) the crime was proven and special penalty thenceforth imposed to "fit that vile Italian crime which hath lately entered into these realms." The culprit was to be boiled to death in oil. Meet punishment that, and fitting for all the vile, accursed class, whether the agency employed be the famous, or, rather, infamous, "Aqua Tofana," or "Elixir of St. Nicholas," which could be gauged to do its hellish work in a day, a week, a month, or a year, or the slower poisons of our day, which enter into our daily food and permits its millions of victims to live out nearly their allotted span, but with impaired constitutions, both mental and physical, for years before their end.

Mr. Speaker, were the adulterated substance sold entirely harmless but of inferior merit or virtue to that which it purports to be, it would still be a fraud, and should as such be punished. But when baleful and deadly ingredients enter into the composition, capital felony should be its status in the list of crimes, and the oil cauldron the bath in which the vile miscreant, be he manufacturer, manipulator, or expert, should be required to lave his sordid soul.

If any one within the compass of my voice doubts the extent and enormity of the evil complained of let him go to any first-class grocery in this town, Baltimore, Philadelphia, New York, or Boston, and attempt to make out a bill of goods with the guarantee of purity attached. Though he stand with golden ducats or silver dollars in his hand to settle upon compliance, I prophesy that the bill will not be filled without abatement of proviso. If these middle-men, or rather first purchasers, honest as a class as I concede them to be, and as a class bitterly opposed to the necessity which exists of selling the counter-

feit commodities, will not sign the "bill of health" required, is it not *prima facie* evidence that their cargo is taint and not entitled to *pratique;* in other words, that it is an unwholesome and sickly lot?

Mr. Speaker, I had occasion some two years ago to lay in a supply of commissary stores for those in my employ, and told my grocer in a neighboring city I desired a pure article of sirup. His reply was, "You can not get it here, nor do I believe you can in or out of the city;" and so with numbers of other articles. When the item of sugar on my list was reached he was equally honest and candid. "We can sell you a pure article of sugar," quoth he, "provided you take the granulated. Nothing else will we guarantee." "And why the granulated?" The reply was pert and to the point: "Because refiners and doctorers have not yet been able to counterfeit it to paying profit."

This, Mr. Speaker, is a sample of the colloquy on that occasion. Did the vendor fall in my esteem or would he have done so in yours on account of the admissions made? No, sir; his candor stamped him an honest man; but it placed the brand of knave, swindler, and scoundrel on him from whom he purchased, assuming that he bought at the fountain-head or of him who made, compounded, or prepared the noxious stuffs. Probably every gentleman on this floor knows what steatite or soapstone is. If not, I will state that it is a soft, calcareous, easily cut rock, but probably surpassing any other in weight and density. Presumptively therefore not the most digestible article of diet known.

True, as we are told, it is eaten by the natives of the Senegal, the Oronoco, and New Caledonia. But, I opine, sir, that it is under the spur of dire necessity and not from choice, and that these poor creatures, but one degree above the ape or the Digger Indian, would much prefer that his muffins, biscuits, or doughnuts had for basis rye, wheat, corn, or buckwheat, or even the favorite cereal of "Old Caledonia," which, according to old Sam. Johnson, "is eaten in England by horses and in Scotland by men." Now, sir, what would be your inference, if told by the proprietor of one of these saponaceous quarries, as I have been, that he finds a ready sale for all the "soapstone flour" that he can grind? And who are your customers? Chiefly commercial millers and sugar refiners. Mine, sir, was that the information tallied with what I had previously seen in print, that the vile stuff enters largely into our tea, coffee, toddy, sweetmeats, and daily bread. Sir, it behooves those who hear to ponder well. Steatite may be an excellent lining for stoves. I doubt its coequal fitness for stomachs. "Hot biscuit for breakfast," "light bread for supper," were wont to gladden my heart in younger days, for in the house of an honored uncle who raised me "corn bread" as a rule was the staple staff of life. Think you that biscuit for breakfast or light bread for supper (Heaven save the mark, how could it have been made light?) would have been as palatable as ash-cake or johnny if one of the descendants of old Job's comforters had kindly volunteered the information that they were to be made out of nice white soapstone flour instead of the glorious golden grain grown on the broad acres around me?

Will men, grown-up men, lawmakers, be less alive to their corporeal well-being and that of those who made them such and confidingly intrusted their well-being into their hands? In licensing this monstrous wrong, as we permissively do, wherein have we the advantage of the toad as regards the reasoning faculty? I have been told that that creature, æsthetically, intellectually, and as a mold of form one of the very lowest of the low order of batrachia, will eat his fill of leaden shot, when thrown to him one by one, until by excess of artificial weight he is utterly unable to move. "Miserable creature!" was my involuntary exclamation, "how does he manage to digest them?" "Oh," replied my juvenile informant, "he doesn't disgust 'em at all. We takes him by the left hind leg and holds him up, and all of the shot runs out of his mouth." Blessed batrachian, that can eat even lead with impunity, and disgorge the overweight through the co-operative agency of a hoodlum, a scientist, or other experimentalist. Miserable, besotted bipeds, who will persist in breaking bread, and eating it, too, knowing full well that it is of the leaden sort, and that they have no kind, considerate hoodlum to relieve them by the left-hind-leg process.

In the late war, Mr. Speaker, the men who wore the soapstone-color coat did bake and break and eat the bread whereof I speak, a simple admixture of flour and water, and ofttimes not half cooked at that. But, thanks to short rations, long marches, hard work, and easy conscience, they managed to worry it through, and would have done it in my opinion though 50 per cent. of their scant handful of flour had been soapstone, sawdust, or brick-dust either.

But, sir, this should not embolden us to hope for like immunity. The digestive organism of the ostrich, the alligator, the confederate soldier, and the anaconda is an exclusive prerogative, a close monopoly, and does not appertain to all the sons of Adam alike. Give us, then, a little more starch and less steatite, more gluten and less glucose or crude glass.

Our New England friends, Mr. Speaker, have the word "sharp," somewhat analogous to our Southern one of "smart," to qualify the possessor of "ways that are dark" and means that are doubtful, which, though not exactly beyond the pale of the law, are nevertheless beyond that attaching to the standard of a well-recognized morality. He who sells you sanded sugar, glucose sirup for the genuine article, soapstone or plaster-of-paris flour, cocoanut-shell black pepper, or red-lead cayenne is doubtless "sharp," "cute," "smart," and is bound to turn his penny (honest or otherwise is immaterial to him); but, sir, he is none the less a cold-blooded, calculating knave and scoundrel, and should be made amenable to the law. "Tell me not of the patriotism of such," exclaimed the impassioned Burke, in speaking of a far more honorable class; "his desk is his altar, his ledger is his Bible, and his gold is his god."

Mr. Speaker, under the operation of our delectable revenue laws, as at present enforced, there are grievous penalties attaching to illicit distillation, as many of the poor mountaineers in my poor State know full well to their cost. Now, sir, I opine that if the restrictions on distillation, including tax on the legitimate article and pains and penalties on the illicit or "moonshine," were removed altogether, and these makers of a pure article of whisky and brandy left as free as their fathers were in that regard, and the same punishments doubled or quadrupled meted out to the compounders of the poisonous stuffs engendered by the tricks of chemistry, the cause of morality and the sanitary cause, not to say the cause of liberty and sobriety, would be materially subserved thereby.

Let me give you an instance in proof. When a younger man than I am to-day by many years I passed some weeks in Bonnie Scotland. I had heard before getting there that the breechless sons of the Lothians were not averse to a wee drop of "rock and rye," and not overparticular if the rock was left out, and faith, Mr. Speaker, observations convinced me that they had not been slandered. Why, sir, one-half of the average potations, judging from what I saw, and assuming that it was a national average, would in this country, in a single year, more than double the victims of drink mania and cram to repletion our inebriate asylums. And yet no such dire effect was visible there; mania a potu, like spinal meningitis, was literally unknown.

Expressing my surprise to a friend in Edinburgh at the marked difference in capacity of absorption between the denizens of the two countries, I asked the cause. Sir, I was not and am not satisfied with the explanation he vouchsafed. It was, as recollected, that the volume of pyroligneous acid evolved from peat smoke had a purifying effect upon the liquid distilled. That may be science, but it is not sense. My explanation is simply pure whisky. The Highlandmen of Scotland in that day, like the highlandmen of North Carolina in ours, were not up to the tricks and devices of devilish science. They made an honest article of whisky, drank it, and lived out their allotted span a brave, hardy, simple race on their bleak free mountain-sides.

Like cause would produce like effect in our own midst. Now, Mr. Speaker, coming back to our mutton, compel the nefarious manufacturer or compounder to drink his own vile decoctions with a slight additional infusion of fusel-oil, to be administered by the public executioner, and bury his accursed secret with him, and, mark the prediction, delirium tremens and other resulting effects, such as wife-beating and kindred brutality, misery, and murder, will very materially diminish as the quality improves.

What is true of distilled spirits is none the less so of beer and other malt-liquors, wines, and cordials; for as enormous as the profits are in both cases, they are not sufficient to satisfy these rapacious ghouls. The beer-maker is as little content with those resulting from accredited hops as the basis as is the whisky or brandy maker with his from honest rye, corn, wheat, or fruits. It is said that the highest encomium that an Irishman can pay his poteen when, with the characteristic hospitality of his race, he sets it before his guest, is the trite remark: "The divil a penny of rivenue has it paid the queen."

But he who clinks canakins with honest Pat has the satisfaction of feeling that while her majesty's money-bags may thereby weigh less than they ought, nevertheless the devil a drop of vile chemicals or doctor's stuff has entered into its composition. So, believing, Mr. Speaker, if I were snake-bitten in blessed St. Patrick's land I would vastly prefer the only recognized antidote on such occasions (and efficacious I know it to be by personal experience in a Robeson County swamp) to be of the unpaid-tax quality to the so-called honest tax-paid stuff stretched out by the infusion of strychnine and other deadly drugs. Let casuists determine which is the most meretricious, the man who makes the first or the government which permits the last to be made.

It is safe to assume, Mr. Speaker, that were the question put to the leading medical men of the country a large majority of them would decide that the alarming increase of late years in nervous, cerebral, and kidney diseases is directly traceable to the cause assigned, namely, adulterated drinks of all kinds, including vinous, malt, and distilled. Is not insanity fearfully on the increase, as evidenced by the overcrowded bedlams of the land and the mania for self-destruction? Then seek for reason why, and find it, too, no less in poisoned beverage than in the growing passion for wild speculation.

In view of the statements made and facts alleged, all of which are susceptible of proof, I ask, and ask with due deliberation, might not the philanthropist better subserve the cause of humanity by directing the batteries of his denunciation from alcoholic drinks *per se* to the adulteration of them; by advocating purity instead of prohibition?

I have thus, Mr. Speaker, briefly adverted to abuses falling under the general head of meat and drink adulteration. The witnesses upon whom it is relied to sustain allegation will appear in appendix.

But, sir, the field is too extensive, proofs too voluminous, if proof be

needed where criminality stands confessed, to permit my going into further detail under this head of my subject. But I were derelict to my subject, my constituents, and myself did I close without some allusion to like vicious practice in the make-up of medicine; for, sir, human depravity, with utter disregard of human life, has even dared invade the sacred precincts of the pharmacopœia, to lift the tops of the mystic jars on shelves arranged, and to infuse base substance in their portentous contents, where oft the difference of a feather's weight may involve the mortal life of immortal men. Medical skill is impotent to act and powerless to grapple with fell disease in critical juncture, because by base admixture with medicinals it is at loss to know what measure to prescribe to compass end desired.

I broadly, boldly make the charge and challenge the refutal of investigation. A distinguished physician told me some years since, in a neighboring city, that probably more deaths resulted directly and indirectly from that source than would from disease if left to itself; and that he made it an inflexible rule never to prescribe medicines unless he was well acquainted with the commercial and moral character of the druggist who was to supply them. If such is the state of the case in a great city, what chance is there of obtaining pure drugs in village shops and country stores?

Mr. Speaker, this branch of my subject is certainly one demanding most instant and efficacious remedy at our hands. Of all men in the world the chemist and wholesale druggist has least occasion and excuse for tampering with his wares. His profits are enormous when confined to legitimate channels.

I do not propose, Mr. Speaker, to take down and look into each separate jar on the shelves of the Constitution amender; am not sufficiently deep in science for that; but I do intend to look into one—and judge the rest by inference.

I see before me "sulphate of quinia." That means in our vernacular "quinine," qui-nine, or quin-in, as folks prefer to call it. "Jesuit's bark" is the staple from which it is compounded, and the introduction of which to the European world entitles the Society of Loyola to the everlasting gratitude of a sinful and suffering world. It is to-day, in the world's conception, almost as indispensable an article to man's welfare as bread or meat or drink. I have heard that out on the raging Wabash or in the Arkansas bottom, where the musical musquito delighteth to hum and to make his home, where the ague shaketh the sons of men, they would willingly swap, pound for ounce, blood for Jesuit's bark in its etherealized state, known as quinine.

Now, sir, a short time back a Democratic House of Representatives, recognizing the indispensable necessity of this light but costly white powder, erased it from the list of the thousand or two other protected articles and put it on the free-list, and the whole country arose and called that Congress blessed. Quinine fell from five or six dollars an ounce to $1.50 nominally. But, sir, I opine the reduction in price is more fictitious than real. The quinine of to-day is not as a rule the quinine of former times. Then it was bitter—deucedly bitter—and there was no horrid apprehension of morphia or other deadly drug left in the mind as afterclap. To-day it is far different, for although not exactly a confection or sweetmeat, it has nevertheless so far laid aside its acerbity as to suggest the thought, *a la* Mrs. Toodles, what a convenient thing a stomach-pump is to have in the house when one is taking white powders.

Now, sir, I ask why the change in its taste, which is so perceptible as to be the subject of general remark? Is it that the bark of the cinchona tree is losing its natural properties, or is it that less expensive barks and other substances are worked in with it to increase bulk and weight, and thus make up for the falling off in price?

It would be an interesting investigation if the question were submitted to a special committee of medical experts. The cinchona is doubtless to-day what it was when Pizarro's followers first found it, and so is red oak or willow.

Almost every leading government in Europe has stringent laws against adulteration. Of these England has perhaps the most perfect and complete system, and yet it is only of yesterday's growth. Less than thirty years ago Dr. John Postgate, a country physician, seeing the abuses perpetrated by adulterators of every class, took the matter in hand and after years of persistent effort, beginning with only one supporter in Parliament, Mr. Scholefield, and with all the large manufacturers and dealers in Great Britain hounding and denouncing him, succeeded at last in having his ideas adopted as embodied in the adulteration acts of the last decade. As a public benefactor he will rank in the history of his country as the peer of Jenner, Stevenson, Arkwright, and Davy; for food adulteration is virtually wiped out so far as it affects English palates and constitutions. But what compounders are forbidden to sell at home they can readily market abroad. For is it not obvious that as long as they are debarred a home market by repressory edicts they will naturally export their base counterfeits to our own more tolerant shores? Eliminate the foreign supply of poisoned and poisonous foods, and forbid the sale of "home manufactured" stuffs of kindred class in the District of Columbia and wherever else the strong arm of the Federal Government will reach, and a most important step in the work of their eradication and extermination will have been accomplished.

Mr. Speaker, my remarks as originally prepared after a careful investigation of the subject contemplated a broader field of inquiry and ultimate repression than that embraced in the bill under consideration. They were intended to sustain my bill, or rather resolution, introduced early in the session, authorizing the Committee of Public Health to inquire into the truth or falsity of the alleged abuses in this regard, and to suggest what legislation should be had for their eradication—a simple inquiry into damning allegations, with an eye to a simple recommendation of remedy. It received, I believe, the unanimous approval of that honorable committee, and they and I were alike at loss when, during my absence at the death-bed of a loved and honored relative, it was killed by a majority of one on the floor of this House. My unavoidable absence on that occasion will be one of the regrets of my life.

In conclusion I now propose, Mr. Speaker, to introduce the witnesses and to adduce the proofs upon which it is intended to rely to sustain the sweeping allegations made. These will appear in the form of appendix in the RECORD. If they seem to any to take more space than is usually accorded in that diurnal history of our doings to any abstract question, let the importance of the subject and the ignorance and indifference which prevail regarding it stand me in justification and excuse. As bulky as it will appear, it is not a tithe of what might be adduced from these and other high authorities in support of the existence of the evils charged and the necessity for remedial relief. Let us hearken to their warning and give that relief to the fullest extent of our constitutional powers. As transcendently important as I believe it to be, I would not have this House go one step beyond to accomplish the end in view under "the general-welfare" clause.

APPENDIX.

I.

Some thirty years ago the London Lancet, the leading medical and surgical journal of the world, owing to the repeated exposures of Dr. Postgate, determined to employ at its own expense one of the best analytical chemists of the age to investigate the subject. For that purpose Dr. Hassall, a man of national reputation and fellow of a dozen learned societies, was selected. He devoted several years to the work and collated his researches in a large sized volume. His book constituted the basis of subsequent Parliamentary investigation, which gives it quasi-official character. From it will be found below copious extracts bearing upon a few of the most glaring abuses:

During the course of the last six years the author has examined minutely and scrupulously, microscopically and chemically, over 3,000 samples of the principal articles of consumption, as well as many drugs; and as the one great result of this somewhat extended experience he affirms that some short time back there were few articles of consumption the adulteration of which was practicable, and which, at the same time, could be rendered profitable, which were not extensively subjected to adulteration.

* * * * * * *

Dr. Normandy, one of the highest authorities of the age, concludes his evidence before the parliamentary committee with this remark:

"Adulteration is a widespread evil which has invaded every branch of commerce; everything which can be mixed or adulterated or debased in any way is debased."

* * * * * * *

The subjoined table contains not only the names of the substances used in adulteration possessing more or less injurious properties, but also the names of the articles in which they have been discovered. It will be perceived that the number of injurious substances thus employed is very great.

Injurious substances actually detected in adulterated articles of consumption.

SUBSTANCES.	ARTICLES.
Cocculus indicus	Beer, rum.
Arsenic of copper, emerald green, or Scheele's green.	Colored sugar confectionery.
Sulphate of copper, or blue vitriol, and acetate of copper, or verdigris.	Pickles, bottled fruits, and vegetables, preserves, dried and crystallized fruits.
Carbonate of copper, or verditer	Colored sugar confectionery and tea.
The three chromates of lead	Custard powders, sugar confectionery, tea, and snuff.
Red oxide of lead	Cayenne, curry-powder.
Red ferruginous earths, as Venetian red, bole Armenian, red and yellow ochers, umber, &c.	Red sauces, as shrimp, lobster, anchovy, and tomato sauces, and in potted meats and fish, cocoa, chicory, anchovies, annatto, cheese, tea, and snuff, &c.
Carbonate of lead	Sugar confectionery.
Plumbago, or black lead	In certain black and Li teas.
Bisulphuret of mercury, or cinnabar	Cayenne, sugar confectionery.
Sulphate of iron	Redried tea, and in beer.
Sulphate of copper	Bread, rarely; annatto.
Cayenne	Gin, rum, ginger, and mustard.
Gamboge	Sugar confectionery.
Chromates of potash	Tea and snuff.
The three false Brunswick greens, being mixtures of the chromates of lead and indigo, or Prussian blue.	Sugar confectionery.
Oxychlorides of copper, or true Brunswick greens.	Sugar confectionery.
Orpiment, or sulphuret of arsenicum	Sugar confectionery.
Ferrocyanide of iron, or Prussian blue	Sugar confectionery.
Antwerp blue, or Prussian blue, and chalk.	Sugar confectionery.
Indigo	Sugar confectionery.
Ultramarine	Sugar confectionery.
Artificial ultramarine	Sugar confectionery.
Hydrated sulphate of lime, mineral white, or plaster of Paris.	Flour, bread, sugar confectionery.
Alum	Bread and flour.
Sulphuric acid	Vinegar, gin.
Bronze powders, or alloys of copper, and zinc.	Sugar confectionery.

These disclosures, be it recollected, were made nearly thirty years ago, and when food-poisoning was but yet in its infancy. It was long anterior to the day when tallow and suet supplanted legitimate and normal butter by most abnormal and disgusting process, or glucose cane-sugar, or scores of other improvements had been made upon the recognized time-honored processes of our fathers. In this, as in other things, the world has moved since then.

II.

Dr. Hassall concludes his general introduction on the subject of food adulteration in the following pertinent and impressive words:

Legislation on the subject is required—

First. For the protection of the public health. The evidence given before the parliamentary committee on adulteration proves that the deadliest poisons are daily resorted to for purposes of adulteration, to the injury of the health and the destruction of the lives of thousands. There is scarcely a poisonous pigment known in these islands which are not thus employed.

Second. For the protection of the revenue. This will be readily acknowledged when it is known that nearly half the national revenue is derived from taxes on food and beverages. It has already been shown that not long since adulteration was rife, and it still exists to a large extent in nearly all articles of consumption, both solid and fluid, and including even those under the supervision of the excise.

Third. In the interests of the honest merchant and trader. The upright trader is placed in a most trying and unfair position in consequence of adulteration. He is exposed to the most ruinous and unscrupulous competition; too often he is undersold, and his business thus taken from him. It is therefore to the interest of the honest trader that effective legislation should take place, and not only is it to his interest but we can state that it is his most anxious desire that adulteration should be abolished. In advocating the suppression of adulteration we are therefore advocating the rights and interests of all honorable traders.

Fourth. For the sake of the consumer. That the consumer is extensively robbed through adulteration, sometimes of his health, but always of his money, is unquestionable. It is, however, the poor man, the laborer and the artisan, who is the most extensively defrauded; for occupied early and late with his daily labor, often in debt with those with whom he deals, he has no time or power to help himself in the matter, and if he had the time he still would require the requisite knowledge. The subject of adulteration, therefore, while it concerns all classes, is eminently a poor man's question; the extent to which he is cheated through adulteration is really enormous.

Fifth. On the ground of public morality. Adulteration involves deception, dishonesty, fraud, and robbery, and since adulteration is so prevalent, so equally must these vices prevail to the serious detriment of public morality and to the injury of the character of the whole nation for probity in the eyes of the world. We repeat, then, that some prompt, active, and efficient legislative interference is demanded for the sake of public morality and the character of this country among the nations of the world.

Hassall's adulteration of food.

From an examination of this table it appears:

1. That of the thirty-four coffees, thirty-one were adulterated.
2. That chicory was present in thirty-one of the samples.
3. Roasted corn in twelve.
4. Beans and potato flour, each in one sample.
5. That in sixteen cases the adulteration consisted of chicory only.
6. That in the remaining fifteen samples the adulteration consisted of chicory and either roasted corn, beans, or potatoes.
7. That in many instances the quantity of coffee present was very small; while in others it formed not more than one-fifth, fourth, third, half, and so on of the whole article.

We are satisfied that the gross aggregate of the adulterations detected did not amount to less than one-third of the entire bulk of the quantity purchased.

* * * * * * *

Speaking of the articles used in the adulteration of tea, the author says:

"The principal of these substances are Dutch pink, rose pink, logwood, turmeric, carbonate of lime, carbonate of magnesia, stealite, soapstone or silicate of magnesia, chromate of lead, the chromates of potash, ferrocyanide of iron, indigo, carbonate of copper, acetate of copper, arsenic of copper."

* * * * * * *

Thus it has been shown that exhausted tea-leaves are sometimes made up with gum, &c., and resold to the public as genuine black tea, and, when artificially colored and glazed, even as green tea.

That the substances employed in the coloring are in many cases very much more objectionable and injurious than those used by the Chinese, being sometimes highly poisonous.

* * * * * * *

Out of seventy-two samples of brown sugar, as procured at different shops, subjected to examination, fragments of sugar-cane were present in all but one. These were usually so small that they were visible only by the aid of the microscope.

Sporules and filaments of fungus were present in nearly all the sugars. The acari were present in sixty-nine of the samples, and in many in very considerable quantities.

Grape-sugar was detected in all the sugars.

Four of the sugars contained proportions of starch so considerable as to lead to the inference that they were adulterated.

Eleven other samples of brown sugar, as imported from the East and West Indies, furnished nearly similar results. Two only could be regarded as pure and fit for human consumption.

* * * * * * *

Concerning Bread.—We have already referred, to some extent, to the adulteration of bread with water. Bread naturally contains a large quantity of water, estimated at sixty-six parts in every one hundred and fifty of bread, sixteen of these only being natural to the flour, but it is frequently made to contain greater amounts. One principal means by which this is effected is by the addition of rice or rice flour to bread; this, swelling up, absorbs much more water than wheat flour. Potatoes used in any quantity probably have, to some extent, the same effect. In the introduction of rice, then, into bread there is a double evil; first, a substance is put into the bread which does not possess nearly so much nourishment as wheat flour; and, second, by its means a larger quantity of another substance is absorbed by the bread, and which has no nourishing properties whatever. While wheat flour seldom contains less and often much more than 12 per cent. of gluten, rice has only about 7 per cent. of that nutritious substance, and potatoes are equally deficient in gluten.

The public, then, in judging of the quality of bread by its color, by its whiteness, commits a most serious mistake; there is little or no connection between color and quality; in fact, very generally, the whitest breads are the most adulterated. The public, therefore, should lose no time in correcting its judgment on this point.

Again, the mistaken taste of the public for very white bread, which, be it known, can not be obtained even from the finest and best flour except by the use of alum or some other substance similar in its operation, tends to the serious injury of the bread in another way.

After proving that alum enters injuriously in almost all bought bread, he adds:

Further, alum is very apt to disorder the stomach and to occasion acidity and dyspepsia.

Vinegar.—The principal adulterations of vinegar are with water, sulphuric acid, and burnt sugar, and sometimes with acid substances, as chillies and grains of paradise, and also with pyroligneous or acetic acids.

The water is added to increase the bulk, sulphuric acid and acid substances to make it pungent, and burnt sugar to restore the color lost by dilution.

Vinegar is not unfrequently contaminated with arsenic, this being introduced through the sulphuric acid used in its adulteration.

A mixture of muriatic acid and soda has been used in bread, and I have seen muriatic acid containing a very fearful quantity of arsenic.

The following evidence in regard to the use of corrosive sublimate was given by Mr. Gray before the Parliamentary committee:

"Corrosive sublimate has been used for years and years in some houses, and not a cask has gone out without a certain proportion of corrosive sublimate."

"CHAIRMAN. Do you believe that corrosive sublimate was mixed with the vinegar in injurious proportions?"

"I do; it was done to give strength to the vinegar. When the D. W. and O. V. have been used the corrosive sublimate is put into it to give it a tartness again in the mouth."

CHAIRMAN. "Are these technical expressions in the trade—O. V. for oil of vitriol, and D. W. for distilled water?"

"Just so. Corrosive subtimate is called 'the doctor.'"

White or distilled vinegar, as it is called, is usually made with water and acetic acid, what is sold is rarely distilled at all.

* * * * * * *

That nineteen out of twenty of the vinegars submitted to analysis, poor as they were, yet owed a portion of their acidity to sulphuric acid the amount of which varied in the different samples from 38 to 252 in the 1,000 grains, the largest quantity of this acid being detected in the vinegars in which the red cabbages were pickled. That in the whole of the sixteen different pickles analyzed for copper that poisonous metal was discovered in various amounts.

On the adulterations of cayenne.—Of twenty-eight samples of cayenne submitted to microscopical and chemical examination no less than twenty-four were adulterated, and four only were genuine. Twenty-two contained mineral coloring matter.

In thirteen cases this consisted of red lead, which was present in very considerable quantities, while in the remaining seven samples it was some red ferruginous earth, Venetian red, or red ocher. Vermilion or sulphuret of mercury was present in one of these cayennes.

Six of the cayennes consisted of a mixture of ground rice, turmeric, and cayenne colored, with either red lead, vermilion red, or ocher.

Six of the cayennes contained large quantities of salt, sometimes alone, but mostly combined with rice and the red earths or red lead.

One of the samples was adulterated with a large quantity of the husk of white mustard-seed.

Lastly. Two were adulterated with rice, and were colored in addition, the one with red lead, and the other with a red ferruginous earth. The object of the use of red lead and other red coloring matters is twofold. First, to conceal other adulterations, and second, to preserve the color of the cayenne, as when exposed to the light for any time it usually loses part of the bright red color which it at first possesses, and therefore it becomes deteriorated in the eyes of the purchaser. The red lead, &c., added does not of course preserve the color of the cayenne, but simply supplies the place of that which it loses in consequence of exposure.

Salt is employed for the same purpose. This substance has a remarkable effect in bringing out the color of the cayenne. It is, however, also used to increase its weight.

The adulteration of cayenne with such substances as red lead and mercury is doubtless highly prejudicial to health. It has been stated that colic and paralysis have both been produced by the use of cayenne containing red lead.

The salts of lead and mercury are characterized by the circumstance that they are apt to accumulate in the system, and finally to produce symptoms of a very serious nature. Thus no matter how small the quantity of mercury or lead introduced each day, the system is sure in the end, although it be slowly and insidiously, to be brought under the influence of these poisons, and to become seriously affected. The quantity of red lead introduced into the system in adulterated cayenne is, however, by no means inconsiderable.

III.

[From Chambers's Encyclopedia.]

ADULTERATION.

The adulteration of food of almost every kind is unfortunately so common a custom that our limited space will merely allow of our noticing a few of the leading points in regard to it.

Wheat flour is not infrequently adulterated with one or more of the following substances: flour of beans, Indian corn, rye, or rice, potato starch, alum, chalk, carbonate of magnesia, bone-dust, plaster of Paris, sand, clay, &c. The organic matters—the inferior flours and starch—do little or no serious harm. Most of the inorganic matters are positively injurious, and of these, alum (one of the commonest adulterations) is the worst. The beneficial action of wheat flour on the system is in part due to the large quantity of soluble phosphates which it contains. When alum is added, these phosphates uniting with the alumina of the alum and forming an insoluble compound, the beneficial effect of the soluble phosphates is thus lost.

Coffee, in its powdered form, is not merely largely adulterated with chicory, but additionally with roasted grain, roots, acorns, sawdust, exhausted tan (termed croats), coffina (the seeds of a Turkish plant), burnt sugar, and (worst of all) baked horses' and bullocks' liver. In the Quarterly Journal of the Chemical Society for April, 1856, there is an excellent report by Messrs. Graham, Stenhouse, and Campbell on the mode of detecting vegetable substances mixed with coffee. Even whole roasted coffee is not safe from adulteration, a patent having been actually taken out to mold chicory into the form of coffee-berries.

Cocoa and chocolate are adulterated with flour, potato-starch, sugar, clarified mutton-suet, and various mineral substances, such as chalk, plaster of Paris, red earth, red ocher, and Venetian earth, the last three being used as coloring matter.

Vinegar is adulterated with water, sulphuric acid, and sometimes with chillies, grains of paradise, and pyroligneous acid. It appears from evidence taken before the parliamentary committee on adulterations that arsenic and corrosive sublimate are no uncommon ingredients in vinegar. In connection with vinegar we may place pickles. Dr. Hassall analyzed sixteen different pickles for copper, and discovered that poisonous metal more or less abundantly in all of them; "in three, in a very considerable quantity; in one, in highly deleterious amount; and in two, in poisonous amount."

Preserved fruits and vegetables, especially gooseberries, rhubarb, green gages, and olives, are often also contaminated largely with copper. In these cases the copper, if in considerable quantity, may be easily detected by placing a piece of polished iron or steel in the suspected liquid for twenty-four hours, to which we previously add a few drops of nitric acid. The copper will be de-

posited on the iron. Or ammonia may be added to the fluid in which the pickles or fruit were lying, when, if copper is present, a blue tint is developed. We should be suspicious of all pickles, olives, preserved gooseberries, &c., with a particularly bright-green tint.

Milk is usually believed to be liable to numerous adulterations, such as flour, chalk, mashed brains, &c. It appears, however, from Dr. Hassall's researches on London milk, that as a general rule water is the only adulteration. The results of the examinations of twenty-six samples were that twelve were genuine, and that fourteen were adulterated, the adulteration consisting principally in the addition of water, the percentages of which varied from 10 to 50 per cent., or one-half water. If space permitted we might extend the list of alimentary substances liable to adulteration to a much greater length.

Beer is adulterated in many ways. Burned sugar (caramel) is added to give color; cocculus indicus, to supply an intoxicating agent which will give an appearance of strength to the beer; quassia, to impart bitterness in place of hops; grains of paradise and cayenne pepper, to communicate pungency; coriander and caraway seeds, to yield flavor; liquorice, treacle, and honey, to supply color and consistence. To stale beer there is sometimes added green vitriol (sulphate of iron) or alum and common salt, which when agitated with the beer communicate a fine cauliflower head.

IV.

[Report of select parliamentary committee 1855–1856, upon inquiry into the adulteration of food, from the Westminster Review, volume 91, page 195.]

In the process of their investigations they examined some sixty witnesses, who gave answers to near eight thousand questions, all of them tending more or less distinctly and directly to prove that the practice of adulteration was very prevalent and most injurious in its effects upon the health, morality, and prosperity of the country. Upward of thirty of the witnesses were physicians, surgeons, analytical chemists, and druggists, and the remainder were gentlemen who occupied responsible positions in the fiscal and sanitary departments of government, of persons acquainted with the manufacture and sale of the larger proportion of such commodities as are in most general use.

* * * * * * * *

Though the witnesses differed both as to the extent to which adulteration is carried on and as to its nature and effects, your committee can not avoid the conclusion that adulteration widely prevails, though under circumstances of very various character. As regards foreign products, some arrive in this country in an adulterated condition, while others are adulterated by the English dealer. Other commodities again, the produce of this country, are shown to be in an adulterated state when passing into the hands of the dealer, while others undergo adulteration by the dealers themselves.

"Not only is the public health thus exposed to danger and pecuniary fraud committed on the whole community, but the public morality is tainted and the high commercial character of this country seriously lowered both at home and in the eyes of foreign countries. Though very many refuse under every temptation to falsify the quality of their wares, there are unfortunately large numbers, who, though reluctantly practicing deception, yield to the pernicious contagion of example or to the hard pressure of competition forced upon them by their less scrupulous neighbors."

And then they proceed to give the following summary:

"Without entering into voluminous details of the evidence taken, your committee would enumerate the many articles which have been proved to be more or less commonly adulterated. These are: Arrowroot, adulterated with potato and other starches; bread, with potatoes, plaster of Paris, alum, and sulphate of copper; bottled fruits and vegetables, with certain salts of copper; coffee, with chicory, roasted wheat, beans, and mangel-wurzel; chicory, with roasted wheat, carrots, sawdust, and Venetian red; cocoa, with arrowroot, potato flour, sugar, chicory, and some ferruginous red earth; cayenne, with ground rice, mustard, husk, &c.; alcohol, with red lead; lard, with potato-flour, mutton suet, carbonate of soda, and caustic lime; mustard, with wheat flour and turmeric; marmalade, with apples and turnips; porter and stout (though sent out in a pure state from the brewers), with water, sugar, treacle, salt, alum, cocculus indicus, grains of paradise, nux vomica, and sulphuric acid; pickles and preserves, with salts of copper; snuff, with various chromates, red lead, lime, and powdered glass; tobacco, with water, sugar, rhubarb, and treacle; vinegar, with water, sugar, and sulphuric acid; jalap, with powdered wood; opium, with poppy capsules, wheat flour, powdered wood, and sand; scammony, with wheat flour, chalk, resin, and sand; confectionery, with plaster of Paris and other similar ingredients, colored with various pigments of a highly poisonous nature; and acid drops purporting to be compounded of jargonelle, pear, ribston, pippin, lemon, &c., with essential oils containing prussic acid and other dangerous ingredients."

V.

[Extracts from English statutes bearing on the subject, 11th August, 1875.]

Whereas it is desirable that the acts now in force relating to the adulteration of food should be repealed and that the law requiring the sale of food and drugs in a pure and genuine state should be amended:

Be it therefore enacted, &c. * * *

SEC. 2. The term "food" shall include every article used for food or drink by man, other than drugs and water. The term "drugs" shall include medicine for internal or external use.

SEC. 3. No person shall mix, color, stain, or powder, or order or permit any other person to mix, color, stain, or powder, any article of food with any ingredient or material so as to render the article injurious to health, with intent that the same may be sold in that state; and no person shall sell any such article so mixed, colored, stained, or powdered, under a penalty in each case not exceeding £50 for the first offense; every offense after a conviction for a first offense shall be a misdemeanor, for which the person shall, on conviction, be imprisoned for a period not exceeding six months, with hard labor.

SEC. 4. No person shall, except for the purpose of compounding, as hereinafter described, mix, color, stain, or powder any drug with any ingredient or material so as to affect injuriously the quality of such drug with intent that the same may be sold in that state, and no person shall sell any such drug so mixed, colored, stained, or powdered, under the same penalty in each case, respectively, as in the preceding section for a first and subsequent offense.

* * * * * * * *

SEC. 6. No person shall sell to the purchaser any article of food or any drug which is not of the nature, substance, and quality of the article demanded by such purchaser, under a penalty not exceeding £20, &c.

SEC. 7. No person shall sell any compounded article of food or compounded drug which is not composed of ingredients in accordance with the demands of the purchaser, under a penalty not exceeding £20. (Glen's Law of Public Health, 38 and 39 Victoria, chapter 63.)

You will thus see, Mr. Speaker, the estimation in which the offense is held by our cousins across the water. It is meet that the two great Anglo-Saxon nationalities should profit, each by the teaching of the other. May not the younger profit by the lesson here laid down by the elder?

I have letters, Mr. Speaker, from some of the leading grocers and druggists of the country, offering to come on and testify before a properly accredited committee at their own expense, to give cause and adduce proof why like legislation is imperatively demanded on Capitol Hill. Let them be heard for our sake, if not for theirs.

Reduction of Import Duties and Repeal of Internal Taxes.

SPEECH

OF

HON. WILLIAM R. COX,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 2, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 5893) to reduce import duties and war-tariff taxes—

Mr. COX, of North Carolina, said:

Mr. CHAIRMAN: I listened yesterday with interest, as I always do, to the remarks of my distinguished friend from Connecticut [Mr. EATON]. In some things I agreed with him, and regretted that in others I was compelled to differ. I heard with surprise remarks from him which were susceptible of a sectional interpretation, and would have concluded they were intended to embarrass this measure with such an issue but for my knowledge of the public and private views of the speaker, whom I have ever found frank, fearless, and eminently national in his character.

I was surprised to find how bitterly he assailed the Morrison bill, while declaring himself in favor of a tariff for revenue and low taxes; but when he informed us he represented one of the largest manufacturing districts in New England, I concluded that his mind, upon the principle of evolution, which moves in lines of least resistance, was leaning to the protected industries of his district. I appreciate the force of a preconceived opinion, which, when once formed, however unsubstantial its foundation, pride rushes to the rescue, and unconsciously we seek for reasons to sustain as realities mere personal predilections. That is one of the troubles the Morrison bill has encountered. The opinion of some members had crystallized against it before it was presented to the House, and they were ready to antagonize without investigation whatever was recommended, with no better argument than—

I do not love thee, Doctor Fell,
The reason why I can not tell;
But this alone I know full well,
I do not love thee, Doctor Fell.

One of the most important issues in the last Congressional election was tariff reduction, and it was the chief question calling for action when this Congress met. The question of free trade, of which we have heard so much in this debate, strikes me more like dodging the real issue than an argument against reducing the burdens of the tax-payer. Reduction and not revolution is what is sought by the measure now presented, and until something more acceptable is proposed I will give it my support. The able Committee of Ways and Means, after a long and laborious investigation, reported this bill, and requested the House to go into Committee of the Whole to consider it, but gentlemen on this side of the Chamber sought to slam the door in their faces and deny them even a hearing. Such treatment on the part of colleagues was at least unwise. "Strike, but hear me!" exclaimed the noble Athenian. "If you must oppose a measure of this importance, at least let us hear the views of its friends," will be the response of every fair-minded constituent. While not wedded to the bill, we have an earnest desire to see taxes reduced, and if not able to get all we wish, statesmanship dictates the acceptance of that which at least approximates one's wishes.

No one denies that there is a surplus in the Treasury of probably $150,000,000, and this is increasing at the rate of more than $50,000,000 per annum, exclusive of a sinking fund of $40,000,000. We collected in 1883 $398,287,581 for the ordinary expenses of the Government, including interest; an excess of $132,879,444 over the amount expended. In addition we are burdened with the support of State and municipal governments. Nor can we forget that the Republican party has exhibited a wonderful talent to impose, but none to remove, unnecessary taxes from the shoulders of a patient and long-suffering people.

How is it proposed to decrease this annual surplus except by the bill now before the House? Where is the proposition for relief if not found here? Would gentlemen on the other side of this Chamber have us, like the ass in the fable, stand starving between two bundles of hay, not knowing which to take, "Letting I dare not, wait upon I would?" We can not reduce it by paying off the bonded debt not yet due, for if we go into market to buy these bonds they will so enhance in value as to compel the payment of exorbitant premiums as well as greatly embarrass our national banking system. If a reduction of taxation will accomplish our purpose, we should not by experiment embarrass the

business interests of this country. It is well said by the Secretary of the Treasury, in his report to the Forty-seventh Congress, that—

In view of the large sum that has already been paid by the present generation on the debt, and the heavy taxation that now bears upon the industries and business of the country, it seems just and proper that another generation should meet a portion of the debt, and that burdens now laid upon the country should be lightened.

Whether this suggestion is wise or not, this side of the House is not responsible for that legislation which placed it beyond our power to pay off the public debt. I do not consider a public debt a public blessing, nor favor its continuance longer than is absolutely necessary. It is opposed to public policy and dangerous to liberty, it creates a species of slavery to a bonded aristocracy, which, while contributing nothing toward the maintenance of the Government, fattens upon its revenues and dwarfs its energies.

In the same report the Secretary makes this appropriate inquiry:

Is it a beneficial exercise of governmental power to raise money by taxation in greater sums than the lawful demands upon the Government require, when these demands are of themselves a heavy burden upon the industry and business of the country?

Nor is this all; it tends to questionable expenditures, the multiplication of unnecessary offices, and with a certain class of legislators, brings economy into ridicule, and produces extravagance and waste.

The President, in his message to the Forty-seventh Congress, called attention to the necessity of revising the tariff to accomplish a reduction of the surplus annually collecting in the vaults of the Government, which should have been left with the people. While these officials are entitled to our respect, they should command the undivided confidence of those by whose instrumentality they were chosen. I therefore prefer to quote from them, as it should divest this discussion of a partisan character as well as present to the doubting reasonable assurance of the necessity for this conservative legislation.

At the meeting of the Forty-seventh Congress the President, in adverting to a necessity for a revision of the tariff, suggested that—

If a careful revision can not be made at this session, a commission, such as was lately approved by the Senate and is now recommended by the Secretary of the Treasury, would doubtless lighten the labors of Congress whenever this subject shall be brought to its consideration.

In furtherance of these recommendations, a bill was immediately introduced in the last House providing for the appointment of a commission of nine experts, whose duty it should be to visit different parts of the country, inquire into the necessities of trade, the wishes of the people, and report to Congress at its second session such information as might be gathered during their investigations. It was anticipated by the then minority that this body would be composed exclusively of representatives of the high protected industries, and their natural bias would color their report in favor of those by whom they were appointed, therefore they resisted its appointment. The tariff reformers insisted that tariff legislation was peculiarly the province of members of Congress, and that they must be presumed capable of legislating for the greatest good of all, without the interposition of an extra-constitutional commission. Nevertheless the commission was appointed, and after traveling some 9,000 miles, and examining over four hundred witnesses, representing the various interests of the different sections visited, it recommended a reduction of the tariff from 20 to 25 per cent. In their report they used the following language:

Early in its deliberations the commission became convinced that a substantial reduction of tariff duties is demanded, not by a mere indiscriminate popular clamor, but by the best conservative opinion of the country, including that which has in former times been most strenuous for the preservation of our national industrial defenses. Such a reduction of the existing tariff the commission regards not only as a due recognition of a public sentiment and a measure of justice to consumers, but one conducive to the general industrial prosperity, and which, though it may be temporarily inconvenient, will be ultimately beneficial to the special interests affected by such reduction. No rates of defensive duties, except for the establishment of new industries, which more than equalize the conditions of labor and capital with those of foreign competitors can be justified. Excessive duties or those above such standard of equalization are positively injurious to the interests which they are supposed to benefit.

Further on they say:

If the reduction reaches the amount at which the commission has aimed and if there is any truth in the allegation of the opponents of the present economic system that a duty on articles such as are produced in this country, whether in manufactures or agriculture, enhances the price to the consumer, not only of what is imported but of the whole domestic production, to an amount of which the duty is the measure, the reduction proposed by the commission would benefit consumers to the extent of hundreds of millions of dollars.

It will be remembered this commission was the creature of a Congress devoted to the doctrines of high protection; and so careful was the President to see that it conformed to their views, not only was every tariff-reformer excluded from it, but the very president of the commission resigned employment in a manufactory to accept a place upon this board, and it is said since his duties terminated has been reinstated in the same factory from which he came. Yet, strange as it may appear, the commission's recommendations were virtually repudiated by the very Congress appointing them. Instead of reducing taxation from 20 to 25 per cent., as recommended, Congress was satisfied with a reduction of less than 1½ per cent. Therefore out of its own lips we condemn it as but sounding brass and a tinkling cymbal.

When the Forty-eighth Congress assembled we were informed by the Secretary of the Treasury that a large surplus was still on hand. In speaking of the legislation of the previous Congress he uses the following language:

The estimated receipts for the current year from customs are $195,000,000, a reduction of less than $20,000,000. Considering that there has been some depression of business during the past year, it is probable, should business revive, that the revenues from customs under the present law will in succeeding years increase rather than diminish.

We are likewise informed by the Secretary—

That by reason of the legislation of the last Congress the repeal of internal-revenue taxes were expected to effect a reduction of about $55,000,000, whereas the aggregate reduction and the augmentation from the receipts from distilled spirits together will be only about $25,000,000 less than the preceding year; altogether the absolute reduction will be actually $30,000,000 less than was contemplated by the legislation of last winter.

What, then, is proposed by the Morrison bill? Why, follow in the direction of the recommendation of the President and do what the other side failed to do, namely, reduce taxes in accordance with the wants of the Government. We now are collecting annually from tax-payers over $50,000,000 more than is required, notwithstanding the advice of the President "that only such taxes ought to be levied as are necessary for wise and economical administration of the Government," and notwithstanding the Supreme Court of the United States (20 Wallace, 657) has denounced protection for protection's sake in the following emphatic language:

To lay with one hand the power of the Government on the property of the citizen, and with the other to bestow it upon favored individuals to aid private enterprises and build fortunes, is none the less robbery because it is done under the forms of law and is called taxation. This is not legislation. It is a decree under legislative forms.

To escape a dilemma into which a law and the facts have placed them, the friends of protection and class legislation have sought to break its force by appeals to the fears of the laboring classes. That party, which is nothing if not sectional, and whose slogan of success has so long been abuse of the South, finding her fertile fields, magnificent water-power, rich mines, and genial climate had invited capital and capitalists to go among them, and that these persons sent to their friends through the North such intelligence of the law-abiding character of Southerners as to remove all fears of sectional uprising and no longer hoping to achieve success in that direction, now seek to arouse the laboring classes by appeals to their fears and prejudices against England's pauper labor.

I was surprised to find my friend from Chicago [Mr. FINERTY], who informed us his eyes had first embraced the sunlight upon foreign soil, should be training in the same direction, especially when he can but remember that in the not far distant past there was a Know-Nothing party in this country, whose watchwords were "Place none but Americans on guard," and that the Roman Catholic owing allegiance to the Pope should not be allowed either to vote or hold office. This cry against pauper labor on the part of high protectionists is but the song of the siren, and if necessary to effect their object they are ready to renew a war upon all foreigners.

Now, what is pauper labor? As Mr. Lincoln would say, "I desire to speak to plain people," and insist the term itself is an insult to the laboring classes. Labor is capital as much so as manufacturing, and a man, though poor, should not be arraigned as a pauper simply because he fails to possess that wealth which gives him immunity from toil. The principles of the Democratic party compel it to oppose encroachments upon the Constitution, high protective tariffs, and class legislation; to discountenance sectional parties; to maintain the rights of the poor against the aggression of power, and preserve the polls from military usurpation. All tariffs should be levied in a spirit of equity, caution, and compromise, and the great interests of agriculture, manufactures, and commerce be equally favored; and an intelligent ballot cast by intelligent freemen is "the right preservative" of these rights. What Democracy has most to fear is the persuasive eloquence of the purchasing power, wielded by a corrupt party or a privileged class.

Many of those now crying out against pauper labor are descendants from those very pauper laborers who by their intelligence and enterprise cut loose from the ties which bound them to their former home, and collecting money enough to transfer themselves and families to our shores, have peopled the great Northwest, added to our wealth, filled our armies in times of greatest peril, and added to the glory and greatness of this Government. Where, then, is the justice or sincerity of such appeals. The very class who are making the greatest outcry against pauper labor is that class whose wealth and disposition bring this foreign labor in competition with the labor of this country. What we oppose is foreign contract labor brought over by the protected industries and monopolies to compete with native labor, but not that labor which seeks to improve its condition by immigration.

We know it is claimed that protection enhances the wages of the laboring classes, yet we find more complaints, more rioting, and more disturbances in the peculiarly protected sections than in any other portions of this country. Hon. Robert J. Walker, in his celebrated report of December, 1845, uses the following language:

When the number of manufactories is not great the power of the system to regulate the wages of labor is inconsiderable; but as the profit of capital invested in manufactures is augmented by the protective tariff there is a corresponding increase of power, until the control of such capital over the wages of labor becomes irresistible. As this power is exercised from time to time we find

it resisted by combinations among the working classes by turning out for higher wages or for shorter time, by trades-unions, and, in some countries, unfortunately, by violence and bloodshed. But the Government by protective duties arrays itself on the side of the manufacture system, and, by thus augmenting its wealth and power, soon terminates in its favor the struggle between man and money. A protective tariff is a question regarding the enhancement of the profits of capital and not the augmentation of the wages of labor. It is a question of percentage, and is to decide whether money invested in our manufactures shall, by special legislation, yield a profit of 10, 20, or 30 per cent., or whether it shall remain satisfied with a dividend equal to that accruing from the same capital invested in agriculture, commerce, or navigation?

It is estimated that at the present time the amount of foreign labor employed in our mills is not less than 66 per cent. If so, where then is the much vaunted protection given by manufacturers to the American against the foreign labor of Europe?

The honorable gentleman from Pennsylvania [Mr. KELLEY], in support of his high tariff views, speaks of what he observed in free-trade England during his visit to that country the past summer; of the great hardships and destitution he saw among the laboring classes in the manufacturing districts. What he says may be true, though we could but wish that it was otherwise. He failed to point out, however, the great dissimilarity between the character of the institutions of that country and our own. England is a purely commercial and manufacturing state. Her population is dense and crowded, and her laws and her institutions, derived from the Middle Ages, are devised to promote the favored few at the expense of the many. It is estimated that among her landholders in England and Wales there are little more than one-hundred and fifty proprietors having half an acre each. Nearly one-half of the land is owned by 2,250 proprietors, averaging more than 6,000 acres each, and four-fifths of all of her lands are in the hands of 7,000 owners. Hence you may see that not as a matter of choice but of necessity the great body of her people have no choice as to the character of their pursuits.

In this country we have still a boundless domain, where every one may engage in agriculture whose means and inclinations may prompt him to follow this ennobling occupation. It is true that the legislation of the Republican party has transferred the most valuable part of this domain into the hands of great railroad corporations, and they have disposed of it in vast bodies to wealthy syndicates, both foreign and native, whose princely estates eclipse the grandeur of every other part of the world. The effect of this policy has been to concentrate population in and around our large cities, and wherever the people are thus congregated; poverty and crime are the consequences for it is truthfully said that when you place a policeman on the street you will find a beggar around the corner. It may seem ungracious to call attention to the destitution and poverty that obtains in one's own country, but as we are dealing with facts and not sentiment we should see whether our own people are cared for before going abroad to shed tears at the misery of those in other lands.

In the May number of the North American Review, under the caption of "Workingmen's grievances," I find the following statement:

To-day throughout our whole country, on the plains and in the mountains, in the densest populations and on the most advanced frontiers, in town, county, and mining-camp, are found armies of homeless wanderers, that can be numbered only by hundreds of thousands, if not by millions, vainly seeking work, begging or stealing their subsistence wherever they can find it, and rapidly sinking to the condition of the most callous vagabondage and crime. And among those who are now doing the work of the country assured and constant employment is the exception, while uncertain and inconstant work is the rule.

The same article, in treating of the density of the population and the destitution that prevails in the city of New York, uses the following language:

Fully three-fourths of the population of the city of New York are living in from one to three small rooms to a family. There are blocks upon blocks in that city where the people are packed at the rate of 486,000 souls to the square mile. While the extreme density of the population in New York rises to 760 per acre, in London it stops at 222. At the close of 1883 the board of health of the city of New York reported the existence of 25,946 distinctive tenement-houses, occupied by 907,000 souls, as estimated. * * * Therefore it is fair to assume that in New York twelve per thousand is the death-rate of comfort, while all above that rate, or nineteen per thousand, is the mortality of destitution. This gives 22,925 as the number of those who are yearly destroyed by want in one city. The 23,000 thus annually sacrificed to Moloch are as clearly the victims of the war that wealth wages against society as are the slain found upon the fields of battle victims of a conflict of arms. The horrors here pointed out are not confined to the city of New York, but exist, more or less modified, in every city and town in our country.

In visiting protected France and Germany even more destitution was seen by me than in England, and in writing a letter last summer for publication I thus spoke in regard to the capital of Austria:

At Shönbrunn we saw the emperor's summer palace with its 1,500 apartments and the zoological garden beautifully situated in a large, handsome park. The winter palace is in the city. We also saw the arsenal filled with its missiles of destruction, of nearly every age and kind, and of such magnitude is this building, that one hour is required to walk around it. The soldier here is seen everywhere, for the army numbers 800,000. To defray the enormous expenses the government has many and peculiar monopolies, such as lotteries, tobacco, &c. Everything and everybody are taxed except those most able to bear its burdens. The stranger on entering the city must pay for the privilege, and when he departs he must pay a tax for registering his baggage.

Amid such surroundings what is the condition of the laboring man? The story is briefly told. We have seen him toiling on Sunday as if there was no day of rest. Women are employed in heaving coal, mowing hay, carrying mortar on high buildings, grinding hand-organs, knitting, and sewing on the Sabbath, and working in carts with dogs. In the market there are offered for sale for food things which in our country are thrown among the garbage, while in the morgue is daily found the bodies of those who, no longer able to bear "the slings and arrows of outrageous fortune," seek oblivion in a watery grave. You may inquire why these things are suffered to exist. We answer: the press is muzzled; the masses have never breathed the air of freedom, but are taught rather to fear foreign invasion than to inquire into their own condition.

These examples are given not for the purpose of reflecting upon the institutions of this country, but to show that there is more apparent poverty and destitution among the protected states of the continent than in free-trade England. Woman is driven to perform these menial labors in consequence of vast standing armies which these governments support, and the soldier's labor is not only lost to the state, but the expense of supporting him likewise falls upon the government. Some one must labor, or all would starve, and as so many men are in these armies, woman must engage in even unwomanly work to drive the wolf from the door.

How different is the situation with us. Our Army is so small a soldier is never seen in many parts of the country. Therefore there is less excuse for poverty and want among us than among any other people. While the area of territory of most civilized nations is circumscribed and their population crowded together, here we have an unlimited domain not yet reclaimed from the deer and the savage. With the disappearance of illiteracy and the diffusion of knowledge among the masses, under our free institutions we may hope to achieve still greater triumphs in alleviating the hardships of all classes. In a government where universal suffrage prevails, education is necessary to defeat the blandishments of the political corruptionist, who, like the snake among flowers, is continually imperiling our liberties through the wayward and unsuspecting voter.

I would like to dwell upon the effect of a protective tariff on the agricultural interest and the wages of the laborer. But as my object is to present some views in regard to the internal taxation I will only add that, by the census of 1880, $2,790,223,506 capital is invested in manufacturing enterprises in the United States, their gross product is $5,369,667,708, and to produce this result 2,738,930 persons are employed. Engaged in farming, we find that we have value of farm implements and live-stock, $12,104,081,440. The gross production is $2,212,540,937, and persons employed 7,670,493. The manufacturing enterprises yield an average of over 70 per cent. upon the capital invested, while farming pays only 19 per cent. Yet the farmer, by his labor, must contribute to the support of the manufacturers through taxes imposed by a high tariff.

It is insisted this measure ought not to be agitated at this time because the present tariff has only been in operation eight months, and has not been sufficiently tested to ascertain how it will succeed; that a continued agitation of these economic questions tends to depress business and interfere with the industries of the country. While acknowledging the force of this argument, we can not ignore the fact that there is already a large surplus in the Treasury, annually augmented by our present system of taxation. We are not in favor of free trade, and if we were we could not forget that so long as the annual expenditures of this Government are about $300,000,000 the imposts collected for this amount alone must give all the protection to the manufacturing interest to which it is justly entitled. The Morrison bill does not propose to destroy the present tariff, but simply to lessen taxes by reducing them horizontally 20 cents on the dollar, and provides a maximum and minimum rate beyond which the reduction shall not go.

It is true that there is placed on the free-list coal, lumber, and salt, and those who assert that it is an illogical bill because it provides for a horizontal tariff I am confident would resist any reduction that may be proposed. Like one of the ablest advocates on the other side [Mr. RUSSELL], they are at heart protectionists for the sake of protection, but more prudent in the declaration of their purposes.

While I should have preferred to reduce the surplus now in the Treasury, and that which is annually collected, by repealing the internal-revenue law, yet from the action taken by the House I know nothing is to be done during this session toward a reduction of the tax upon whisky. Wishing to be practical in all legislative matters, I would have been content to have kept silent on this subject but for the remarks made in relation to this tax by gentlemen who have discussed the Morrison bill, for they were calculated to produce the impression that the advocates for a repeal of the internal-revenue laws were *per se* in favor of cheap whisky, that they were protectionists in disguise, and the general sentiment of the country was in favor of continuing them in force. I therefore feel it a duty to place the State I have the honor in part to represent in her true light, and will endeavor to show her people occupy a far more elevated and patriotic position than her opponents ascribe to her.

In urging a repeal of the whole excise system she is but doing what the people of the United States have heretofore uniformly done in regard to excise laws whenever the exigency that called them into existence had passed. And not only so, but the people from whom we descended, from the time of Oliver Cromwell to the present day, held such laws in abhorrence. In his Commentaries upon the common law, Mr. Blackstone, a high-prerogative lawyer, uses the following language in regard to this system of taxation:

The rigor and arbitrary proceedings of excise laws seem hardly compatible with the spirit of a free people. It is necessary to give the officer power of entering and searching the houses of such as deal in excisable commodities at

any hour of the day and (in many cases) of the night also; and the proceedings are so summary and sudden that a man may be convicted twenty times by a commissioner, to the total exclusion of trial by jury and in disregard of the common law. * * * Such was the opinion of their general unpopularity, that when in 1642 aspersions were cast by malignant persons upon the house of commons, that they intended to introduce excises, the house for its vindication therein did declare that these rumors were false and scandalous, and that their author should be apprehended and brought to condign punishment.

In regard to the charge that a removal of the tax will lessen the price of whisky and thereby lead to drunkenness, I beg leave to call the attention of the committee to a few facts which should dispel any prejudice on that score. It is stated that after the enactment of the statute of George I, affixing a license of £50 on the sale of spirits in quantities less than two gallons, and a tax of 20 shillings on the gallon, which it will be remembered was in those days a large sum, this effort in the cause of temperance utterly failed of its purpose, although 12,000 people were convicted of a violation of the law; and the consumption of spirits in England and Wales rose from 13,500,000 gallons in 1734 to 19,000,000 in 1742, and there were 20,000 houses where gin was sold by the retail. We find from the report of the Commissioner of Internal Revenue for 1883 that, so far from the quantity of distilled spirits diminishing by reason of the high tax, the amount now on hand would seem to have increased, and that the number of persons who took out licenses under the internal-revenue law to retail liquors in the different States and Territories is continually increasing. In 1879–'80 there were 163,523; in 1880–'81, 170,640; in 1881–'82, 168,790; in 1882–'83, 187,871.

In the discussion of this question in 1816 Governor Troup, of Georgia, an able and distinguished statesman, used the following language:

It is said the excessive use of ardent spirits is immoral. It is true, sir. It is a vice, a deep-rooted vice, but it finds soil in the passions and propensities of man. But will you suppress it by imposing upon it a tax? No, sir. He who indulges in it knows that it leads directly to disease, poverty, and disgrace. If these are not sufficient restraint upon his appetite, vain will be the attempt to restrain him by increasing the price of the article.

Experience proves that these observations are unfortunately too true. No one has more respect for those philanthropists who seek to remove the blight and curse of drunkenness from among us than I have. Their intentions and efforts are entitled to our highest respect, and I am far from intending to oppose them in their effort to redeem our fallen brothers; but many of them agree with me that the continuation of this excise law is not the proper means of promoting the cause of temperance.

Its immense profits to capital increase its production, and the temptation to fraud increases adulteration, and its victims fall a more easy prey to its dangerous influences.

The Woman's National Temperance Union in their report in regard to the spirit tax, employed the following true and eloquent language:

In every place where this liquor crime is found the Government divides with it the spoils of its prey; however the money comes, a part goes into the public Treasury, and so the nation lives on the destruction of its own sons and daughters.

And they recommend the repeal of all laws touching the traffic in these beverages. So much in way of reply to those who, oblivious of the true principle underlying the motives of those who advocate the repeal of this law, are content to speak of such as being actuated only by a desire for cheap whisky. To them we commend the logical reasoning and touching eloquence of the noble ladies composing the union.

This discussion has revealed the fact that those who have opposed the repeal of this law, and expressed opinions that the general sentiment of the country demands its continuance, are advocates of the bonded, or in other words, high protected whisky.

In reply to these gentlemen who, coming from the great whisky manufacturing districts, are so anxious to retain this tax, and which places them in the novel attitude of begging the Government to continue to tax them, I will again call to the witness-stand the eminent Georgian from whom I have above quoted. In the discussion in Congress in 1816 he said:

A high tax on whisky would not tend very much to reduce the quantity which is made; on the contrary, the large distiller would profit by it. He would extend his business with immense profit, for by driving the small distiller from the business he would be enabled to regulate both the article manufactured and the material of which it is made.

Thus we see what was clearly predicted over half a century ago is verified by what is daily occurring. The Government is made virtually a copartner with the whisky monopolist, for she exempts him from the payment of his taxes for three years, while his wealth and influence shield him from prosecution and annoyances. He regulates the grain market, secures the most expensive plants for his business, and the Government permits him to keep his whiskies in bond for three years, without a payment of a cent of tax or interest on the use of the money, while it ripens and mellows and becomes more and more valuable. The bonded-whisky interest is one of the great monopolies of this country, and if those who oppose it are to be known as the advocates of cheap whisky, then let those who favor it be known as the advocates of protected whisky.

In reply to the charge that those seeking the repeal of the internal-revenue system are covertly favoring a protective tariff, I need only remind gentlemen that the strongest opposition to the law in 1792 arose from anti-protectionists. The New England rum,* with which the manufacturers of whisky in those days were competing, was made from imported sugar and molasses and the duties of those subjects elicted an able debate. In the discussion on the subject, Mr. Steele, of my State, said:

He begged the House to remember this was the first attempt to introduce the system of excise in the United States; that it was, too, the first attempt to tax an article of American growth and manufacture; that the law required at least one-fourth part of the value of the thing excised, and that not only the justice of the measure was denied but its policy doubted.

In summing up his objections he stated:

First. Excise laws are novel in the United States and novel in their nature.
Second. Articles of American manufacture are not proper articles of taxation, and if they were the rate was too high.
Third. Because it operates and is in fact a tax upon this occupation and agriculture, as they stand connected in one part of the Union, while manufactures in other parts are not only rewarded by high protective duties but in some instances by specific bounties.

The first excise law enacted in the United States went into operation in 1792. It met with opposition in North Carolina, Georgia, Virginia, Maryland, and Pennsylvania, and it is somewhat singular that these States and Tennessee, the daughter of my State, stand together in their opposition to the internal-revenue system of the present day; thus showing that history often repeats itself.

I again quote from the speech of Mr. Steele, a Representative in Congress in 1792 from North Carolina. He said:

The opposition to this law has not proceeded from a restless and disorderly spirit among the people, but from an aversion which freemen in all countries ever had and perhaps ever will have to this mode of taxation. Let ingenious theorists refine as they please upon the nature of internal taxes, it must always be admitted that excises retrench the liberty of the citizens on whom they operate, and that they are subject to solid as well as plausible objections.

The views expressed by this distinguished Representative in 1792 were reaffirmed by the Legislature of my State in 1883, when it declared:

If Congress should deem it impracticable to modify the present tariff, and at the same time abolish the internal-revenue taxes, as a less of the two evils we prefer the retention of the former and the abolition of the latter.

The impression that this measure is in some way connected with the protection idea arises from a knowledge that the people in Pennsylvania are bitterly hostile to an excise system, while they are in favor of a protective tariff. Yet we should not forget that the bitterest opposition to this character of law was manifested in that State in 1793, when it was first sought to enforce it in this country. It led to the verge of civil war, and involved among those engaged in its resistance her governor, judges, and many distinguished citizens. Judge Breckenridge, in his History of the Whisky Insurrection, gives the following graphic account of the situation of the people and their unrelenting hostility to the measure:

The farmers, having no market for their produce, were from necessity compelled to reduce its bulk by converting their grain into whisky. A horse could carry two kegs of eight gallons each, worth 50 cents per gallon on this, and $1 on the other side of the mountains, while he returned with a little iron and salt, worth at Pittsburgh, the former from 15 to 20 cents per pound, the latter $5 per bushel. The still was therefore the necessary appendage of every farm where the farmer was able to procure it; if not, he was compelled to carry his grain to the more wealthy to be distilled. In fact, some of these distillers on a large scale were friendly to the excise laws, as it rendered the poorer farmers dependent upon them.

Such excise laws had always been unpopular. Among the small farmers in Great Britain they excited hatred, which they brought with them to this country, and which may be regarded as hereditary. Scarcely any of the causes of complaint which led to the Revolution had so strong a hold on the people of Pennsylvania as the stamp act, an excise regarded as an oppresive tax on colonial industry. Every attempt of the Colony or State to enforce the excise on home-distilled spirits had failed, and so fully were the authorities convinced that they could not be enforced, that the last law on the subject, after remaining a dead letter on the statute-book, was repealed just before the attempt to introduce it under the Federal financial system by the Secretary of the Treasury, Alexander Hamilton.

There were, moreover, circumstances necessarily attending the collection of the tax revolting to the mind of a free people. Instead of a general assessment, a license system, confined to a few dealers on a large scale, or an indirect tax on foreign imports while in the hands of the importers or retailers, this tax created a numerous host of petty officers, scattered over the country as spies on the industry of the people, and practically authorized at almost any moment to inflict domiciliary visits on them, to make arbitrary seizures, and commit other vexatious acts.

I have seen an illustration of the moonshiners of Pennsylvania in those days which is both striking and amusing. They have an exciseman or revenue officer clothed in a coat of tar and feathers, whom they are marching out of the town to the tune of the "Rogue's March," accompanied by an escort of citizens of all sizes and sexes as well as dogs of small degree.

The Federalists attempted to fix upon the Democratic clubs responsibility for the indignation felt by the people against domiciliary visitations and the disreputable employment of spies and informers. But

* This rum, it may be added, was made mainly from molasses imported from the West Indies, and from 300,000 to 500,000 gallons were sent annually from that section to Africa for the purchase of slaves.
Official documents show that from 1804 to 1807, inclusive, 202 cargoes of negro slaves were brought into Charleston, S. C. Of these slaves, 3,914 were sold for account of persons residing in Bristol, R. I.; 3,488 for Newport, R. I.; 556 for Providence, R. I.; 280 for Warren, R. I.; 200 for Boston, Mass.; and 250 for Hartford, Conn. This was, it will be observed, at only one port in the South and during a period of only four years.—*Princeton Review*, March, 1884, page 194.

the feeling was innate and could not be resisted. Nothing but the extraordinary equanimity of President Washington prevented the precipitation of a civil war. When a public meeting was held to express their opposition to this law, the Federalists, who regarded such meetings as levying war against the United States, sought to secure from the Attorney-General (Mr. Randolph) an opinion that the promoters of the movement were guilty of treason and indictable, and expressed indignation at his declining to concur in their construction of the law. Mr. Jefferson, in a letter written about this time to Mr. Monroe in regard to this insurrection, used the following language:

> The people in the western part of this State have been to the excise officer and threatened to burn his house, &c. They were blackened and otherwise disguised so as to be unknown. He has resigned, and H. says there is no possibility of getting the law executed there, and that probably the evil will spread. A proclamation is to be issued; another instance of my being forced to appear to approve what I have condemned uniformly from its first conception.

And he subsequently denounced it as an "infernal tax."

In a document supplied to the members of this House during the present session, entitled "Arguments before the Committee of Ways and Means on the Morrison tariff bill," under the title "Internal-revenue taxation on tobacco and fruit brandy," I find that certain members of the House and Senate appeared before the committee to express their views as to what course should be done.

Mr. DIBRELL, of Tennessee, a prominent churchman and temperance leader, said he was in favor of taking the taxes off tobacco and fruit brandy, if the internal-revenue laws were not entirely repealed. In the course of his remarks he presented a letter from Judge Key, of the United States district court, in which he inquires:

> Is there any hope for the repeal of the internal-revenue laws? In this State these laws have become the means by which a very large number of disreputable people live, by making themselves spies, witnesses, guards, &c., at the public expense. Men too lazy to work manage to live at the expense of the Government.

He also produced another letter from Judge Baxter, of the United States circuit court, who said:

> The public service of the United States is, I regret to say, in very bad hands in a majority of cases in Tennessee, and it can never be corrected until it is actively disfavored by the authorities at Washington.

Mr. DIBRELL also called the attention of the committee to the great hardships to the small distillers in rural districts in procuring stamps, securing gaugers, and the prosecutions to which they were exposed.

Mr. CANDLER, of Georgia, also bore testimony to the great hardships practiced upon the people of his State, and expressed his opinion as to the necessity for the repeal of these laws.

Mr. CABELL, of Virginia, informed the committee that "If this law had been carried out in your respective States in the oppressive way in which it has been carried out in my State and in other States that I know of, you would not have tolerated it a week longer than you could have got to Congress and accomplished its repeal."

I have given the views from these various sources to show the unpopularity of this law among an independent and enlightened people. An unpopular law is apt to be a bad law. The object of taxation, it is respectfully submitted, is not alone to raise revenue, but it should bear as equitably as possible upon all citizens, without heaping unnecessary burdens upon any particular class. What may be borne by one man can not be sustained by another without great hardship and inequality. It is said that the tax imposed by Mehemet Ali upon the date-tree caused the Egyptian fellahs to cut down their trees, but twice the amount imposed on the land produced no such result. A tax of 10 per cent. imposed on all sales by the Duke of Alva in the Netherlands would, had it been continued, have stopped exchange, while yielding little revenue.

The tax imposed on brandy distilled from fruits has caused the destruction of many orchards and prevented the planting of others, while the revenue derived from this source scarcely exceeds the cost of collection. The conversion of grain into whisky is a conversion of a necessity into a luxury; the conversion of fruit into brandy is the conversion of a luxury into a luxury. Grain can be preserved and used for many of the purposes of life; fruit is perishable, and if not immediately used will decay and be lost. While the rich and the poor have orchards, it is the poor man usually who distills. His orchards are planted upon a thin, sandy soil or broken hill-side, and his little distillery is the most profitable source of support. He converts his fruit into brandy for the purpose of exchanging it for the necessaries of life, and if deprived of this means you leave him poor indeed. If spirits must be manufactured, wise statesmanship would dictate that its production from fruit should be encouraged rather than prevented, as fruit is perishable.

The same argument urged for the repeal of the whole internal-revenue tax applies to tobacco as well as to spirits. If you should remove the tax from one you should certainly remove it from the other. The people of my State are perfectly willing to pay this internal-revenue tax provided the method of collecting could be changed. They are ready to meet all taxes imposed by the Government which are just and equitable. They appreciate the fact that while the war is over its debt has not been paid, and are conscious that the Government intends to deal honorably and justly by them. At the same time they demand that the law for collecting the taxes be so modified as to secure the freedom of persons and the sancity of their homes and families, and if this can not be done and the revenue law be enforced, then they ask that the whole system be abolished as early as possible. With an overflowing Treasury and a reasonable prosperity they fail to see why some relief can not be given, and I, as their representative, ask it at your hands.

Pensions.

SPEECH

OF

HON. LEONIDAS C. HOUK,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Friday, April 11, 1884,

On the bill (H. R. 6094) making appropriations for the payment of invalid and other pensions of the United States for the fiscal year ending June 30, 1885.

Mr. HOUK said:

Mr. CHAIRMAN: As this is a bill making an appropriation to pay pensions and to provide for the incidental expenses of making the payments, it is proper, as I think, to look into the machinery and practical workings of the pension agencies of the country and ascertain as far as possible whether the bill under consideration will accomplish the purpose intended. I find a woful lack of correct information among members as to the machinery and labor in the pension offices of the country. I find a vast amount of misinformation on this subject. I therefore desire to call attention to the organization of a pension agency and to the kind and method of labor to be performed in paying pensions. The Clerk is asked to read the statement I now send to his desk on that subject, showing what the steps are in the Pension Office after the certificate of the pensioner has been presented for payment.

The Clerk read as follows:

> UNITED STATES PENSION AGENCY,
> *Knoxville, Tenn., January*, 31, 1884.
>
> SIR: * * *
>
> First. The certificate, when originally received, is entered on the rolls at the proper alphabetical place and in the proper book. This enrollment requires very great care, the pensioners being divided into classes, and in many cases the certificates are "reissues," "increases," and "corrections."
>
> Second. After the certificate has been enrolled a proper voucher is prepared, and, along with the certificate, forwarded to the pensioner. Along with the certificates comes a letter of advice to the pensioner, a letter of advice to his attorney in some cases, and sometimes special instructions to the pension agent.
>
> Third. After the pensioner's voucher is matured it is critically examined by the pension agent to see if it is properly executed. Many vouchers have to be returned for correction. The pensioner's signature may not correspond with his certificate name; the voucher may not be duly witnessed; the probate officer may be unknown to the agency and not duly certified; the receipts may not be correctly signed or may be unwitnessed; the guardian's official character (in guardian cases) may not be correctly certified or there may be a discrepancy between the name of his ward or wards in his guardianship letters as compared with the certificate; the guardian's bond may be wanting or may be deficient in form, in penalty, or in solvency of sureties; the pensioner may fail to give his post-office address; the voucher may be written with a lead-pencil or with illegible ink; witnesses may sign by mark and be themselves unwitnessed; the date in the jurat may be, and frequently is, omitted, or may be false, its falsity being evidenced by the post-office stamp on envelope antedating the jurat, and in various other particulars the voucher may be fatally defective without correction by the pensioner. This agency returns fully 4 per cent. of the vouchers for correction one time, and many in the aggregate for correction a second time.
>
> Fourth. The roll is then examined to see whether the voucher is correctly made out; if so, the date and amount of the payment is entered on the roll in the proper column. This is a very critical process, and is intended to see that the voucher corresponds in name, number of certificate, and rate of pension with the roll, and that the voucher is for the proper period and the proper amount.
>
> Fifth. The check is then drawn for the amount due, properly dated according to the preceding audit, and signed. The name in the voucher must be spelled, letter for letter, according to the orthography of the rolls; and the name in the check must to the same extent correspond with the name in the voucher. The nomenclature of the rolls is "fearfully and wonderfully made," the various ways of misspelling names being almost incredible.
>
> Sixth. The check is then stubbed, the stub showing its amount, date, and number, and the name and post-office address of the payee. All this has to be done with great care, the stubs being exceedingly valuable for reference,
>
> Seventh. The check is then forwarded to the pensioner by mail, along with his voucher for the next installment. But pensioners frequently neglect to give their post-office address, and it then is assumed to be their last address, which frequently proves erroneous, and the check is retained until we can hear from the pensioner. When we hear, it is frequently in the shape of an indignant remonstrance against our delay.
>
> Eighth. The voucher receipts (duplicates) are then dated so as to conform to the date of the checks and the check number entered in the receipts. Exact conformance must exist between the audits, checks, and receipts.
>
> Ninth. The voucher receipts are then so indorsed as to show on what United States assistant treasurer the corresponding checks were drawn. This agency draws some checks on New York and some on New Orleans, according to the convenience or request of the pensioner.
>
> Tenth. The date, number, and amount of the check are then entered in the check-register. This register also gives the daily total of checks issued; and when we are notified that the check has been cashed the date thereof is also entered in the register.
>
> Eleventh. An abstract of payments is then prepared for each class of pensioners showing all the payments made during the month. This abstract gives the name of each pensioner in alphabetical order, the number of the corresponding voucher, the rank of the pensioner, the rate of the pension, the period paid for, the amount of payment, the number of his certificate and special "remarks." This abstract, along with the vouchers (less the said duplicate receipts), is transmitted to the honorable Third Auditor, by whom it is most critically audited, and all errors against the Government must either be duly corrected according to the facts, if correctible, and if not the pension agent makes good the loss out of his own pocket.

Of course it is not necessary to detail the various reports required each month, including the accounts current and the monthly statements.

Mr. HOUK. This brief and imperfect statement will very clearly show that the machinery and work inside a pension agency is arduous and complicated. Some gentlemen seem to think it a small matter to pay off fifteen or twenty thousand pensioners and guard the rights of the Government as well as those of the pensioner. And now, in order to illustrate some of the workings of this system of making payments, I call attention to these four vouchers—invalid, widow, ward for minors, and arrears of pension. This bill proposes to pay 5 cents apiece for the preparation of these vouchers. And it will be understood, as I have already stated, that these fees are allowed under the law for the payment of clerk-hire and office expenses. Heretofore, and as the law now stands, 15 cents apiece is allowed for making these vouchers. That is to say, $15 a hundred is now allowed for preparing them, and this money goes to pay clerk-hire and office expenses.

I want gentlemen to examine these vouchers, complex and difficult to understand and make up, and consider how much they could make in their preparation. Gentlemen talk on this subject as though they ought to be filled out as rapidly as chaff is blown off from a thrashing-machine. And yet I doubt whether these gentlemen could fill out and properly make up one of these vouchers per hour, if it were to save their lives. I will simply exhibit these vouchers to you here and ask to insert them in the RECORD as part of my remarks. I send them to the Clerk's desk for that purpose, and ask that the face and indorsements be printed in the order in which I present them.

The vouchers are as follows:

[3—820.]

A. INVALID. A.

Be it known that I, —— ——, do solemnly swear that I am the identical person named in pension certificate in my possession No. ——, dated — day of ——, 18—, and whose name is inscribed on the rolls of the Knoxville agency at the rate of —— per month, ——.

That I have not been employed or paid in the Army, Navy, or Marine service of the United States from [1] — day of ——, 18—, to the present time, and that my present P. O. address is ——, county of ——, State of ——.

(Two witnesses:)
—— ——.
—— ——.

(Pensioner's signature:) —— ——.

STATE OF ——, *County of* ——, *ss:*

Subscribed and sworn to before me this — day of ——, 18—; and I certify that —— ——, above named, exhibited to me his pension certificate, No. ——, and was fully identified as the pensioner described therein, and that he signed the following duplicate receipts in my presence.

(Magistrate's signature:) —— ——,
(Official character:) ——.

[1] If the first payment, insert the date of the commencement of the pension. If not first payment, the date from which the payment is claimed.

*When there is a change in the rate, either by an increase, reissue, &c., note the former rate at which paid.

$——. [Original.] —— —, 188-.

Received of Henry R. Gibson, United States pension agent at Knoxville, Tenn., —— 100 dollars by check No. ——, dated ——, 18—, being for —— months' and —— days' pension, due me on pension certificate No. ——, from the —— day of ——, 18—, to the —— day of ——, 18—, for which I have signed duplicate receipts.

—— ——.

Witness:
—— ——.

The pensioner will sign these receipts in the presence of the magistrate.

[13031—18,000.]

(A.) Army voucher No. ——.

INVALID.

—— ——, —— —, 188-. $——.

NOTE.—By act of Congress, approved July 8, 1870, these vouchers are furnished free of expense to the pensioner, and all payments of pension are required to be made thereon. One will be forwarded to every pensioner immediately before the 4th day of March, June, September, and December of each year. On or after the 4th day of the months above mentioned, the pensioner, with his pension certificate, will, with two witnesses, go before a magistrate and sign and execute the oaths and sign the receipts. The executed voucher will then be returned by mail to the U. S. pension agent mentioned below, who, upon its receipt, will forward to the sworn address of the pensioner, given within, a check for the full amount of pension due.

Return this voucher for payment to

——,
U. S. Pension Agent, ——.

STATE OF ——, *County of* ——, *ss:*

I, —— ——, clerk of the —— court of the county and State aforesaid, do hereby certify that —— —— is ——, duly commissioned and qualified; that his commission was dated on the — day of ——, 18—, and will expire on the — day of ——, 188-; and that his signature within written is genuine.

Given under my hand and the seal of said court this — day of ——, 188-.

——, *Clerk.*

[3—281.]

B. WIDOW. B.

Be it known, that I, —— ——, do solemnly swear that I am the identical person named in pension certificate in my possession No. ——, dated — day of ——, 18—, and whose name is inscribed on the rolls of the Knoxville agency at the rate of —— dollars per month. That I am the widow of —— ——, who was a ——, and that I have not remarried since his death; that my P. O. address is ——, in the county of ——, State of ——.

(Two witnesses:)
—— ——.
—— ——.

(Pensioner's signature:) —— ——.

Deposition of two witnesses.

We, the undersigned witnesses, do solemnly swear that we are well acquainted with the above-named pensioner; that she is the identical person that she represents herself to be; and that, to our best knowledge and belief, she has not remarried since the death of her late husband, above named; and that our acquaintance with her is such that, if she had resumed marriage relations, the fact would have become known to us.

(If mark is made one witness is sufficient, in addition to magistrate's jurat).
(Witness' signature:) —— ——.
(Witness' signature:) —— ——.

STATE of ——, *county of* ——, *ss.*

Personally appeared before me this — day of ——, 188-, the above witnesses, —— ——, of —— and —— ——, of ——, whom I believe to be credible persons, and the pensioner, —— ——, and made oath in due form of law to the truth of the foregoing statements subscribed by them; and I certify that the aforesaid pensioner exhibited to me her pension certificate, No. ——, and signed the following duplicate receipts in my presence.

(If mark is made one witness is sufficient, in addition to magistrate's jurat.)
(Magistrate's signature:) —— ——.
(Official character:) ——.

$——. [Original.] —— —, 188-.

Received of Henry R. Gibson, United States pension agent at Knoxville, Tenn., —— 100 dollars by check No. ——, dated ——, 188-, being for —— months' and —— days' pension, due me on pension certificate No. ——, from the — day of ——, 188-, to the — day of ——, 188-, for which I have signed duplicate receipts.

(Witness:)
—— ——.

—— ——.

The pensioner will sign these receipts in the presence of the magistrate.

(Post-office address:) ——.

CERTIFICATE OF COURT AS TO DEATH.

STATE OF ——, *County of* ——, *ss:*

I, —— ——, clerk of the —— court in and for the county aforesaid, do hereby certify that satisfactory evidence has been exhibited to said court that —— —— was a pensioner of the United States, residing at ——, in the county of ——, State of ——, and died on the — day of ——, 187-, and that he left (4) ——.

Given under my hand and seal of said court this — day of ——, 187-.

—— ——, *Clerk.*

(1) Insert "widow of" or "guardian of minor children of," &c.
(2) If lost or destroyed, so state, and erase "is herewith surrendered."
(3) When an invalid, insert "that he has not been employed or paid in the Army, Navy, or Marine service of the United States from — day of ——, 18—, to the day of his death." For a widow pensioner, add "that she has not intermarried, but continued the widow of the above-mentioned (husband's name) until her death." If the pensioner was drawing two dollars per month additional for minor children, give the names of those under sixteen years of age who at the date of the last payment were alive. If any one of the children has died or been abandoned since the last payment, add (—— in this space) the name and the date when. For a dependent mother, add "that she has not intermarried since the death of the above-mentioned (son's name), and was dependent on her pension for support until death." For dependent father, add "that he was dependent on his pension for support until his death."
(4) If a widow survives, add "a widow, —— ——, whose genuine signature appears above." If children are claimants, add "no widow, but the following-named children, who were under sixteen years of age at the death of the pensioner (giving names and ages), and of whom —— ——, whose genuine signature appears above, is the legal guardian."

[Voucher No. ——. Original.]

Paid by check No. ——, dated —— —, 187-.

$—. —— —, 187-.

Received of —— ——, United States pension agent at ——, —— 100 dollars, being for —— months' and —— days' pension due on pension certificate of —— ——, deceased, No. ——, from the — day of ——, 187-, to the — day of ——, 187-, for which I have signed duplicate receipts.

(Witness:) —— ——. —— ——.

The claimant will sign these receipts in the presence of the magistrate.

[Voucher No. ——. Duplicate.]

Paid by check No. ——, dated —— —, 187-.

$—. (O) —— —, 187-.

Received of —— ——, United States pension agent at ——, —— 100 dollars, being for —— months' and —— days' pension, due on pension certificate of —— ——, deceased, No. ——, from the — day of ——, 187-, to the — day of ——, 187-, for which I have signed duplicate receipts.

(Witness:) —— ——. —— ——.

STATE OF ——, *County of* ——, *ss:*

I, —— ——, clerk of the —— court of the county and State aforesaid, do hereby certify that —— —— is ——, duly commissioned and qualified; that his commission was dated on the — day of ——, 18—, and will expire on the — day of ——, 18—, and that his signature within written is genuine.

Given under my hand and the seal of said court this — day of ——, 187-.

—— ——, *Clerk.*

(O) No. ——. —— ——, deceased, act of —— —, 187-. $——.

Mr. HOUK. Now, then, examine these vouchers in connection with what I have said as to the machinery and workings of a pension agency, and see the amount of work involved, and then as practical business men decide whether or not 5 cents is a sufficient compensation for making them out. But suppose it was, why reduce the compensation, while the Government gets the benefit of it, unless it amounts to more than enough to defray the expenses of running the offices? These fees are allowed for clerk-hire and office expenses instead of making a direct appropriation for that purpose. This is the mode of paying clerk-hire and office expenses, and is much cheaper to the Government than any other possible system of making payment. All experience proves this to be the wisest and cheapest mode of running the agencies and providing for the payment of the pensioners of the country.

If gentlemen would inform themselves as to the workings and expenses of the pension system and compare the different policies of making payment, they would learn that the present system is the cheapest and most expeditious of any that has yet been proposed for adoption.

And this bill is objectionable in almost every line. I do not wish to be offensive to any one, and certainly not to the members of the Appropriations Committee, whose wisdom conceived and genius brought forth the remarkable bill under consideration; but justice and candor require that every friend of the soldier, and particularly every friend of the pensioner, should pronounce this bill a legislative monstrosity. It is bold in its assumptions and monstrous in its application and force; and yet it is covert in its designs, though none the less mischievous in purpose. It ought not to pass.

And while I am neither a prophet nor an alarmist, I beg leave to place the prediction on record that whoever shall vote to pass this bill in its present shape will by that vote put himself in direct opposition to the soldier element of the country, and that element will accept the issue thus tendered, and sooner or later punish those who thus trifle with their interests. This should have been called an anti-pension-appropriation bill, for I think I will be able to show that it is the first step in the direction of undermining and destroying the whole fabric of our liberal, enlightened, and humane pension system. First of all, it is a stingy bill. It is niggardly in its provisions. It does not appropriate enough money to pay the pensioners. The amount it grants is for less than the sum which will be required for this purpose during the next fiscal year, and much less than asked for by the Department.

But I leave this obnoxious feature of omission to the criticism of others more capable than myself. And now I propose to examine some of the positive enactments of this bill. The new legislation ingrafted upon it is neither germane nor in the line of economy, and will, I take it, be ruled out on a point of order, which of course will be made. To adopt the latter portion of section 1 of the bill, commencing at line 23, on page 2, and including line 39, on page 3, will virtually stop the whole machinery of the pension offices of the country and leave this branch of the public service entirely inadequate to meet the ends for which it was established. The fees and other allowances under the law as it exists are barely sufficient to defray the necessary expenses of paying the pensioners. And yet this bill proposes to take from the pension agents two-thirds of the amount now allowed by law for clerk-hire and other office expenses, thus in effect abolishing the pension agencies, or, to say the least, destroying their effectiveness. Whereas the pension agents are now paid $15 a hundred for the preparation of vouchers, it is here proposed by this bill to cut this rate of compensation down to $5 per hundred for the preparation of these vouchers.

To do this, I say again, will be equivalent to closing up at least some of the agencies. Take the agency at Knoxville, Tenn., my own home, and of which I know more than of other agencies. To reduce the fees as proposed by this bill will be to wipe out that agency. Under the present law, the agent receiving 15 cents apiece or $15 per hundred for vouchers, the agent is barely able to run the office. Let me give you some facts and figures in regard to this matter. There is not a more competent business man in the public service than this pension agent. And to show you that he is economical in his management of the office I will state that he employs nine regular clerks, who work from 7 o'clock in the morning to 5 in the afternoon, and their salaries, as will be seen, range from $50 up to $110 per month. So it is seen that the salaries paid are small and the time devoted to labor in the office much greater than the usual time employés of the Government devote to their duties.

But let me give the organization of this office, the money now allowed with which to run it, and the actual expenses incurred and paid. As already stated, the regular force of this office consists of—

Nine clerks: one at $110, one at $100, one at $75, three at $60, and three at $50 each per month, making the monthly clerk-hire $615, and for three months	$1,845
Extra clerk-hire during the three months	80
Printing 16,000 vouchers during the three months	24
Printing 20,000 envelopes for this three months	52
Printing two thousand white envelopes for the same time	15
Two thousand letter-heads for the three months	20
One thousand indorsement slips, same period	5
One thousand blotting-pads for same time	5
Three hundred lost-check directions, same period	6
Four hundred guardian directions	4
Two thousand directions for executing vouchers	8
One thousand two hundred error slips to call attention to errors in vouchers returned	6
Binding five volumes of extracts for Third Auditor	3
Binding two volumes of abstracts for agency, extra-good	2
Eight hundred postal cards, printed	4
Six bottles of ink, six quarts	4
One bottle of ink for copying	1
Two bottles of red ink	1
Four gross of rubber bands	4
Five gross of pens	4
Four hundred sheets of linen paper for copying abstracts	4
Rent of post-office drawer	2
Two spools of tape, use of rubber types, Postal Guides, large copying-press, mucilage, inkstand, figuring paper—items making	14
Total expenses for three months	2,112
Pension agents' salary for three months	1,000
Fees for making vouchers, at 5 cents each	695
Total allowance, including salary and fees	1,695

Subtract this sum which goes into the hands of the agent from the amount he pays out for expenses, thus:

Expense account	$2,112
Allowances to the agent	1,695
This leaves a balance against the agent of	417

every three months, after exhausting the fees which accrue from making the vouchers (now paid for at 15 cents a piece, but proposed to be cut down by this bill to 5 cents each), and likewise every cent of his salary.

These figures are official and accurate. They are based upon statistics taken from the record as made to the Pension Office under oath by a faithful and competent officer. And I wish to emphasize the folly and practical effect of this bill by impressing the fact upon this House that to pass this measure at once vacates and wipes out this agency which pays the pensioners of ten States of the Union. The figures which I have given show that to reduce the fees as proposed by this bill will leave the pension agent $417 worse than nothing at the end of every three months, or making him hold the office at an annual loss of $1,668. Fortunately the bill does not propose to compel any one to hold the office of pension agent, nor is it made a felony for those now in office to resign, and if the distinguished Committee on Appropriations should amend this bill so as to compel men to serve and make good this deficit, which I have shown will certainly exist, I shall then want the writ of habeas corpus enlarged so as to release them from this service and loss. If this bill passes the President will have no scrambling before him for appointment, but he may have to call on Congress and upon the Committee on Appropriations to devise a bill for a law to enable him to conscript pension agents and compel them to serve.

Let me here show the income and outgo of the pension agent at the Knoxville (Tenn.) agency under the present law giving $15 per hundred for vouchers: Total income for three months, $3,086; total expense for three months, $2,112. This leaves the net income of $974 as the quarterly payment of the agent. The statute fixes the agent's salary at $4,000 per annum, but even under the present law, by which he gets $15 a hundred for preparing vouchers, the agent at Knoxville, Tenn., only receives, after paying the expenses of the office, the sum of $3,896, which is $204 less than the amount given him by the law as it stands. In order to enforce the absurdities and hardships of this bill, I ask the attention of members to a restatement of the effect it will have if it shall become a law. Remember, under the present law the Southern agent will and does receive the sum of $3,896 as an annual salary. By crippling the efficiency of his office he could make his salary the full $4,000, for the law authorizes him to draw and keep that sum as his yearly salary. But he prefers to apply even a portion of his own money to the payment of office expenses rather than have an inefficient clerical force, and thus fail to meet the wants and expectations of the pensioners of the country.

But to pass this bill you take from him every cent of his compensation and force him to furnish $417 every three months, or, in other words, to pay an annual sum of $1,668 for the honor or the fun of holding the office. This bill forces an individual to pay the expenses of transacting the Government's business and to throw in his own services for nothing. Need I comment further on the absurdity of this feature of this unique bill? I think not.

This bill also proposes to reduce the number of agents after the 1st of July next from eighteen, as now, to twelve, and makes it the duty of the President to consolidate the agencies, and thus reduce the number of agents to twelve. This is the first step in the direction of abolishing the present system of paying pensions through pension agents and agencies.

The Appropriations Committee, at least that portion of it reporting this bill and advocating this new legislation, really desire the abolition of the present system of making payments through agencies, and would have readily reported a bill for that purpose if they had believed it could be passed. Feeling that they could not abolish the agency system, they have resorted to the next best thing as leading, looking, and pointing to the final accomplishment of their purpose. This is the entering-wedge by which they hope to finally succeed in destroying the present agency system; and it would be perfectly legitimate to pause here and show the inconvenience, danger of loss to the Government, and additional cost of paying the pensioners from Washington; but I will barely call attention to the fact, and turn to other features of this anti-pension and anti-soldier bill. But I will add that the fewer the agents the greater the chances of fraud and loss to the Government.

For instance, it is a statistical fact that the great majority of frauds are committed in the localities most distant and remote from the place of payment. It is well known that obedience to law is more universal in those localities where the presence of the Government is seen and felt. Thus it transpires that where the officers of the Government are in the midst of the people, near to and overlooking them, the people are less inclined to commit wrongs, and the officers more likely to detect the wrong if it was attempted. And while the present system of paying pensions through bonded agents secures the Government against fraud, mistake, and overpayments, to abolish the agency plan of payment and pay the pensioners from Washington the Government would lose from all these sources.

Another and still more serious objection to the reduction of the number of pension agents is the inconvenience and delay it will occasion in making payment to the pensioners. With the number of agents which are now scattered over the country situated in convenient localities, through the aid of our improved mail facilities the pensioners are rapidly paid, and usually receive their money from one to fifteen days after it is due. Of course, the fewer agents there are the farther they will be stationed from the pensioner, and the more distant the pensioner may be from the agency the more delay and trouble in paying him. It does not require elaboration to enforce this proposition. It is self-evident on the mere statement.

But the most objectionable portion of this bill is found in the second section, where it as loudly and emphatically pronounces the pensioners and claimants for pension "fools," "idiots," and "imbeciles" as if it said so in express language.

The greatest mistake Congress ever made in its legislation in regard to the rights and interests of the soldier element of the country was when it assumed their incapacity to take care of themselves, and sought to make the United States their guardian, by providing just how much they should give and what sort of a contract they should make with their attorneys. These men were free agents when they enlisted. They were free when fighting the battles of the country and incurring the disabilities for which they are now seeking pensions. They at least thought they were free, except in so far as military discipline required obedience in the prosecution of their military duties. They could do as they pleased with the money they received in payment for their services. They could buy and sell. They could give or take. They could convey property, make bequests, and receive in return. And they are recognized as freemen now in all transactions, except where the Government has given them the small reward of a pension, and this bill proposes to carry this guardianship a step further and apply it in all cases of bounty, back-pay, and claims for horses lost in the service. Of course I am now making reference to that provision which limits the attorney's fee in pension and these other cases to $10 and makes it unlawful for him to be paid any greater compensation, regardless of the character of the case.

We may all have our opinion of the claim agents. Much can be truthfully said against them, or at least against a portion of them. But it will be found that this question of limiting attorneys' fees to $10 has at least two sides to it, so far as the rights and interests of the soldier are concerned. That is, it has two sides provided there is any substantial reason on which to base this limitation law with respect to fees, for there are certainly many reasons against it.

If it is a one-sided question at all, it is on the side permitting the pensioner to employ whom he will and contract in his own discretion to such an amount as will secure the services of an attorney competent to prosecute his claim.

Now, what has been the effect of this ten-dollar limitation of fees in

pension cases? There is not a member of this body who does not well know that the great majority of these cases involve such an amount of work that no competent attorney can afford to do it for the sum of $10. And still, under the pretense of friendship for the pensioner, these same members of Congress sit here and vote to limit the attorney's fee to $10 when they know it embarrasses the prosecution of the claim and in many instances actually involves its final rejection. This is humbug legislation. It is the product of demagogy. And the result of it is that nearly all the capable and honest attorneys have been driven out of this kind of practice. Why, sir, in my own section I have seen the evil effects of this law, and it is my observation and experience that this limitation has caused the dishonest and incompetent attorneys to reap a perfect feast of fees, for the reason that the honest and capable attorneys of the country absolutely refuse to continue in the practice of prosecuting this kind of business. There is not a member of this body who has a soldier constituency and who has taken an interest in the procurement of pensions who does not know full well that the greatest difficulty in the way of obtaining pensions is the informal, or, to put it plainer and stronger, the imperfect and improper manner in which the papers are prepared.

My own experience is that a very large proportion of the pension cases which are rejected would be allowed if prepared by a competent attorney. But competent and honest attorneys will not take these cases for a ten-dollar fee. I have used the words "honest" and "competent" in conjunction, because there are but few "honest" attorneys who are "competent" who can be induced to take these cases and prepare them for $10. But the "dishonest" attorney will take them for that sum, provided he can collect it, and never give the claim any further attention. And so will parties who are "incompetent," and yet "honest," plunge into these cases and prepare them with zeal and lose them with alacrity.

I know that much can be said as to the way Washington and other claim attorneys have acted and would act again if the opportunity was given them. But let me say to gentlemen that, like all other men engaged in wrongful pursuits, the claim agents have run their course, and it will be an utterly impossible matter for them to ever regain the confidence of the people. Originally they found it easy to impose on the soldier; but now the country is educated up to understand their "ways that are dark," and hereafter their "tricks" will be "vain." They can never ingraft themselves back into the confidence of the public. Their fraudulent circulars will no more deceive the "unsuspecting" soldiers, because there are no longer any of this class. They are changed into a class of "suspecting" characters.

But the limitation law has forced the soldier into an undesirable and in fact helpless and pitiable condition. He has learned that there are but few reliable attorneys in Washington who will take his case for the legal fee, and yet he can not find such a one where he resides and he is forced to run the risk of selecting one in Washington who is dishonest or taking one at home whom he knows to be incompetent. What the soldier needs is not the protection of a guardian statute but competent help in the prosecution of his claim. And in order to give this aid to the soldiers of the country several things are demanded. If, instead of undertaking to forbid the pensioner by law from employing dishonest attorneys, the law would forbid the dishonest attorneys from practicing, the rights of all would be more secure. Instead of limiting and prescribing inadequate compensation to attorneys, and thus offering a premium for dishonesty, the law should erect a standard of qualifications for claim attorneys which would command men of character who would be stimulated by professional pride as well as honesty of purpose, and then the claim business would be conducted upon such a plan that dishonesty would be comparatively unknown among this class as well as other attorneys.

In conclusion I want to say that it may be that gentlemen are right in urging this extreme legislation in regard to pension matters; but, I believe they are wrong; and I will risk saying that they may think they reflect the sentiment of the soldier and are doing the soldiers a service, but they are sure to learn to the contrary. The soldiers are not all, nor any considerable portion of them, fools; they are not idiots, nor are they imbeciles. They have a keen sense of their rights, and do not thank either pretended or real friends for taking an interest in them because of their supposed incapacity to take care of themselves. They can penetrate the gauze of an assumed friendship. And I will suggest that they will not be deceived by the pretension of words when actions in the character of legislation are telling them in thunder-tones that their real interests are being sacrificed on the altar of selfishness by a false use of sentiment. I warn the pensioner to beware of those who so zealously proclaim their interests but clog their rights.

The idea of prescribing one fee, and that limited to $10, without regard to the amount of labor to be performed, is a self-evident absurdity. We all know that in pension cases, like in all other legal proceedings, they each rest on a wholly different state of facts, one case often involving great labor and much trouble, while another involves but little labor and scarcely any trouble. For instance, one soldier has a full military and hospital record, and his claim for pension is easily made out, because very nearly every item of proof is a matter of record; while another soldier may have no military record beyond enlistment and muster; he may have no hospital record, and his surgeon may be dead, or post-office address unknown, and his claim for pension may have to be made out entirely by proof not of record. In one case the soldier's officers, including his regimental surgeon, are living and of easy access; in another case the soldier's officers are all dead or their whereabouts unknown. In one case the company and regimental books and records were well kept, while in another things went "slip-shod," and drifted along at "odds and ends," in looseness and without order. Now, anybody knows that pensioners of the one of these classes have much less trouble in prosecuting their claims than pensioners belonging to the other class; and yet the existing and proposed law fixes the attorney's fee alike and at the same amount in each class of cases.

The right thing to do is to recognize the soldier as capable of taking care of himself and protecting his rights in making contracts with his attorney. The Government does not pretend to guard the pensioners' money as against anybody but his attorney, and the attorney is repelled to find him falling into the hands of some more desperate character.

Let the pensioner know that he is expected to guard his own interests, and my word for it the great majority of them will demonstrate their capacity for self-protection. I have made this plea in behalf of the freedom of the pensioner. I do not believe they will need guardians. If any one class of people should have more freedom than another it should be the ex-Federal soldier, and still he is the only class whose liberty to contract with reference to his rights is abridged. Give him the same freedom you do other citizens and let him take care of himself like other people, and my word for it he will be satisfied.

If the soldier is content who has any right to complain? Certainly not the politician. And the soldiers of the country will yet make it a condition precedent to giving any candidate their votes for Congress, that he shall promise if elected he will not vote to embarrass their rights. Just think of the idea of Congressmen sitting here voting that the average pensioner is incapable of knowing his rights, of knowing right from wrong, when the intelligence of the average pensioner qualifies him to make more than an average Congressman. I protest against this sentimental nonsense and demand the same right of judgment for the pensioner that the Congressman reserves to himself. I demand freedom of action and equality of privileges for the ex-Federal soldiers of the country.

Pensions.

SPEECH

OF

HON. FRANCIS B. BREWER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES.

Monday, April 21, 1884,

On the bill (H. R. 6535) to regulate the granting of pensions in certain cases.

Mr. BREWER, of New York, said:

Mr. SPEAKER: In the limited time allowed the members of the committee to speak on the bill now before the House it will hardly be expected we can do more than hastily and briefly call attention to some of the reasons which have decided the Committee on Payment of Pensions, Bounty, and Back Pay to ask a suspension of the rules this morning.

And now we desire to put upon its passage this very important bill which has just been read. It will bring relief to thousands of worthy soldiers who, as yet, have been unable to establish their claims, because they could not obtain the requisite proofs in accordance with the existing laws. Now, sir, it is twenty years since most of the soldiers received their disabilities. Most of them kept no memoranda of the daily occurrences, can hardly give a correct account of the times and places where they were exposed to danger or disease, the names of the hospitals even where they were temporarily placed; the names of the surgeon and the nurse have gone from them; their commissioned officers may be dead, or not to be found.

It has been necessary heretofore to prove that the applicant was healthy and free from disease when he enlisted. Some have no hospital record, preferring to remain with their regiment to being confined in the sickly wards of a malarious hospital. Perhaps in the early years after the war these restrictions were necessary and proper, and the class who could procure this evidence are now receiving their pensions, but we are told there are 185,000 claims still back, awaiting evidence which the claimant is unable to obtain, and the bill we present for your action this morning is framed to cure these evils, as far as they can be cured, and give to these men their just dues.

We provide for no new classes. We have tried to so modify the rules of evidence as to give all deserving disabled soldiers, who have seen actual service, a chance. So that cases of disability, where it is reasonable to suppose the disability was incurred in the service, and is not the

result of bad or vicious habits, or other known cause since the war, are under this act entitled to a pension. This seems to be right and just and safe. Of course, there are many things left out of this bill which the committee would gladly have put in; but inasmuch as they are incorporated in other bills which will be called up later in the session, it was deemed advisable to bring measures which would do the most good into as small a compass as possible, and take this occasion and this method to at once get the action of the House.

We have had the advice and counsel of the honorable Commissioner of Pensions, who has given us his time. We have availed ourselves of his experience and have his hearty co-operation and indorsement, and after the clear and eloquent presentation of the subject which has been made to you by my colleague on the committee, the gentleman from Ohio, I hope and expect to have a large vote recorded in favor of the immediate passage of the bill. If this bill becomes a law by the early action of the Senate, it will almost immediately carry relief to thousands of deserving soldiers now in abject want and distress, unable to procure their pensions on account of legal technicalities which by the provisions of this act are wiped out. Think of the boon it must be to the long-suffering soldier and sailor who has waited long and is waiting still for the Government to recognize his claims.

How long, Mr. Speaker, can we afford to turn our eyes away from the outstretched hands of the disabled and distressed soldier? How long shall we turn our ears away from the cry of the once gallant and brave but now broken-down and diseased sailor, when from the depths of their disappointments, their bitterness, and their withered hopes they cry out for the pittance which the nation has promised them and for the relief which the Government owes them? In the dark days of the war, when at times it seemed uncertain whether the Stars and Stripes or the Stars and Bars should float over this Capitol, whether we should continue to be a nation or not, we were profuse in our promises of golden bounties and of liberal pensions to those who enlisted. Shall we go back on our part of the contract when they executed their part at such fearful expense, such terrible sacrifices? They stood a living wall on a thousand battlefields to secure to us and to our children what we enjoy to-day. Can we as citizens, as patriots, as Christians, as legislators withhold a moment longer the requisite legislation which shall relieve their distress and the distress of their wives and their children? Better far to close up the doors to our halls of legislation and leave the walls of this Capitol to molder and crumble back to its original dust than to break faith with our soldiers and refuse the relief to which they are so justly entitled.

When the swelling floods of the Ohio carried upon its turbid waters widespread desolation and calamity to the inhabitants who dwelt along its borders; when want and distress came upon the people who occupy the broad savannas of Mississippi and Louisiana, did they make their appeal in vain? Did not this House and the Senate and the Executive vie with each other to hasten the work of relief? Did we hesitate to thrust back the bolts of the locks, and open wide the doors of the Treasury, and dispatch, with telegraphic speed, succor to those ready to perish? And shall we now, because it is an oft-told tale, and because it is the old, old story, refuse to heed the cry of the soldier and shut up our vaults and push home the bolts of our overflowing Treasury, when distress and the cold hand of penury is upon them?

One hundred and eighty thousand soldiers, their wives and children, stand with hands outstretched toward this Capitol to-day, and ask you to pass this bill. They ask not for your sympathy and good talk; they want what they have a right to demand—justice. Shall they have it? They ask us to fulfill our promises. Shall we do it? And every day we delay there goes up to Heaven the cry from this long-suffering, wounded, and distressed multitude, "How long, oh Lord, how long?" And to many of the disabled sufferers the pendulum of the old clock of Time has ticked out their answer; as it swung backward and forward it said, "Forever, forever!" Too true! To many who looked for the promised relief it will come too late. They will have died without the sight.

How long shall we sit here and haggle over whisky bills and over public-building and tariff and internal-revenue bills, and leave these men and their families to perish? Hundreds are in poor-houses—to the disgrace of the nation I say it—and hundreds more are on their way thither. Let us make no longer delay.

How enthusiastically we cheered the boys when they came forward and enlisted and filled up the ranks, and the regiments started for the front! How we presented them with flags, and how we presented the officers with swords, and bid them Godspeed! Have we displayed the same eagerness at their return, and been careful that they were made comfortable in sickness and the wolf kept from their door?

How the mother in her loyalty gave her son! How the wife in unselfish and patriotic love for her country could say to her husband, "Go!"

> Take your gun and go, John,
> Take your gun and go;
> Rose can drive the oxen, John,
> An' I can use the hoe.

They left their teams in the field, their plows in the furrow, their ax at the root of the tree, and buckled on the armor of battle. In the storms of winter, in the stifling heat of summer, in the battle of the wilderness, in the malarial swamps of Carolina, in the rifle-pits, in the trenches, on picket, in the fever-infected hospital, in the inhuman, insufferable, and infernal prisons of the South—in all these places our brave soldiers stood up like men and did their duty like soldiers. The sun by day shone upon the heaps of the dead slain in battle, and at night the pale moon shone down upon the new-made graves of those carried off by pestilence and disease. Worn and weary, and disheartened they sank into their graves believing that the nation would not forget their brave deeds or hesitate to take care of their widows and children.

Can any man on the floor of this House mistake the duty of the hour? I trust this bill may receive not merely a two-thirds, but the unanimous vote of the members present. Need I say more? The wants and the necessities of the soldier are well known, and I appeal to the gentlemen of this Congress to take such immediate action as will afford them the quickest and most effectual relief.

Bureau of Labor Statistics.

SPEECH

OF

HON. RICHARD GUENTHER,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 19, 1884,

On the bill (H. R. 1340) to establish and maintain a bureau of labor statistics.

Mr. GUENTHER said:

MR. CHAIRMAN: I consider the bill under consideration a step in the right direction. The statistics to be gathered by a bureau of labor will greatly aid the legislator in this country in framing wise and proper laws for the benefit of those of our citizens who earn their daily bread by manual labor. It is the duty of the lawmakers to legislate in their favor; it is our duty to do everything in our power to better their condition, to promote their financial, social, and general welfare. Too little has heretofore been done for them, practically at least. While it is true that almost every legislative measure for the benefit of the capitalist has been paraded before the country as being solely in the interest of the laboring man and "for his higher glory," it is also true that not only its result but its object has been to protect capital.

Under the guise of protection to labor the capitalist has secured all he wanted; the workingman has formed the bridge over which cunning capital has reached the shore of wealth and abundance. I have always voted, Mr. Chairman, for every measure which I thought would benefit the working classes, and I will continue to do so whenever I will have the opportunity. I voted in the Forty-seventh Congress to exclude Chinese laborers from our shores, because I am opposed to allowing any class of people to come here and underbid American labor or force the laboring man of this country down to the low plane of these Mongolians. My vote shall only be cast in the direction of elevating the condition of our workingmen, and for that reason I will oppose the introduction of all people under the contract system, be they Caucasians or Mongolians. I do not propose to allow even a semblance of human slavery in our midst. I want to make manual labor more and more respected, not the reverse.

Last summer, Mr. Chairman, I visited Europe, and when I saw how the laborer is treated there I understood why it was that almost every European country is in a state of continuous fermentation, ready to explode at almost any time. That lesson ought to be a warning to us not to fall into the same gross error and to disregard those who labor. There is already too much of that even. The sons of the well-to-do farmer feel ashamed to follow the respectable calling of their father because they have to perform manual labor; the son of the prosperous, honest mechanic wants to become, as he foolishly says, something better. They want to be "gentlemen," as they call it; they enter a dry-goods store, a lawyer's or doctor's office, and end their career usually as lightning-rod peddlers or book agents.

Mr. Chairman, one need not be a profound statesman to conceive that the perpetuity of our free institutions depends upon the prosperity of our working classes—the farmers, the mechanic, the laborer, and that it is not only right, but wise and politic to do everything reasonable for their advancement. We must make manual labor respected. We must see to it that it is well paid; we must devote a fair share of our time to the consideration of measures affecting the vital interests of the laborer. When you protect labor, when you make it remunerative and prosperous, capital will be correspondingly benefited. Make capital dependent upon labor by legislating primarily in the interest of the workingman, and capital will be more secure than by pursuing the opposite policy. I hope that every bill reported by the Committee on Labor will be considered and passed by this House. Let us pass laws

which will enable the workingman to provide properly for his family, so that his children can enjoy the blessings of a pleasant home and a good common-school education, and not be obliged to work to earn money to help support the family while they should be in school.

Let us do everything we can to lift the laboring man to a plane of prosperity and contentment, and the result will be the perpetuity of a happy, peaceful, and prosperous nation.

Chinese Immigration.

SPEECH

OF

HON. CHARLES A. SUMNER,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 3, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 1798) to amend an act entitled "An act to execute certain treaty stipulations relating to Chinese," approved May 6, 1882—

Mr. SUMNER, of California, said:

Mr. CHAIRMAN: What is the object of this bill? It is a proposition to amend; it is entirely so in form, and it can not be said to have more than two provisions that are supplementary in their character. It is to make more nearly perfect that which Congress has already placed upon the statute-book. It is born of observation and experience.

For the most part it has its text precisely indicated by the decisions of courts, and by exigencies that have arisen since the passage of the original law on the subject; so that its foundation is upon past and approved legislation; its additional clauses come according to the natural order of trial and test and demand. By every relevant consideration it is here legitimately; on a basis to invite eager and careful attention and to command respect.

With what grace or propriety is this measure assailed as one exhibiting effrontery on the part of its introducers? Under the circumstances, in the course of events, some such bill was to be looked for, as the result of an active and faithful effort to administer the Chinese treaty law of 1882.

This being an amendatory bill, and the original act having been passed at so recent a date and after full and searching discussion, it was to be expected that debate upon it would be confined with some degree of strictness to the words of amendment. Certainly that was the reasonable expectation, in view of the history of Congressional action in the premises and having regard to the dignity and ability of the gentlemen who were announced as spokesmen for the opposition. At least that was my understanding and anticipation. Instead of this, most of the speech from the other side, so far, is a revival in some sort of the long-ago stereotyped tirade—sneering and scolding and denouncing—against the people of the Pacific coast, because of their temerity in petitioning for, and through their Representatives urging the passage of, such sections as are now before us. There has been a high pitch of voice in aspersing our community character, and in sweeping criticisms of our alleged conduct with respect to the Chinese race. And then the action of our Pacific coast delegations has been referred to in such a manner as would lead a stranger to believe or suspect that the council here which first considered this measure, in December last, was composed of superannuated old men and feeble-minded youths.

Such terms as "petty" and "puerile," "frivolous" and "contemptible," "absurd" and "ridiculous" are unhesitatingly employed by the distinguished gentleman from Massachusetts [Mr. RICE], who has not the excuse of precipitancy for his harsh words or his sarcastic suggestions. The honorable gentleman from my native State, who leads off in the championship of Mongolian immigration to-day, has had many weeks in which to prepare for this contest, and he has been supplied—as I have been authoritatively informed—with all the ammunition which the ability and cunning of the Chinese consulate in San Francisco could give him. Yet in his derisive passages we find this gentleman on this occasion at his best. Must it not be a sorry cause that has such speech at such a time from such a man?

All this is to be regretted. We wished to meet pertinent and skillful comment and analysis. We are by no means averse to amending the amendments, if good cause can be shown by any person for such action on the part of this House; but for the general integrity of the propositions here submitted, as amendatory, we stand ready to explain and answer and aggressively advocate. For the credit of the opposition, insignificant in numbers as it is, it could on all accounts have been desired that more strength had been developed. There is not much of an enemy in sight; and what there is of a foe appears to be equipped with stale cartridges of powder and wadding. It is almost tormenting, it is vexatious, to brace one's self for an actual encounter, and then find yourself face to face with an opponent who devotes himself principally to calling you and your people bad names, and repeating the erroneous assumptions and the ancient exploded arguments, so called, against the original "cause of war,"—assumptions and arguments that have been repeatedly met and overthrown in discussion in this Hall and largely in this very presence. But the situation is as it is; and so far as absolute necessity is concerned we might believe that we have the comparatively slight duty of recalling the minds of the members to the plan of this measure—taking our turns as Representatives in our limited time, in selecting sections or lines for special reference and commendation, and urging a speedy conclusion to the whole matter by a vote of the House.

What was the aim of the bill of which this is amendatory? To keep the Chinese out of this country. There was no disguise about that; no lack of definite particularity in announcing the purpose. It was not to persecute, but to prohibit the incoming of a race. We may forget if we like, and without loss to this advocacy, that California and Nevada are upon the record with an almost unanimous vote for the enactment of such a bill. Congress has upon principle granted the prayer, and the President, after the amplest opportunity for deliberation and reconsideration, signed the bill. The original law has been in existence since 1882, and the question is, Are these new provisions or is this new phraseology desirable and wise? Are these amendments the just product of reflection upon the practical operation of the law that the Forty-seventh Congress framed and the present Chief Executive approved?

This bill provides that it shall not be lawful for any Chinese laborer to come "from any foreign port or place;" it provides for the punishment by fine and imprisonment of any master of any vessel who shall "attempt to land or permit to be landed" any Chinese laborer; and it explicitly provides that Chinese laborers bound to ports not within the jurisdiction of the United States, meeting with tempestuous weather while off our borders, "shall not be permitted to land except in case of absolute necessity," and must depart with the vessel in which they came on its leaving port. There is a provision in the fourth section for a more thorough and complete registry; therein supplying a deficiency in the present statute to which attention has been called by every person who has officially observed the progress of trials arising under the act; and in a later section there is an explanation as to the meaning intended to be given to the word merchant—an amendment framed by my colleague, Mr. GLASCOCK—a construction by legislation appropriately offered to meet and cancel or cover the interpretation of a court that has had and will continue to have to do with the enforcement of this measure.

Now, to all these proposed amendments inclosed in the clauses quoted, with a single exception—to which reference is about to be made—we have had no serious objection worthy of extended consideration or reply; hardly any direct objection at all, save that which exists in general declamation, and in such pointless assertions as that these clauses are more stringent in their single or combined effect than the passport systems of any monarchical nation. Why, Mr. Chairman, who is it that talks in this relation about the "petty" and the "puerile" and the "frivolous?" This is no time or place to bandy epithets; and it would very ill become us who are so assuredly in the right to condescend to anything of that kind for one moment. But in searching for something to which we can make reply, we have continually to mourn the weakness of our adversary. According to the report of this debate, does not the treasury of the adjectives tossed against us belong rather to the private work of self-introspection than to utterance against fellow-members upon this floor who favor the passage of this bill? To the discriminating reader let the record answer.

But with respect to the provision that no Chinese laborer shall come here from "any foreign port or place," in connection with the provision in the fifteenth section—"that the provisions of this act shall apply to all subjects of China, and Chinese whether subjects of China or any other foreign power"—it is said that there is danger or threat of war! "England will not tolerate that." Why not? Is not the honorable gentleman from Massachusetts, by his very positive language on this point, apparently undertaking or assuming the rôle of prime minister to her majesty Queen Victoria? Will England ever put herself in the position of forcing or attempting to force Chinese slavery into this country? For that is the proposition, neither more nor less. Where again, we might venture to inquire, is the "absurd" and the "ridiculous?" As England dealt with one of our American colonies of old—thrusting negro slavery upon it against the almost unanimous protest of the people inhabiting the land she thus afflicted—will she endeavor to do in this day and generation, as against the American nation with its 55,000,000 of inhabitants? Such would be the position and the action or effort of Great Britain in the event supposed and even conditionally prophesied by the honorable gentleman from Massachusetts.

This is not the case of a single Chinese subject of Great Britain, engaged in mercantile pursuits or possessing or seeking professional attainments. It is the "Chinese laborer." And reference is undoubtedly made, and intended to be understood as made, to the exportation or the importation from an island on the Chinese coast over which there is a nominal or, if you please, an actual English protectorate or jurisdiction. "Sufficient unto the day is the evil thereof." I will not think

so poorly—I had almost said absurdly—of the English Government as to believe for one moment that she will even intimate a design or a desire to attempt anything of the kind. I think I appreciate and understand her proverbially jealous care of the rights of her subjects in foreign lands; but the apprehension does not apply to any case that is altogether supposable in the light of history and existing facts. England never will place herself in the position which the gentleman would have us believe she is likely to assume; for, leaving entirely out of consideration the weight of her own colonial record, which has already been cited, as rising against her in such an event, the moral sense of her people would not permit the declaration that the gentleman affects to dread. For there is always a moral sentiment—which is sometimes called public opinion—which does largely exist and control in Great Britain—(in this respect, by the way, presenting a lamentable contrast to our nation, which often has no public opinion on important questions, consisting in or founded upon the moral sense of the whole people; owing to the fact of the monopoly of the Western Union Telegraph Company and its Associated Press).

Mr. Chairman, we have no hint, after much and sufficient test in this direction, that either Great Britain or any other civilized power will ever come to such a rescue as has been imagined in behalf of schemes to transplant the Mongolian serfs. It is unnecessary, it would not be appropriate, to suggest here that England or any other nation would do such a thing at peril! There is no likelihood of such a thing, and I had almost let slip again the suggestion that such a bugaboo is "petty" and "puerile" and "frivolous."

This bill does provide that no Chinese laborer shall come to this country from "any" foreign port or place, except as herein provided. And we insist that that is a good provision under the arguments that have been repeated over and over again, here and elsewhere, in support of the law of which this is amendatory.

But the portion of this bill to which I especially wish to call attention is to be found in section 12. It is the provision at the conclusion of that section: that all peace-officers of the several States and Territories of the United States are invested with the same authority as a marshal or deputy marshal of the United States in reference to the carrying out of the provisions of this act, and shall be entitled to like compensation, to be audited by the same officers. This is a clause which constituted the main portion of the bill which I brought with me to this Congress, and which I drafted nearly two years ago, and read to my constituents in most of the counties of California during the summer and autumn of 1882. I promised that I would introduce that bill into this body and urge its passage. Here it is, in substance as I prepared it, though I think the phraseology has in one or two lines been changed without improvement. The substance is here. I have always regarded this as the most important amendment, in view of the threatened incursion—I should now say the actual incoming of—the Chinese over our northern boundaries from British Columbia. Subsequent to my presentation of this proposed amendment, the attention of one Department of the Government was drawn to the matter, and some formal communications on the subject have been published as a result of that notice. My honored colleague, Mr. BUDD, who drew most of the other amendments that are here proposed—all the other amendments except one, I believe—will probably give this House some detail of description in reference to the creeping in of these cunning peons from the British Territory.

If I was scanning the horizon for a speck of war, in connection with this subject, I should rather (sooner than take the fright of the gentleman from Massachusetts) consider the possible foolish temerity of the Chinese themselves—on which I once before gave a passing hint—or a protest originating with our own Government against collusion on the part of local British authorities in a scheme to smuggle companies or squads of Mongolians into our borders.

The delegations from the Pacific coast, having been called together at the suggestion of one of the Senators from California, agreed to frame a bill that should embrace all matters of amendment in favor of which we could harmonize; and to those delegations I submitted this proposition, as it is to be found, in effect, on page 10 of this number.

At the time when I was speaking to my people on this subject, it was rumored that there were about to be discharged from the construction works of the Canadian Railway not less than 15,000 Chinese; a report which I believe has since been confirmed by persons who have had occasion to make an estimate as to the force employed for such service in British Colombia. So it was that I was led to emphasize my pledge, and that it acquired great importance among the few who at first regarded it with indifference, as many thousands of my listeners during the campaign of 1882 will well remember.

The propriety of this amendment, considered on general principles, seems to me so obvious that I shall not speak upon that question, but rather briefly direct your attention to the merits of efficiency and economy which I have claimed that it possesses.

The local peace officers, well acquainted with their respective districts, constantly "on guard," stimulated by every motive of public and personal interest, are in the very nature of the case the best adapted for the service required. And here is not a section authorizing the employment of a corps or line of extra United States deputy marshals, at a great or considerable expense to our Government, but a provision for attention and action as needed, and payment only for the particular official labor undertaken and performed.

But it has been said that humanity revolts against this species of law!

Mr. Chairman, it might be asserted, and with unction, that we appear here as the real "humanitarians"—in the secularized sense of that word—against a hostile camp. "Humanitarianism" for us, for our people, especially for our laboring classes: to defend our fellow-citizens and ourselves against the incursions of an inferior race, whose members with few exceptions have proved to be incorrigible in their heathenism; devoted to their idolatry with a stolid bigotry that is even amazing; whose civilization, if you will persist in calling it such, is in conflict with all our ideas of acquiring and maintaining the comforts and conveniences, not to speak of the refinements, of our civilized life. And right here I might say, in opposition to their continued coming—since the broad question has been dragged into this discussion—right here I might say, by way of parenthesis, and with a respectful request for attention on the part of pious people residing east of the Rocky Mountains, who have not been accustomed to hear but one side of this question: the Episcopalian dignitaries of our churches and many of the leading preachers and laymen of our Protestant denominations on the Pacific coast have formally and repeatedly protested against this immigration. Men no less eminent than Archbishop Alemany, Bishop Kip, and Doctors W. A. Scott and T. K. Noble have petition-signatures and personal letters, of record in the archives of this House, which being interpreted by the light of events can only be read in support of this identical measure.

Yes; humanitarianism for our own people. And tell me with what consistency gentlemen upon the other side of the House can call for the maintenance or the establishment of a high tariff on the ground of protecting our laborers against the poorly paid workmen of Europe, while at the same time opposing a measure that would prevent the Chinamen from taking up a temporary residence in our midst. Please to tell me that. The Mongolian comes here without a family and never intending to have wife or children so long as he remains in this nation, almost all of them indulging in practices that are not so much as to be once named among you, and sets himself down to compete with our laborers and mechanics, until such time as he shall have acquired a few thousand dollars, which is to him not merely a competence but a great fortune. And must it be said again that the Chinaman can live, and when working in gangs with his fellow-workingmen does live, at a cost ranging from one-fourth to one-tenth of the amount required to support the workingman of Caucausian parentage and habits, taking the average of expenses, and attributing to both the good qualities of frugality and sobriety?

Humanitarianism! I challenge you upon that score! It is YOU—you who would reopen the doors to Mongolian invasion, or fail to close up the loop-holes in the present statutory fencing; it is YOU who are inhumane towards your own people by this very token and in this very respect. We will meet you in Massachusetts and before your own constituency, face to face, on this proposition.

The majority of our fellow-citizens in these Eastern Commonwealths faintly realize the debt of gratitude they owe to the citizens of the Pacific coast for their persistent appeals, representations, and protests and championship against Mongolian importation.

And I hesitate not to say that we plead in the cause of humanitarianism toward the Chinese themselves. For this business of legislation that we are about is the peaceable method of keeping them out of our country, from this time forth to the end of this chapter. And if resort be not made to this method, we might as well confess that the stay will or would be secured in ways that are unusual and even revolutionary.

But it is said that there is no direct appeal from the people for this amendatory legislation—that this proposed amending is the gratuitous proffer of demagogy; and to sustain this assertion our attention is called to the fact that marked copies of a certain weekly journal of limited circulation in California have been sent to members of this House—I presume to every member—within the past few weeks. And from this journal the honorable gentleman from Massachusetts has seen proper to read a paragraph, deprecating in effect the attempt to pass such amendments as are before us, and indulging in abusive reference to the press of California that has prominently suggested and taught otherwise. From the entire newspaper issue of the Pacific coast the gentleman has only this one article to quote. And what is it? A slur, a diatribe from the San Francisco Argonaut, particularly directed against other papers in California because of their support of such a measure as this.

Some of the gentleman's beloved adjectives will persist in coming to mind again, as applicable to those who have betrayed the distinguished Representative from Massachusetts into the use of such authority. "Authority" did I say? Does he know Frank Pixley, the editor and publisher of the Argonaut? Manifestly he does not know him, or he would not read from his types on this occasion. Whoever, on this floor or elsewhere, knowing Frank Pixley, would willingly or under constraint do that individual the personal favor to notice him at all, if he speak

fairly must state the simple fact, that no person of Pixley's acquaintance in San Francisco pays any respectful attention to anything that he says on this or any other important subject. I would not dignify him by mention here, but for my earnest and proper anxiety that no gentleman on the other side of the House should be misled or influenced by such an "authority." His inconsistencies with respect to this and other matters have gone so far as, in earlier days, to have afforded general amusement; he was for years the central figure of the large cartoons of our local Punch, when it was sought to illustrate the extreme of miserly mendicancy and reckless mendacity, until in very truth, as regards himself, he wearied and wore out the vitality of popular contempt. I did purpose, when his paper was first mentioned, sending to the Clerk's desk for reading a short, compendious notice of his life and character, delivered to a great audience in Union Hall, San Francisco, by George C. Gorham, for many years Secretary of the United States Senate and until recently editor of the Washington Republican. Since the thing has been touched it is proper to add that Pixley's subserviency to the interests of corporations that fee him is the one line of reliability in his biography. It is notorious on the Pacific coast that he is a flunkey of the Central Pacific Railroad Company; the greatest local monopoly with which we have to deal; and I am sure I need hardly add the statement of the fact, that the Central Pacific Railroad Company has always been and now is an interested advocate of Chinese importation.

I apologize for saying so much about this person; but it is perhaps well that the people of my State should be informed in this way—at the same time that you are enlightened as to the individual—that he is quoted here, in behalf of this day's opposition. No other paper on the Pacific coast is produced in such a service. It may possibly be of public benefit for some of my constituents to remember all this on some future occasion.

In the paragraph quoted Pixley appears as denouncing with especial emphasis the daily papers of San Francisco, with an exception in favor of a journal that has recently been purchased by the Central Pacific Railroad Company. The papers so denounced are fully competent to make fit reply, where it could be called for. They need no defender in me on this occasion. Very likely this day's publication from hence, may be the first notice they have of the sentence of defamation referred to. Whatever may be at any time justly said to the disparagement of the San Francisco secular press, the great ability of its managers and editorial writers, and its practical unanimity in hearty support of this proposed legislation—in manifest sympathy with and obedience to the will the people of our coast—can not be denied. And as for the interior press of California—which comes under the ban of the Argonaut's editor, by reason of its commendation of this measure without exception or qualification—it is the best in the world.

The Tariff.

SPEECH

OF

HON. CASEY YOUNG,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 5, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 5893) to reduce import duties and war-tariff taxes—

Mr. YOUNG said:

Mr. CHAIRMAN: In respect to the bill now before the committee I feel myself placed in a most unpleasant and embarrassing dilemma—one from which I can see no deliverance except by yielding my individual opinions to the aggregate judgment of the majority of my party and by subordinating my personal convictions to my sense of public duty. This I shall have to do, for I have presented to me for my consideration and action a measure affecting a great question of political economy which does not meet my approval, but for which I shall feel it my duty to vote when it comes before the House for action. While I shall do this, however, I conceive it to be equally a duty which I owe to myself and that part of the public that sent me here as their representative to give some reasons why I am opposed to this bill, and why at the same time I propose to give it my support. To give these reasons intelligently, and to avoid the liability of being misunderstood, it will be necessary to state some facts and call attention to some general principles which are too frequently lost sight of and overlooked in tariff discussions.

The question of taxation and the methods of providing public revenue are so important in their connection with every interest and every branch of industry which contributes to the prosperity and wealth of the whole country that they need to be fairly and honestly treated, whether in discussion or in legislation. The people of the country who have intrusted us with the guardianship of their interests have a right to expect at our hands reliable and truthful information, so far as we can give it, concerning the effect upon these interests of the present tariff or revenue system, and also as to what changes should be made in order to render it more equal in its operations, as applied to every pursuit in which our 50,000,000 of people are engaged.

The fact that our tariff system has been too frequently treated as a partisan question, instead of a great economical and financial problem requiring for its solution the most thoughtful and painstaking investigation, has wrought infinite injury to the business interests of the country whenever the subject has been agitated. And perhaps no question that has been discussed so much and legislated upon so often has been so little understood as this one, and certainly none has given rise to such conflicting opinions and such a variety of discordant views. This has not been confined alone to our own country, but has been observable in every one where tariff laws and regulations have existed. It occupied the public mind of England to the exclusion of almost every other topic of public interest for a long period of time, and it was only after an exciting and often bitter discussion of more than two centuries that the public thought of that country reached anything like a common conclusion.

Even now the judgment of English statesmen is not in entire accord in respect to the tariff system of Great Britain and its dependencies, for some hold that the policy of free trade which has been pursued in that country for more than a third of a century is not the wisest one that could have been adopted. The same differences of opinion, the same heated discussion, and the same partisan zeal, in a greater or less degree, have marked the history of tariff legislation in France, Germany, Belgium, and Holland, and in almost every other civilized nation of Europe. In all countries and in all periods of its history there have been those who denounced it as the vilest system of robbery and oppression ever devised, while there have been others who defended it as the wisest and best method ever adopted for raising revenue and protecting the industries of a country.

Strange as it may seem it is nevertheless true that among the most intellectual men and profound thinkers of the world there is scarcely more unanimity of opinion upon this important question to-day than there was a hundred years ago. But this young and growing country of ours, with its boundless resources, its resistless enterprise, its new principles and functions of government, has been the field of the bitterest controversy in respect to this vexed and discordant question. Here there has been the widest divergence of opinion and the most hostile antagonism between the advocates of one or the other of the two distinctive features of tariff legislation—free trade and protection.

The terms "free-trader and protectionist," when applied to the supporters of the two theories into which the question of the tariff is usually divided, have for fifty years been regarded as epithets of opprobrium and reproach, and when a man has been denounced as the one or the other it is generally conceded that he stands charged with the gravest political crime of which an American citizen could be guilty, judged from the standpoint of opposing party predilections. Yet both theories have at different times been advocated by the most distinguished men our country has ever produced, and have often been alternatively incorporated in the accepted creed of both the great political parties into which our people have been divided from the beginning of the Government up to the present time.

These vagaries of political opinion, these inconsistencies in political thought and action concerning this particular question grew no doubt very largely out of the fact that it is one more elastic than almost any other, and more adjustable, if I may use that phrase, to local interests and more subordinated to local influences than all others. So that the declarations at a recent period of a very distinguished man, that the tariff was a mere local issue, was, in the light of history, a true if not a wise assertion. The history of the tariff discloses the fact that for the most part men form their opinions concerning it under the influence of local surroundings and the pressure of local interest, and the greatest of our public leaders have not been wholly free from these influences. But sometimes, however, one has made his appearance strong and brave enough to discuss the question from a national standpoint, and if our leaders of to-day could be brought to emulate this praiseworthy example they could, I think, easily formulate a tariff bill that would meet with general public approval, and thus end this unnecessary agitation and fruitless discussion.

We might, I think, with great profit to the public interest, lay aside some of the bitterness and asperity which has characterized this discussion, and consider the grave question before us in the light of how far and in what way it will affect the well-being and prosperity of the whole country, without regard to its influence upon isolated and local interests. No tariff law could be enacted that will injuriously affect any established interest or tear down any industry that has grown up under the present or any former system, if we keep in view the cardinal principles upon which a tariff system should rest. To build up, however, or foster one interest at the expense of another would be to inflict by legislative action an injustice which should not find a place

in any public law; but this effect is never attendant upon a properly adjusted tariff.

In formulating any tariff bill two fundamental ideas should be kept constantly in view and should control our action, namely, a reduction of the amount of revenue now received, and to derive a sufficient amount to meet the demands of the Government from a duty on commodities used by those best able to bear the burdens of taxation rather than from a duty on the articles consumed by the poorer classes of the people. It is conceded by everybody that we must have a tariff of some kind until we shall devise some better system for raising revenue to meet the annual expenditures of the Government. The truth of this proposition being admitted, another conclusion equally true necessarily follows, which is that any tariff inevitably carries with it, as one of its active functions, a protective feature to the extent at least that it is laid upon articles of foreign importation either in the raw or manufactured state which are also the products of our own country.

Thus the phraseology of a tariff for revenue with incidental protection, so often found in Democratic platforms and in declarations of Democratic principles, describes the true theory of all tariff laws, and the only one upon which they can be based in a country like ours with any hope of meeting with popular approval. It is a fair compromise between the opposing dogmas of free trade and protection, neither one of which should, when considered alone as distinctive theories, be controlling factors in tariff legislation, for the reason that the one is wholly impracticable at this time, and the other is one not warranted by the Federal Constitution under any of the terms of that instrument as I have been taught to construe it.

I hear others declare themselves to be in favor of the doctrine of free trade, and I learn from the public press that there is a free-trade party in this country, but I do not see how such a theory can be put in practical operation unless we do one of two things: either repeal all laws for the imposition and collection of import duties and adopt some other method for raising revenue, or bring our Government to that degree of perfection at which we will require no money to carry it on. Are either of these thing possible of accomplishment? Everybody will answer in the negative as to the latter proposition, and the former is almost equally impossible. Suppose we should conclude to abolish our present revenue system, what one would we adopt in its stead? Would we resort to direct taxation, with all its odious features and methods, its espionage, its invasion of every man's household, and total disregard of every man's rights and feelings? Nobody would want this.

Even the direct tax now levied upon two single articles has become most offensive and distasteful to the public, and there is a growing feeling for a repeal of the law which authorizes it, though it rests alone upon two articles which of all others are considered the least necessary in promoting the public good. We must, then, as a matter of necessity, adhere for the present at least to the system we now have, and the all-important question we are called upon to determine is its proper adjustment. But when we come to consider this we are confronted with difficulties not easily overcome, and we encounter differences of opinion equally hard to reconcile. This has been made but too apparent in the progress of the discussion that has already been had upon this bill for any one to doubt it.

We have had the relative doctrines of free trade and protection discussed from every possible standpoint and with as much eloquence and learning as if both these questions were living issues and their respective merits were being submitted to public judgment. But in reality neither one of them is practically before this House or the country, and their discussion in connection with this bill is a mere waste of time and a departure from the real question with which we have to deal. I speak of course of free trade and protection as constituting of and within themselves a distinctive tariff theory, and not as mere incidents to or parts of one, and in this light they can alone be considered as connected with the bill now under consideration.

The advocates of these theories have presented them with great force and in most attractive form, but their arguments have tended more to mislead the public mind than to elucidate any sound principle of tariff legislation. The advocate of protection paints his theory in glowing colors, makes it a beautiful picture, and holds it up to the merchant, the manufacturer, and the artisan as his shield and safeguard against the destructive competition of foreign goods and the invasion of foreign labor. They declare for the fostering of American industries and the dignity and protection of American labor. These phrases embody a popular idea, and they are willingly accepted by those to whom they are addressed without even inquiry as to the extent of their truth or the strength of the logic with which they should be credited.

While the protectionist advocates this doctrine, the free-trader is equally zealous and industrious in presenting his theory to the public for support. By him we are told that the current of trade should flow without hinderance in its natural channels, that commerce between all the nations of the world should be free and untrammeled by legislation, and that any restraint placed upon it is a blow at those natural rights of mankind which no government can lawfully abridge. He says that a tariff is a species of robbery, that it fosters some industries at the expense of others, that it lays burdens upon the labor of one man and offers a premium for that of another, and yet he does not deny that a tariff is necessary. He denounces protection, but must admit that it is a feature and attribute of any and all tariffs which necessarily attaches to their operations. He denounces tariff for revenue, but fails to show that even this does not embrace practically the same principle and carry with it the same effect as a tariff for revenue with incidental protection. There is practically no difference between the two.

If to raise revenue you lay a duty upon any commodity imported from a foreign country, to the extent of the duty so laid you protect the same commodity raised or manufactured in our own country, for it will hardly be contended that we can raise a sufficient amount of revenue by laying a duty only upon commodities of foreign production. Unless we can do this there can be no such thing as a tariff for revenue only. It will have the same effect whether you add to it the words "incidental protection" or not. It is not my purpose at the late stage we have reached in the consideration of this bill to indulge in any unfair or improper criticism of the manner in which it has been treated by any gentlemen who have spoken upon it; many of them have displayed great learning and ability as forensic combatants; but I must say that to my mind their premises have been for the most part unsupported by facts, while their conclusions are illogical and untenable.

In my view of the question it has not been discussed on either side in a manner calculated to elicit all the facts which would aid in its proper solution or to lead the public mind to any definite and correct conclusion in respect to its merits. It has been treated thus far in a great measure as a mathematical rather than as a political problem, if I may judge of the matter by the array of figures which garnish many of the arguments. Some gentlemen have favored us with an amount of statistical information that would puzzle and bewilder the most accomplished experts in that branch of learning to be found in this or any other country. While we have had presented to us long columns of figures and elaborate, complex statistical tables, it is not clear that many of them have any direct or even remote bearing upon the question which we are considering, and it will be very difficult in some instances to discover the purpose for which they were offered or the propositions which they were intended to prove.

Most gentlemen who have addressed the committee upon this measure have discussed abstract principles that are now dormant and theories that have no present force or vitality. The gentleman from Pennsylvania [Mr. KELLEY], with his usual earnest force and ability, urges the theory of protection in its broadest sense as vital to American interests, while the eloquent gentleman from Ohio [Mr. HURD], with equal earnestness and devotion to his own convictions, denounces it as a vicious and wicked political heresy, and holds up the doctrine of absolute free trade as the only wise and just policy which a government can adopt in its commercial relations. This course of discussion has tended to unsettle the public mind of the country and impair public confidence in the effect of any bill which may be passed. The extreme and impractical views expressed and insisted upon by some leading members of the House are calculated to subject to unjust criticism those who hold to more moderate and temperate opinions.

The people, who are after all the most deeply affected by tariff legislation, have been so misled by unfounded misstatements, so deceived by shallow fallacies and ingenious sophisms, that a man who does not laud free trade to the exclusion of every other feature connected with the tariff is forthwith called a protectionist; and if, on the other hand, he does not proclaim himself in favor of protection he is without any ceremony pronounced a free-trader. Thus it is that men who base their convictions upon the safe conservative ground that lies between dangerous extremes are not infrequently called trimmers, without courage or convictions. But no public representative should be driven by such harmless missiles as these from the discharge of his duty as it is presented to him in the light of his convictions.

It is another unfortunate circumstance which has been attendant upon tariff legislation that it has too often been treated as a purely sectional question; and even up to a period quite recent the advocates of one theory were found mostly in the East and the North, while the followers of the other were in a great measure found in the West and the South. But this has not always been so, and ought not to be so now. Men governed by principles, inspired by honest convictions, can defy the mere local sentiment of any section, especially when that sentiment rests alone upon local interests. Should a New England student of this branch of political economy be led by his convictions to the advocacy of free trade, and in consequence be denounced for his defection from the accepted doctrine of that locality, he might point to the fact that in the very first Congress that assembled under the Constitution Mr. Madison introduced a tariff bill avowedly for protection, and out of the fourteen New England members nine of them voted against it, while of the twenty-four members from the Southern States twenty-one voted for it.

So, too, if a man from the South or the West should offend against local opinion by declaring for protection and bring upon himself an adverse popular judgment, he might bring to his defense not alone the fact that twenty-one members from the South voted in the First Congress for a protective tariff, but also the further fact that Andrew Jackson was

elected President upon a platform of which the following resolution was a part:

Resolved, That an adequate protection to American industries is indispensable to the prosperity of the country, and that an abandonment of that policy at this period would be attended with serious consequences to the nation.

He might cite the additional fact that in 1821 a bill was introduced in Congress entitled "An act to increase tariff duties," and that upon the motion of the celebrated John Randolph of Roanoke to admit cotton goods free of duty Mr. John C. Calhoun, of South Carolina, certainly one of the most gifted statesmen the South ever produced, said:

The matter assumes a new aspect in the motion under consideration, it having been introduced professedly on the ground that manufacturers ought not to receive any encouragement. Coming, as I do, from the South, and having in common with my immediate constituents no interest but in the cultivation of the soil, no motives can be imputed to me but such as are disinterested. * * * If the mere statement of facts does not carry convictions to any, what additional arguments might be drawn from the general nature of wealth? Neither agriculture, manufactures, nor commerce, taken separately, are the source of wealth. It flows from the three combined, and can not exist without each. The wealth of any single nation, it is true, may not immediately depend upon three, but such wealth always presupposes their existence.

This bill for the increase of tariff became a law, and in his message to the succeeding Congress President Monroe said concerning it:

On full consideration of the subject in all its relations, I am persuaded that a further augmentation may now be made of the duties on certain foreign articles in favor of our own, and without unjustly affecting any other interest.

Following this line of defense still further, it might be shown that in all the Democratic platforms adopted since that time by Presidential conventions in which the subject of tariff was mentioned at all, some protective feature was recognized, except in the platform of 1880, and finally attention might be called to the recent able speech of Mr. Hilary A. Herbert, one of the most distinguished members of the Ways and Means Committee of the present House, in which he says:

The Democratic party has always raised revenue by tariff taxation. That tariff always necessarily afforded incidental protection; and yet we are called free-traders.

It will thus be seen that one's belief in respect to the tariff has not always been and can not now be taken as a test of either sectional or party loyalty under ordinary circumstances; but I hold it to be the duty of every Democrat to give his earnest support to this bill for reasons which I shall present before I close. I do not want to be misunderstood, and I hope it will not be concluded from what I have said that I am an advocate of tariff for protection *per se*, but I am an advocate of that degree and kind of protection which is necessarily brought about by a tariff for revenue properly adjusted. By this I mean a tariff conformable to a revenue standard and laid upon such commodities as are used in the main by those consumers who are best able to pay the tax thus imposed, and which also compete with our domestic products. A tariff thus adjusted would conform to the ideas which the Democratic party has held upon this question from time immemorial. That is, a tariff for revenue with incidental protection. I have already stated as true the general propositions, and nobody can deny them, that in our present condition a tariff is an indispensable necessity, and as every tariff must and does carry with it a certain degree of protection, it will strike every one as an indisputably just conclusion that this protection, which is inevitable, should reach alike all interests and afford the same benefits and advantages to every section of the country.

I would not make this question a sectional one, but I would treat it as eminently national in its character. I would have a tariff that afforded the same protection to the interests of the South and the West that it does to the North and the East. I would have the fire in the furnaces of Georgia, Alabama, and Tennessee burn as steadily and brightly as those of Pennsylvania and Ohio, and I would have the cotton-mills erected in the cotton fields, which under the fostering influences of a wisely adjusted tariff would keep pace with those in busy operation all over New England, and which made that sterile region of fruitless valleys and frowning mountains the most opulent section of our whole country. I would give to the sugar of Louisiana, the rice of South Carolina, and the tropical fruits of Florida the same protection under a tariff for revenue that I would to the wool of Tennessee, Texas, California, and Ohio, to the lead of Missouri, and the hemp of Kentucky.

I am giving no sectional caste to this question when I insist that the locality from which I come shall share equally in all the benefits which any tariff can bestow, but I am only meeting my obligations as a public representative in doing so. I should be criminally negligent if I were to permit a mere abstract principle in political economy, wholly impossible of practicable application at this time, to prevail against the advancement of the great interests just being developed in my section and among my constituents. We of the South have, I fear, sacrificed too long the material results which we might have gathered from practical efforts to a mere sentiment, which is of no value now in this country except to the students of political metaphysics. In consequence of thus following a sentiment instead of practical politics we have paid tribute long enough to a mere idea of political economy, and should now avail ourselves of all the benefits of the system of legislation which circumstances impose upon us, whether we want it or not.

The present tariff has been denounced in every quarter of the Union by fair-minded men of both parties for its unjust discriminations, unequal operation, and oppressive effect. This denunciation and attendant discussion have informed the people of its objectionable features, and a large majority of them, and especially of Democrats, are firm and fixed in the belief that it ought to be reformed and readjusted. Two-thirds at least of the Democratic members of this House came here under pledges as distinct and strong as were ever given in a political canvass to effect some such reform and readjustment in the present tariff system as is clearly demanded by the public interest, at the same time bringing it in nearer conformity to the Democratic idea upon this subject.

But this bill is in no way calculated to effect a correction of the inequalities so prominent in the present law, and I doubt very much whether or not it will even bring about a reduction of the revenue at present derived from import duties. If it should effect this, it is certainly the only result which can be accomplished by it. The people demand a different character of tariff legislation from this, if we should have any at all, and I am one of those who believe that it is both proper and wise to have it. I am not strongly impressed with the wisdom of that timidity which whispers constant warning against tariff agitations, whether it comes from my political friends or adversaries.

We owe a duty to the public from which we should not shrink, but, with a courage which honest convictions always bring, we should seize with a strong hand upon this vicious system so marked with political deformity that no man can successfully defend it. I have no apprehension about disturbing and unsettling the business interests that we hear so much of from gentlemen who are opposed to any change in the tariff. No interests will be hurt by the passage of a proper bill. On the contrary, every business interest will be promoted and placed on a surer basis. I would have a radical change or thorough reconstruction of this bill, for as it is it only perpetuates, with a very few exceptions, all the evils of the old system which we have all denounced so much.

Glancing over our present schedule of tariff duties I find these glaring absurdities, these palpable evidences of the injustice which it inflicts. It may be well said, as it often has been, that it is a tariff which favors the rich and oppresses the poor, and the truth of this charge would seem to be established by the comparisons I shall make.

By an examination of paragraph 362 of the present tariff law it will be seen that shawls made wholly or in part of wool, worth not more than 80 cents per pound, pay a specific duty of 35 cents per pound and an ad valorem duty of 35 per cent. On one of these shawls weighing five pounds, and worth $5 at the custom-house, the specific duty would be a dollar and seventy-five cents and the ad valorem duty a dollar and forty cents, making a total of $3.15 on an article costing but $4, which amounts in the whole to 79 per cent. of tariff charges. This is the character of goods that would be worn by the wives and daughters of the poorer classes, and on which there is imposed a tax of 79 per cent. Then take a silk embroidered shawl of the same weight, worth $50, such a one as the more wealthy could purchase, and on this the specific duty is 45 cents per pound, amounting to two dollars and a quarter, and 40 per cent. ad valorem, making a total of $20, and aggregating a duty of $22.25, or 45 per cent., paid upon the more valuable shawl, as compared with 79 per cent. paid upon the commoner and cheaper one. Next, take the costliest of these articles, a camel's-hair shawl, weighing five pounds, and worth $500. The duty on that is 40 per cent. ad valorem and 45 cents per pound, that is $202.50, making an aggregate duty of 40.9 per cent. So that the duty decreases as the article upon which it is laid gets further and further from the reach of the poor man, and the rich man is given that degree of favor found in every feature of the present tariff, as appears from the foregoing, the poor man paying 79 per cent. of tax upon the value of the article which he buys, while the rich man pays scarcely one-half that much. Is there any justice in such a system of taxation? And, besides, if we want a tariff for revenue only, which some of my friends demand, then the tax should be entirely upon the camel's-hair shawl, as that is an article which can only be afforded by the rich, and none of them are manufactured in our own country.

Now, sir, we are expected by the people as tariff reformers to correct just such injustice as is shown in the above statement. Are we proposing to do it? Is it just to tax one man, and a poor man too, 79 per cent. upon the articles which he purchases, and only 40 per cent. upon those which the rich one buys? Ten yards of common cloth or dress goods, partly of wool, worth 20 cents per yard, pay a specific duty of 50 cents, 5 cents for each yard, and an ad valorem duty of 35 per cent., aggregating 70 per cent., and making a total of $1.20 on an article costing but $2, while on the same quantity of cloth of finer quality, costing $1 per yard, there is imposed a specific duty of 8 cents per yard and an ad valorem duty of 40 per cent., amounting in all to 48 per cent. of taxation. Thus the cheaper and commoner cloth is taxed 70 per cent., and the finer and more costly only 48 per cent. Cotton laces, such as the poor buy, pay a duty of 35 per cent. Linen laces, which are used by the rich, pay but 30 per cent.

Common table ware, such as is used in the household of the poor, pays 60 per cent., while encaustic tiles, used for flooring in the houses inhabited by the rich, pay 35 per cent., and alabaster vases to beautify and adorn their rooms pay but 10 per cent. On diamonds and other

precious stones which sparkle upon the person of his wife and daughters the millionaire pays but 10 per cent. Yet salt, without the use of which neither man nor animal can live, pays 73 per cent., and watches, worn by gentlemen of ease and leisure, pay but 25 per cent. Attar of rose, jasmine, and other delicate perfumes, found alone in the boudoirs of the rich, are admitted free of duty, while spelling-books pay 25 per cent. Cabinets of rare coins, collected by wealthy numismatologists, come in free, but castor-oil, a therapeutic agent of universal use, pays a duty of 80 cents per gallon.

Fashion-plates and furs, purchased alone by ladies of wealth, are admitted free, but on a ten-dollar suit of clothes, worn by an artisan or farm laborer, a duty of six dollars and a quarter is paid. Parchment and vellum, upon which are written the license of lawyers, the diploma of doctors, and the wills of millionaires, are also admitted free; but printing-paper, by the use of which valuable information is diffused throughout the world, pays 25 per cent. Spar statuary and ornaments pay 10 per cent., while palm-leaf, straw, or chip hats or bonnets, worn by country rustics or laborers, pay 30 per cent. Silk buttons pay 10, while cheap ones pay 25 per cent. Epaulettes, galloons, laces, knots, stars, tassels, and wings of gold and silver or other metals, so profusely worn by our young soldiers, pay a duty of 20, while horseshoe-nails pay 36 per cent. Ginger ale, the beverage of idlers, pays a duty of 20 per cent., while twice that sum, or 40 per cent., is collected on the handsaws used by the mechanic and on the farm; and while dice, chessmen, and billiard-balls, used for the amusement and recreation of gentlemen having no need for more valuable employment, pay 30 per cent., the common article of cut tacks pays 91 per cent. Hair bracelets and rings, ornaments for the rich, are taxed 35 per cent., while the trace-chains of the farmer are taxed 58 per cent.

Papier-maché, used in the manufacture of articles purely ornamental, and which are without value in practical use, is only taxed under the present tariff law 30 per cent., while bicarbonate of soda, an article used for culinary purposes in every household in the land, has imposed upon it a duty of 60 per cent. Ivory, an article almost exclusively for the use of those possessed of ample means, comes in free; while the cheap glazed hollow-ware used by the poor housekeeper is taxed 33 per cent., and so, too, the most costly woods, such as cedar, rosewood, mahogany, and satin-wood, used entirely in ornamental work, in the manufacture of furniture, construction of buildings, &c., and which can only be afforded by those in affluent circumstances, are all admitted free of duty; while the wooden material used for the building of the substantial parts of houses and in the construction of wagons, drays, carts, &c., pays a duty of 20 per cent.

Stuffed birds, prepared for the cabinets of the rich, come in free, while cement for building purposes, used every day by a vast army of busy mechanics, pays 20 per cent. The material that strings the harp and the guitar, only to be touched by delicate fingers unused to toil, is admitted free of duty, while spirits of turpentine, an article in daily use for a multitude of purposes by every class of poor people, is taxed 20 cents per gallon. The slender bamboo canes that dandies flourish on the street are allowed to pass through our custom-houses free for the benefit of the useful and reputable class of people who use them, but colors and paints, articles in constant demand for useful purposes, must bear the burden of 25 per cent. of taxation. Musk, that scents with rich perfume the dainty belle of the ball-room, is on the free-list, while mustard, more generally used in the kitchen, on the table, and in the sick-room than almost any article found on our present tariff schedule, pays a duty of 10 cents per pound. Genuine diamonds, costing from hundreds to many thousands of dollars, and none of which are worn by the 17,000,000 people in this country who live by daily labor, are also on the free-list, but if the farm rustic or factory girl should aspire to an imitation diamond, the genuine being wholly out of their reach, they have to pay a tax of 40 per cent. to gratify their taste or vanity.

And so, Mr. Chairman, I might go through the entire schedule, and every page and almost every sentence would furnish additional evidence of how unjust and unequal our law is in its effect as between the rich and the poor. I hazard nothing in saying that the tariff law now in existence is the most iniquitous one ever enacted, clearly violative in all its features of every sound principle that should underlie a tariff suited to our conditions and surroundings. No man can look for a moment at these comparisons which I have hurriedly made, showing, as they do, the glaring injustice and inconsistencies of this tariff which we are undertaking to revise, and with truth say that it is a just or fair one. I have other objections to the present system quite as potent, in my judgment, as those I have already pointed out, and which grow out of local and sectional considerations.

Ever since the formation of our Government the South has been the victim of tariff laws vicious in their character and partial in their operations, paying yearly tribute to other sections that have made them rich and prosperous to a degree far beyond any expectation warranted by their natural advantages. Against this policy of discrimination I here enter my protest, and the reason that I complain of this bill is that it perpetuates in only a somewhat modified form the very evils that have existed so long. When the North and the Northwest abounded in timber valuable in foreign commerce, and when the supply from that region was exported to almost every foreign country, there was a tariff on lumber; but now, when these forests have fallen under the ax of the lumbermen and disappeared, and when the timber regions of the South are beginning to take the place of those that have been exhausted in other sections, it is proposed to put lumber upon the free-list.

The gentleman from Iowa [Mr. COOK], where there is little or no timber, devoted the most of his strong and vigorous argument to the denunciation of the tariff on lumber. Perhaps his theory in the abstract is correct; but taking as true the propositions "that we must have a tariff, and that every tariff necessarily carries with it a certain degree of protection," is it exactly just, after the regions so long protected against competition have exhausted their timber, to take the duty off lumber just as the extensive pineries of Arkansas, Louisiana, Mississippi, Alabama, and Florida are beginning to furnish it for exportation. As an effectual remedy against tariff evils he suggests the probability of an entire repeal of the whole system within a short time. I would willingly assist in the accomplishment of this result if it could be reached and a better system of taxation for revenue could be substituted, but everybody knows that such an idea is visionary and impracticable in the extreme.

A general system of direct taxation as a method of raising revenue would not be tolerated a single day in this country, and the little of it we have left remaining of a war policy would be instantly abolished if it affected any other articles except distilled spirits and tobacco. But too many people think as I do, that we had better have cheap commodities that everybody is compelled to use than to have cheap whisky and tobacco, articles which nobody is obliged to consume, for the tax to be taken off these two things for some time to come at least. For myself I should deem it wiser to add to instead of reducing the amount now collected from this source, and relieving as far as possible from all taxation those things which the poorer classes are compelled by necessity to use. I might present innumerable illustrations of how the West, and especially the South, have been discriminated against by former tariff laws, and how they have enriched other sections by submitting to tariff exactions that effectually guarded the East and the North against all foreign competition, while their own products and industries have been left to struggle against the rivalry of every other producing or manufacturing country.

The Western people, owing partly to circumstances, and quite as much perhaps to their quicker apprehension of their own interests and greater energy and sagacity in pursuing them, have within the past decade entered swiftly upon the race of enterprise and development with the East and the North, and have very far outstripped their more laggard brethren of the South. They have demanded and obtained their just share of all the benefits which flow from Federal legislation, and the result is manifest in their fruitful farms, growing cities, and the vast and rapidly increasing wealth of their mines and factories. While the farmer of the South was tilling the soil with implements of husbandry made of iron and steel taken from the mines east of the Alleghanies he was steadily taxed from 40 to 75 per cent. under a tariff admitted to be for the protection of Eastern manufacturers; but now, when the inexhaustible beds of iron ore which underlie vast regions in Alabama, Georgia, and Tennessee have been discovered, and shafts are being sunk and furnaces being built for its manufacture, it is proposed to put iron on the free-list. Eastern manufacturers have grown rich by protection. They have large sums of money invested in extensive plants and improved machinery; they have skilled artisans and trained operatives, with everything nicely adjusted for the successful prosecution of their business, so that to give them the raw material free of duty, and thus cripple or destroy the recent and newly established manufactories in the South, they could contend against competition from other countries.

And so, too, with coal. Upon this article there has always been a duty imposed; but now, after the largest deposits on the continent have been found in the South, and when mining it is growing into a large and profitable industry, it is proposed to put that on the free-list along with most other valuable Southern products. I am told that the iron and coal interests South require no protection against foreign competition, and possibly this may be so; but that fact does not seem to have been discovered in some localities until within a very recent period.

Another striking evidence of the tendency of tariff legislation to discriminate against the South is found in the commercial treaty between this country and Mexico, negotiated by a commission authorized by Congress, and which was recently ratified by the Senate, and is now before this House for such further action as may be necessary to carry it into effect.

Attached to and constituting a part of this instrument there are two schedules, the one embracing all articles coming from Mexico, which are admitted free of duty into this country, while the other one contains those which go from this country, and are admitted at Mexican ports free of tariff charges. By an examination of the Mexican articles to be put upon the free-list it will be seen that nineteen out of the twenty-eight come in direct competition with commodities of the same kind produced in the South and West, while scarcely a single one of them affects any product of the North or the East. Then examine the schedule embracing the articles that are to be admitted into Mexico

from this country free of duty, and it will be found that scarcely one of them is produced or manufactured in Mexico, and all of them find in that country an eager market.

Cotton-seed oil, which is becoming one of the most valuable of all our Southern products, and its manufacture one of the greatest industries of the South, while it is used for mechanical, scientific, culinary, and many other purposes, is constantly increasing, until now there is a demand for it from almost every country in the world. Mexico presents one of the best known markets for its sale; but it is practically excluded from that country by a tariff of $1.50 per gallon, while petroleum oil, found nowhere in the South, is put upon the free-list. Unjust and unfair as all the provisions in this treaty evidently are, it found favor enough in the Senate to secure ratification; but that only furnishes additional evidences of how easy any tariff law can be passed under the guise of promoting free commerce so long as it discriminates against no section but the South. And I want to say here to my fellow-Representatives from that section that the South will never attain that degree of opulence or prosperity easily within her reach until we oppose a solid front to the system of discrimination to which our people have so long and so unwisely submitted.

Perhaps this question of the Mexican treaty does not properly enter into the discussion of this bill; but I have referred to it for the purpose of directing attention more forcibly to the perverted course of legislation on the subject of the tariff, and as an additional argument in favor of turning it into a different direction and into a broader and more natural channel. And I allude to it in this connection for the further reason that my opposition to this particular measure has brought upon me the criticism that I was opposed to a freer and more unrestrained commercial intercourse between our own and all other countries, when in fact my opposition was confined to those features of the treaty which imposed burdens upon the commercial products of my own section, while those of other localities are protected at home and allowed to seek a free market everywhere else. Whatever may be said in commendation of enlarging our commercial relations and of removing all the obstacles that may stand in the way of their extension, I shall not consent for it to be done to the manifest injury of one section for the benefit of another, especially when the section chosen to suffer the injury to be inflicted is the one to which I belong and the interest of which it is my duty to protect as far as I can with proper regard for the public well-being of every one.

Another new industry just beginning to attain sufficient proportion and importance to attract public attention is the production of raw silk, which is being prosecuted in different parts of the country, and especially in the South, with great success, though with little profit, for the reason that it is wholly unprotected by any tariff, and has to contend with the powerful competition of Italy, France, Spain, and other countries. If this industry had been afforded the same protection that has long been given to the other domestic products used in the manufacture of other fabrics it would before now have reached a degree of strength which would have enabled it to stand alone against any competition and to meet if not exceed our entire home demand.

In calling attention to this unprotected industry I am proceeding upon the same theory on which all I have said in support of protection of any kind is based, that is that we are compelled to have a tariff which of necessity carries with it a certain degree of protection, and this I want equally distributed; that is all. When we can get rid of a tariff altogether then I shall be willing for all industries and interests to stand upon their own merits and their own intrinsic values. I have stated frankly and more in detail than I intended the objection that I have to this bill, and I shall now state with equal frankness, but with greater brevity, the reasons that influence me in giving it my support.

The Democratic party of the country is pledged to a reform in our present tariff system, and has sent its representatives here charged with the duty of effecting it. Eight distinguished Democratic members of this House, distinguished not only here but throughout the country, constituting a majority of the Ways and Means Committee, have devoted three months to careful investigation of the whole subject, with every facility at their command to obtain all possible information concerning it, and have presented this bill to the House as a Democratic measure. It has been urged by most of the Democratic press of the country, and though I do not approve of it for the reason I have given, yet I will not follow a faction of my own party in aiding the Republicans to defeat a Democratic measure.

I have the fullest confidence in the capacity and the integrity of the gentlemen of the Ways and Means Committee who favor this bill. They were in a position to obtain more accurate information than was accessible to me, and they are of opinion that this is the only character of bill that can at present become a law. It is certainly conservative enough for the most timid and to defeat it now could do no good. We may at the proper time so amend it as to make it more acceptable to a larger number of Democrats. At least let us make the effort, and not join with the enemy in destroying it in embryo. What better bill is offered either by the Republicans or our Democratic friends who are acting with them in the effort to destroy this one? Better show us a better method of meeting the popular demand for tariff reformation before trying to thwart the one proposed, and then we might reach a common ground upon which every Democrat can stand.

Our tariff system is so complex and difficult of adjustment to all our varied industries that the work of reforming it must necessarily be of slow growth and should be proceeded with in a conservative and cautious spirit, so that as little injury as possible may result from the change which must come sooner or later.

Considerations of this character have no doubt in some measure influenced the majority of the Ways and Means Committee, who thought it wiser to take one step at a time in a great reformation which it is the mission of the Democratic party to accomplish and for that this bill is intended; but to defeat it would emphasize the fixed intention of its opponents to prevent any interference with the present tariff law. The Democratic party of the country can not afford after all its pledges to be put in this attitude, and I will not aid the Republican party in placing it there. No party can very much longer uphold and defend such tariff regulations as we now have and successfully appeal to the public for a favorable judgment upon its action.

The people of all sections are being educated on this subject and can not be further misled and deceived by shallow sophisms and meaningless platitudes. They will soon demand practical legislation, based upon the necessities of the hour, for the advancement of material interest, and not for the propagation of abstract theories of political economy.

The Tariff.

SPEECH

OF

HON. D. H. SUMNER,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 5, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 5893) to reduce import duties and war-tariff taxes—

Mr. SUMNER said:

Mr. CHAIRMAN: In 1850 the differences between radicalism and conservatism ripened into open strife, resulted in a victory for radicalism in 1860, and finally, in 1861, plunged the country into that terrible conflict known as the great "civil war of America." During that period of crimination and recrimination the study and discussion of the all-important subjects finance and taxation were almost entirely abandoned. Then followed four years of war, filled with the booming of cannon and clashing of swords, drowning out even the recollection of anything relating to the science of civil government based upon conditions of peace. The war, so far as active hostilities were concerned, having ended, ten years of reconstruction ensued, during which time radicalism asserted its grinding power by inciting race prejudices, fomenting sectional animosity, and enforcing partisan despotism.

WAR TAXES IMPOSED.

During that whole war period the taxing power of the Government was run at its utmost capacity. Direct taxation was revived and an internal-revenue system imposed. Tariff taxes were increased to the highest limit, and all the revenue powers of the Government placed upon a war footing. The people worked as industriously at home as the soldiers fought bravely on the battlefield. Patriotism and zeal felt not the burdens, and all reckoned it not only a duty, but a pleasure to make every possible sacrifice for the Union and the Constitution. During the reconstruction period radical selfishness and ambition worked the revenues of the Government at the same high-pressure rates, and scouted the idea that peace should bring relief from the burdens of war taxation. It proved to be about as expensive to maintain Radical partisanship in peace as to support the Army in war.

MONOPOLISTIC SPECULATIONS.

The high rates of tariff taxation cut off competition and brought about a series of monopolistic speculations never before equaled. Whoever secured a Government contract of any considerable proportions was more sure of a fortune than the sole heir at law and legatee of a millionaire, provided he made a thrifty use of the rules of addition, subtraction, and silence. It is not my purpose, however, to review at this time the speculations, jobbery, and corrupt practices carried on under Radical rule and official connivance during that period except as they belong to this field of inquiry, but to bring you face to face with the main fact that all these practices were carried on under and made possible because of the high rates of taxation imposed on account of the war, called at the time war measures, and that no practical reduction has been made from those high-tariff rates of war taxation up to the present time.

SURPLUS REVENUES.

The result of this vicious system of collecting war taxes in time of peace has been that the party in power has collected from the earnings of the people annually a hundred million dollars more than has been re-

quired for all legitimate uses. To get rid of this surplus revenue they have concocted all kinds of schemes, encouraged unlimited extravagance in the several departments of the Government, and debauched the public service beyond all calculation. Notwithstanding all this extravagance and waste of the public revenues, from one to two hundred million dollars have been withdrawn from the business of the country and hoarded in the Treasury vaults in idleness. This raises the question, what right has the Government to demand and what wisdom is there in the policy which requires the withdrawal of such an amount of money from the circulating medium of the country, and to that extent cripple the business interests of the people?

POWER TO TAX.

The only purpose for which taxes may be laid and collected is that of revenue for the necessary and legitimate uses and expenses of the Government. Beyond that there is no right or authority to go, and any taxation for purposes outside of that is an arbitrary and unwarrantable exercise of power.

There are two methods of obtaining revenue for the General Government: One by indirect taxation under tariff laws imposing duties on imports, and the other by direct taxation through an internal-revenue system.

The people of this country have always been opposed to any general system of direct taxation, except that the production, manufacture, and sale of luxuries, including whisky and tobacco, should come under the general rule that the necessaries of life should be free to all—that is, free from all burdensome taxation—and that the luxuries of life should be taxed for all, that is, taxed at the highest revenue rate for the support of the Government. Hence the almost universal feeling among consumers that the tariff taxes on necessaries should be reduced for the benefit of the masses of the people, and that the internal-revenue taxes on the luxuries named should be retained for revenue purposes.

REDUCTION OF TAXATION.

This simple statement seems to me to be conclusive proof of the necessity for a reduction of tariff taxation. The present rate was imposed on account of the war. The war ceased long ago, and war taxation ought to have ceased as soon as the expenses of the Government would permit. For several years all political parties in the country have conceded that fact and advocated that policy. During the first session of the Forty-seventh Congress it became unmistakably apparent that a reduction of tariff taxation was not only necessary to insure a continuance of business prosperity, but was demanded by the people. To meet that necessity and demand that Congress in May, 1882, passed an act providing for the appointment of a tariff commission. That commission, although leaning strongly toward the policy of protection, fully investigated the situation, examined the business condition faithfully, and recommended a general reduction, I may say a horizontal reduction, of from 20 to 25 per cent.

The people, presuming that that Congress intended to act in good faith and make a reasonable reduction in accordance with that recommendation, and that some considerable portion of its last session (the Tariff Commission having made its report upon the first day thereof, December 4, 1882) would be devoted to the formulating and passage of an act which would make such reduction upon a basis of justice and equality, looked on in wonder and amazement to see very nearly the whole session devoted to the work of inventing "ways and means" for defeating the passage of such an act. They saw instead the Congressional lobbies and Washington hotels fairly swarming with astute lobbyists working in the interest and for the benefit of manufacturing monopolies, and an act passed which was almost entirely for their advantage, and which produced a reduction of less than 2 per cent. If any political party was ever committed to any particular line of policy the Republican party was committed to a reduction of tariff taxation by its action in 1882.

THE PRESENT ISSUE.

In accordance with the time-honored principles of Democracy, in harmony with the action of the Republican party in 1882, and in support of the recommendations of the Tariff Commission, the Democratic party now proposes a reduction of 20 per cent. from the rates of war taxation. But what a change do we behold! Now the Republican party stands with drawn sword, and says: "Hands off!" This was unexpected, because inconsistent in action and wrong in principle. We make bold to ask, Why do you now oppose the same measure you proposed and advocated two years ago? To this question we receive two answers: First, that agitation of the tariff question will unsettle the business of the country; and second, that protection is necessary to the growth and maintenance of American industry.

In this way the present issue on the tariff question is joined. Democrats propose a reduction of 20 per cent. from the rates of war taxation, and Republicans oppose it. Let it be remembered that the Democratic party has not proposed and does not advocate any public measure based upon the doctrine of free trade. The only measure before the people by the authority of that party is the "bill to reduce import duties and war-tariff taxes," commonly called the "Morrison bill," which proposes a nominal reduction of 20 per cent., but which can not effect an actual reduction of more than about 17 per cent. This is the measure the Republican party opposes. The issue, then, may be restated as follows: The Democratic party favors a reduction of 20 per cent. from the burdens of war taxation in the interest of revenue reform, and the Republican party opposes it in the interest of those who demand protection.

PROTECTION.

What is protection? Webster defines it to be the favoring of some branch of industry by legal enactment. It is, then, an interference with the natural course of some particular branch of trade or business by law, so as to give those who follow that trade or business an advantage over those engaged in other branches of trade and business. This is in direct conflict with the charter of our liberties, the Declaration of Independence, where it is declared that "all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness."

It is also outside of the constitutional authority, which is contained in these words:

Congress shall have power to lay and collect taxes, duties, imposts and excises, to pay the debts and provide for the common defense and general welfare of the United States.

This is the revenue clause of the Constitution, and is the sole authority for collecting taxes for the support of the General Government. Protectionists claim that the "general-welfare" clause is sufficient to sustain the doctrine of protection. This, however, is upon the assumption that protection as extended and applied under protective tariff laws is for the "general welfare." This assumption we most emphatically deny.

The tariff question is not a new one with the American people. It was agitated before the adoption of the Constitution. A tariff law was adopted by the first Congress under the Constitution. That, however, was a tariff for revenue and not for protection. The average duty imposed was about 8 per cent. But the country was new, the people poor, and money very scarce. Of all things the people needed money most. Without capital, they could not engage in business of any kind to any considerable extent, and could do next to nothing in manufacturing. Then, as is always the case in new countries, the idea of extending special privileges to capital grew with the necessities of the situation. Tariff duties were demanded for the encouragement of those who ventured to invest their capital in manufacturing enterprises.

The idea of protecting labor was not thought of at that time. So from time to time the tariff duties were increased. Capital flowed into the country, and by reason of the special privileges given it doubled, trebled, and quadrupled. Whoever engaged diligently in any of the protected industries became rich, and whoever had special skill or aptitude made millions. By reason of these special and exclusive privileges the increase of capital has been almost exclusively confined to the few enjoying them, which has resulted in the ownership of about one-half of the property of the country by only one-eighteenth of the population. This jug-handle process of accumulating the riches of the country into the hands of these privileged classes is not, as I believe, for the "general welfare" of the whole people.

INFANT INDUSTRIES.

The only legitimate argument in favor of a protective policy is that protection may be necessary to encourage and establish infant industries in a new country, so that they can acquire sufficient means and strength to enable them to compete successfully with old and established works in other countries. This country, as I have already shown, has passed through that period and advanced to full age and strength. The fact that these protected industries have been able to compete successfully with the same kind of industries in older countries, and at the same time acquire in addition thereto wealth and capital in excess of all such business requirements, is proof that they no longer stand in need of such protection. The equality having been established, so far as capital, skill, and experience are concerned, the protection should be withdrawn.

This rule applies to such industries as are natural to the country and will not need protection when once established. As a rule no attempt should be made to establish the manufacture of any article that can not be produced without loss after fair trial under favorable circumstances. This idea of encouraging infant industries in new countries is not incompatible with the general principle that tariff taxation should be for revenue only, so adjusted as to equalize the burdens of taxation. But to continue a protective tariff for the support of those industries which can never be profitable in this country without protection, or for the further advantage of such industries as have already been established and made profitable, can not be for the "general welfare."

In theory the advocates of the doctrine of protection justify it as necessary to enable infant industries in new countries to advance to that equality of strength and experience that will give them the ability to enter the markets of the world as free-traders; but in practice the more protection they have the more they want, and the longer they have it the longer they want it, and when they have acquired that ability given them by protection, they pervert it from the purpose originally intended, and use it to control legislation in the interest of mo-

nopolies founded upon inequality of privileges, which condition they seek to make perpetual by legal enactment. That is what protection now means in this country.

THE GENERAL WELFARE.

Whatever is for the greatest good of the greatest number must be for the "general welfare," and whatever imposes unjust burdens upon the majority of the people for the benefit of a few privileged classes is against the "general welfare." Upon these propositions the doctrine of protection must stand or fall.

If we find certain facts and conditions connected with or resulting from protection when adhered to for any considerable length of time, showing that the protected classes, which constitute but a small minority of the people, have been benefited beyond all reason, and that the unprotected classes, which constitute a large majority of the people, have been injured in what appears to be about the proportion that the protected classes have been benefited, that is to say, if such a state of inequality has been produced as to make the protected classes rich and the unprotected classes poor, we must conclude that protective tariffs do not protect the masses of the people and do not promote the "general welfare."

That we may arrive at an intelligent conclusion upon this subject I select and present, from the general mass of such facts, the following:

I.—BANKRUPTCY.

Protectionists have declared that "bankruptcies would be the order of the day" if our protective tariff should be reduced to a revenue standard.

If conditions and circumstances, except the protective tariff, were ever favorable to, and if protection ever had opportunities to show what it could do for, business prosperity, those conditions, circumstances, and opportunities existed in 1881, 1882, and 1883. More than twenty years of protection had prepared the way. Let us, then, strike the balance and see the result:

For the first quarter of 1881 there were 1,761 failures, with $24,000,000 liabilities; for the first quarter of 1882, 2,127 failures, and $33,000,000 liabilities; an increase in one year of 20 per cent in number and 37 per cent in amount.

For the first quarter of 1883 there were 2,806 failures, with $37,000,000 liabilities; an increase in two years of 59 per cent. in number and 54 per cent. in amount.

For the first quarter of 1884 there were 3,296 failures and $40,000,000 liabilities; an increase in three years of 87 per cent. in number and 66 per cent. in amount.

From this showing it appears that bankruptcy flourishes wonderfully under protection. And this is the best showing protection is able to make after fifty years of trial. It does not advance the "general welfare."

II.—INCREASE OF WEALTH.

The greater part of our national growth and development took place between 1820 and 1880. From 1820 to 1850 we were under protection; from 1850 to 1860 we were under a tariff for revenue only; and from 1860 to 1880 under protection again. During that whole period the increase of national wealth was as follows: From 1820 to 1830, 41 per cent.; from 1830 to 1840, 42 per cent.; from 1840 to 1850, 64 per cent.; from 1850 to 1860, 126 per cent.; from 1860 to 1870, 52 per cent.; and from 1870 to 1880, 79 per cent. The average increase for the whole time was 67 per cent.; the average increase under protection was 55 per cent.; and the increase under a tariff for revenue only was 126 per cent. The increase under a tariff for revenue only exceeds that of the last and best period under protection—from 1870 to 1880—by 47 per cent. Our experience with protection thus far does not warrant its continuance. Let it, with all other failures of that kind, be wiped out. It does not promote the "general welfare."

III.—EMPLOYMENT OF LABOR.

Those who oppose a reduction of tariff taxation tell us that the withdrawal of protection will destroy manufacturing and drive the labor employed in that industry into agriculture, and that the competition in that industry will then be such that wages will be greatly reduced.

If this be true the tariff-for-revenue-only period, from 1850 to 1860, must disclose the fact. The truth, however, is just the reverse. From 1850 to 1860 the employment of labor in manufactures increased 36 per cent., against an increase of only 33 per cent. from 1870 to 1880.

VI.—HOME MARKET.

Every time the tariff question is discussed we are told that protection will give us a home market for all our agricultural products and make us independent of foreign markets. That might be a desirable condition, but protection has not given it to us. On the contrary, every decade of our experience shows that protection has increased our dependence upon foreign markets, as witness the following:

In 1820 we sold in foreign markets, including breadstuffs, cotton, and provisions, $28,000,000 worth. In 1830, $39,000,000 worth; an increase of 39 per cent. In 1840, $79,000,000 worth; an increase of 102 per cent. In 1850, $95,000,000 worth; an increase of 20 per cent. In 1860, $231,000,000 worth; an increase of 143 per cent. In 1870, $328,000,000 worth; an increase of 42 per cent. And in 1880, $626,000,000 worth; an increase of 90 per cent.

From this it appears that our dependence upon foreign markets for the sale of our agricultural products was twenty-two times greater in 1880 than in 1820, and we have to record another failure against protection. So long as the farmer has to accept for his products the prices they bring in foreign markets, less the cost of transportation and marketing, he ought not to be compelled to pay for the manufactured articles consumed by him more than their cost in those same foreign markets with the cost of transportation and marketing added. Every such increase in the cost of the manufactured articles consumed by him is just so much of a discrimination against him and in favor of the home manufacturer.

But there is another phase of this home-market question that is not very generally considered. Protectionists assume that the home market for our agricultural products depends almost entirely upon the persons engaged as workmen in the protected industries. This is not true. They do not consume enough to equal the variation between a medium and a good crop of grain. Stop and take a little thought upon this subject. How many of your friends and acquaintances are employed in the protected industries? Farmers are not benefited by protection. Farm laborers are not protected. Blacksmiths, shoemakers, stonemasons, bricklayers, plasterers, painters, carpenters, and joiners are not protected. And so we may go on through the whole catalogue and find but very few of the laboring classes affected in the least by protection except as consumers of manufactured articles made dear by high tariff duties.

According to the best estimates, founded upon the census of 1880, there are less than a million persons—not one-fiftieth part of our population—employed in the protected industries. Home market, indeed! If the number of persons employed in the protected industries should be doubled to-day it would not raise the price of wheat 2 cents per bushel, or if the whole number of persons employed in the protected industries should be transported to-morrow it would not lower the price of wheat 2 cents per bushel.

The protected industries consume less than one hundred million dollars' worth per annum, while the foreign market takes more than six hundred million dollars' worth each year. This ought to be enough to make farmers think.

V.—PAUPER LABOR.

Protectionists are driven to the adoption of the most ridiculous assumptions known to the human mind. One of the most glaring of these is the declaration that the workingmen of this country are not able to compete successfully with the pauper labor of Europe. This is the climax of absurdity. It amounts to an assertion that the intelligent, competent, industrious, and self-supporting American workman is inferior to the ignorant, lazy, incompetent, and charity-eating European pauper. When called upon to meet this allegation fairly, what true American ever had the hardihood to assert that ignorance is superior to intelligence, indolence more productive than industry, or that incapacity is superior in productive power to ability? If this be true, of what advantage is our public-school system? Why should we tax ourselves for the education of the masses of the people if it is going to result in weakness and inefficiency? Pauper labor is not even self-supporting, to say nothing about producing a surplus for export.

But, say they in answer, we do not mean paupers that beg or are supported at public expense. We mean the poorly-paid labor of England, where wages are much lower than in this country. Our manufacturers pay our workmen about 50 per cent. higher wages than English workmen are paid.

Conceding that daily wages are nominally higher in this country than in England, let us make inquiry upon two points that must be determined before their relative rates can be estimated: First, what is the relative value of their labor to their respective employers? And second, what is the relative value to the respective workmen of the wages paid them in the two countries? If we find that the labor product of the American workman exceeds the labor product of the English workman by a higher per cent. than the wages of the American workman exceed the wages of the English workman, then it will appear that the American manufacturer pays lower wages than the English manufacturer, and that protection has injured rather than benefited our labor.

VI.—WAGES AND PRODUCT OF LABOR.

The product of labor is what must be measured when we undertake to determine what class or what nationality of workmen receives the highest rate of wages. The gross annual product of each American manufacturing hand is $1,960, while the like product of each English hand is $1,040. The labor product of the American workman being 88 per cent. greater than that of the English workman, his wages ought to be 88 per cent. higher. But such is not the fact. His per diem wages are not more than 50 per cent. higher than the English workman. It is thus shown that the wages of the American workman, when we come to measure the labor product, are 38 per cent. lower than the wages of the English workman.

There are several reasons why this is so:

First. The English workman labors only from fifty-four to fifty-six hours per week; the American from sixty to seventy-two, and still does more each hour than the Englishman. There is in fact no country in the world where workingmen work as many hours each day and as many

days each year as in the United States. They are also equally noted for perfection and rapidity of execution. In these too they excel all other nations and peoples.

Second. The higher intelligence of the American workman, derived largely from our system of common schools, an attendance upon which has become practically obligatory on account of the demands of society and business, is another factor which makes him in every way superior to any and all of his competitors.

Third. His participation in and responsibility for good government make him ever vigilant, self-reliant, and ambitious for success in all his undertakings, whether of a private nature or public character.

In speaking of American workmen, I do not mean those only who are native-born, but all who have become American citizens. The man who in some foreign land learned of the advantages of our form of government, became inspired with the spirit of liberty, and had the ambition and bravery to leave his fatherland and seek a home in the New World, has shown himself equal to the highest grade of American citizenship.

VII.—PURCHASING POWER OF WAGES.

Having shown that the American workman gives the American manufacturer a very much larger return for the wages paid him than the English workman does the English manufacturer, it would seem that the cry of the American manufacturer that he can not compete in his own home market with the English manufacturer ought to be silenced. But another feature of the question is the purchasing power of wages. Society is now so organized and laws so enacted that the wages of workingmen are all used in furnishing themselves and families with the necessaries of life. Upon investigation we find that, with the exception of breadstuffs and provisions, the purchasing power of wages in England is greater than in the United States by about the rate of tariff duties on imports, which is somewhat more than 40 per cent. Now, then, half the wages of American workmen are paid out for articles that are enhanced in price not less than 40 per cent. on account of the tariff duties, which reduce the purchasing power of their wages at least 20 per cent.

Let us recapitulate. The American workman receives about 50 per cent. higher per diem wages than the English workman, but their purchasing power is 20 per cent. lower; so that the actual value to him of his daily earnings is only about 30 per cent. greater than those of the English workman. It must be kept in mind also that the American workman does 88 per cent. more work daily than the English workman, and that the difference between that increased labor product and his higher rate of wages, 38 per cent., remains with the American manufacturer.

This shows unmistakably that the claim of the protectionists that a protective tariff benefits workingmen by giving them higher wages is not only a false assumption, but that a protective tariff deprives them of a large percentage of what they actually earn, and transfers that percentage to the pockets of the protected manufacturers.

VIII.—ENGLAND.

Hardly a member has spoken upon this question without in some way referring to England. Protectionists quote her in support of their points, and tariff reformers do the same thing to apply and illustrate their arguments. On this account, and for the further reason that protectionists parade with mortal fear the allegation that the competition of English workmen and English manufacturers will ruin American workmen and American manufacturers if not shielded by high protective tariff duties, I have made a comparison of the wages received by those employed in the manufacturing industries of the respective countries. This was done not with a view to eulogize Englishmen nor to indorse English policy. On the contrary, I have shown clearly that the workingmen of England are inferior to the workingmen of this country, and have not even mentioned her policy with respect to protective tariffs.

If there is any one thing more prominent than another in the history of England it is her absolute and despotic policy of protecting her privileged commercial and aristocratic classes by protective export and import duties. Up to the year 1824 her system had been strictly protective. Her policy was to rob and plunder other nations and peoples when she could with impunity, and to burden and oppress the masses of her own people to enrich her privileged classes. All the wrongs and injustice perpetrated upon the American Colonies were done at the bidding of protected monopolies. Yes; all the suffering, plundering, and oppression imposed upon injured and downtrodden Ireland have been the direct result of the protection she has extended to her legalized and petted aristocracies.

But for centuries the people of England have been struggling against these privileged classes and for the overthrow of aristocracy. They have not yet succeeded, but some advance has been made. In 1824 a general effort was made to convert Parliament to the policy of commercial freedom, which was continued with unabated vigor until 1849, when a system of practical free trade was adopted. Since the adoption of that policy more actual progress has been made toward equality of rights by the English people than was made by them in the preceding four and a half centuries. During that period very much has been done toward the establishment of a system of common schools. As a result of increased commercial freedom and consequent growing intelligence the right of suffrage has been greatly extended.

As a result of this general advance the wages of labor have been increased during the last thirty years, on an average, 37 per cent. Another feature not generally considered is that as commercial freedom has advanced and the condition of labor has improved the profits and power of capital have been greatly decreased. Capital always seeks investment where it is most protected by law. Protective tariffs are the favorite means of extending special privileges to capital. Hence, as commercial freedom has advanced in England, and the protective policy has become more firmly established in the United States, English aristocracy and English capital have sought shelter under our high tariff system by investing in our manufacturing monopolies and buying up our public lands. In this way the English operative system has been imposed upon our factories, and the English landlord system is being transplanted to our Western States and Territories.

IX.—MONOPOLIES.

The first and most direct result of a tariff for protection is the establishment of monopolies. This is done by cutting off competition. One of the first industrial and economic maxims I learned was that "competition is the life of business." This maxim relates to the business of the whole people and not to that of the privileged few under a protective tariff. The foundation principle of this maxim is that competition stimulates production and improves the quality of the articles produced. Such stimulus and improvement always arise from that natural condition which is based upon equality of rights and privileges. It increases the production of each individual, class, or nation beyond what each needs for its own consumption.

This surplus product of labor is the basis of all business, trade, and financiering. The first object of each individual, class, or nation is to exchange its surplus product for the surplus product of some other individual, class, or nation, so that the enjoyment of life may be increased by the possession and use of those comforts and luxuries which may be obtained by such exchange. Now, then, this exchange of the surplus products of labor calls for another division of labor, and a general class is called from the employment of producing to that of handling the product. In this general class I include those who employ and manage labor with those who handle and exchange the product. Their interests are the same; they always combine upon the question of toll-taking, and grow fat and rich from the same source and by reason of the existence of the same laws and conditions.

Protective tariffs shield those who handle and exchange the product of labor from competition, but leave those engaged in the labor of production open to competition from every quarter. This enables the employer to control both the cost of the article he sells and the price he sells for, while the laborer can neither decide how long he will work nor the price he shall work for.

Such is the manner in which monopolies have been created and are maintained in this country under protective tariff laws. In business, as in politics, morals, and religion, conditions and circumstances produce their legitimate results. If the persons engaged in any particular kind of business have a monopoly of it, that fact will very soon appear from the rapidity with which they acquire great fortunes.

In no country in the world have colossal fortunes been so quickly amassed as in this since legislation has been manipulated in the interest of privileged classes; not because of great industry, learning, and good judgment, but by those who have in some way been enabled by law to take advantage of their fellow-men. If there is any one place in the United States where protection has protected, and the protective policy has been fruitful, it is in the city of Cleveland, Ohio. Last winter, in the Ohio Legislature, Senator Williams of that city, in speaking upon the tariff question, among other things, said:

> I am thoroughly conversant with the working and effect of a protective tariff in my own city. There the benefits of protection have inured to the manufacturer almost exclusively. Why, sir, I can remember when there were but two millionaires in the whole United States—Girard and Astor.
>
> Now I can name no less than thirty in my own city of Cleveland. I have traced the history of these millionaires, and found that their wealth grew out of protected monopolies, and through the policy of a protective tariff. The fact is that their net profit is never less than 20 per cent., and it very often exceeds that. Upon the other hand, the average wages of the workingmen in the Cleveland manufacturing establishments range from $350 to $378 per year—barely enough to afford a subsistence.

Here we have the whole secret. The protected monopolies are making a net profit of 20 per cent. on their investments at the expense of the whole people. A protective tariff legislates three-fourths of these enormous gains into their pockets. This is nothing short of legislative robbery. It keeps the masses of the people poor that these petted beneficiaries may revel in wealth and luxury.

Of what use is a republican form of government when molded into a taxing machine for the upbuilding and support of an untitled aristocracy? What authority is there in our Constitution for extending special privileges to any class of our citizens? These monopolies buy labor and sell the product of labor. Workingmen sell labor and buy the product of labor. Why should the monopolies be protected in the privilege of buying labor in the cheapest market and at the same time be given the power to make a dear market for the sale of the product of that labor? If this is not rank injustice, where can it be found?

X.—"AGITATION RUINS BUSINESS."

The first plea of our opponents—"the benefits of protection"—having been disposed of, we now come to the consideration of their second plea, "that the agitation of the tariff question will disturb and injure the business condition of the country." The real and only question involved in this measure is the proposition of the Democratic party to reduce taxation to a revenue standard. It is true that we propose to do that by reducing the rates of import duties.

It being established that our present rates of taxation produce a large surplus revenue, what reasonable objection can there be to such a reduction of those rates as will reduce the amount of taxes collected to the legitimate uses of the Government? The answer comes to us in a weak, cracked, and trembling voice that the "business interests" can not stand it. When they say "business interests" they mean the protected monopolies. They have had the lion's share at the common expense until they have acquired the lion's strength, and now when called upon to use that strength for their own support and the common good they plead weakness and cowardice.

Protection, then, produces weakness and instability. Protection has made the Republican party a coward. That so-called "grand old party" has lost the courage of its convictions. But, Mr. Chairman, that is not the only trouble with that party. Two years ago a Republican party President said in his message to Congress that such a reduction of taxation as we now propose was necessary for the general welfare and demanded by the people. This declaration of the President was indorsed by the Republican Secretary of the Treasury. A little later a Republican Congress reiterated the declaration and appointed a Republican tariff commission to investigate and report a measure that would effect such a reduction. And then about a year and a half ago that tariff commission reported and recommended the passage of an act for such a reduction of taxation.

Then the music commenced. The pampered lions of protection began to roar. That would lessen the amount of tribute they were levying upon the people. It would interfere with their system of legalized plunder. Something must be invented to divert the attention of the people, not only from the great question of revenue reform, but from the record they have made upon that question.

Behold the wonderful production! Look at this child of protection! "Agitation ruins business." Such is the platform of the Republican party of to-day. Republican orators, Republican newspapers, and Republican office-holders have dubbed it the "grand old party." Yes, it is the grand old party of agitation and revolutionary tendencies when it wishes to engage in the manufacture of party capital by inciting race prejudices and fomenting sectional animosity, or when it becomes the ally of prohibition cranks and woman-suffrage agitators. Then it believes in agitation. But when a great economic question, the true principles of which have not yet been fully settled and adopted by the nations of the earth, is presented for discussion, it shrinks back and votes against its consideration. When we propose to relieve the people from the burdens of war taxation it threatens to vote to strike out the enacting clause of the bill.

Until the first session of the Forty-seventh Congress the Republican party in Congress, in conventions, in newspapers, and on the stump professed to be in favor of revenue reform and for a reduction of taxation. Since that time its course of action has been against that policy, with an evident desire to keep up old appearances and in that way deceive the people. But now that party is compelled to vote upon that identical question. The record must be made. Now, then, if the representatives of that party vote to strike out the enacting clause of this bill "to reduce import duties and war-tariff taxes," it will become the anti-revenue reform party. That will be an irredeemable pledge against a reduction of taxation. Yes, I may add that such vote will bind that party to oppose even the consideration and discussion of any such great economic measure. With such a record and such a pledge its only promise for the future will be that war taxes shall be maintained and lavish expenditures of the public moneys continued. It will try to escape this issue by "pointing with pride" to its achievements in the war. But the war is of the past, and the people demand that provision for the future shall be made upon the basis of peace, economy, and progress.

XI.—REPUBLICAN RULE.

Inasmuch as this "grand old party" is determined to look only upon its bloody and corrupt past, I call your attention to a few of the results of a quarter of a century of Republican rule.

1. It has given us a system of taxation so fatally vicious that it takes from the earnings of the people annually a hundred million dollars more than is required for all legitimate uses of the Government.

2. It has given us a foreign commerce almost entirely surrendered to foreign ship-owners, by reducing our interest in our carrying trade with other nations from what it was in 1859, 75 per cent. thereof, to what it is now, only 15 per cent.

3. It has given us a Navy upon which more than $500,000,000 have been expended during that time, but which is officially confessed to be utterly worthless as to ships and guns.

4. It has given us an Army that is dissolved by desertion as fast as it can be filled by recruiting, on account of the corrupt practices, extravagant habits, and aristocratic privileges of the officers, whereby the common soldier is sunk into oblivion and the service degraded.

5. It brings to us the Mormon problem in worse shape than it was when that party first declared war upon polygamy twenty-seven years ago.

6. It has given us one mighty wrangling, log-rolling, and lobbying for the creation and maintenance of special and class privileges.

7. It has inaugurated the tendency and established the practice of centralization, by absorbing the liberties of the people into the powers of the Government.

8. Its teaching and practice have been that fealty to the Republican party is more important than loyalty to right principle.

9. It has given nearly 200,000,000 acres of the public lands to railroad corporations, comprising the best portions of our public domain, the grants being in many cases 25,000 acres to the mile of railroad proposed to be constructed, without requiring adequate security for such construction or forfeiture of the grants in case of failure to construct.

10. It has drawn to itself all the corrupt elements in politics by its practice of dispensing public patronage and power to the highest bidder.

11. It has substituted men of wealth for men of worth as its representatives in the Government, whenever such a change could be effected with the probability of securing an enlarged corruption fund for campaign purposes.

12. And it has brought popular government into disgrace by the stealing of one Presidency and the purchase of another.

XII.—DEMOCRATIC TARIFF.

In conclusion, Mr. Chairman, I submit the following propositions for a Democratic tariff platform as being the best expression of true Democratic principles as advocated by our best representative Democrats:

1. No more money for revenue should be collected than is necessary for the expenses of the Government economically administered.

2. No import duty should be imposed upon any article above the lowest rate which will yield the largest amount of revenue. Below such rate discrimination may be made descending in the rate of duties, or for imperative reasons the article may be placed in the list of those free from duty.

3. The maximum revenue duty should be imposed on luxuries.

4. All maximum and specific duties should be abolished and ad valorem duties substituted in their place, care being taken to guard against fraudulent invoices and undervaluation and to assess the duty on the actual market value.

5. And all duties should be so imposed as to operate as equally as possible throughout the Union, discriminating neither for nor against any class or section.

Reduction of Taxation.

SPEECH

OF

HON. CHARLES H. MORGAN,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 5, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 5893) to reduce import duties and war-tariff taxes—

Mr. MORGAN said:

Mr. CHAIRMAN: I thank the gentleman from Iowa [Mr. COOK] for yielding a part of his time to me to-night. It is not my purpose to speak upon the question of the tariff, but I have a word to say in favor of a reduction of taxes. The bill under consideration has my hearty support. It reduces unnecessary taxation, and such reduction is made on the duties upon imports alone. It increases the free-list by adding thereto the following articles:

Salt, in bags, sacks, barrels, or other packages, or in bulk.
Coal, slack or culm.
Coal, bituminous or shale.
Provided, That this shall not apply to coal imported from the Dominion of Canada until that government shall have exempted from the payment of duty all coal imported into that country from the United States.
Timber, hewn and sawed, and timber used for spars and in building wharves.
Timber, squared or sided, not specially enumerated or provided for in this act.
Sawed boards, plank, deals, and other lumber of hemlock, whitewood, sycamore, and basswood, and all other articles of sawed lumber.
Hubs for wheels, posts, last blocks, wagon blocks, oar blocks, gun blocks, heading blocks, and all like blocks or sticks, rough-hewn or sawed only.
Staves of wood of all kinds.
Pickets and palings.
Laths.
Shingles.
Pine clapboards.
Spruce clapboards.
Wood, unmanufactured, not specially enumerated or provided for in this act—

All of them of common use throughout the country. It will cheapen

the expenses of living and add to the savings of the people. It is, in fact, a measure to reduce war-tariff taxes, which are no longer required for the support of the Government or the payment of the national debt.

From the year 1865 to the year 1883, inclusive, there has been collected by the Government in the shape of taxes the sum of $6,740,246,000 in round numbers. These figures are taken from the published official statement from the Treasury Department, warrant division, dated August 20, 1883. This sum is the remainder, after subtracting from the net revenue of the Government the amount received from the sale of public lands, the sales of public land during these years yielding less than $43,000,000.

The mind of man is incapable of comprehending the sum so paid by the people, and by subdividing it alone can we obtain a realizing sense of its magnitude. Let us distribute it to counties according to their population; for by the system under which our taxes are collected communities pay in the ratio of population instead of wealth. This will show that a county with a population of 25,000, or equal to that of Henry or Cass or Bates, in the State of Missouri, have contributed the sum of $180,000 per annum. These figures are startling, but verify them, as you easily may, and they will be proved substantially correct.

These burdens have been patiently borne, although they have been most oppressive. No small portion has been for extravagance and not for the necessary expenses of Government, while millions of dollars have been stolen outright. The payment of this amount without complaint shows the grand resources of the nation and the patriotism of the people. During this time legislation has not always been for the purpose of making the payment of taxes easy. Contracts for the payment of a large portion of the bonded debt of the United States have been changed, and bonds payable under the original contract in lawful money have been by act of Congress made payable in coin alone. During a portion of this time there was no law authorizing the coinage of silver, and in their hour of extremest need the people were deprived of the benefit of the mines of the West, with their untold millions of uncoined silver dollars.

Instead of wisely using the public lands for the legitimate purposes of the Government, a large portion of them have been granted to railroad companies. Public domain greater in area than the State of Missouri at one Congress has been diverted from the purposes to which it was dedicated in the earlier days of the Republic, namely, for homes for the people, and conveyed to moneyed corporations under circumstances so scandalous as to weaken confidence in Congress.

At last, after all these years, we find a surplus of revenue in the Treasury, and the people supposed that the rate of taxation would be at once reduced. President Arthur called attention to the fact, and suggested a reduction of taxation two years ago. The matter was discussed in the Forty-seventh Congress. The friends of a low tariff insisted that a reduction should be made in the rate of duties upon customs and favored a revision of the tariff laws. The representatives in Congress of the interest receiving protection insisted upon the appointment of a commission to investigate the question, gather information, and report to Congress.

The friends of revenue reform were defeated, and the "commission bill" passed Congress and became a law. At the time it was earnestly insisted by Democratic members that it was a delusion, and it was not intended by a majority in Congress that it should result in a reduction of tariff taxation. The commission was appointed by the President, and composed of men who were well known as protectionists, many of them being personally interested in a high protective tariff. Notwithstanding the composition of this commission, it reported to the Forty-seventh Congress in favor of a tariff reduction, using the following language:

> Early in its deliberations the commission became convinced that a substantial reduction of tariff duties is demanded, not by a mere indiscriminate popular clamor, but by the best conservative opinion of the country, including that which has in former times been most strenuous for the preservation of our national industrial defenses. Such a reduction of the existing tariff the commission regards not only as a due recognition of public sentiment and a measure of justice to consumers, but one conducive to the general industrial prosperity, and which, though it may be temporarily inconvenient, will be ultimately beneficial to the special interests affected by such reduction.
>
> * * * * * * *
>
> Excessive duties generally, or exceptionally high duties in particular cases, discredit our whole national economic system and furnish plausible arguments for its complete subversion. They serve to increase uncertainty on the part of industrial enterprise, whether it shall enlarge or contract its operations, and take from commerce as well as production the sense of stability required for extended undertakings. It would seem that the rates of duties under existing tariff—fixed for the most part during the war, under the evident necessity at that time of stimulating to its utmost extent all domestic production—might be adapted through reduction to the present condition of peace, requiring no such extraordinary stimulus. And in the mechanical and manufacturing industries, especially those which have been long established, it would seem that the improvements in machinery and processes made within the last twenty years, and the high scale of productiveness which has become a characteristic of their establishments, would permit our manufacturers to compete with their foreign rivals under a substantial reduction of existing duties.
>
> Entertaining these views, the commission has sought to present a scheme of tariff duties in which substantial reduction should be the distinguishing feature. The average reduction in rates, including that from the enlargement of the free-list and the abolition of the duties on charges and commissions, at which the commission has aimed, is not less on the average than 20 per cent., and it is the opinion of the commission that the reduction will reach 25 per cent."

The Committee on Ways and Means of the House, with the distinguished gentleman from Pennsylvania [Mr. KELLEY] at its head, took up the matter for consideration, and reported a bill to the House which, instead of reducing the tariff 25 per cent., as recommended by the commission and warranted by the condition of the Treasury, made a reduction of less than 2 per cent.

This bill, amended and changed in many particulars, passed Congress and received the signature of the President, and is now known as the "tariff law of 1883." Against its passage the revenue reformers were solidly arrayed under those able leaders CARLISLE and MORRISON. The supporters of the measure, led by KELLEY, MCKINLEY, and Haskell, were only victorious by the aid of RANDALL, of Pennsylvania, and a small following of protection Democrats.

The people were not then and are not now satisfied with the action of that Congress. They expected, and had a right to expect, such a reduction of taxation that no more money should be taken from them than actually necessary for the expenses of Government. The last report of the Secretary of the Treasury shows that there was remaining in the Treasury at the close of the last fiscal year about $150,000,000, and the effect of the tariff law of 1883 is now sufficiently known to warrant the opinion that with an honest and economical administration of public affairs this surplus will not be diminished, but continue to increase year by year.

Even the advocates of a protective tariff admit that this condition should not and can not remain, and they have proposed various expedients and schemes to get rid of the surplus in the Treasury without abatement or reduction of tariff taxation. This is not strange; such an amount of money lying idle in the Treasury invites schemers and corruptionists.

One distinguished gentleman, a most prominent candidate from the far East for the Presidency, Mr. Blaine, proposes to solve the problem by turning over to the States the entire amount of money received into the Treasury from taxation of spirits. This is not only a bid for popularity and a bribe held out to the States, but it will permit the present high protective tariff to remain and even to be increased. It would relieve the States of the payment of taxes and change the entire system of tax-paying there. Under the State laws the revenue necessary for the State purposes is derived by a tax upon property. Under the tariff and internal-revenue system of taxation revenue is derived from the individuals according to what they may use, and a laboring man with a wife and children may, and often does, pay more for the support of the Government than a millionaire. Such a change would be in the interest of rich people and against the interest of the poor.

Another candidate from the West [General LOGAN] proposes, by means of the Blair bill, to get rid of the surplus revenue by establishing a system of Federal education—a most dangerous and unconstitutional proposition, and which, if enacted into law, will go further toward centralization of power in the Federal Government than all the legislation in the last twenty-five years.

Others propose the erection of expensive public buildings throughout the United States, and to-day we have on the Calendar bills which are proposed to be passed this session erecting a public building in every district whose Representative has applied for one. New and extravagant schemes for the improvement of rivers and harbors before unheard of have been made. Every possible device is to be resorted to to spend the money of the people in order to keep up the protective tariff.

Another plan, and one which in my opinion will finally be adopted by the protectionists, is to abolish entirely the internal-revenue tax. To each and every one of these schemes I am unalterably opposed. The idea of meeting the excess of revenue collected by extravagant expenditures is absurd. It can never be carried out. The people will never submit to it; but we must expect no easy victory.

Nearly half a century ago Andrew Jackson, in his great address to the American people, said:

> Rely upon it, the design to collect an extravagant revenue and to burden you with taxes beyond the economical wants of the Government is not yet abandoned. The various interests which have combined together to impose a tariff and to produce an overflowing Treasury are too strong and have too much at stake to surrender the contest. The corporations and wealthy individuals who are engaged in large manufacturing establishments desire a high tariff to increase their gains. Designing politicians will support it to conciliate their favor and to obtain the means of profuse expenditure for the purpose of purchasing influence in other quarters.

This is the language of a Democrat and a statesman, and is as true of to-day as of the time it was uttered.

I will now for a moment consider the proposition of abolishing the internal-revenue tax. The taxes upon tobacco and upon liquors are voluntary; no one is compelled to pay them, for these articles are not necessary to life, comfort, or happiness. Those who have the money to spend can indulge in the luxury of tobacco, and the same is true of liquors. No one is obliged to indulge in them. In fact, the use of liquor is in itself pernicious; it brings no happiness, but, on the contrary, it results in suffering and misery. It is the last article from which taxation should be removed. The people to-day are not suffering for cheap whisky. Those who drink it are willing to pay the tax. No law is necessary to remove this tax. Those who are opposed to it can refuse to pay it by leaving off the use of it. In doing this, and thus refusing to pay this tax, they will not be prosecuted and punished by the Government, nor will they suffer any privation. I would

leave the remedy against high taxes on whisky and tobacco to the people in their individual capacity. Whenever they are ready to abate these taxes, in whole or in part, they can do so by simply abstaining from the use of the articles.

Any person opposed to paying a tax on whisky can carry out that opposition as an individual, and refuse to pay another cent of tax upon it, and to such refusal no penalty is attached, but a reward is offered and paid in increase of wealth, happiness, and honor.

I shall oppose the removal or reduction of the tax upon spirits, and insist upon the reduction of taxation upon the necessaries of life. I would make as cheap and as free as possible the food for the people; as cheap as possible what they are obliged to wear; and in the third place, would cheapen all articles that go into the homes of the farmers, the laboring men, and of every other class who are compelled to earn their living by their own exertions.

All over the Western country to-day, out upon the prairies and in the forests and amopg the mountains, there are thousands struggling to build up homes, many of them commencing with less than the sufficient amounts to purchase the lands upon which they are living at Government prices. Let us shape the laws of the country to protect these men. Let us aid them in their struggle for existence. Let Congress enable them to build good houses to live in by giving them free lumber and cheap building material, and then cheapen all articles that go into those houses to furnish and fit them for pleasant homes. Let us cheapen the food upon their tables, and everything necessary to life, comfort, and happiness. When we reflect upon their condition, when we consider their labors, privations, and hardships, it seems to me that the proposition to cheapen liquors or tobacco in order that you may increase or keep up their taxes is the most unstatesmanlike and wicked measure ever devised by the ingenuity of man. To abolish the internal-revenue taxes and refuse to reduce tariff taxes would encourage the production and consumption of liquor and tobacco at the expense of hard-working, honest, and intelligent citizens of the country, who alone contribute to its greatness.

Gentlemen say the present bill will not accomplish the result we seek. They object to the peculiar features of this bill known as the "horizontal cut." I have heard this objection urged on every hand, in season and out of season, since it was first reported by the distinguished gentleman from Illinois [Mr. MORRISON] from the Committee on Ways and Means, and have never heard it urged by a single individual who is in favor of lower tariff. It is always urged by the friends of protection.

You tell us that what we need is a thorough revision of the tariff. We know that this is impossible at the present time, and if attempted would meet with the united opposition of all the protectionists on both sides of this House, and if by good fortune it should pass here would be defeated in the Senate, now controlled by the Republican party. We have therefore, and as we still think wisely, attempted nothing of the kind, but have provided for a reduction of overtaxation by the tariff. This bill will reduce taxation at least $100,000,000 per annum, and it is estimated will reduce the yearly revenue derived from duties on imports nearly half this amount. Applying the same rule used by me a few minutes ago, that these tariff taxes fall upon counties in about the ratio their population is to that of the whole country, we obtain a saving to each of the four largest counties in my district—Bates, Henry, Cass, and Vernon—of about $50,000 per annum, and more than half this sum to each of the four smaller counties, namely, Barton, Dade, Cedar, and Saint Clair. To aid in accomplishing this result I have bent all my energies and will continue the work to the end.

The gentlemen on the other side of the House say that this bill does not remove the inequalities and incongruities of the present law. You forget if there are inequalities and discriminations and inconsistencies that you alone are responsible for them. You made this law against our protest, against our votes, and you are estopped from denouncing it now. We know the law is a bad one, and we propose to revise it whenever we have the power. If the present bill is defeated and no reduction in taxation is made we are sure to return to this House in sufficient numbers to pass any bill we see fit to pass. Defeat this measure for the partial relief of an overtaxed people, and we will have the power, not only in the House of Representatives but in the Senate of the United States, to pass a law revising the tariff. Defeat this bill, and the people will elect a President who will approve any bill that may be presented to him by Congress revising the tariff and making it for purposes of revenue alone. For the time will come, and shortly too, when the people will declare that the power to levy and collect taxes is limited and confined to purposes of Government alone, and that no power exists to compel one citizen to contribute money or labor for the use and benefit of another. And I expect a declaration upon this subject at Chicago in the coming July convention of the national Democracy in sentiment and language like this:

We denounce the present tariff, levied upon nearly 4,000 articles, as a masterpiece of injustice, inequality, and false pretense. It yields a dwindling not a yearly rising revenue. It has impoverished many industries to subsidize a few. It prohibits imports that might purchase the products of American labor. It has degraded American commerce from the first to an inferior rank on the high seas. It has cut down the sales of American manufactures at home and abroad and depleted the returns of American agriculture—an industry followed by half of our people. It costs the people five times more than it produces to the Treasury, obstructs the processes of production, and wastes the fruits of labor. It promotes fraud, fosters smuggling, enriches dishonest officials, and bankrupts honest merchants. We demand that all custom-house taxation shall be only for revenue.—*Democratic National Platform*, 1876.

Or this:

Home rule, honest money, consisting of gold, silver, and paper convertible on demand; the strict maintenance of the public faith, State and national, and a tariff for revenue only.—*Democratic National Platform*, 1880.

Any party, or faction of a party, refusing relief to the people from war taxes after twenty years of uncomplaining payment, and when the necessities of the Government no longer require their payment, is unworthy of support and will be condemned at the polls.

There can be no doubt of our triumph in this House. We will pass this bill, with but few changes, this session I sincerely hope and believe; but if we fail, we will go before the people at the coming election and ask indorsement of our course, and returning with their vindication go forward to victory.

The Tariff.

SPEECH

OF

HON. SETH L. MILLIKEN.

OF MAINE,

IN THE HOUSE OF REPRESENTATIVES.

Wednesday, April 30, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 5893) to reduce import duties and war-tariff taxes—

Mr. MILLIKEN said:

Mr. CHAIRMAN: I shall not attempt at this period of the discussion to enter upon an examination of the tariff in all its details. To do so would be to repeat an o'er-told story. Already we have been treated to a plethora of debate upon the important items which make up the schedule of duties upon imports; but there are some salient points which I desire briefly to consider, and some statements have been made and conclusions drawn by the gentleman who has just taken his seat [Mr. CULBERSON, of Texas] and by others to which I wish to reply. That done, I will not further engage the time of the House and delay its final vote upon this question which the country so much desires to see settled. I feel that the agitation of this subject is to be deplored. The bill is not only bad in character but inopportune in its introduction. So long as it is pending the business of the country knows that it treads upon uncertain ground, and it will advance timidly, shrinkingly, and hesitatingly instead of going forward with firm and healthy step.

Capital is proverbially a coward. Above all things it is anxious to be assured against unknown perils. This bill threatens so many industries in which capital is invested, menacing at the same time the rewards of labor, that the sooner we dispose of it the better, I believe, will the people be satisfied. Indeed, I am sure that if the country is solicitous for one thing more than another relative to this Congress it is that we should stop talking, go to work, do the duties that are before us, adjourn, and give the people a rest.

So believing, I mean not to make myself responsible for extending to August a session which should have done more and better than we are likely to do and should have ended in April.

I observe that some gentlemen who favor the passage of this bill seek to place the issue between curtailing the tariff on the one side and abolishing the internal-revenue tax on the other. This is a shrewd deception. It is a well-spread net thrown out to catch votes for free trade. But the net is none too well concealed, though the deception receives help from a few protectionists who are weak enough to fear that a system so sound as that of protection of American industries and American labor against the aggressive encroachments of British interests in this country may possibly be unable to stand upon its own merits, and they would therefore make the system a revenue necessity by throwing away more than a hundred millions of dollars which the Government receives as taxes on whisky and tobacco.

But this is not necessary, and will not be done. Protection requires no such sacrifice. It can stand in its own strength. The issue is not between duties upon imports and internal revenue. It is between protection and free trade. All the efforts of the Democracy to disguise this fact and sail under a false flag, as it has continually been endeavoring to do for the last twenty-five years, will not avail it. The people are studying this subject as they once studied the character of slavery, and as upon that question so now upon this they will arrive at a correct conclusion. Ingenious phrases will not deceive them. They will not be misled by cunningly constructed platforms, which specifically state nothing, and may be construed to answer the demands of the different popular sentiments of different localities.

The Democratic shibboleth is tariff reform, but every Democratic orator who rises in his place in this House and takes "tariff reform" for his text makes a speech for free trade. Every proposition he lays down, every argument he makes, every conclusion he arrives at, is a proposition upon which to rest the theory of free trade, an argument urging the virtues of free trade, a conclusion that free trade should be practically adopted by the nation.

Tariff reform is used as every other expression of the Democracy upon that subject has hitherto been employed. It has been resorted to as a cloak to cover its ulterior purpose of free trade. The Democratic party has never yet dared to phrase a distinct, unequivocal proposition upon the tariff question. It has acted toward the people like an intriguing diplomat who believes with Talleyrand that language was made to conceal rather than to express the real meaning and intention of the speaker, and not like a brave party conscious of the honesty of its motives and confident of the soundness of its principles.

With the approaching national election ever present in its mind, it continually endeavors to ambush its position. Hence "tariff reform," "tariff for revenue only," and "tariff for revenue" are the devices upon its banners to-day. But should such an improbable event occur as its success in the approaching Presidential contest those misleading flags of a misleading party will be pulled down, the free-trade flags will be raised, and American producers of all kinds, farmers, manufacturers, and laborers, will be treated to their hearts' content to British monopoly in this country and British paupers' wages paid to American workmen. So much at least has been established by this debate.

Not only have gentlemen preached free-trade sermons as often as they have taken tariff reform for their text, but we have been assured by the distinguished chairman of the Ways and Means Committee that this bill is only a first step in cutting down protective duties. What the next step will be we are not informed, but that the final one is to be free trade in the event of Democratic success no intelligent man can doubt. The attempts of gentlemen to evade the issue will not serve them. They do it but haltingly. The ingenious rhetoric which they resort to neither changes it nor hides it away. Plainly protruding up through the sheep's clothing the ears of the wolf are discernible. The recent remarkable speech of the gentleman from Ohio [Mr. HURD], as self-contradicting and absurd in its propositions as it was elegant in its composition, was but a wild, incoherent cry for free trade under the caption of tariff reduction. He brands protection as robbery, but is willing to have it with 20 per cent. reduction to be made upon all dutiable articles without discrimination.

If protection is robbery, then there should be none of it at all. A horizontal reduction of 20 per cent., as provided in the Morrison bill, is absurd; for it assumes that all products upon which there is now a duty can equally bear reduction. It is worse than Procrustes's iron bedstead, which was to make all people of equal height by cutting off those who were too long and stretching those who were too short. It cuts off 20 per cent. from all duties regardless of whether they be great or small. Such a reduction is senseless. If the tariff is to be revised at all it should be done judiciously, carefully, and with proper discrimination. He asserts that protection robs one class for the benefit of another, and then attempts to show that no class gets the benefit of the robbery. He says the farmers pay $450,000,000 annually on account of protection, and then declares that neither the manufacturer nor laborer nor any one else gets it. What becomes of it the gentleman fails to tell us. He says that protection raises the price of manufactured articles, that the manufacturer pays no more for labor on account of it, and still is not benefited by it. He says a reduction of the tariff will raise the price of wool, and yet commends it to the woolen manufacturer as the means of giving him cheaper raw material. He argues that free trade would increase our commerce by increasing our exports and imports, forgetting how greatly these have increased since the tariff laws of 1860 were enacted; neglecting to state that our commerce has not recovered from the crushing blow which it received from Democratic cruisers during the war and inimical Democratic legislation since, and that the trouble is not that we have no exports to carry, but that we have no ships to carry them in.

And while we are struggling for legislation to relieve American commerce of the burdens which weight it down he and his friends defeat our bill introduced for that purpose by attaching to it an amendment which would ultimately destroy every American ship-yard now in existence and prevent the creation of any more in the future.

The fact is, that while our exports and imports have quite doubled since 1860, our foreign trade has diminished by one-half in the same period.

If gentlemen will allow us to abolish the oppressive burdens upon American commerce and to encourage ship-building by wholesome legislation, so that we may compete upon equal footing with foreign nations for the carrying trade of the world, then we may see our commerce restored to more than its former greatness and be gratified to be able to greet the American flag floating upon every sea and in every port on the globe. This we will do without resorting to the mischievous fallacy of free trade for which the gentleman in his speech upon tariff reform so warmly and earnestly appeals. Indeed it is protection, such protection as we have extended to our coasting trade and inland industries and by it built them up, that our foreign commerce needs; and it is no insignificant argument against free trade that this great unprotected American industry has been decaying for twenty years, and is to-day above all others depressed.

The gentleman desires by free trade to open to our manufacturers the markets of the world, but fails to tell us how by the same act he would open to foreign competition our own markets, glut them with pauper-produced goods, drive our manufactures out of existence and our laborers out of fairly paid employment into idleness and poverty.

He talks earnestly of the distress of labor in America, but neglects to compare its condition with the abject misery and degradation of labor in free-trade England, or to inform us why it is that if labor is not better rewarded here than there hundreds of thousands of foreign laborers leave their hovels and their broth in their native land and flock to our shores, where they earn comfortable homes and wholesome living.

He tells us that the surplus products which we ship abroad control the home market. That surplus is less than 10 per cent. of our production. By as much as the home market is reduced the surplus product must be increased, unless our productions are curtailed. Through the open gates of free trade he would let in foreign products to take the place of our own in our markets. When by thus decreasing our home market he has increased our surplus from 10 to 30 or 40 per cent. of our production, would not the necessity of placing so large a surplus upon the foreign market bear down the foreign price and, upon his theory, reduce the price at home?

But his theory is incorrect. By stimulating an active and wholesome home market the surplus for the foreign market is decreased, and the price there controlled, instead of controlling the price at home.

Mr. HEWITT, who was chairman of the Democratic national committee, struck the key-note to the tariff controversy when he wrote to Jay Gould in his letter of January 27, 1870, that "free trade will simply reduce the wages of labor to the foreign standard."

The entire aim and effect of a protective tariff is to protect American labor, which is the foundation of American prosperity. We are here to legislate for America and not for Europe; but any legislation which shall open the gates to the products of pauper labor of the Old World and allow them to flow in upon us without restriction, destroy our industries, and drive our workingmen out of employment or reduce their wages to keep our manufactories running is inimical to American prosperity, and that party which sustains it is an enemy to the American people. It has been called the British party, and justly so. It is endeavoring to foster British interests as against American interests in this country, and British gold and British brains are backing it.

Let us examine briefly the operation of a protective tariff. You start an industry in Great Britain; I start one just like it in New York. To illustrate, suppose it to be a woolen mill. Ninety per cent. of the cost of this mill will be for labor. You procure that for 60 cents per day. I pay $1 per day for labor to construct my mill in New York. If you have $60,000 invested I have $100,000, so that my interest account is one hundred while yours is only sixty. We hire employés in about the same ratio, you paying 60 cents per day in Great Britain for the same class of labor that costs me $1 per day in America. The inevitable result is that as often as I produce a piece of my goods upon the market for $1 you produce a piece exactly like it for 60 cents. Of course you will drive me out of the market and cause me to shut up my mill and close my business unless something interferes to place us upon equal footing. This the protective tariff does. It says to you: "Mr. Englishman, you may expose your goods for sale in our American market, but before you do so you must drop into the American Treasury, as a duty upon your importation, 40 cents, to be used to pay our Government expenses. This added to the 60 cents which your goods have already cost puts you on an equal footing with me and forces you to compete with me in our market upon equal terms."

The only exceptions that occur to this result are where we are able to overcome this discrepancy in the price of labor by superior skill, greater ingenuity and enterprise, and advantage in our resources. Where these exceptions do not exist the American industry must be protected or be destroyed. But gentlemen of the Cobden Club and their Democratic free-trade allies inform us that there is an easier way to equalize the cost of manufactures in the two countries than by resorting to the principle of protection, which is to reduce the price of American labor. This is their method. This will be the effect of free-trade if the people of this country shall be so unwise as to adopt it. But what says the American laborer. He says, "I cannot live on 60 cents per day; I cannot content myself with the miserable food, clothing, and shelter which the British laborer receives; his deplorable condition of existence I cannot put up with." If an adopted citizen, he has fled to this country to escape those terrible conditions and enjoy the better ones which this land of protection affords him. If a native American laborer. he will tell you that he must live in a house and not a hovel; that he must be decently clad and not covered with rags; that he must have meat and bread to eat and not subsist on broth, as so many British laborers do; that his children must be enabled to go to the school-house to be educated to meet the requirements of manhood, and not to the work-house or the factory or the brick-yard, while yet in their infancy, to toil with their hands and carry clay upon their heads to earn a few pennies each day

for parents whose wages are not sufficient to support them, and grow up in ignorance, with a life before them of misery, degradation, and despair.

And yet these are the conditions to which the American laborer, now so independent and prosperous, so superior in culture as well as in the comforts of life to the laborers of all other lands, must come if the work of his hands and his brains is not protected from competition in our home markets with the products of the poorly paid labor of Europe. They are the conditions to which the free-trader invites him—the free-trader, who would clothe the American workingman in the filthy rags and feed him upon the broth and refuse of the crushed and stunted and unhappy poor laborers of Great Britain.

And who expects to be benefited by free trade? Who is not to be injured by it? Not any producer in the land, whether in the field or the shop or the ship-yard or the mine. Only they who have retired upon their accumulated capital and cut off coupons from their bonds for a living, he who receives a stipulated salary from Government, and the idler who lives by his wits or importunity. The importer thinks he is to be benefited by free trade; he thinks that his importations will be greater when free trade has destroyed American production and we are obliged to make greater purchases abroad. But has it never occurred to him that American labor is the foundation of American wealth; that when by free trade he shall have crippled American industries and driven American laborers into idleness he will have taken away both their power and the power of their employés to buy; so that in destroying American production he will have destroyed his own market, and in his overreaching avarice he will have killed the goose that lays for him the golden egg? This would certainly be but a just retribution to him who would break down the industries of his country and degrade the labor of his countrymen to enhance his own gains. He does not deserve the favorable legislation of his Government. The capitalist does not need it.

Who is demanding a modification of the tariff in the direction of free trade? Is it the mechanic, the manufacturer, the miner, the farmer? No. Where are the petitions asking this legislation? Do they appear before this House from any great industry in this country? No. Who is pushing this measure? The Cobden Club, the theorists in our colleges, and those Democrats who inherit the doctrines which were announced in the days when slavery, which despised American labor and free American workingmen, desired through "free trade" to obtain cheap food and clothing for the slaves. Does any one know of any workingman who belongs to the Cobden Club? Does he know of any practical American farmer or mechanic or manufacturer who has not a larger British than American interest that is a member of that club? How does it happen that that British institution is taking so much interest in our affairs and is reaching its fingers over here so eagerly and industriously to manipulate our politics? Why is it distributing its "free-trade and tariff-reform" tracts all over this country? Why is every member of Congress deluged with them? Is it a disinterested spirit of beneficence which causes it to take so great pains and provide the great amount of money which all this costs?

This club represents the manufacturing interests of Great Britain. Are its members simple missionaries who disseminate their literature throughout this country for the single unselfish purpose of enlightening our people upon principles of political economy, or have they organized for the purpose of pushing British interests in this country? That the latter is their object who is so foolish to doubt? And if the protective tariff were not a barrier to their operations, if it were not a bulwark to American industries which these gentlemen find it necessary to batter down ere they can destroy them and build up British interests upon their ruin, who believes that they would so insidiously attack it? The fact that our great rivals make such Herculean efforts to secure the repeal of our tariff laws is conclusive proof that they regard them as our chief protection in controlling our own markets in the interest of our own producers. They seek to make a diversion in their favor by ingenious appeals to American farmers, but these appeals are as deceptive as they are adroit. More than any other one in this country is the American farmer interested in the protection of American industries, unless it be the American laborer. Of the truth of this proposition both facts and logic are conclusive.

Two things the farmer desires as the conditions of his prosperity: a good sale for his products; a cheap market in which to purchase his supplies. These conditions protection has given him. It has created for him a home market by building up thrifty manufacturing villages all over the country and by employing in manufacturing pursuits those who would have been his competitors in the field. It has given to him cheaper goods by encouraging manufacturers in our own country, destroying foreign monopoly, and inciting competition here, a competition which has resulted in cheapness of production. It has also stimulated the inventive genius of our people until by their improved machinery and better methods they are enabled to furnish the farmer with all that he buys at a large percentage less than the price at which he once purchased from abroad. Twenty years ago the farmer sold for 35 per cent. less and paid 25 per cent. more than he does to-day.

Now, what is the proposition of the "free-trader?" It is to destroy American manufacturers by burying them under the products of foreign cheap labor, giving again a monopoly to Great Britain, who, when she is once more firmly established upon the ruins of our industries, will send up her prices and make our farmers pay as they did in the palmy days of comparative free trade. When no alpaca goods were made in this country we imported them without duty at 22 cents per yard. A duty was placed upon them which encouraged Americans to commence their manufacture, and we now produce in our own country by our own labor for one-half the price which we paid to the foreign manufacturers a much better article than we imported. Prior to the enactment of the present tariff laws, one year ago, cashmeres were made abroad and imported into this country without duty. The tariff act of '83 placed a duty upon these goods. Encouraged by this protection, American mills commenced to make them, and to-day we have upon the market the American product, quite equal to the foreign and at a lower price.

We are purchasing all except the finest grades of cotton goods cheaper at our own mills than they can be procured elsewhere. We do not manufacture fine lawns and cambrics because they contain little raw material, their principal cost being that of labor, and as labor is much cheaper in Europe than here we can not compete with foreign manufacturers in the production of these goods. It is to cover this difference in the price of labor here and abroad that protectionists desire a duty upon articles which Americans produce. It may be asked why, if we can manufacture the coarser cotton goods more cheaply here than they can be produced abroad, we desire protection for them. It is for the following reason: When foreign manufacturers have a large surplus on hand they can afford to transport it to this country, dump it down upon us for less than cost, and greatly embarrass our manufacturers. From this the latter desire to be protected, and should be; for such periodical disturbances of our home market would work more detriment to the consumer than he could possibly gain by the temporarily low prices which they would afford him, and from which there could not fail to be a corresponding reaction.

The gentleman from Texas argued better than he knew and to a different and wiser conclusion when he said that nine manufacturing States in this country had increased their wealth under the policy of protection vastly more than the agricultural States had done. His statement is correct, and it is a conclusive argument for protection; for this great increase of wealth in the States referred to has not been confined to their manufactories, but has extended to every branch of their industries. If the gentleman will examine the statistics he will find this statement to be strictly correct. The manufactures which have been built up under the encouragement of protection in these States have brought wealth not only to their own pockets, but to the farmers, the merchants, and the workingmen as well. Here is where the gentleman will find that farming lands are of the greatest value per acre, though they be not of the best quality; here farm laborers receive the largest wages; here farm products command the highest prices; here farm buildings are the best and most costly; here commerce and trade are the most thrifty; and here the saving-banks, where are deposited the surplus earnings of working people, have the largest accounts. The gentleman, in the true spirit of free trade, would transport this prosperity across the ocean to Great Britain by destroying the source from which it has sprung, and would reduce these nine States to the condition of the others which he says are comparatively so unthrifty.

I would, on the contrary, continue the protective policy that these other States may avail themselves of its benefits, erect the factory and foundery beside the farm, and build up industries as prosperous as those of the nine States whose thrift the gentleman seems so much to envy. It is the home markets which manufactories create near by the farmer's door which give him the best returns for his products. They are better than foreign markets for various reasons. They are more reliable, because they do not depend upon foreign wars or floods or pestilence or famine or other causes remote from our control. They are the best paying markets, because to those who sell in them the cost of transportation across the ocean is saved. They are the broader markets, because they absorb many products of the farmer which could not be shipped abroad and upon which he makes his largest profits.

Gentlemen talk of opening a larger foreign market by free trade. How is this to be done? Foreign nations now purchase all they want of our products. Will free trade induce them to buy more? Gentlemen have assumed that it will do so, but I have not yet heard any reason for the assumption. The question is, shall we allow the foreign producer to come in and capture our market with his pauper produced goods, or shall we so levy the revenues for the support of the Government as to give to the manufacturer, the farmer, and the miner the benefit of supplying our own consumers and give also to our laborers reasonable wages for their toil?

Our free-trade friends talk of low prices as if they alone were to be considered in the economy of our Government. They ignore the fact that the great mass of our people are not rich; that they have no established incomes but are dependent upon their earnings to give them subsistence and the comforts of life, and that the question of fair wages for their labor is one in which they are most deeply concerned, and whatever legislation protects the country's industries in giving them a liberal remuneration for their toil is legislation for their highest benefit.

It is notorious that England built up her great manufacturing and agricultural interests by the most heroic methods of protection, protection not only against foreign competition, but even against that of her own colonies. She continued this policy until she had made her great industries so strong that she felt that she commanded the situation, and with free trade could go into other countries with the products of her skill, her machinery, her cheap labor, and the strength of her immense capital, break up their infant industries, and control their markets.

That is her purpose to-day, and it is with such a purpose that acting through the Cobden Club and its Democratic allies she is endeavoring to disseminate her free-trade sophistries into every corner of our land, and it may not be out of place for me to say here that it is significant of the effect of protection upon the farmer that the manufactures which grew up under that policy in England made his home market so large in comparison with the number it left to cultivate the fields and so raised the price of his products that the first effort toward free trade was not on the part of the farmers to obtain cheaper manufactures, but it was a movement of the people to procure by the passage of the corn laws act cheaper food.

In this country, however, with our immense area of rich and productive lands food can never be unreasonably high; and it is a fact that while protection gives to the American workingman a better reward for his labor than is paid in any other country, he buys almost every article of food which he consumes, except sugar and rice, more cheaply here than it can elsewhere be purchased. Hence he has more comforts, is better educated, is more independent, and provides better for his family than does his fellow-laborer in any other land. And it is this condition of things which we desire to continue. Neither to decrease the expenses of the retired capitalist, the salaried official, the unproductive idler, nor to fill the coffers of British manufacturers. Will we consent so long as we can prevent it to clothe in the tattered rags of foreign pauper laborer the workingmen of America?

I stated in the early part of my remarks that the issue was between protection and free trade. There is no intermediate ground where a tenable position can be taken. A tariff for revenue only, with incidental protection, which is one of the many propositions of the Democracy on this subject, is a simple impossibility. It is a contradiction of terms, for a tariff for revenue only must be levied of course upon those articles alone which would produce the largest amount of revenue upon the percentage of taxation, whatever it might be. Those are articles exclusively of foreign production, the duties upon all of which are collected and paid into the Treasury of the Government. Such a tariff would protect no American industries, because the duties would be laid upon no goods of the kinds produced in this country.

A tariff exclusively for revenue is an injustice to all the poor people in the land. What reason can you give to the man who has a dozen children and is poor why you should tax the mouths and backs of his family and himself to raise revenue for the support of the Government rather than raise it upon property, as the States and municipalities do, unless you can show to him that these duties are either levied upon luxuries which he does not use, or are so levied as to protect the industries by which he lives? Why should the Government raise its revenues upon his necessities and the needs of his family rather than upon the property of the childless man of wealth—the Government which alone stands between the rich man's possessions and the strong who would wrest them from him? No good reason can be given, unless you enhance his wages by as much as you take from him through this method of taxation. Protection does this and more.

Let us, moreover, consider the fact that if gentlemen shall succeed in bringing this Government to the practice of the principles of "free trade," which they all so earnestly advocate, there will be nothing left but direct taxation to furnish the necessary revenues of the Government beyond the amount raised by the internal-revenue tax. Are the people ready for such direct taxation? Has any one cast up the sum to see what it will amount to for each State, county, and municipality? The current expenses of the Government can not be less than $300,000,000 per year. The internal-revenue tax, if it shall not be repealed, will give us about $100,000,000. The amount left to be raised by direct taxation would be $200,000,000, or $4 for each person in the country. This would add annually to the taxes of the State of New York $20,000,000. To the State of Maine it would add $2,600,000, and gentlemen can readily calculate the large sums which would be added to the taxes of their own States, cities, and towns.

Do these figures hold out a gratifying prospect to tax-payers? Will they prefer this method of raising the public revenue to that of taxing the foreign manufacturer, who imports his goods into our country for a market? I feel assured that they will not; yet this is the feast to which the free-trade Democracy invites them, to which they must inevitably come, and of which they must partake, if that party shall be placed in power where it can make its fallacious and ruinous policy the policy of the Government.

Gentlemen say that protection benefits the manufacturer but not the laborer. To refute this assumption it is necessary only to cite the fact that while thousands of laborers flock to our shores every year from Great Britain to secure the higher wages which protection gives them here, British capital does not come here to invest in manufactures. Were the manufacturer and not the laborer benefited by protection, then the former would send his capital here to invest and the latter would stay at home, for capital will flow where it can be best invested as surely as water runs down hill.

The foreign manufacturer makes his profits from cheap labor as our own manufacturers are enabled to compete with him and give fair emoluments to labor by protection. If any further proofs are needed as to who reap the benefits of our protective policy they may be found by comparing the comforts by which the great majority of American workingmen surround themselves with the poverty and misery so common among the laboring classes of "free-trade" Great Britain. The history of protection is its best advocate. As it built up and solidly established the manufactures of England, giving incidental prosperity to her other industries, so it is now doing for us. It has diversified the employment of our people, made us in large measure to be the producers of what we consume, created a healthy competition that has reduced the cost of what we wear and use, stimulated the inventive genius of our people to create new machinery and discover better, cheaper, and easier methods of production, is filling the land with thriving communities, and is making us an independent as well as a prosperous people. Let us not abandon it to gratify the greed of our transatlantic rivals, nor to adopt the plausible but delusive theories of impractical doctrinaires.

The Tariff.

SPEECH

OF

HON. JOHN C. COOK,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 5, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 5896) to reduce import duties and war-tariff taxes—

Mr. COOK said:

Mr. CHAIRMAN: I noticed during the last Congress that while the tariff bill was under consideration in the Senate it was agreed at one time to place lumber on the free-list. A few days afterward I observed that that was reconsidered and lumber was again placed where it now is, upon the dutiable list. That occasioned some degree of surprise to me and I took occasion to investigate the matter.

There is probably nothing in the whole range of the tariff in which we in the Northwest are more interested than the tariff upon lumber. There is to-day a duty of $2 per thousand upon round logs, squared timber, and rough boards of all descriptions. I am speaking now of white pine, which comprises almost the entire supply of lumber that is used in the Northwest. Upon a large class of manufactured lumber the duty is $3 per thousand.

It has been constantly insisted by the protectionists upon this floor that the tariff is designed to compensate the manufacturer and employer for the difference between the cost of labor in this country and in Europe. Here is one item which shows that that is not correct. Why is there a duty upon round logs, upon unmanufactured lumber, if the design is simply to compensate the employer for the difference between the cost of labor in this country and in Europe?

The white pine supply of this country is practically limited to three Sates of this Union: Michigan, Wisconsin, and Minnesota. The white pine that supplies the great Northwest, the prairie regions of this country, the timberless portions of the United States, is drawn almost wholly from those three States. I ask again, why we should have a duty of $2 per thousand feet upon round logs, squared timber, upon unmanufactured lumber, so to speak, if the only design is to protect the American laborer? Just across the borders in Canada are pine forests probably equal in extent to what is remaining in the three States to which I have referred.

I want now to call attention to another fact: that the pine regions of this country in those three States were sold by the Federal Government to the present owners at from $1.25 to $2.50 an acre. Pine timber is worth to-day upon the stump about $5 per thousand, and the yield is from five to eight and ten thousand feet per acre. These pine lands have increased in value from $2.50 per acre, the price at which they were sold many years ago to the monopolists who now own them, to about $20 or $25 an acre.

On the other hand, the price of pine in Canada upon the stump, as it is sold there—and I should say that in Canada the government retains the title to the land; it does not sell the land, but simply the privilege of cutting off the timber—the price of pine there will range from $2 to $3 per thousand.

Now why is this difference? Simply because the Government of the United States enacts a law which enables these monopolists on this side

of the line to charge for their pine $2 per thousand more than the pine of Canada is worth. What benefit is this to the laborers of this country? In the lumber regions of the Northwest those who manufacture this lumber do not hesitate to draw their supply of laborers from Canada. There is only the lake to constitute a part of the boundary line between the two countries, and as to another portion of the boundary there is but an imaginary line of separation. It would be idle to say that on one side of this imaginary line labor is so much higher than on the other.

It was shown by the Lumber Dealers' Association of Chicago before the Tariff Commission that while there might be a slight difference in the wages paid to laborers in the pineries of Michigan, Wisconsin, and Minnesota, as compared with the wages paid across the line, yet the difference in favor of the American owner of pine in the matter of conveniences for getting his lumber to market or to mill are such as to more than compensate the American lumberman for the difference in wages.

I was told the other day in private conversation by a gentleman on this floor who is interested in the lumber region of Wisconsin and perhaps Michigan that it would make no difference if the tariff on lumber should be reduced or taken off, because, he said, in that case the men who own the pine forests of Michigan and Wisconsin would simply step across the line, buy up the pine in Canada, and thus control the market and dictate the price. The answer to that was ready, that if the Government of the United States should take off the tariff from unmanufactured lumber, in that case the owners of the pine forests, in order to secure a monopoly, would have to invest twice as much money as they do now; it would cost them twice as much to make this business a monopoly as they are obliged to invest now.

Mr. Chairman, it is further a conceded fact that the pine of those three States will be exhausted within comparatively a few years. The lumber men of Chicago who appeared before the Tariff Commission estimated that it would not last more than eight or ten years. It may be that the supply will hold out longer; but what will be the result? We in the Northwest are now limited in obtaining lumber to the markets of Michigan, Minnesota, and Wisconsin. We are compelled to buy of a lumber syndicate that every year or every few months has its regular meetings and gives us a price-list. We can not buy any lumber anywhere except upon that schedule of prices. That syndicate dictates to its thousands of consumers in the Northwest just what they shall pay, and how much profit it shall make.

The profit, so far as concerns the $2 per thousand embraced in this tariff, does not go to the men who manufacture the lumber, but to the men who own the pine trees. It simply enhances the value of their property—property which they secured almost as a gift, for which they paid not one-half of what the land alone is worth to-day; for when the land is denuded of the trees it then becomes valuable for agricultural purposes.

The Government, having given them this land for $1.25 or $2.50 per acre, enacts a law that gives them a monopoly of the lumber market. Through Indiana, Illinois, Missouri, Kansas, Nebraska, Dakota, and the southern part of Minnesota and Wisconsin we are limited to the monopoly which is thus created.

Mr. Chairman, we have only to look at the difference in the value of the pine stumpage on this and the other side of the Canadian border, to know that this tariff inures to the benefit of the men who own the pine on the stump and sell it on the stump; that it does not benefit the men who run mills or employ laborers. It is idle to talk of the tariff being placed on this material simply to protect American labor. It is simply a protection to American monopoly, to American capital invested in these pine forests.

One thing further to illustrate that the tariff, at least on that article, is not laid with a view to benefiting the laborer. I want to state this fact: That the ties, that are sold perhaps principally in the Northwest, being cedar, come from cedar swamps which penetrate principally those three States in the Northwest, and are cut by farmers, by men who own the lands in small tracts, and are bought from them by railroads in large quantities. In short, that which is produced by the many and purchased by the few, or that which is produced by the many and purchased by the concentrated capital, railroad ties, are sold free of duty; while lumber cut and sold by those representing aggregated capital and concentrated wealth is protected to the extent of $2 per thousand feet and is bought by the thousands. Their interests then are ignored, the interests of the many who produce this lumber, while the interests of the few are protected. The interests of the many comparatively who are engaged in selling cedar ties to the railroads are ignored; but when concentrated capital is interested in producing, then they are protected.

It is no wonder that in the Senate the men who represented the lumber interests of those three States struck at the iron men because one or two iron men in the Senate voted to place lumber upon the free-list; and no wonder that after a little negotiation those men went back and placed unmanufactured lumber upon the dutiable list, when everything was harmonious between the iron men and the lumber men. It shows, Mr. Chairman, that we in the West are now paying tribute to the lumber kings of Minnesota, Wisconsin, and Michigan as a result of the combination between the iron interest and the lumber interest; and this, Mr. Chairman, is one of the great objects of this tariff system. It operates not as a protection to individual interests upon their merits, but as a combination between a variety of interests for their own advantage. Parties having capital invested in the manufacture of salt combine with those having investments in pine forests or in iron-works.

There is in the Northwest a growing sentiment against monopolies which is going to make itself felt in the legislation of this country. It is a feeling against monopoly which is being directed against the tariff system as a whole. Though not benefited by tariff, at least not to any great extent, we are willing that a tariff shall remain if it is so adjusted upon various interests as merely to compensate the American employer for the higher rate of wages paid by him as compared with that paid by the foreign manufacturer or producer.

But unless this tariff is adjusted fairly, unless it can be adjusted simply to protect the capitalists for the difference in wages of labor that he employs, unless the part that builds up monopolies in this country can be cut off, I want to make a prediction that in the West, and in the great Northwest especially, where the sentiment of the country has sprung up upon several important issues—action for reform in the currency among other things, upon the railway legislation of this country and railway management—you will see coming from there a sentiment that will grow and grow until it sweeps the whole of this tariff system from our statute-books.

I noticed some time ago a statement going the rounds of the press with reference to the question of tariff as between the sugar interests of Louisiana and the local interests of other States; and one of the prominent tariff leaders on this floor, this tariff gentleman hailing from Pennsylvania, said: "If your Representatives from Louisiana will vote with us to protect our interests in Pennsylvania, we will in turn join hands with you and vote to protect your interests in sugar-planting in Louisiana; and if not, if your Representatives will act and join hands with the tariff reformers and free-traders and refuse to come to the aid of our interests, we will vote against continuing sugar upon the dutiable-list much longer."

What does that show? Mr. Chairman, simply, as I said before, that there is a combination between the various interests which are protected by the tariff, and in this instance a combination between iron and sugar, just as I have already shown between iron and lumber. Here is a man who does not hesitate to say that he will vote to protect the Louisiana sugar interests if the Louisiana Representatives will vote to protect Pennsylvania manufactures; but he will not vote in that direction unless they reciprocate the favor. Now, if it is right that the sugar interests of Louisiana should be fostered or protected by the tariff, why not vote on that subject according to his convictions, and simply upon that subject alone, regardless of what the Louisiana Representatives will do for him?

I have noticed the discussions here for the last few days, and the impression that it conveys upon the mind of a listener is simply that it is a system of "I tickle you and you tickle me." Here, for instance, is a fellow in Michigan who has a salt-well, and here is another one, perhaps from the same State, who has a pine forest; here is somebody in Pennsylvania who is interested in iron-ore, and another fellow somewhere else who has an interest in sugar or some other monopoly, and they all come together with the understanding that "I help you and you help me," while those fellows who have not any interest of any kind are compelled to bear the burdens and stand between and pay the tribute.

As a result we have a far more illiberal tariff than even on a protection basis. Now, on principle it seems to me that it is bad policy for any government to enact laws that are to build up any one thing or any one man or any one interest at the expense of another. It is bad policy for any country to enact laws which shall favor certain interests, and it is a strong argument against the present system of tariff legislation. I want to repeat, sir, that I am not hostile to a tariff even as it now stands if it was designed simply to compensate the manufacturer or producer in this country for the difference between the wages of labor here and in Europe. But all I have seen here on the subject of tariff legislation and of protection, having been classes of men coming here and asking for additional protection, leads me to believe that it is the object to enable one class of men or one man who has something to sell to exact a higher price for his product than he otherwise would. And we allow that class to come here in legislation. A constant cry has been heard by those opposed to tariff reform that we ought to do nothing to obstruct the business interests of this country. We are told that a Presidential election is approaching, and that nothing should be done that would be detrimental to any of the business interests of the country.

But, Mr. Chairman, there are vast interests in this country aside from the business interests, and the only interests which are protected here ought not to be the speculative or the manufacturing interests. The farming interests ought to be considered and the interests of the vast army of consumers, comprising more than seventy times as many souls as are engaged in the protected industries; these ought to find a champion upon this floor; these ought to receive consideration at the hands of this Congress. It is in behalf of these interests, representing over 51,000,000 of our population, that I appeal to-day for a modification of the tariff upon lumber and a check upon the growing power of confederated monopolies.

Bureau of Navigation.

SPEECH

OF

HON. PETER V. DEUSTER,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, April 21, 1884,

On the bill (H. R. 3056) to constitute a bureau of navigation in the Treasury Department.

Mr. DEUSTER said:

Mr. SPEAKER: The merchant marine is a subject of general interest, not only from a pecuniary standpoint, but from considerations of national pride.

With the longest line of seacoast of any nation beneath the sun, with harbors noted for safety and easiness of access, with commercial cities on the coast second in importance to those of no other nation, the American merchant marine, in place of being the largest, is, however, in reality but a midget upon the high seas. There is scarcely a nucleus around which to build up our shipping interest, and yet our mountains, our fields, and our forests contain all the materials necessary to build and equip vessels of all kinds and descriptions.

The laws that govern the navigation of the high seas and under which the nations of the earth compete for the world's carrying trade on an equal footing are international. If legal enactments are responsible for the meagerness of our merchant marine, they are of a national rather than an international origin.

The boast of the Englishman is that Britannia rules the wave; the chagrin of the American, that the proud ensign of the free is almost unknown to the sea.

It is useless to pit an economic policy against the passage of the pending bill. The amount involved approaches only to the bagatelle of about $4,000 per year.

The establishment of a bureau of navigation releases four bureaus from clerical duties for the performance of which they can now scarcely be held to account, and it places those duties in the hands of one responsible head, whose time and energies will be devoted to the interests of American navigation and to the devising of means for its improvement.

There is a large number of bills pending before the present Congress looking to the improvement, or rather to the building up, of our merchant marine. These bills are presented, not by the representatives of a single locality nor by the representatives of a single interest, but they have had their origin with members from the interior as well as from the seaboard, which is a sufficient index of the general interest centering on this subject.

The pending measure has the indorsement of those high in authority, as the report of the committee shows. Officers of the Government whose duties lead them to a close communion with the subject under consideration recommend its execution, and the members of this House can therefore not well afford to refuse to pass this bill to constitute a bureau of navigation in the Treasury Department.

The Tariff.

SPEECH

OF

HON. HORATIO BISBEE, JR.,

OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 6, 1884,

On the bill (H. R. 5893) to reduce import duties and war-tariff taxes.

Mr. BISBEE said:

Mr. CHAIRMAN: My profession has been and is that of a lawyer, and I do not pretend to have any special knowledge of the subject of the tariff. The people that I represent here are very largely engaged in the cultivation of the soil. Their products are cotton, sugar, rice, oranges, lemons, and other semi-tropical fruits and early vegetables for the Northern markets. Our manufacturing interests consist chiefly of lumber and naval stores, and the former will continue for many years to be an important industry in my State.

The schedules of dutiable articles under our customs laws include nearly all the articles produced in Florida, either from the soil or the factory; consequently my constituents are not without an interest in this question. This will be probably the leading issue between the two great parties in the campaign of 1884.

I confess that when I cast my first vote in the Forty-fifth Congress for a protective tariff, I had not reached any settled convictions upon the subject, and gave the benefit of the doubt to my own party. Since then I have given this question some attention, with a sincere desire to arrive at a correct conclusion, irrespective of party considerations. I have listened to many of the speeches in the House during the past seven years on each side of the question by gentlemen who are acknowledged to be largely learned in political economy, and have read attentively those made by distinguished Senators who are conceded to be masters of the subject. Recently I purchased and read the works on political economy by Professor Perry, of Williams College, who is one of the great theoretical apostles and advocates of free trade who instruct the students of New England and Eastern colleges in this important branch of learning.

Having heard the protective tariff vehemently denounced in Congress and elsewhere as "piracy," "highway robbery," "larceny from the people for the benefit of monopolists," I have been an anxious and impartial inquirer upon this subject. The result of my study and reflection is that I am not in favor of reducing or repealing our custom duties for the present.

In all conflicts or controversies where the rich and powerful are arrayed against the poor and the weak, or between the employer and employed, while my sympathies are usually with the latter, I desire to do justice to both. But there is no such conflict properly arising on a tariff bill. The Government collects annually about $200,000,000 of revenue from the duty or tax laid upon imported products of the soil or factories of foreign countries. This sum, with the amount of taxes collected from spirituous and malt liquors and tobacco produced in this country, is admitted to be more than is necessary to pay current expenses and the interest on the national debt. The excess of revenue is somewhere between $40,000,000 and $60,000,000, as I understand it, after paying the estimated expenses of the Government and the sinking fund provided by law to redeem the bonded debt at maturity.

Should the bill to aid the common schools of the country become a law (and I sincerely hope it will) this excess will be reduced by ten to fifteen millions annually for several years. And if the necessary appropriations are annually made for the improvement of our rivers and harbors, and for the creation of a navy adequate for the defense of our long line of seacoast and the commerce of the country abroad, there will be an inconsiderable excess of receipts over expenditures. And a reduction or abolition of the internal taxes on tobacco and malt liquors would leave no excess whatever; at any rate it would be so small that it could be applied to the payment of the debt without danger of any financial disturbance arising from a diminution of circulation from that source.

No one is prepared to advocate a national debt as a national blessing, and a slight annual reduction of our debt is to be preferred to any increase of it arising from insufficient revenue. I have no faith that the Democratic party is much concerned about excess of revenues, although its majority in this House is divided upon the question of proper legislation to effect its reduction. Some favor reducing customs duties, others advocate abolishing our whole internal-revenue system, and of course the tax on whisky, and of leaving the customs duties as they are under existing laws.

The Republicans of this Congress, with few exceptions, are opposed to any reduction of duties on foreign importations, believing that our true and wisest policy for the public interests is to wait a reasonable time to give the tariff act of March, 1883, a fair trial, and to close all agitation of the question until the effect of that law shall be ascertained. This is the position of the two political parties as expressed by their representatives in Congress. On one side we believe that the country should have a rest on a matter of such vital interest to its prosperity, and that to reopen the discussion of it unsettles business, disturbs the relations between capital and labor to the great injury of the latter as well as the former, and that this is an evil greater in magnitude than the possible or probable collection of a small excess of revenue.

The task of a Committee on Ways and Means is usually to levy taxes to pay the expenses of the Government, but such is our revenue system, created by a Republican Congress, that the task of this committee of this Congress is to discover the ways and means of reducing the revenue. And the Ways and Means Committee of the House, to secure such reduction, have reported for consideration a short tariff bill reducing generally the duties on all articles imported from foreign countries 20 per cent., so that if under the law of 1883 the duty or tax upon any article of foreign production is 30 per cent. ad valorem, it will be 24 per cent. if this bill should become a law.

But the question is, will such reduction of duties accomplish the object? The end aimed at by the Democratic majority is to reduce the revenues of the Government. Will reduction of tariff rates have this effect? This is not certain. On the contrary, it is a matter of great uncertainty. Low duties increase importations of foreign goods, and may increase the amount of taxes collected instead of diminishing them. To illustrate, suppose under existing laws $100,000,000 in value of foreign goods are brought into this country annually, paying a duty of 30 per cent. ad valorem; the revenue collected therefrom would be $30,000,000. Now, if after you have reduced the duty 20 per cent. $130,000,000 in value of foreign goods should be imported the Govern-

ment would collect, at 24 per cent. ad valorem (the proposed rate), $31,200,000. That is, there would be collected, at the rate proposed by this bill, $1,200,000 more of revenue than there is under existing law. Thus the proposed remedy for excessive revenue would not be any remedy at all, but an increase of the evil complained of. And the more of foreign productions come to our shores the greater would be the excess of revenue collected. This whole matter rests very largely upon speculation or guesswork.

It is evident that a duty so large as to prohibit the importation of foreign goods would give no revenue at all, while a duty so low that foreign manufacturers could bring the products of their factories here and undersell American manufacturers would produce a very large revenue from this source. Precisely what the rate of duty to be assessed shall be, and exactly where the line shall be drawn so as not to prohibit foreign products from being imported, and not drive our domestic manufacturers out of existence, but keep up competition between both foreign and domestic, and produce not too little nor too much revenue, it is not easy to determine. It depends upon the state of the trade of the world. English producers, with the aid of their government subsidies to foreign steamship lines, largely control the commerce of the world. When English manufacturers can not sell their goods to the people of other nations they will sell all they can to this country. And the quantity they sell to the people of this country depends upon our tariff laws. Exactly what the rate of duties shall be can only be determined by experience.

I believe the Republican party will reduce or regulate the rate of duties as public interest demands, and that this party is quite as competent to learn what the interests of the people of this country require as the Democratic party is, and quite as quick and ready to conform their action to such interests. The Democratic party had a majority in this House in the Forty-fourth, Forty-fifth, and Forty-sixth Congresses, and a majority of the Senate during the Forty-sixth Congress. During all that time the Democratic party either had no convictions upon this subject or had not the courage to pass a tariff law. During that long period no tariff-reform measure of any kind passed either House of Congress. If there is any reason for tariff reduction now, there was then.

The same party has possession of the House now (Forty-eighth Congress). It can not now agree upon a bill upon this subject, and none will be passed this Congress in all human probability. A Republican Congress, the Forty-seventh, with a very narrow majority in the House, did agree upon a tariff-reform bill reducing customs duties, and it became a law by Republican votes. That law did not take effect until the 1st of July, 1883. Before this law had been in operation six months, and consequently before its effect upon business and upon our revenues could be known—and it is not known yet—the Democrats, who had failed or neglected to reform the tariff laws, with full power to do so, for six years, commenced an organized and systematic denunciation of the Republican party for not reducing taxation and relieving the people so dear to them, pending a Presidential election, from its burdens.

If these burdens of taxation are so grievous and hard to bear, the people will ask, why have they not been removed before? When did the Democratic party make this new discovery, and why have they not acted before?

Now, I do not give gentlemen on the other side of this Chamber credit for any patriotism or statesmanship respecting this subject. They are not so much concerned about the welfare of the dear people just now as they are about their votes next November. They have been on every side of every leading public question for twenty-four years, and been all things to all men that they might gain the Presidency. This is what they are after now. Having a record that looks repulsive even to themselves, they seek to become the champions of the people on a distinctively new issue, and to gain an end would take either side of it. They are ready to sail their political craft in any direction and upon any sea that promises fair weather and to bring them safely into the Presidential harbor. Anything to secure votes is the unexpressed policy of the Democratic party.

We are told by the free-traders or Democratic tariff reformers that the tariff laws operate very oppressively upon the consumer; that the tax levied upon cotton and woolen goods imported into this country for sale is paid by the people who purchase them, and that the farmer and mechanic could buy the clothes he and his family wear at less cost if this tax was repealed, and that consequently he ought to vote the Democratic ticket. We are told that the Englishman, by reason of low wages paid laborers, mechanics, and operatives in English factories, can make cotton and woolen cloths and other textile fabrics and sell them to the people of this country at a price much less than the manufacturers of our own country can make and sell them, and that the Republican party continue to collect a tax on the foreign articles to keep the foreign goods out of our market and compel our own people to purchase those made in America.

We are told this is done to enrich domestic manufacturers and foster monopolies with moneys wrung from the hard earnings of the toiling masses, therefore they ought to vote the Democratic ticket. If this were true I should agree that the people ought to vote for the Democratic party. If the principles or policy of the Republican party were such as take money by way of taxation out of the pockets of the laboring and working classes and give it to the capitalist, thus making the rich richer and the poor poorer, I think the people of this country, with all their boasted intelligence, would have found it out and hurled such a party out of power and control of every branch of the Government long before this. But the Republican party has been continued in possession of the Government during the last twenty-four years, for the reason that the people do not believe these assertions and pretenses of the Democratic party are true.

If we are living under a system of laws that prevent a citizen from buying where he can buy the cheapest and from selling where he can sell for the highest prices, the honest voters of this country will abolish it just as soon as they are satisfied such a state of things exist. I say that it would be an outrage to maintain a law on the statute-book for a single moment that deprived a farmer from selling his corn, or wheat, or cotton, rice, sugar, oranges, or anything else he raises at the place where he can get the largest price for them; or that would deprive him of the right to buy the clothes he wears, his farming implements, his crockery, and the furniture in his house where he can get them at the least cost.

Now, what is the truth about this. Every man knows that the price of a thing depends upon the demand for it, and the greater the demand the larger the price. Every farmer knows that if he takes a load of wheat, or corn, rice, sugar, or fruit to any town or city for sale the price he will receive depends entirely upon the condition of the market. If there is but little of the article in town which he carries there to sell he will obtain a large price for it, but if there is an abundance of the article in the town for sale he will have to sell at a low price. So, too, every farmer knows that when he takes the money he has received for his load of produce and goes to a grocery store to purchase tea and coffee, or to a dry-goods store to buy clothes for his children, the price he will have to pay depends upon the fact whether the merchant is anxious to sell or not. He knows that if there is but one merchant in town that sells tea, coffee, and wearing apparel he has to pay just as high a price for them as the merchant has conscience to ask him. The farmer knows that if there are a dozen merchants in town, each desiring to undersell the other, by reason of such competition he will be able to buy at a less price than he would if there was but one merchant.

Now, every one understands this law of supply and demand. If there are two railroads connecting two places one hundred miles apart, you get transportation over that distance, as a rule, for less than you could if there were but one railroad.

Another thing. Every farmer knows that he never wants to buy what he has to sell. He wants to buy something that he does not produce from his farm. Neither the farmer, mechanic, or merchant desires to give away anything. It is his duty and the law of his own nature to provide for himself and family and keep what he gets for that purpose. Now, what is true of an individual is true of a State or nation. Each nation is a family by itself, governed by all the laws of prudence, economy, and self-preservation that govern the head of a family. It must take care of its own before looking after the welfare of the people of another nation, precisely as one citizen looks after the comfort and happiness of his own family before he does that of his next-door neighbor.

Now, obeying this law of nature, the Republican party says that this nation, that speaks and acts through the laws its representatives make, must study to protect its own people and promote their happiness and comfort, and enact laws for this purpose, even though the people of England, France, Germany, or Russia suffer in consequence. If our system of laws is better and promotes higher wages than theirs, they must change their laws, and if unable to do that, they must come here. They have no right to ask us to change ours; and yet the most powerful advocates of free trade in this country to-day are Englishmen, speaking and writing in England or through their agents here. We know that large numbers of foreigners land upon our shores every year, some years as many as 750,000, and free-trade doctors may dispute it as they please, the truth is, they come here because under our system of laws and government their labor commands better wages than they can obtain in their own country. Is this not an unanswerable argument to prove that the laboring classes are in better condition in this country than they are in foreign countries? Does any sane man believe that the Englishman, German, Frenchman, Swede, or Italian would sever all the ties of home, of family and friends, and brave the dangers of 3,000 miles of ocean travel if he did not know that when he arrived here he would receive larger wages and a larger share of human happiness than he did at home? And it is an undeniable fact that few who come to this country ever go back to their native land.

Facts and practical results are better than theories on this subject. This is essentially an age of facts and figures; rhetoric and florid speeches are at a very large discount. That the wages paid laborers, mechanics, artisans, and all classes engaged in agricultural pursuits or manufacturing industries in this country are higher than in Europe is entirely beyond dispute.

The exact wages paid in this country and Europe are ascertained with all reasonable, if not mathematical, certainty by Government agents

and from the pay-rolls of manufacturing establishments. They are incorporated into our statistics, and no fair man doubts they are substantially correct. Before the citizen votes to destroy our protective-tariff system he should study these tables and prices of wages in this and other countries. They are more reliable and more easily understood than the subtle reasoning of book-writers or the impassioned speeches of Congressmen.

I commend those who earn their bread by the use of their muscles to the patient study of the following tables. The citizen who can not read can find some friend to read them for him.

Comparative rates of weekly wages paid in Europe and in the United States.

[Condensed from the report of the Secretary of State on the state of labor in Europe, derived from facts reported by the United States consuls, Washington.]

	Belgium.	Denmark.	France.	Germany.	Italy.	Great Britain.	United States.	
							New York.	Chicago.
Bakers	$4 40	$4 25	$5 55	$3 50	$3 90	$6 50 to $6 60	$5 00 to $8 00	$8 00 to $12 00
Blacksmiths	4 40	3 90	5 45	3 55	3 94	7 04 to 8 12	10 00 to 14 00	9 00 to 12 00
Bookbinders		3 72	4 85	3 82	3 90	6 50 to 7 83	12 00 to 18 00	9 00 to 20 00
Bricklayers	6 00		4 00	3 60	3 45	7 58 to 9 03	12 00 to 15 00	6 00 to 10 50
Cabinet-makers	4 80		6 00	3 97	4 95	7 70 to 8 48	9 00 to 13 00	7 00 to 15 00
Carpenters and joiners	5 40	4 25	5 42	4 00	4 18	7 33 to 8 25	9 00 to 12 00	7 50 to 12 00
Farm laborers			3 15	2 87	3 50	3 40 to 4 25		
Laborers, porters, &c	3 00			2 92	2 60	4 50 to 5 00	6 00 to 9 00	5 50 to 9 00
Painters	4 20	4 15	4 90	3 92	4 60	7 25 to 8 16	10 00 to 16 00	6 00 to 12 00
Plasterers	5 40			3 80	4 35	7 68 to 10 13	10 00 to 15 00	9 00 to 15 00
Plumbers	6 00		5 50	3 60	3 90	7 13 to 8 46	12 00 to 18 00	12 00 to 20 00
Printers		4 62	4 70	4 80	3 90	7 52 to 7 75	8 00 to 18 00	12 00 to 18 00
Shoemakers		3 30	4 75	3 12	4 32	7 35	12 00 to 18 00	9 00 to 18 00
Tailors		4 10	5 10	3 58	4 30	5 00 to 7 30	10 00 to 18 00	6 00 to 18 00
Tinsmiths	4 80	3 90	4 40	3 65	3 60	6 00 to 7 30	10 00 to 14 00	9 00 to 12 00

It will be observed that in every one of the fifteen classes given in this table the wages are about one-third higher in the United States than in either of the six foreign countries named, except that the wages of bakers are higher in Great Britain than in New York, but less than in Chicago.

The free-traders or tariff reformers do not deny the truth of these tables. It can not be denied truthfully that the wage-earning classes of this country on an average receive for their labor one-third more than they do in Europe. Where the laborer receives $3 here he would receive but $2 there. The tariff laws, we claim, produce this difference, and the laboring classes of this country will never vote for free trade until it is demonstrated beyond all doubt that the tariff laws do not keep up the present prices of labor. They will not vote to cut down their wages one-third until they are certain that they will receive some assurance that when their wages are so reduced they can purchase with such reduced wages more than they can now. If they act with their usual caution they will vote to maintain the present tariff laws as long as any uncertainty exists on this subject.

It is sometimes asserted that the laborers in Europe with their wages can purchase food supplies at less cost and live better than they can in this country with their higher wages; that provisions are cheaper in that country than in this. The following table of prices of food, showing the prices in Europe and in the United States, refute all such claims as this and prove that this assertion is not true:

Comparative retail prices of the necessaries of life in Europe and the United States in 1878.

[Condensed from the report of the Secretary of State on the state of labor in Europe, derived from facts reported by the United States consuls, Washington, 1879.]

	Belgium.	France.	Germany.	Italy.	Switzerland.	Great Britain.	United States.	
							New York.	Chicago.
Beef:								
Roast, per pound	$0 20	$0 22	$0 22	$0 20	$0 30	$0 22	$0 12 to $0 16	$0 08 to $0 12½

Sugar, per pound	15 to 20		11	08½	08	05½ to 10	08 to 10	07 to 10
Tea, per pound			75		50	43 to 88	50 to 60	25 to 1 00

These two tables of figures show that the wage-earning classes not only receive higher wages but pay less for their provisions in the United States than in Europe.

The opponents of a protective tariff assert that with free trade or a low duty cotton and woolen goods would be cheapened, and the laboring classes would in consequence be able to clothe their families at less expense. On the other hand, it is contended that if customs duties are abolished, or materially reduced, one of two results will follow: either the factories in this country must be closed and their operatives discharged, or the wages of the latter reduced to the standard of wages paid in Europe. The difference in cost of manufactured articles in this country and in foreign countries is the difference in wages paid labor, and our manufacturers say they can make cotton and woolen goods and sell them as low as Englishmen can by reducing the wages of their operatives to the price paid in English factories, and in no other way.

This would be a degradation of American labor and a reversal of that policy by which this country has elevated the laboring masses and preserved them from that condition of squalid misery to which starvation prices have brought them in foreign lands. Therefore the interests of wage-earning classes of our country demand that a protective duty shall be maintained. Again, suppose all the cotton and woolen mills in America were closed to-morrow. The reduction in the price of manufactured products would be only temporary. The products of American mills now on hand would soon be consumed, foreign manufacturers would have the entire control and monopoly of our domestic or home markets, and would put up the price of their goods beyond what it is now. We now have two competitors in the market, the American and the Englishman, each offering cotton and woolen goods to our people; but drive the American sellers out of existence, as you would by free trade, and the Englishman would advance his price. The policy of the tariff

laws is to discourage foreign importations of all articles that can be produced in this country, to induce Americans to invest their capital in manufacturing industries, and to furnish our people with goods made in our own country. If manufacturing cotton and woolen goods in this country is profitable, manufacturing establishments will increase in number and the competition among them will always keep prices down to reasonable rates even though there were no foreign importations at all.

This fact is established by experience. Protective duties increase the price of any manufactured article but for a brief period, if at all. Nearly everything that a family consumes can be purchased for less to-day at wholesale or retail prices than it could be in 1860, when a tariff for revenue only had been in existence for several years.

I here insert a table of prices of cotton fabrics, showing their selling prices in 1860 and in 1884:

Fabrics.	1860.	1884.
	Cents.	*Cents.*
Standard sheetings, per yard	8.73	7.0
Standard drills, per yard	8.92	6.75
New York Mills bleached shirtings, per yard	15.50	10.50
Cocheco and Merrimack prints, per yard	9.50	6 0
Sixty-four square print-cloths, per yard	5.44	3.625

It will be seen that what the agricultural population have to purchase for wearing apparel is actually less in 1880 than in 1860; so that abolishing our tariff laws, destroying our manufacturing interests, and depending upon foreign markets for all we consume except the products of the soil would not benefit either our wage-earning classes, the farmer, nor the manufacturer, but would be an injury to all. I request to have printed with my remarks, and in this connection, an extract from a speech of Hon. Dudley C. Haskell, made in the Forty-seventh Congress. He was then a member of the Committee on Ways and Means of the House, had made our tariff system a special study, and represented a constituency composed almost exclusively of farmers. He said:

Our free-trade friends, or our tariff-for-revenue friends, assert that the tariff is a tax. Every gentleman who has spoken upon that side of the question proceeded to add to every article named by him such and such a per cent. of tariff tax; so much it costs and then 100 per cent. or 90 per cent. or some other per cent. of tariff tax, as if a great tax was paid by the consumer in every instance. What are the facts? Take the budget of the workingman to-day; granted that he can earn $500 in a year, and at the end of the year, with his year's wages in his pocket, he steps out from his home to invest it in a year's supply of the necessaries of life. Tariff tax! There is not 10 per cent. of all the articles that the workingman of America buys that are not cheaper in this market than in any other market in the world. Mark that! The workingman of America buys every article of food either as cheap as any foreign nation or cheaper. The workingman of America buys every article of cotton manufacture in the markets of the United States as cheap or cheaper than they can be bought anywhere else in the world. He buys his boots and shoes at as low a rate as the same goods can be furnished in any country.

If he is a farmer he buys his agricultural implements by his own door at a less price than the citizen of any other country can buy his. The American farmer or laboring man buys his woodenware cheaper than he can buy it anywhere else in the world. The American workingman buys all his cutlery and edged tools cheaper than they can be bought in England to-day. The workingman buys all his plain pressed glassware cheaper than it can be bought in England to-day. He buys all his wagons cheaper than the Englishman can make them. He buys all his reapers and mowers and harvesters and thrashers cheaper than they can be made in England. He buys his clocks, watches, carpets, furniture as cheap as they can be bought in any free-trade country in the world; buys his axes, shovels, saws, nails as cheap as they can be bought anywhere, and he reads his newspaper, books, and periodicals, printed with American type so much better than English type that the Englishman comes here to our market for American type and printing-presses. Many of the woolen goods are as cheap here as in England, and all would be but for the duty on wool which protects the wool-grower.

Mr. Haskell maintained, and it is unquestionably true, that a protective tariff ultimately reduces the price of manufactured articles. The true interests of the tillers of the soil is to maintain a protective tariff. .The more factories and mills the more men and women will be employed in them, and the less will be the number engaged in cultivating the soil. Each produces what the other does not, and each must have what the other produces. This creates diversified industries, gives employment to those that otherwise would be idle, increases our population, our wealth, and our power.

The nearer the farmer's market is to his farm the greater will be the value of his farm and all that he has to sell. The grain-grower of the West would obtain a higher price if he could sell to those engaged in manufacturing industries in his own section than when he has to depend upon a purchaser in New England and Eastern States or in foreign lands.

Those who raise cotton in the South would receive a larger price for it if there were more cotton factories in the South to buy it. They would save the freight paid to carry it elsewhere for sale, and that paid to carry the manufactured product back to the merchants of whom the planter purchases his cloth. There is not a place in Florida or Georgia or in any other Southern State that would not be benefited by having a cotton factory employing one hundred or two hundred hands. Real estate, extending miles from the place, would immediately advance, and the farmer would receive better prices for all his products. The Department of Agriculture has prepared a table of four groups of States with a view of arriving at the value of farms and farm products in States having large manufacturing interests compared with those States whose manufacturing interests are very insignificant. This classification of States proves conclusively all that the protectionists claim, and furnish an interesting study for all who care to be instructed upon this great question. If studied and comprehended, the tiller of the soil will never vote to destroy a protective tariff and force the millions of people now occupied in manufacturing industries to find employment on the farms. Let this report speak for itself:

Here is the result—and a striking exhibit it is, teaching the effect of varied industry, and its necessary increase of population and wealth, on the value of agricultural lands. It gives the number of States in each class, number of acres, value, and value per acre, with the average percentage of agricultural workers, as follows:

Classes.	Number.*	Acres.	Value.	Average.†	Workers.‡
First class	15	77,250,742	$2,985,641,197	$40 91	16.59
Second class	13	112,321,257	3,430,915,767	22 21	40.12
Third class	13	237,873,040	3,218,108,970	13 03	58.85
Fourth class	6	108,636,796	562,430,842	5 28	77.46

* Number of States and Territories.
† Average value per acre.
‡ Percentage of workers in agriculture.

See how the value of land comes down as the proportion of agriculturists to the whole number of workers goes up. Only one man in five on the roll of employed persons in New York and Pennsylvania is an agriculturist. The value of land in New York is $44.41 per acre; in Pennsylvania the eastern counties are alive with factories, the southwestern black with coal, the northwestern flowing with oil, and this exceptional variety in industry makes the average value of land $49.80 per acre. But New Jersey, lying between New York and Philadelphia, with daily access to markets of four millions of city population, has an average value of $65.16 per acre, the highest of any State in the United States. And New York and Philadelphia are the great manufacturing centers of the country, supporting their populations by manufactures more than by commerce.

Dividing again the States and Territories into four sections, the first comprising the manufacturing and mining areas, and including all having a smaller proportion than 30 per cent. of the occupied population, the working class, engaged in agricultural employments; the second section comprising all States having more than 30 and under 50 per cent.; the third including all States having 50 and not exceeding 70 per cent., and the fourth including all States having more than 70 per cent. engaged in agriculture, we have the following perfectly natural, not to say inevitable, results, namely:

Classes.	Number engaged in agriculture.	Value of products of agriculture.	Value per capita.	Workers in agriculture.
				Per cent.
First class	1,060,681	$484,770,797	$457	16.59
Second class	1,566,875	616,850,969	394	40.12
Third class	3,017,981	786,681,420	261	58.85
Fourth class	2,024,966	325,099,388	161	77.46

Here again we see the product per man go down as the percentage of agricultural workers goes up. We see that in the manufacturing States 1,060,681 agriculturists get $484,770,797 per annum for their labor, while in the agricultural States 2,024,966 receive only $325,099,388. New Jersey has but 14.92 per cent. in agriculture, and each man earns $501, while Mississippi has 81.81 per cent., the largest proportion of any State, and each person earns but $187, the lowest average in the United States.

The following tables give like results in a less condensed form, the States constituting each of the four groups being named:

Aggregate value of products of agriculture by States, acres of land in farms, and value of farm lands, by States and groups of States.

FIRST GROUP.

States.	Value of products of manufacture.	Total land in farms.	Value of farm lands.	Value per acre.
	Dollars.	*Acres.*	*Dollars.*	*Dollars.*
Massachusetts	631,125,284	3,359,079	146,197,415	43 52
Rhode Island	104,163,621	514,813	25,882,079	50 27
Connecticut	185,697,211	2,453,541	121,063,910	49 34
New York	1,080,696,596	23,780,754	1,056,176,741	44 41
New Jersey	254,380,236	2,929,773	190,895,833	65 16
Pennsylvania	744,818,445	19,791,341	975,089,410	49 30
Delaware	20,514,438	1,090,245	36,789,672	33 74
Total	3,021,405,831	53,919,546	2,552,695,060	47 34

SECOND GROUP.

Maine	79,829,793	6,532,578	102,357,615	15 62
New Hampshire	73,978,628	3,721,173	75,834,389	20 38
Vermont	31,354,366	4,882,588	109,346,010	22 40
Ohio	348,298,390	24,529,226	1,127,497,353	45 97
Michigan	150,715,025	13,807,240	499,103,181	36 15
Indiana	148,006,411	20,420,983	635,236,111	31 11
Illinois	414,864,673	31,673,645	1,009,594,580	31 87
Total	1,247,046,686	105,587,433	3,558,969,239	33 71

Aggregate value of products of agriculture, &c.—Continued.

THIRD GROUP.

States.	Value of products of manufacture.	Total land in farms.	Value of farm lands.	Value per acre.
	Dollars.	*Acres.*	*Dollars.*	*Dollars.*
Wisconsin	128,255,480	15,353,118	357,709,507	23 30
Minnesota	76,065,198	13,403,019	193,724,260	14 45
Iowa	71,045,926	24,752,700	567,430,227	22 92
California	116,218,973	16,593,742	262,051,282	15 79
Total	391,585,577	70,102,579	1,380,915,276	19 70

FOURTH GROUP.

Maryland	106,780,563	5,119,831	165,503,341	32 33
Virginia	51,780,992	19,835,785	216,028,107	10 89
North Carolina	20,095,037	22,363,558	135,793,602	6 07
South Carolina	16,738,008	13,457,613	68,677,482	5 10
Georgia	36,440,948	26,043,282	111,910,540	4 30
Florida	5,546,448	3,297,324	20,291,835	6 15
Alabama	13,565,504	18,855,334	78,954,648	4 19
Louisiana	24,205,183	8,273,506	58,989,117	7 13
Texas	20,719,928	36,292,219	170,468,886	4 70
Arkansas	6,756,159	12,061,547	74,249,655	6 16
Tennessee	37,074,886	20,666,915	206,749,837	10 00
West Virginia	22,867,126	10,193,779	133,147,175	13 06
Kentucky	75,483,377	21,495,240	299,298,631	13 92
Missouri	165,386,205	27,879,276	375,633,307	13 47
Kansas	30,843,777	21,417,468	235,178,936	10 98
Nebraska	12,627,336	9,944,826	105,932,541	10 65
Colorado	14,260,159	1,165,373	25,109,223	21 55
Oregon	10,931,232	4,214,712	56,908,575	13 50
Utah	4,324,992	655,524	14,015,178	21 38
Total	676,427,860	283,233,112	2,552,840,616	9 01

These figures teach us a lesson. They prove beyond dispute that the farmer is directly benefited by having manufacturing industries in his own State and near his farm. They prove that the workmen and operatives employed in mills and factories must purchase their food supplies from him, and the greater the number of these who live near his farm the greater will be the demand for what he raises, the more valuable will be his farm and all its products. In other words, the more people there are in a State who are not employed in agriculture the more valuable will be the products of the labor of those that are so employed. The farmer, then, should encourage manufacturing interests in his own State and neighborhood, and thereby create a market near his door for what he has to sell, and at the same time create the supply of manufactured products which he has to purchase in the vicinity of his own farm. He can do this by maintaining a protective tariff. By abolishing it, and the consequent destruction of manufacturing interests in this country, our entire population must seek employment in agricultural pursuits; the home market for the products of the soil is destroyed; the people of foreign countries must be depended upon to purchase what the farmers do not themselves consume, and to sell us what of manufactured articles we have to buy. And the foreigner will do both, buy and sell, at his own price. He has no interest in our affairs except to make all the profit he can from our labor.

Free trade or revenue tariff, resulting, as we believe, in destroying our manufacturing interests, diminishes our national wealth and increases the capital of the countries with which we trade. Every one knows that if an individual expends annually more than his income he grows poorer, and most persons strive to add to their possessions every year instead of spending more than they make. The same rule governs nations, or ought to.

Now, destroy our tariff system and shut up our mills and factories, and what is the result? Why, English manufacturers will sell to us the most that we need and at such prices as they choose to ask.

But how will the people pay for such foreign products? Where is the money to come from to buy with? It must come from surplus agricultural products which our people do not consume; and hence it follows that instead of buying from our own manufacturers, as we do now, and keeping the money in our own country and thereby annually adding to its wealth, we should send our money to England to add to the wealth of her people. The result is we should purchase more than we sell, expend more than our income, and the balance of foreign trade will be against us. Our gold and silver will be shipped to foreign countries to pay our debts, and the large annual additions to the wealth and power of our own country will cease. Neither a nation nor an individual can accumulate while its or his expenditures are greater than his income.

Our country must be independent of all foreign powers. We should manufacture at home all that our own people consume. Our factories should be at the doors of our own people, to supply all their wants. We must not depend upon factories of foreign countries to supply us with the shoes and clothing we wear, the plates upon our tables, or pottery in our kitchens. Every citizen should take a just pride in purchasing such articles with the stamp of an American manufacturer upon them, knowing that by so doing he is adding to the capital, dignity, and glory of his own country. The humiliating weakness of an agricultural people with no manufacturing industries was illustrated in the South during the late civil war. The South had iron-ore in abundance beneath the soil of Alabama, Georgia, Tennessee, and Virginia, but she could not supply her armies with cannon and muskets. She had large herds of cattle, but she could not make the shoes for her soldiers nor the saddles for her horses. The South had abundance of cotton—her fields were white with it—but she had no cotton-mills to furnish clothing for her armies and her people. In short, the South, for want of mills and factories, could not furnish supplies for her armies, and the Southern confederacy was strangled to death by a blockade of her ports. Her supplies from abroad being cut off, her soldiers were insufficiently clothed and fed, became discontented, and their surrender was inevitable.

Now pursue this policy of free trade to its legitimate result, destroy our manufacturing industries, close up our mines, our cotton and woolen mills, and in the future the United States in time of war with foreign nations would be reduced to the deplorable condition of the South in the late civil war. The Democratic party must wait the revival of confidence of the American people in its patriotism and capacity to govern this country before it can win a Presidential election.

It seems impossible for the Democratic party to comprehend the wants and the aspirations of this great country. Since 1860 the United States have outgrown the comprehension of that party. This House recently refused to appropriate for the Post-Office Department money enough by over $3,000,000 to meet the absolute needs of a postal system. The Senate has amended the bill by adding nearly $4,000,000 to it, to the end that the people may have adequate mail facilities, and the House refuses to concur in the Senate amendments.

This House, with a large Democratic majority, but recently refused to appropriate money to purchase guns to arm four ships of war that are being constructed and are nearly completed under a law passed by the last Republican Congress. But by a solid Republican vote in the House, aided by a few Democratic votes, the amendment put on the naval bill by the Senate providing for such armament was agreed to.

The people of this country are demanding a navy for the defense of its coasts and its commerce upon the seas, but a Democratic House, with money in abundance lying idle in the Treasury, persists in its refusal to appropriate money to build a single ship of war. The Senate but a few days ago amended the naval appropriation bill, and provided for an appropriation to build seven more war vessels, that the country might have the nucleus of a navy, but gentlemen on the other side of the House refused to concur in such amendment.

And now, by this tariff bill, they seek to destroy our manufacturing industries; to reduce American laborers and workingmen to the starvation wages of foreign countries; compel our citizens to purchase the products of foreign factories, and contribute to the wealth of European nations. Having no record to point to in a Presidential year, the Democratic party is making false issues for the next election, and the people must decide which party they will trust.

The Tariff—Reduction of War Taxes.

SPEECH

OF

HON. BENTON McMILLIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 2, 1884.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 5893) to reduce import duties and war-tariff taxes—

Mr. McMILLIN said:

Mr. CHAIRMAN: The question presented by this bill for our consideration is not whether we shall or shall not have free trade. The real issue is, "Shall there be a reduction of taxes; will we take thirty millions off the tax-payers or let it stay on them?" Many of our citizens and most of the States, counties, and municipalities owe debts and implore us to reduce Federal taxes. Will we do it? That is the question.

For twenty years the people have had to endure this burden. For twenty years they have been told to bear it patiently and by and by they should be relieved. For years the Democratic party has in its platforms and from the stump thundered against the great weight of taxes. The following extract from the Democratic platform of 1876, adopted at Saint Louis, is a specimen of our denunciations and promises and proves what I say:

Reform is necessary in the sum and mode of Federal taxation, to the end that capital may be set free from distrust and labor lightly burdened.

We denounce the present tariff levied upon nearly 4,000 articles as a monster piece of injustice, inequality, and false pretense. It yields a dwindling, not a yearly rising, revenue. It has impoverished many industries to subsidize a few. It prohibits imports that might purchase the products of American labor. It has

degraded American commerce from the first to an inferior rank on the high seas. It has cut down the sales of American manufactures at home and abroad and depleted the returns of American agriculture and industry followed by half our people. It costs the people five times more than it produces to the Treasury, obstructs the processes of production, and wastes the fruits of labor. It promotes fraud, fosters smuggling, enriches dishonest officials, and bankrupts honest merchants. We demand that all custom-house duties shall be only for revenue.

Believing these promises, the people hurled from power those who had imposed and retained the onerous system, and gave Democracy full sway in Congress. But divisions in our ranks existed, and our party failed to fulfill the pledges of tariff reform made and was relegated to the minority. The Republicans of the last Congress also shirked the issue. Instead of taking hold of the question manfully and patriotically, that Congress went outside of the Constitution and shifted its duties off on a Tariff Commission, composed in the most part of men selected for the purpose of guarding particular interests. I raised my voice against its creation. I said then:

Whenever Congress establishes this commission to do its work it will have voted a want of confidence in itself, and the people will vote a want of confidence in it.

How true was my prediction the 70 Democratic majority here tells.

Notwithstanding the Tariff Commission was composed of men chosen from particular protected industries, the necessity for reduction of the tariff was so great they reported that there should be a reduction of from 20 to 25 per cent. The following is an extract from their report:

Early in its deliberations the commission became convinced that a substantial reduction of tariff duties is demanded not by mere indiscriminate popular clamor, but by the best conservative opinion of the country.

* * * * * * *

Such a reduction of the existing tariff, the commission regards not only as a due recognition of public sentiment and a measure of justice to consumers, but one conducive to the general industrial prosperity, and which, though it may be temporarily inconvenient, will be ultimately beneficial to the special interests affected by such reduction.

* * * * * * *

It would seem that the rates of duties under the existing tariff—fixed for the most part during the war, under the evident necessity at that time of stimulating to its utmost extent all domestic production—might be adapted, through reduction, to the present condition of peace, requiring no such extraordinary stimulus.

* * * * * * *

Entertaining these views, the commission has sought to present a scheme of tariff duties in which substantial reduction should be the distinguishing feature. The average reduction of rates, including that from the enlargement of the free-list and the abolition of the duties on charges and commissions, at which the commission has aimed, is not less on the average than 20 per cent., and it is the opinion of the commission that the reduction will reach 25 per cent.

Mr. Chairman, how did the party that created the commission treat these recommendations? It disregarded them in almost every particular. After confessing they did not know what to do without a commission's instructions, they ignored its recommendations and thereby admitted that neither the commission nor they were capable of dealing with the subject intelligently. The people so believed, and crushed them out with such a defeat as has seldom overtaken a party in this country. Sir, when we look at the bill and remember the outrageous way in which it was passed and the little relief it gave, we must conclude the people were right in forcing them to go.

THE TARIFF NOT MATERIALLY REDUCED.

The bill they passed reduced the tariff only 1.74 per cent. The commission said the tax-payers were entitled to 25 per cent. reduction, but they were given less than 2 per cent. Not only this, but on many articles essential to home comfort, and used in every-day life, which were already taxed too highly, they increased the duty. They raised the duty on window-glass, goblets, and other glassware. They increased the duty on table ware—stone, china, and earthen ware. They also increased it on cotton goods, such as domestics and sheetings. That on cotton goods was increased 2.51 per cent.; on earthen, stone, and china ware, 13.11 per cent.; and on glass and glass ware, 1.48 per cent. These are but samples. Scores of others could be mentioned. When, however, that anomalous Congress came to legislate for the wealthy they relented. Their hard hearts softened, as they always do, and they reduced the tariff on silk and silk goods immensely. They then came sweeping down the list and reached mechanics' tools. Here, again, they inflicted a great wrong by increasing the duty on many articles. All their vaunted love for the laborer vanished when the interests of that laborer came in conflict with their protected pets.

Now, Mr. Chairman, let him who votes against the Morrison bill remember that he votes to indorse and perpetuate this increase of duties on the necessaries of life. Are gentlemen ready to say by their votes and voices not only that the war taxes should be kept up, but that it was right to increase them in 1883? Others may do as they please, but I feel that were I to cast any such vote I would deserve the condemnation of the noble people I have the honor to represent. The tariff bill of 1883 was never regularly considered by the House. It came in as a conference committee's report on a bill to reduce the internal revenue. It differed from everything passed by either the House or Senate. It never could have passed the House on its merits. The rules of the House were amended, or, rather, trampled down. The mouths of members opposed to it were closed by cutting off debate; the constitutional right of the House to originate bills for raising revenue was tamely, cowardly surrendered to the Senate; the cause of justice was powerless; the voice of Representatives chosen by the people to originate these bills was drowned out by the wild clamor for higher tariff; justice failed, and the bill passed.

Sir, this is the system which they tell us should not be disturbed by agitation. These were the means resorted to which we are called upon to justify by non-action. And this is the prohibitory, grinding law, from which they tell us we should hold our hands. For one, I will never, never do it till mine "forgets its cunning." Members may cry for "peace" on this question, but there is no peace while such flagrant robbery goes on. If you want no agitation, give us justice. If you "do not want business interests disturbed," strive with us to bottom the tariff on principles of "equal and exact justice to all men," and then we will lock shields with you, and all rush together to the defense of any one of them that is ruthlessly assailed.

But, Mr. Chairman, you will cry in vain to the sovereign citizen to

"KEEP QUIET"

while you take his scanty earnings by any sort of legislative larceny. How can you expect him to "keep quiet" when he looks to the Treasury and beholds one hundred and fifty millions of his money which you have wrongfully wrung from him by this law lying there idle and you refusing to relieve him? How can you expect him to make no complaint when he in full sight of these things feels your long, felonious fingers turning his depleted pockets inside out and seizing his last penny to swell the vicious surplus accumulation? To-day there are near three dollars surplus in the Treasury for every citizen of the United States, yet you refuse to reduce taxes. Money is flowing in at the rate of a million dollars a day, more than forty-one thousand dollars an hour; still you say there shall be no relief given. Refuse it if you will, but be prepared as a consequence to have an outraged people "shriek their horrid curses in your shrinking ears."

Mr. Chairman, no statesman has yet appeared rash enough to justify this vast surplus by public declaration. If any man has, it was some individual who neither believed what he said nor would so far violate his instincts as to say what he belived. I have already quoted to you the declarations of the Tariff Commission and of the Democratic platform at Saint Louis. The platform of the Cincinnati convention contained a declaration similar to that adopted at Saint Louis. Let us next examine the testimony of others on the subject of revising the tariff. In a speech made by the distinguished gentleman from Pennsylvania [Mr. RANDALL], in this Hall, May 8, 1882, he said:

The existing overflowing Treasury brings a demand for the reduction of the tariff and internal-revenue taxes. In my opinion, in such a condition of our finances, reduction of taxation shall at once begin. Unnecessary taxation is injurious to the interests of the people in many directions. Government has no justification for the collection of burdensome taxes in excess of the sum requisite for the support of its proper administration.

Mr. Chairman, if there was "no justification for the collection of burdensome taxes in excess of the sum requisite for the support of the proper administration of Government," then what excuse or justification is there for it now? There has been no perceptible reduction of the tariff since these words were spoken. If a reduction of duties was demanded then—and I admit it—it is much more needed now. Then our bonded debt amounted to about a billion and a half. Since that we have paid off 20 per cent. of it, and our surplus has increased. If public policy, wise statesmanship, demanded a reduction then, how can we deny it now? The reduction proposed by the bill now under consideration added to the small reduction made by the last Congress would not exceed that recommended by the Tariff Commission.

THE PRESIDENT'S RECOMMENDATIONS.

Sir, in his annual message sent to Congress by the President in December, 1882, when the surplus in the Treasury was not greater than it is now, he said:

You can not fail to note with interest the discussion by the Secretary as to the necessity of providing by legislation some mode of freeing the Treasury of an excess of assets in the event Congress fails to reach an early agreement for the reduction of taxation.

I heartily approve the Secretary's recommendation of immediate and extensive reductions in the annual revenues of the Government.

It will be remembered that I urged upon the attention of Congress at its last session the importance of relieving the industry and enterprise of the country from the pressure of unnecessary taxation. It is one of the tritest maxims of political economy that all taxes are burdensome, however wisely and prudently imposed. * * * Of late the public revenues have far exceeded what was necessary for a wise and economical administration of the Government.

THE SECRETARY OF THE TREASURY RECOMMENDS A REDUCTION.

Mr. Chairman, in his annual report, made just before the assembling of this Congress last December, the Secretary of the Treasury makes this strong statement:

The chairman of the Senate Committee on Finance (in explanation of the bill that became a law) estimated at $45,000,000 the reduction of the revenue which would follow the changes in the tariff proposed thereby. These intentions and calculations have not been verified. * * * We have, then, a reduction of $30,000,000 less than was sought for and expected. * * * There ought to be a reduction of taxation.

GENERAL JACKSON ON EXCESSIVE TAXATION.

Sir, we are sometimes told that General Jackson, one of the founders and expounders of Democracy, favored a "judicious tariff." Who does not want a judicious tariff to-day? Our complaint against the present one is that it is not judicious. We are willing and anxious to stand on the same principle he did. Concerning taxation he said:

There is perhaps no one of the powers conferred on the General Govern-

ment so liable to abuse as the taxing power. The productive and convenient sources of revenue were necessarily given to it that it might be able to perform the important duties imposed upon it; and the taxes which it lays upon commerce being concealed from the real payer in the price of the article, they do not so readily attract the attention of the people as smaller sums demanded from them directly by the tax-gatherer. But the tax imposed upon goods enhances by so much the price of the commodity to the consumer. And as many of these duties are imposed on articles of necessity which are daily used by the great body of the people, the money raised by these imposts is drawn from their pockets.

Congress has no right under the Constitution to take money from the people, unless it is required to execute some one of the specific powers intrusted to the Government; and if they raise more than is necessary, it is an abuse of the power of taxation, and unjust and oppressive. It may indeed happen that the revenue will sometimes exceed the amount anticipated when the taxes were laid; and in such a case it is unquestionably the duty of the Government to reduce them, for no circumstance can justify it in assuming a power not given to it by the Constitution, or in taking away the money of the people when it is not needed for the legitimate wants of the Government.

Upon this bold, ancient, and able enunciation of principles the Democracy stood then and stands now. We ask nothing more and will take nothing less.

IS THE REDUCTION HORIZONTAL?

Mr. Chairman, some members have objected to the bill because they say it is a horizontal reduction. If it is merely a 20 per cent. horizontal reduction it presents to the legislator the alternative of having high duties or low, as he prefers, with the articles bearing the same relation to each other, whether high or low. He who wants lower duties will vote for the bill, while he who wants no reduction will vote against it of course. No man who voted for the present law can consistently object to this, because the cut affects all in a horizontal way. But the reduction is not horizontal throughout. The bill discriminates by reducing the tariff on articles of necessity, now highly taxed, and leaving without reduction certain schedules of luxury which carry a low rate.

Silk dress goods, shawls, shoes, ribbons, trimmings, buttons, in fine all silk goods, are left by the bill without reduction. But cotton and woolen goods are reduced. Jewels and many precious stones are not reduced, because they are articles which may be dispensed with. But, as I have already stated, we do propose by the bill to reduce the tax on tableware, glass, clothing, and the thousand other necessaries of life. There is no reduction on liquors and wines, but there is on medicine. Let him who wants to continue the present high rate on essentials and low rate on luxuries oppose this measure. But he who thinks there should be less duty on home comforts and higher on luxuries will not oppose it.

But aside from all this we have had many instances of horizontal reduction supported by Mr. Clay and others. The following from the able speech of Mr. MILLS, of Texas, gives concisely the history of that kind of legislation:

In 1833 the great compromise tariff introduced by Mr. Clay, the father of protection in this country, was passed by Congress. Under that law there was a horizontal reduction of the tariff of 10 per cent. in 1833, a horizontal reduction of 10 per cent. in 1835, a horizontal reduction of 10 per cent. in 1837, a horizontal reduction of 10 per cent. in 1839, and in 1842 a horizontal tariff of 20 per cent. was reached by the sliding scale, and it was agreed that that should remain the law of the future, and that the bill should be regarded as a settlement of a long-vexed question—"a treaty of amity and peace," as it was characterized by its distinguished author. These are not all of the horizontal taxes we have had during our history. In 1865 there was a horizontal increase of 20 per cent. on the taxes levied on the schedules of domestic manufacture; and in 1866 there was a horizontal reduction of 20 per cent. on domestic manufactures. In 1872 there was a horizontal reduction of 10 per cent. on the schedule of imported goods, and in 1875 there was a horizontal increase of 10 per cent. on imported goods.

HOARDING MONEY IN THE TREASURY AND PAYING INTEREST.

Sir, I am unable to see how any Representative can conclude the best interests of his country require the raising of more revenue than is necessary to meet the various demands of Government economically administered. The individual who owed a heavy debt, had the money by him to pay a large amount of it, and yet hoarded his money, kept it out of his business, and continued to pay interest on the debt he could discharge any day, would be called financially a fool. Yet this is the very thing we are doing as a Government. We owe two hundred and fifty-four millions, now due and callable. We have a hundred and fifty millions surplus lying in the Treasury idle. Still we refuse to pay the money out, and force our constituents to pay interest.

To hoard that sum there year after year when it might be paid on bonds, stop interest, and go forth to enliven trade is a crime against the tax-payers. It is a crime for which the administration that is guilty of it should be held to a severe account. He who hoards it and still grinds his people with oppressive and unnecessary taxation is a political malefactor. Some opposing this bill have said that if we reduce import duties it will increase the revenue. The author of the bill claims it will reduce the revenues $30,000,000 a year. But if we can reduce the tax-payer's burdens 20 per cent. and at the same time not diminish his ability to pay what he owes, who is foolhardy enough, unpatriotic enough to refuse to do it?

If there be one such here I pause that he may rise and announce it. Let him proclaim his readiness to betray the trust committed to him. Through Congress alone, under the Constitution, can the people get relief from onerous taxation once fastened upon them by that body. Their condition is to be deplored when this their last tribunal refuses to heed them. When the time comes that Congress refuses to discharge this duty the people will discharge Congress and send here those who are not afraid to act.

AN OVERFLOWING TREASURY LEADS TO PANICS, EXTRAVAGANCE, AND CORRUPTION.

But aside from all considerations of mere policy for the reduction of taxes there is an imperative necessity for it growing out of the payment of our public debt. We have to-day a surplus of about one hundred and fifty millions in the Treasury. The Secretary estimates the surplus for the ensuing year at eighty millions. We have outstanding $254,000,000 of bonds subject to call and payment before 1891. Using the surplus in the Treasury and coming in, we can pay all of this by the close of 1885. If the "do-nothing policy" is adopted, the tariff untouched, and the taxes left standing, money will continue to flow into the Treasury at the rate of one hundred millions surplus a year from 1886 to 1891.

There being then no bonds due, this means of sending it back into circulation can not be resorted to, and it will be withheld from circulation and locked in the Treasury. It is safe to calculate that there would be in the Treasury January, 1891, five hundred millions, or $9 for every man, woman, and child in the Government. It requires no power of prophecy to foretell the result. An overflowing Treasury leads to prodigal appropriations. The lobby lingers longingly around it as vultures around the carcass. Thieves congregate and devise every means, from larceny to legislative robbery, to get their hands into it. Besides, so much money would thereby be diverted from the legitimate channels of trade that stringency, panics, and ruin would inevitably follow.

This must be averted, and it can only be done by reducing taxes. Messrs. Blaine, LOGAN, and others, say, "Let the system run on and distribute the surplus among the States." In other words, they propose, after degrading the States in many other ways, to take from them the power or necessity for raising revenue to carry on the State governments, and do this by deputy marshals and customs officers. Congress is to dole out revenue to the States! Every patriot in the land should cry out against such a suicidal, centralizing policy as this, if permanently established, would be. We should flee from it as we would the pestilence.

STRIKING OUT THE ENACTING CLAUSE.

We are told, sir, that a motion to strike out the enacting clause of the bill is to be made as soon as general debate closes next Tuesday and before there is any chance to amend it. The enemies of tariff reform boast that they can carry that motion. He who votes to kill the bill in that way thereby says he wants no change. He will proclaim that he wants to continue the high duty on salt, mechanics' tools, farming implements, and the thousand things the laborer must have to live. He will thus say he wants high war tariffs retained on the men of to-day who were infants at the close of the war.

I see sitting around me members who voted last session for the present iniquitous law. They took the tax off of patent medicines, but refuse now to take it from salt. They voted then for free bologna sausage, and decline to vote to reduce the tariff on sugar. They reduced it on silk, and refuse to reduce it on calico and domestics. They voted to give us velvet at 30 per cent., and now refuse to let us have cotton goods reduced to 60 per cent. They voted to let in jewelry at from 10 to 30 per cent., and refuse to let us reduce mechanics' tools to 50 per cent. They reduced the taxes on banks many millions, and to-day stand stubborn as the dog in the manger and refuse to vote for reduction of the high duty on hats, blankets, and jeans. They freed hair oil and "rough on rats" from all internal taxes, and refuse to reduce the high tariff on the linen and flannel worn by children. Love of literature does not lure them from their pet theory, for they vote against reducing the tax on literary productions. The fear of Heaven seems powerless to move them, for when they oppose this bill they oppose a proposition to reduce the tax on the Word of God.

Mr. Chairman, there is no excuse for such a vote. I would say to the enemies of the bill, "If it does not suit you, and you have power to strike out the enacting clause, you have power to amend it. Why do not you amend it till it does suit you?" No, sir; they do not want to amend it. They want to kill all tariff legislation, and all their energies are turned in that direction. If they succeed it will be at a sacrifice of their country's best interest. But I warn them that the fruits of their victory, like "Dead Sea fruits, will turn to ashes on the lips." They may impede but can not stop this great movement. Before they get through this business they will learn that while they may destroy themselves they can not destroy the spirit of tax reform. "Justice travels with a leaden heel, but strikes with an iron hand." This is no spasmodic effort. It is one engaging the thoughts and enlisting the energies of millions of people. Those who labor to live think their labor should be less taxed, and will never stop till it is done. They have seen

CONGRESS REPEAL THE INCOME TAX,

thereby taking more than sixty millions annually off of the rich. They have seen the tax on manufactured tobacco and on the privilege of dealing in it and whisky reduced about two-thirds. They have seen the banks freed from their taxes. After seeing Congress in various ways reduce the taxes on these things about three hundred millions a year, they come forward and implore you to take just 20 per cent. off of their coats, hats, shirts, blankets, farming utensils, sugar, rice, table ware, and medicine. Will you do it? Or will you say to them, "Go, hence; you deserve no relief, and we will give you none." Are you ready to

say to them, "We rushed to the rescue of the rich by repealing the income tax while the smoke of battle still hung around the hills, but we will do nothing for you even after half of the war debt is paid."

Will you who oppose this bill by refusing relief still further confirm the laborers of the land in the belief that for the advancement of their best interests no Congress ever assembles? If so, do it quickly. Do it by striking out the enacting clause and refusing even to amend, if you will; but when you do it, prepare to take the consequences; prepare to meet the wrath of those you wrong. There is yet a voice loud enough to make itself heard. There is yet a hand strong enough to make itself felt. That voice is the complaining voice of an overtaxed people. That hand is their hand raised to strike down any man or party of men standing in the way of their relief.

LET THE REDUCTION BE JUDICIOUS AND GRADUAL.

Mr. Chairman, I do not favor so sudden a revolution in the tariff as to produce disaster. In a speech I made on this subject in the last Congress I said:

The raising of revenue ought to be the primary object, but in the raising of revenue we can so adjust the tariff that our home industries will receive all the protection they need, and all that the equitably disposed could wish. We have to pay interest on $1,554,752,700. Besides this, we have to pay a large amount for pensions annually and pay the current expenses of the Government. We collect about a million dollars a day; more than $600 a minute. I insist that there is no need of further protection to industries than is afforded by a judicious tariff sufficient to raise this revenue. We have gone on under our present system until it may be wise to adopt the course of a graduated tariff as did the Democratic party in 1846, thereby arriving at the revenue basis ultimately to be reached by such gradual steps as will not imperil establishments which have been forced into existence by the abnormal tariff under which we have worked for the last twenty years. We ought to go about the work judiciously but resolutely.

I have no cause to change my views as thus expressed after two more years of reflection on the subject, and I insist that it is in accord with the sound Democracy.

DEMOCRATIC PLATFORMS ON THE TARIFF.

Sir, for more than a quarter of a century after the adoption of the Constitution—till 1838—there were no conventions, as we now hold them, for the purpose of selecting candidates for President and Vice-President. That work was done by party Congressional caucuses. But those caucuses sometimes announced the principles upon which they asked the voters' support for the candidate commended. The following is from the caucus declarations when Mr. Jefferson was first elected President:

6. Free commerce with all nations, political connection with none, and little or no diplomatic establishments.

The first platform adopted by a convention other than the caucus was that of 1838, and contained this clause:

Hostility to any and all monopolies by legislation, because they are violations of the equal rights of the people.

The true foundation of republican government is the equal rights of every citizen in his person and property and its management.

The Democratic platforms of 1840 and 1844 promulgated the following principles:

4. *Resolved*, That justice and sound policy forbid the Federal Government to foster one branch of industry to the detriment of another, or to cherish the interests of one portion to the injury of another portion of our common country.

5. *Resolved*, That it is the duty of every branch of the Government to enforce and practice the most rigid economy in conducting our public affairs, and that no more revenue ought to be raised than is required to defray the necessary expenses of the Government.

The platform of 1848 on this subject was as follows:
